REV. WM. H. PENDLETON, pastor of West Fifty-third Street Baptist Church, was born in Stonington, Conn., in the year 1832. He spent his early years in academical pursuits and the study of law. Having located himself in California, he was called to the work of the Christian ministry in the year 1855. His first pastoral charge was assumed in the city of Brooklyn in the year 1858, in which he spent eighteen months, when he was called to the care of the Cannon Street Baptist Church, and continued to labor as its pastor for five years. It is now nearly four years since he assumed his present charge. In all these positions his ministry has been eminently successful. The aggregate of conversions under his preaching reaches nearly six hundred.

As a speaker, Mr. Pendleton is attractive and effective. His arrangement of a discourse is lucid and striking; his argument is cogent, his style elegant, sometimes verging toward the florid. His manner is fervent and deeply impressive. Few pastors in this city are more highly esteemed by their churches, and few individuals have warmer or more devoted friends.

Mr. Pendleton has been much distinguished as an advocate of the American Bible Union, of which he has been an influential manager for a considerable number of years. One of his most brilliant platform speeches was delivered before that body about four years ago. The flashes of poetic eloquence by which it was illustrated evinced that, if he should direct his attention to

platform speaking, he would not have many competitors for the palm. His mind is essentially poetic, but with sound discretion he has chastened it to the more sober shade of thought suitable to the character of the Christian ministry.

The evidences of power of expression are marked on this countenance. He should talk fluently, copiously. The eyes are full, the head wide in the region of suggestion and ideality. The social affections are influential; and there is, too, a vein of the controversial, all of which qualities in combination nourish discussion and discourse. He should be a firm adherent of his denomination. The organs of Firmness, Spirituality, Conscientiousness, and Veneration are well developed. He has a practical cast of intellect, and should be correct in his discriminations and descriptions. The temperament supplies activity and elasticity. He is impressive, yet his impressions are rendered useful and efficacious. He has a strong sense of the humorous, the witty, the elegant, and the eloquent. Although one who would exhibit a powerful defense when his liberties were invaded, he yet is cautious and calculating. As a clergyman, he should exhibit a profound acquaintance with the main characteristics of his people, much affability in society, and sufficient regard to their interests to render himself acceptable. He is genial, social, kindly, self-assured, and confident.

REV. HENRY M. GALLAHER, pastor of the First Baptist Church, Brooklyn, N. Y., the youngest in the group, was born in Castlebar, Ireland, September, 1833. He received but the rudiments of an education at his native place, being apprenticed at the age of twelve. At the age of seventeen he emigrated to this country, and after a few years' sojourn in the East he settled in Illinois, engaging in his occupation of carriage painting. Being possessed of a mind thirsting for knowledge, and having a very strong desire to enter the ministry, he entered Shurtleff College, Alton, Illinois, there receiving the benefits of a regular theological training. Mr. Gallaher had then been married about a year; and despite his great responsibility, he managed to support his wife and child during the period of his collegiate course. He accepted a call from the Baptist Church at Quincy, Illinois, and continued his ministrations there for three years. In 1864 he was appointed as a delegate to the Baptist Convention at Philadelphia; and while East, the First Baptist Church of Brooklyn, being without a settled pastor, invited him to occupy their pulpit during one of the Sabbaths of his visit East. An enthusiastic reception met the young preacher; and soon after a unanimous call was extended to him, which was accepted only after mature deliberation, and in October, 1864, he assumed the pastorate of the Church. From that time until the present the career of his Church has been one of uninterrupted prosperity; the original congregation of one or two hundred was soon swelled to fifteen hundred, and the church is now too small. Mr. Gallaher is a fluent and polished speaker; his language is full of apt illustration and originality of idea, and he is fearless in announcing his convictions. Naturally talented, Mr. Gallaher has by cultivation and close application and earnest thought become one of the most effective workers in his denomination. His abilities as a lecturer have also caused him to be in universal demand; and few lectures have been so acceptably delivered as his "Ireland and the Irish," "America and the Americans," and "A Summer's Trip to Europe."

Mr. Gallaher has a superior intellect. His perceptive faculties rather predominate, thus indicating ability to portray and describe. He would be brilliant rather than profound. He belongs to that class of ministers who are eminent for their ability to rivet the attention of an audience by a warm and enthusiastic style of address. His moral organization is finely developed. Veneration, Benevolence, Spirituality, and Conscientiousness are well marked. He is not remarkable for independence of character. He is rather diffident than forward. The nature of his vocation, the moral status of the community, are the stimuli which urge him forward to take a conspicuous position. He must believe in his work earnestly to act in a position which draws the attention of others. There is much breadth of mind, much liberality of sentiment in this organization. There is also much humor, and in his discourses there may be quaintness of style, or a vein of facetiousness which inclines

the hearer to smile. He is an easy, tender, and accessible man. The more he may be known, the better he will be beloved.

REV. CHARLES HADDON SPURGEON, one of the most popular ministers of the Baptist Church in England, was born at Keldvedon, Essex, June 19, 1834. His father and grandfather were preachers in the Independent denomination in England. At the age of sixteen he commenced teaching, as an usher, at Newmarket, and afterward at Cambridge. While at the latter place, he connected himself with a "Lay Preachers' Association," and went out almost every evening to some one of the adjacent villages, to conduct religious meetings. Soon he commenced preaching, and before he was eighteen became pastor of a small Baptist congregation at Waterbeach, one of these villages. In 1864 he was called to the New Park Street Baptist Chapel, in Southwark, London, where his preaching attracted such crowds that the congregation removed, first to Exeter Hall, and then to Surrey Music Hall, the largest public room in London. This proved to be totally inadequate, however, and in 1861 a chapel called the "Tabernacle" was erected for his immense congregation. Here he has preached ever since; and sometimes in the Crystal Palace, at Sydenham, where he draws together larger audiences than any other preacher in England. A writer in the *Christian Advocate* gives the following interesting statement respecting Mr. Spurgeon and his work:

"Mr. Spurgeon has added to his Church during the year 1866 between three and four hundred members. His success depends upon his simple faith in Gospel instrumentalities, and the power with which the Holy Spirit honors his unstudied and unpretending messages. There is an utter abandon in his manner, as if it were of no account what his hearers thought or said of him, or whether he appeared as an intellectual and eloquent man or otherwise. His sermons are delivered with great directness and confidence of immediate results in the conversion of sinners. His efficiency lies in his administrative ability. His power to do and make others do, probably exceeds that of any man in England. He preaches twice on the Sabbath to seven thousand people, and administers to them the Lord's Supper; has a prayer-meeting in his church every morning and evening; has baptism two evenings of the week; lectures, I am told, somewhere, about every day; manages a theological seminary of one hundred students, for whose subsistence he chiefly provides; publishes a monthly magazine, and one sermon every week; has just issued a hymn-book; is about establishing an orphan asylum; manages a Church of 3,000 or 4,000 members; makes frequent journeys to preach abroad; and how many more enterprises he has on hand I know not.

"Of course he has to do much of this work through the agency of others, keeping two clerks to do his writing, twenty or thirty deacons to do the pastoral visiting and other work, a corps of theological teachers, and other co-operators, upon all of whom he has the faculty of so impressing himself as to direct their work and be the animating soul of the whole movement. It is said that a commercial firm of London were so impressed with his administrative ability, that they offered him fifteen thousand dollars a year to embark his influences in their enterprise. He can so infuse his own spirit into others as to make them one with himself in his peculiar lines of labor and activity. There is nothing in Mr. Spurgeon's person to indicate his career. In a crowd, one would pick out hundreds as apparently better fitted for his work. He is short, chubby, with distended cheeks and apoplectic neck, receding forehead, and other characteristics of person setting at defiance the doctrines of Phrenology. His voice, though clear, and well suited to be heard by a multitude, lacks variety, depth, and pathos, and has in some cases a wiry twang, which is by no means specially captivating."

[We disagree with the foregoing statement as to there being nothing in Mr. Spurgeon's person to indicate character. To our mind it is quite the contrary. He would be a marked man anywhere; nor is it true that his voice lacks depth or pathos, nor has it a wiry twang. This writer may have heard him under peculiar circumstances, when the speaker may have labored under some temporary infirmity. No man's voice is always the same. A "bad cold" makes a great difference. We heard Mr. Spurgeon during our summer in London on many dif-

ferent occasions. We have been seated near him and far from him, in the farthest extremity of his immense Tabernacle, and his voice filled the house as completely as that of an ordinary speaker would fill an ordinary room. Is it not strange that different observers and listeners come to conclusions respecting others so various? Each, no doubt, tries to tell the truth. But the colored glasses through which we look at each other makes the difference.]

Mr. Spurgeon has a plump, well-formed body and a good-sized brain. There is nothing colossal in either, but the whole is healthy and well proportioned. Those who try to make Mr. Spurgeon out a superhuman character are as much in error as those who represent him to be less than a man. He is neither a philosopher nor an idiot. He would claim nothing for himself which the world would not readily concede. We see nothing in his character or career at all wonderful or puzzling. He is a spiritually illuminated preacher, and the psychologist would count him a capital medium for the manifestation of religious impressions. That he makes the best possible use of what there is of him is clear; but this only goes to show how much less more capable men make of themselves and accomplish in life than their Creator intended and expected them to do, whereas many fritter away their lives and come to naught. Mr. Spurgeon improves almost every moment of his time, and turns all his faculties to the best account. He is simply true to his nature, doing what he finds to do with his might. Mr. Spurgeon has a top to his brain as well as a base, and a fairly developed intellect. He takes impressions from above and beyond, and he communicates those impressions in a clear, concise, and practical manner.

His strong social nature, with his ardent, impulsive temperament and his great executive power, warns him up, impels him on, and with his high moral sense he devotes himself to what he conceives to be the best and the highest interests of humanity. We have not space at present to go into a detailed analysis of Mr. Spurgeon's character. Should we take him up again we will analyze more minutely, and show the various phases as well as the eccentricities peculiar to him.

DENOMINATIONAL FEATURES.

The Baptist Church in the United States is one of the largest, numerically, and most powerful among the denominations of Evangelical Christians. The peculiar tenet which distinguishes Baptists from other sects is that relating to the mode of administering the sacrament of baptism. They insist on the immersion of the entire person as the proper performance of this rite; and claim this mode was originally practiced and (except in case of the sick) universally observed throughout Christendom for 1,300 years. In substantiating this claim, they urge the signification of the Greek word βαπτίζω (*baptizo*) used in the New Testament in relation to the rite; the example of Christ himself and of his Apostles; and the allusions of the evangelists when explaining the spiritual import of it.

They maintain also the necessity of an intelligent belief in the mediatorial sufficiency of our Saviour, to render baptism of effect to the recipient. Those only who profess repentance for sin and faith in Christ are eligible candidates for the sacred ordinance.

There are several bodies of Baptists; but the Regular or Associated Baptists form the most numerous body. The character of their church government is congregational, each society or assembly being complete in itself, and managing entirely its own affairs. This principle of independence is balanced by an-

other principle which they highly esteem—that of intercommunion. This intercommunion between their churches is regarded as the visible expression of unity; and in the furtherance of this principle they from time to time hold councils or conferences to which the different churches send delegates. Through these councils, societies are organized for extensive benevolent or missionary enterprises. Church association is also maintained by them for mutual advice and co-operation in such measures as will promote their general interests. These councils or associations, however, can exercise no judicial or appellate power; their measures may be adopted, or not, by individual congregations as the latter elect.

Baptists are sometimes called "close communionists," for the reason that they do not admit the members of other denominations who have not been baptized in their way to unite with them at the celebration of the Lord's Supper. They profess, however, that in this restriction they do not judge the consciences of others, but seek to preserve their own inviolate.

The Declaration of Faith with the Church Covenant, published by the Baptist Convention of New Hampshire, expresses at some length the general sentiments of the Associated Baptists; to that we beg leave to refer our readers for further information respecting doctrinal features.

The Baptist Almanac for 1865 gives 1,039,400 as the number of Regular Baptists in the United States. The Disciples, or Campbellite Baptists, number 300,000.

QUAKER COURTSHIP.

[A MEMBER of the Society of Friends, commonly called Quakers, gives us for the PHRENOLOGICAL JOURNAL this account of their courtship and marriage.]

There is no relation in life that exerts so important an influence over our happiness, here and hereafter, as that of marriage. Youth should therefore be guarded with a jealous care, if possible, to prevent the affections from becoming entangled in a manner that might lead to unhappy consequences. The practice of the Friends in this respect is somewhat peculiar. Their regulations forbid young persons associating together with a view to matrimony without consent of parents. This may appear quite unromantic, and in a very few exceptional cases attended by no good result. But let any one familiar with that Society remark the general prevalence of domestic happiness, and the extremely rare cases of separation, and he will see good reason to conclude that there is some unusual preserving element. Before marriage, the parties appear in a meeting and state that, with Divine permission and the approval of Friends, they intend marriage with each other. The meeting then appoints a committee to see that there are no similar engagements between them and others, and about a month afterward, if reported clear, they proceed. In a public meeting for worship, after a considerable time of silence, they rise, and taking each other by the hand solemnly declare that in the presence of the Lord and the assembled people they take each other to be husband and wife, promising, with Divine assistance, to be loving and faithful until death. A formal certificate setting forth these facts is then produced and read, and the parties sign it, and as many of the company as desire to do so, subscribe their names as witnesses.

Thus a religious sanction is thrown around this most important engagement, under which it is hoped those entering into it will be led to feel, that however ardently

attached in the bonds of love, a higher Power alone can preserve from the discord incident to so close an association of two individual wills.

[That the Quakers are among the most orderly people in the world must be conceded. That they are quite as loving and as happy in wedlock, is also true. That their children are as well constituted and as well behaved is undoubted. It has been said that Quaker babies do not cry; but we doubt the statement. As for music, which they ignore, the less said by them the better. We believe in the "Art divine," and insist on the legitimate exercise of the organs of Time and Tune. We rather like their courtship and marriage, and think well of the Quaker girls; they make good wives, good mothers, good Friends, and good neighbors.]

OVER THE RIVER.

BY FRANCES L. KEELER.

THE river is dark and the waves are cold,
The boatman is pale and the bark is old;
'Tis the burden that's breathed from lips of clay,
And the spirit shudders to launch away,
To ungrapple the chains from the shores of Time,

With an outward bound for an unknown clime;
To loose its grasp from the realm of Real,
And be drifted away to the dim Ideal.

But a mystical voice that the deep life hears,
Would scatter such doubts and would banish the fears;

It talks to the soul in a different way,
And it says that the rays from the regions of Day
Give *warmth* to the waves that we *dream are*
so cold,

And the *river* is glinted with glimmers of gold;
That the ripples are bronzed by a brilliancy bright,

Unswept by the shadows that darken Time's flight.

And it says that the bark, though a fairy thing,
Is a masterpiece of the heavenly King;
And though light as a cloud in the ether blue,
And clear as the air, it is strong and true.
And angels' wings are the sails that fan
The longing Life to a lovelier land;
And the music that drifts from the world of bliss,
Makes the spirit forget all the music of *this*.

And this is the way our bark shall ride
Over the murmuring, musical tide;
And a host of souls on the other side,
So pure and fair, and so glorified,
With anthems of rapture shall welcome in
Another Life from the land of sin;
And the spirit released shall nevermore
Regret its change to the fadeless shore.

THEATERS IN EUROPE.—There are in the whole of Europe 1,490 theaters. Of these there are 337 in France, 168 in Spain, 169 in England, 152 in Austria, 115 in Germany, 76 in Prussia, 44 in Russia, 34 in Belgium, 23 in Holland, 20 in Switzerland, 10 in Sweden, 8 in Norway, 16 in Portugal, 10 in Denmark, 4 in Greece, 4 in Turkey, 3 in Roumania, and 1 in Servia. In Italy there is one theater for every 75,000 of the inhabitants.

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without endorsing either the opinions or the alleged facts set forth.

ORIGIN OF VEGETABLE LIFE.

THE two great organic departments of our globe are exclusively monopolized by the animal and vegetable. These great families have each their land and water varieties, and respectively form a network of beautiful constructions entirely surrounding the globe. There is probably not a spot of surface, on land or water, but is occupied by some of the maximum or minimum species of these two great kingdoms of nature.

When we trace these organisms of both departments down to their minimum forms of simplest construction, the microscopist is puzzled to say where animal life ends and vegetable life begins, or the absolute demarcation or line of separation takes place. Simple cell life comprises the beginnings of both, while each by mechanical (so-called) division of their respective cells multiply arithmetically—as one into two, two into four, four into eight, eight into sixteen, etc.—and thus into more compound organisms and complicated forms. As each progresses in complicity, the distinction becomes marked in the compound animal organization, possessing its own individual sentient or intelligent principle, which is more or less traceable in their very minute microscopic forms; while in the most complicated forms of vegetation this distinctive characteristic is nowhere found, except perhaps in its most simple cell forms, floating in their circulatory systems.

In plants, as in animals, from introduced or surrounding materials, are extracted the assimilative nutrition to build up and keep in repair their varied compounds, as well as forms, of which their respective organs are constituted, and each possessing its reproductive powers. Each, too, has its circulatory system, through which are carried the assimilative materials for their varied constructions; as have, also, each their secretions, excretions, inhalation and exhalation, constituting their lung-breathing apparatus. The animal absorbs into its lungs atmospheric air, separates its components, retaining its oxygen and giving back the carbon, in the form of carbonic acid gas; while the plant also absorbs into its lungs—the leaves—the same vitalizing air, separates its constituents, retaining the carbon and giving back the oxygen.

We have suggested as highly probable that the animal frame, with its attached intelligence, has within its body innumerable animalcules, with their sentient principle, coursing through our veins, to intelligently select materials for building up and keeping in repair our animal machine in all its complicated parts. Why is it not also probable that minute organic intelligence performs the same offices to build up and keep in repair all vegetable organs and their compounded forms? There is the corresponding assimilative materials for secretions, the circulatory system, the digestive and the lung-breathing organs in the vegetable, as in the animal, in which animalcules in both may become erated and refreshed, and the same opportunities in both cases for the display of limited intelligence and usefulness in supplying their own necessities, and using the surplus in building up the varied vegetable forms; just as the polypes, in building up their diversified cellular homes, as frameworks for future islands and continents, obtain such materials from the surrounding ocean; only that in the two former the animalcules have a wider range of materials to select from for their nourishment and more complicated structures, compound animal and vegetable organizations.

Microscopists find in all vegetable infusions, however much pains are taken to exclude animalcules or their germs from the air or associated water, that many forms of infusorial life are rapidly developed and multiplied; which rather points to the overlooked probabilities of their being indissolubly associated in all vegetable constructions, either as retaining life even in dried vegetation, or their germs there left, ready to spring into existence as soon as the sap is liquefied by warm water penetrating their capillary or circulatory systems, in

which, in living plants, moving colored globules are seen passing up and down in the cellular tissues of chara, caulinia, etc. This probability is lost sight of by microscopists, in their eager belief that such animalcules exist exclusively in the water or air, and from thence introduced, despite all precautions, into all vegetable infusions, never apparently dreaming that such profuse cell or globular life is probably the inseparable accompaniment, as well as origin, of all vegetable forms which comprise the homes and scenes of industry of a vast variety of infusorial life.

The sensitiveness of vegetation, so marked in very many species, as well as other peculiarities of many, has some more direct association with contained intelligent life and feeling than could possibly arise from mere vegetable crystallization. Again, the temperature of vegetation in winter is maintained but little below that of its season of growth, and in the winter, too, it is far above that of surrounding inorganic matter, which preserves it from damage through inclement periods, thus clearly evidencing a vitalizing warmth within far above that of mere cold crystallization. Again, animal industry and intelligence are apparent in surrounding their vegetable constructed homes in the capillary vessels with thick coatings of bark, as non-conductors of heat, to preserve themselves and their vegetable constructions from the destructive effects of more direct exposure to the elements.

Thus I infer that all vegetable constructions, fiber, tissue, fruit, flower, and reproductive organs, are but materials which animalcules intelligently select, carry, and assimilate; from the parent stock to the bud or kernel, as in the animal to the fetal embryo, there to multiply its growth by their industry, and by the same order of progression, through a countless succession of generations, for the perpetuation of species.

Some of the same modes of reproduction which characterize the lower forms of animal life—as the monad, hydra, actinia, etc.—such as mechanical division of the cell, budding, branching from the parent stem, etc., are also observed as equally characteristic of vegetable cell reproduction or multiplication. Both animal and vegetable remains in a state of decay, when placed in favoring circumstances, invariably exhibit an immense amount of animalcules or infusorial life, probably reproduced from the remaining germs in each, when death or destruction stayed their circulatory systems.

The very many similar characteristics of construction, composition, and growth, existing in animal and vegetable organizations, clearly point to some uniform mode of origin and progression, from the simple to the complex; and we know of no other mode so likely and so congenial with known facts as that both are built up and sustained by the intelligent actions of globules, or simple cells, found floating in liquids contained in the circulatory systems of each; and, as in both cases, these globules are found to have a rapid motion of oscillation, and an up-and-down movement in the capillary vessels, that therefore they consist in both cases of living animalcules. As intelligence more or less is inseparable from all life, so the appointed and intelligent labor of these minute creatures is expended in keeping in repair their homes, the organs and entire frames, which constitute the varieties of these two great departments of organic life. In further confirmation of this view, the laticiferous tissues of some plants abound with colored globules in a constant state of motion, and when separated from the plant coagulate and leave a fluid lymph, or serum, like animal blood, which certainly are thus proved to partake of similar origin.

The rise of sap in the circulatory systems, or capillary vessels of many tall trees, is much more readily accounted for on the supposition that it results from the labors of living intelligent bodies, which probably construct intervening valves in these capillaries, as in the animal system, to prevent its return by the same passage, than to any theory of mere capillary attraction performing such anomalous hydrostatics.

Simple cells of cellular tissue in the lower plants perform all the functions which, in higher forms of vegetable organization, are performed by particular parts; therefore cells are the primal living principle of vegetation. The functions of plants can not be considered as a mere mechanical process, as those functions immediately

cease on the death of the plant, as with the animal; so, necessarily connected with vitality, from which intelligence in some degree is inseparable; hence a cell is an animal organization. The storing or secreting of more assimilative material or food in some parts of plants, as in the bud than is required for immediate use, is evidently provided to serve as subsistence for future growth, and can not be possible to be a mere mechanical operation, but must be the design and performance of a provident intelligence within the circulatory system; hence such operations must be performed by animal organisms. The spiral arrangement of many plants to cling for support can not be simply mechanical, varying as they do with surrounding circumstances, but a recognized necessity, for which contained or associated intelligent action is also adequate to effect.

Vegetable as well as animal cells or globules (both originally animalcules) multiply by mechanical division, adhering to the parent wall or capable of a separate existence, according to circumstances. Now it is in the highest degree probable that such branching from animalcules, in the circulatory systems of plants as well as animals, are left by the parent attached to the organs, whether vegetable or animal, but they are constructing (as with the polype to his cellular matrix), and thus themselves, with their assimilative materials, form the cell-like structures of many vegetable and animal organs, making an appointed sacrifice of their simple organizations to build up more complicated structures, both vegetable and animal. Thus, wheel within wheel, are animal and vegetable existences due to the multiplication of these formulative individual animal cells.

Here it remains to be observed that with such intelligent animalcule life, engaged in the construction of both vegetable and animal forms, may be readily assigned the cause of the variation in growth of the same species, under varying circumstances and requirements, by the primary adaptable habits of these industrious, constructive little creatures.

These reflections point to the probable agency of minute forms of life, in their formulative processes, through impressed habits, governing these infinitesimal creatures, as the instruments or working machinery of an All-wise Projector in the creation of His most marvelous works, the animal and vegetable kingdoms—the only organic existences with which we are acquainted.

CHAS. E. TOWNSEND.

DEAR JOURNAL: This year finds my name on your subscription books for the first time, and when I read our editor's kind, welcoming words, "You have come again," in the January number, I must own to a little feeling of—no, not envy, not jealousy, but a little wish that I, too, were one of the "first-born" and well-beloved. But the same kind greeting is extended to the new additions to our great phrenological family, and to all who are with the cause in "thought, spirit, and sentiment," and all who feel interested in this great work can not afford to do without our beloved JOURNAL. Why is it that the JOURNAL family all have a "fellow-feeling" for each other? a strange heart-and-soul sympathy, or kindred feeling? I think if I should ever see our editor, I should know him in a moment, and would not feel at all backward in holding out my hand for his kind, friendly grasp. I keep a warm corner for him in my heart, and I, for another, send up a plea for his portrait in the JOURNAL. I think he owes it to the "family," and I am safe in saying each member will give it a glad welcome; and I for one would like to try my pen at his "delineation." A kind greeting to all the readers of the JOURNAL.

EMMA A. T., Cambridge, O.

[It is gratifying to be thus appreciated by the "Journal Family," and especially so by the sisterhood. But we must be guarded. What will the men say when they hear the ladies complimenting the editor of the A. P. J.? Won't they be jealous and feel defrauded? Then won't they demand of us "that satisfaction which one gentleman expects from another"—pistols and coffee for two? Oh, dear! we beg our lady friends to spare us such embarrassment. We fear to publish our portrait for these reasons, but will continue to make the JOURNAL just as fascinating as ever—indeed, indispensable to all "lovers"—of good reading.]

MAN, MONKEYS, AND GORILLAS.

SPECIES, HABITS, INCIDENTS, WITH ILLUSTRATIONS.

UNDER this head we purpose giving some account of those species of the great family of quadrumana which, on account of certain marked peculiarities, especially their singular instincts, have rendered them most conspicuous. Did we attempt to present all the species now known as belonging to the ape or monkey tribe, the space of many entire JOURNALS would be requisite. Natural history presents many attractive features to the general reader when treated in a popular way and divested of its dry technicalities; and it is in this way that, of late years, the general public, through newspapers and magazines, have acquired much scientific information. But to our subject. Apes live in communities. They seem to prefer society, and are usually on amicable terms with each other. Their social instinct, however, seems limited to the purposes of mutual protection. They are found in great herds, but different species do not amalgamate or intermingle. They are strongly adverse to the doctrine of miscegenation.

It is but recently that particular and accurate investigations into the nature and habits of these animals have been made, and information gathered which places the ape in his proper place in the catalogue of mammalia.

THE APE AND MAN.

Before the extensive researches of Cuvier, many accounts were current, contributed to by both writers and credulous travelers, affirming the existence of "long-armed, hairy men," who dwelt in the wooded recesses and jungles of Africa, and whose language was a sort of hissing. The more ignorant and debased negro tribes of some portions of Africa probably aided such *canards* by their belief in the monkey, especially the chimpanzee, or orang-outang, being a hairy man that was so cunning that he would not speak lest he should be put to work. There have not been wanting, among even the *savants* of natural science, those who have striven to demonstrate a connection between man and the ape. Such have asserted their common derivation, and ascribed their present distinctions to the different physical or moral agencies to which they have been subjected. These distinctions are so great, both with reference to nervous phenomena and physical organization, that we can hardly think it possible for any careful investigator to find positive starting-points from which to trace backward toward a common origin. Professor Agassiz disclaims any such possibility, and so do most naturalists of distinction. Certainly among apes we find the animals who approach nearest to man, but the latter's mental faculties and moral sentiments raise him immeasurably

FIG. 1.—HAND OF APE.

FIG. 2.—HAND OF CHIMPANZEE.

above them. His physical structure is vastly superior. In the human skeleton, the symmetry and elegance of its arrangement above that of the chimpanzee are marked. A more striking difference is seen in a comparison of the human with the chimpanzee's skull and brain. The chimpanzee is considered the most intelligent of his race, and so far as volume and quality of brain go, he takes the highest rank in the

brute creation. Yet how wide the difference! The large, beautifully arched and rounded skull of man, with its small jaws and regular teeth, at once indicate superiority over the small and low crown, massive and protruding jaws, and somewhat uneven teeth of the chimpanzee. The removal of the brain from the skull of each shows a still greater disparity in size and structure. Not only is the brain of the chimpanzee far smaller than the human, but the convolutions are coarser, with little depth and uniformity. The lower part of the brain of the chimpanzee in the middle lobe protrudes considerably, giving great relative breadth to the head between the ears.

The teeth in the jaw of the ape, as indeed of all the other monkeys of the Old World, are of the same number as in that of man; and as far as the cutting teeth and grinders are concerned, they present no marked difference in form. But, in the adult animals, and more especially in the old males, the dog or canine teeth are developed in the same relative proportion as in the flesh-eating animals, being elongated so as to pass beyond each other. The tusks of the orang-outang, when full grown, are at least as large as those of the lion, and are most formidable weapons, which, coupled with that already mentioned rela-

tive to the width of head between the ears, furnishes strong reason for supposing that the gentleness and placidity often observed in those brought into this country are not common in their native climates, but that their disposition alters according to the increase of their muscular force, and that in their adult state they are extremely formidable and dangerous.

FIG. 3.—FOOT OF APE.

The neck in all the ape tribe is shorter than in man, and relatively larger. The skull is joined to the trunk or back-bone in such a manner that the former is inclined forward when the monkey stands erect, and the strong muscular connections which support and control the head are analogous to those of the inferior animals.

The great dexterity exhibited by monkeys in the use of their paws has been much extolled, but the superiority of the human hand is readily perceived on examination. The paw of the chimpanzee, as seen in the illustration, has a small and comparatively weak thumb, extending only to the root of the fingers. In man, the thumb is large and powerful, and quite indispensable to the prehensile capacity of the hand. Expert workmen in any of the branches of manual industry are distinguished for the size and power of their thumbs. For purposes of grasping, however, the paws of the ape are admirably adapted, while they lack the special muscular mechanism which in man enables him to control the movement of single fingers. The muscle which in man terminates with a single tendon, and concentrates its action on the great toe of his foot, in the chimpanzee terminates with three ten-

FIG. 4.—FOOT OF CHIMPANZEE.

dons, none of which are connected with the great toe or hinder thumb, but being connected with the three middle toes, adapt the foot for clasping as a hand. The natural walk of the chimpanzee is not upright, but on all-fours—the great length of the arms or upper limbs raising his body so that it makes an angle of about sixty degrees with the horizon. The arms are used to steady the body, and help the

animal's progress very much, as crutches assist one who uses them. By these he swings the body forward in a rapid but not very graceful manner. The use of these long arms is best seen when the animal is gamboling among the branches of his native forests, where they act like the balancing-pole of the tight-rope dancer, rendering him perfectly secure, however precarious his footing. Thus it is that travelers have seen monkeys poised on the very extremity of slender bamboo shoots, waving their arms from side to side.

THE CHIMPANZEE.

This species of ape (*Troglodytes niger*) is a native of the warmest parts of Africa. It is sometimes called the black orang or pigny, but differs from the Asiatic orang in the proportionately shorter arms, in the possession of an additional dorsal vertebra, and an additional or thirteenth pair of ribs, and in other particulars. Although the chimpanzee is able to move easily in an erect position, it usually, when so doing, holds its thighs with its fore hands, as if to support the upper part of the body. The appearance and characteristics of the animal are as follows: the skin appears of a yellowish-white color, thinly covered with long black hair in front, while it is considerably more hairy behind. The hair on the head is rather thin; it is thickest on the forehead, and forms whiskers on the cheeks. There are a few stiff black hairs on the eyebrows, and a scanty eyelash. A few whitish hairs are scattered over the lips, especially on the under one. The rest of the face is naked, and has an ash-colored and wrinkled skin. The hair is somewhat bushy on the back. The longest hair is just at the elbows. There is none on the fingers or palms of either extremity. The ears are remarkably prominent, thin, and naked. The nose is quite flat, or rather appears only as a wrinkle of the skin, with a slight depression along its center. The nostrils open upward, which would be inconvenient did the creature usually assume the upright position. The projection of the jaws is excessive. The mouth

is wide, the lips rather thin, and destitute of all human expression. From the lower ribs the body decreases rapidly to the loins. The thumb of the foot is longer and more powerful than that of the hand or fore paw, and may be considerably extended.

Their natural dwelling-place is found in a mountainous tract of country, with numerous intervening valleys, where fruits of a luscious and nutritious character, like the plantain, pineapple, banana, and the agreeable edible rice are abundant.

Cuvier says that the chimpanzee lives in troops, arms itself with

FIG. 5.—THE CHIMPANZEE.

stones and clubs, employs them to repulse from its dwelling both elephants and men, and pursues and carries off the negro women. Strange as the latter statement may appear, its truth is asserted by the people of the country. Their strength and courage are indeed extraordinary, and it is very dangerous for persons to pass singly near their places of abode. On one occasion, a number of them attacked, overpowered, and were proceeding to take out the eyes of two slaves, when a party of negroes arrived to their rescue.

In Sierra Leone they generally take up their abode near some deserted town or village where the papaw-tree grows in abundance, of the fruit of which they are very fond. They build huts nearly in the form of those reared by the natives, and cover them with leaves; but these are intended only for the females and their young, the males always lying on the outside. If one of them is shot, the rest immediately pursue the destroyer of their companion, and the only means of escape from their vengeance is the surrender of the gun which proved fatal; when, with the utmost indignation, they tear it in pieces and give up the pursuit.

M. Du Chaillu gives several entertaining accounts of his experience with chimpanzees in Africa. The following extract from his book, "Journey to Ashango Land," relates to the chimpanzee which he sent to England, and which unfortunately perished in the recent fire which destroyed a portion of the Crystal Palace at Sydenham:

"On the 1st of November a negro from a neighboring village brought me a young male chimpanzee, about three years old, which had been caught in the woods on the banks of the Nponlounay, about three months previously. Thomas, for so I christ-

ened my little *protège*, was a tricky little rascal, and afforded me no end of amusement; he was, however, very tame, like all young chimpanzees. Unfortunately, Thomas was lame in one hand, several of the fingers having been broken and healed up in a distorted position. This was caused by his having been maltreated by the village dogs, who were sent in chase of him one day when he escaped from his captors and ran into the neighboring woods. I had Tom tied by a cord to a pole in the veranda of my hut, and fed him with cooked plantains and other food from my own table. He soon got to prefer cooked to raw food, and rejected raw plantains whenever they were offered to him. One day I witnessed an act of Master Thomas which seemed to me to illustrate the habits of his species in the wild state. A few days after he came into my possession I bought a domestic cat for my house; as soon as the young chimpanzee saw it, he flew in alarm to his pole and clambered up it, the hair of his body becoming erect and his eyes bright with excitement. In a moment recovering himself he came down, and rushing on the cat, with one of his feet seized the nape of the animal, and with the other pressed on its back, as if trying to break its neck. Not wishing to lose my cat, I interfered and saved its life. The negroes say that the chimpanzee attacks the leopard in this way, and I have no doubt, from what I saw, that their statement is correct."

The chimpanzee does not attain its full growth until it is nine or ten years old. At full maturity its height is said to be between four and five feet. One species, inhabiting the Isle of Princes, in the Gulf of Guinea, is reported to attain a height of over five feet, and to be so strong that they will attack the elephant.

FIG. 6.—THE ORANG-OUTANG.

A chimpanzee kept by the sailors on board of a vessel manifested great intelligence. She had been taught to heat the oven, and take care that no coals fell out. She knew well when the temperature was adapted to baking, and never failed to fetch the baker, who implicitly trusted her, in good time. She also assisted in unfurling the sails, splicing the ropes, and could even pull one along with the sailors. The vessel on which she was seen was bound for America, but she did not live to reach it, in consequence of an act of cruelty. The mate having severely and undeservedly punished her, she immediately thereafter exhibited the keenest grief, refusing all food, and finally dying of a broken heart and starvation. Chimpanzees can not endure brutal flogging.

THE ORANG-OUTANG

is found native in the deep forests of Sumatra, Borneo, Malacca, Cochin China, and in some of the islands of that part of the world. It is remarkable for its size, swiftness, and ferocity. The name "orang-outang" is Malayan, and signifies wild-man, or man-of-the-woods. The hair of the orang-outang is of a brownish red color, and covers his back, arms, legs, and the outside of his hands and feet. The face has no hair, except on its sides, somewhat in the manner of whiskers, and a very thin beard. The eyelids and margin of the mouth are of a light copper color. The insides of the hands and feet are of a deeper copper hue. The head, viewed in front, is pear-shaped, expanding from the chin upward. The eyes are close together, of an oval form, and of a dark brown color. The eyelids are fringed with lashes, and

the lower ones are wrinkled. The nose is confluent with the face, except at the nostrils, which are but little elevated. The mouth is very projecting, the lips are very narrow, and scarcely perceptible when the mouth is shut. The chin projects less than the mouth; below it a membrane gives the appearance of a double chin, and swells out when the animal is angry or pleased. The chest is full and broad, and the abdomen very protuberant. The hands are long compared with their width, and with the human hand. The fingers are small and tapering; the thumb is very short, scarcely reaching the first joint of the fore-finger. All the fingers have very perfect nails, of a blackish color and oval form, and exactly terminating with the extremities of the fingers. The feet are long, resemble hands in the palms, and in having fingers rather than toes, but have heels resembling the human. The great toes are very short, are set on at right angles to the feet close to the heel, and are entirely without nails.

The bony structure of the orang-outang is somewhat heavier than that of the chimpanzee; the arms are relatively longer, reaching to the ankle-joint, and there is one pair of ribs less. Like the chimpanzee, which it so nearly resembles, the orang has evinced considerable intelligence. It can be taught to do many serviceable things, such as carrying burdens, watching the fire, and waiting on the table, but usually the training must be gentle, as the animal, if an old one, is easily irritated. A female orang, which had been captured when quite young and taken to Holland, exhibited a marked degree of tractability. She would present her hand to the people who came to visit her, and walk as gravely along with them as if she formed part of the company. She would frequently sit with persons at dinner, when she would unfold her towel, wipe her lips, use a spoon or a fork in conveying food to her mouth, pour her wine into a glass, and make it touch that of a person who drank with her, after the custom of the Hollanders. If invited to take tea, she would bring a cup and saucer, place them on the table, put in sugar, pour out the tea, and allow it to cool before she drank it. All these acts she performed without any other instigation than the sign or verbal orders of her master, and often even of her own accord.

The capture of an adult is attended with much difficulty, on account of its amazing agility in springing from tree to tree. One of extraordinary size, which a party of sailors killed, after a long chase, on the coast of Sumatra, equaled the swiftness of a race-horse in his progress from one tree to another, and would certainly have escaped had it not been for the scarcity of trees in the neighborhood where he was discovered. He was shot many times before he exhibited any signs of weakness, and when apparently dying, he seized a wooden spear which would have withstood the strength of the strongest man, and broke it, to use the words of the narrator, "as if it had been a carrot." The natives who had been attracted to the spot by the noise attending the chase were astonished, almost as much as the sailors, at the great size of the animal. His stature is said to have been not less than six feet.

Of an orang which M. le Comte saw in the Straits of Malacca he says, that all its actions were so imitative of those of mankind, and its passions were so expressive and lively, that a dumb person could scarcely have made himself more clearly understood. This animal was very gentle and affectionate, though it would frequently make a stamping noise with its feet, from anger as well as joy, when it received or was refused any kind of food to which it was partial.

Its agility was scarcely credible. With the greatest ease and secrity it would run among the rigging, vaulting about from rope to rope, and indulging in a thousand pranks, as if it were delighted at exhibiting its feats for the diversion of the company. Sometimes, suspended by one arm, it would police itself, and then suddenly turn round upon a rope with nearly as much quickness as a wheel or a sling. Sometimes it would slide down one of the ropes and then climb it again with astonishing agility. It seemed as if there were no posture which this animal could not imitate, nor any motion that it could not perform. It had sometimes been known to fling itself downward from one rope to another, though at a distance of more than thirty feet.

THE GORILLA.

The gorilla (*Troglodytes gorilla*) is the largest of the ape species, and is generally referred by naturalists to the same genus with the chimpanzee, although some claim for it a separate genus. It received the name by which it is now known in consequence of its being supposed to be the same animal which is mentioned by Hanno, the Carthaginian navigator, in his *Periplus*. He visited the tropical parts of the west coast of Africa about the year 600 B. C., and it is by no means certain that the gorilla of Hanno is not the chimpanzee. Vague accounts of apes of great size, of which very wonderful stories were told, were occasionally brought from Western Africa; but it was not till 1847 that the gorilla became really known to naturalists.

Dr. Thomas S. Savage, a member of the Boston Society of Natural History, and at the time a medical missionary, while on his voyage to America from Cape Palmas, was unexpectedly detained on the Gaboon River during the month of April, 1847, at the house of the Rev. J. L. Wilson, senior missionary of the American Board of Foreign Missions to Western Africa. Soon after his arrival, Mr. Wilson showed him a skull, represented by the natives to be that of a monkey-like animal, remarkable for its size, ferocity, and habits; and the doctor was led to believe that it had belonged to a new species of orang. Intent on further investigation, and, if possible, on deciding the point by the inspection of a specimen alive or dead, Mr. Wilson entered cordially into the matter, and promised his full co-operation; and having been a resident of the country for several years, well acquainted with the chiefs and people, highly regarded by them, and speaking freely their language, he was able to render the doctor advantages of signal importance. He did not succeed, however, in obtaining either a living or a dead specimen, but only several skulls of the two sexes, and of different ages, with other important parts of the skeleton of the gorilla. These portions were afterward ably described, with several engravings, in a quarto pamphlet, on the return of Dr. Savage to America, by Dr. Wyman, professor of anatomy in Harvard University.

Professor Owen has given us a full and elaborate description of the gorilla, from which we extract. The lofty ridges of the skull, he affirms, give to the face of the gorilla a most forbidding appearance (see illustration of gorilla skull); the thick

covering forming a scowling pent-house over the eyes. The nose is more prominent than in the chimpanzee or orang-outang. The mouth is very wide, the lips large, and the chin very short and receding. The huge canine teeth in the male are very frightful. The eyelids have eyelashes, but there are no eyebrows; the ears are smaller in proportion than in man, and much smaller than in the chimpanzee. The length of the upper limbs is not greater than in man when compared with the trunk; they seem longer through the disproportionate shortness of the lower limbs. The arm is longer than the fore-arm, which is remarkable, and the thumb reaches to beyond the first joint of the fore-finger, while it does not extend to that joint in the chimpanzee or other ape. The hand excites attention from the breadth, thickness, and great length of the palm; the fingers appear short, taper quickly at the ends to the nails, which are not larger or longer than in man. The back of the hand is hairy as far as the divisions of the fingers; the palm naked and callous, and the thumb scarcely half as thick as the fore-finger. The leg has no "calf," and grows thicker from the knee to the ankle. The sole of the foot is more walked upon than by the chimpanzee, or any other ape. The hind thumb or great toe is stronger than in those creatures; it stands out like a large thumb from the rest of the foot; its base swells below into a kind of ball; the nail is small and short. The sole is wider than in man, the foot more like a hand, but one of huge dimensions and immense power of grasp. And yet the gorilla, judging from the structure of his grinding teeth, lives on fruits: This latter statement is corroborated by Du Chaillu, who says that he has, after examining many intestines of the gorilla, failed to find anything except vegetable food in the stomach.

The skeleton of the gorilla indicates great strength, both in the jaws and limbs. The bony ridges in the skull are extremely prominent, giving in the engraving an apparent size to the brain far greater than the reality. As compared with the chimpanzee or orang-outang, the brain is exceedingly small and inferior.

The gait of the gorilla is shuffling; the motion of the body, which is never upright as in man, but bent forward, is somewhat rolling, or from side to side. The arms being longer than those of the chimpanzee, it does not stoop as much in walking; like that animal, it advances by thrusting its arms forward, resting the hands on the ground, and then giving the body a half-jumping, half-ewing motion between them. In this act it is said not to bend its fingers, but to make a fulcrum of its hand. When it assumes the walking position, it balances its huge body by bending the arms upward.

The gorillas live in bands, which are not so numerous as those of the chimpanzee. Only one adult male is said to be seen in a band; and when the young males grow up, a contest takes place for mastery, and the strongest, by killing and driving out the others, establishes himself as head of the band. Their dwellings, if they may be so called, consist simply of a few sticks and leafy branches, supported by the limbs of trees. The natives call the gorilla a fool, to make a house without a roof, in a country where they have so much rain. They say he has not so much sense as a certain bird,

FIG. 7.-THE GORILLA.

The gorillas live in bands, which are not so numerous as those of the chimpanzee. Only one adult male is said to be seen in a band; and when the young males grow up, a contest takes place for mastery, and the strongest, by killing and driving out the others, establishes himself as head of the band. Their dwellings, if they may be so called, consist simply of a few sticks and leafy branches, supported by the limbs of trees. The natives call the gorilla a fool, to make a house without a roof, in a country where they have so much rain. They say he has not so much sense as a certain bird,

which Mr. Wilson pointed out to Dr. Savage, which makes a large nest with a tight roof, then daubs it with mud in the inside, and, unfolding its wings, whirls round and round till the crevices are all filled, and the inside is smoothly plastered like a house.

The appearance of the gorilla when young is shown in the engraving on the third page. This animal is the most ferocious and intractable of the ape kind. M. Du Chaillu, who has studied this species more thoroughly than any other naturalist, says: "The difference in tamability between the young chimpanzee and the young gorilla is a fact which I have confirmed by numerous observations, and I must repeat it here, as it was one of those points which were disputed in my former work. A young chimpanzee becomes tame and apparently reconciled to captivity in two or three days

FIG. 8.—SKULL OF GORILLA.

FIG. 9.—HEAD OF GORILLA.

after he is brought from the woods. The young gorilla I have never yet seen tame in confinement, although I have had four of them in custody, while still of very early age."

The hunting of gorillas is attended with as much, if not more danger, than the hunting of the fiercest beasts known to the tropics. Among the natives of those parts of West Africa where gorillas abound, the killing of one is considered an act of great skill and courage, and they rarely attempt its capture except in self-defense. They call it Engé-ena. When the male is first seen by the adventurous sportsman, he gives a terrific yell that resounds far and wide through the forest, something like KA-ah! KA-ah! prolonged and shrill. His enormous jaws are widely opened at each expiration, his under lip hangs over the chin, and the hairy ridge and scalp is contracted on the brow. The females and young disappear at the first cry. He then approaches the foe, pouring out in quick succession his horrid yells. The hunter waits his advance with his gun extended; if his aim is not sure, he permits the animal to grasp the barrel, and as he carries it to his mouth, according to his habit, the hunter fires; should the gun fail to go off, and it is an ordinary musket, the thin barrel is crushed between the teeth of the gorilla, and the hunter perishes.

Du Chaillu gives the following interesting incident of gorilla habits: "I had not been at the village long, before news came that gorillas had been recently seen in the neighborhood of a plantation only half a mile distant. Early in the morning of the 25th of June I wended my way thither, accompanied by one of my boys, named Odanga. The plantation was a large one, and situated on very broken ground, surrounded by the virgin forest. It was a lovely morning; the sky was almost cloudless, and all around was still as death, except the slight rustling of the tree-tops moved by the gentle land breeze. When I reached the place, I had first to pick my way through the maze of tree-stumps and half-burned logs by the side of a field of cassava. I was going quietly along the borders of this, when I heard, in the grove of plantain-trees toward which I was walking, a great crashing noise, like the breaking of trees. I immediately hid myself behind a bush, and was soon gratified by the sight of a female gorilla; but before I had time to notice its movements, a second and third emerged from the masses of colossal foliage; at length no less than four came into view.

"They were all busily engaged in tearing down the larger trees. One of the females had a young one following her. I had an excellent opportunity of watching the movements of the imphish-looking band. The shaggy hides, the protuberant abdomens, the hideous features of those strange creatures, whose forms so nearly resemble man, made up a picture like a vision in some morbid dream. In destroying a tree, they first grasp the base of the stem with one of their feet, and then with their powerful arms pull it down, a matter of not much difficulty with so loosely-formed a stem as that of the plantain. They then set upon the juicy heart of the tree at the bases of the leaves, and devoured it with great voracity. While eating, they made a kind of clucking noise, expressive of contentment. Many trees they destroyed apparently out of pure mischief. Now and then they stood still and looked around. Once or twice they seemed on the point of starting off in alarm, but recovered themselves and continued their work. Gradually they got nearer to the edge of the dark forest, and finally disappeared. I was so intent on watching them, that I let go the last chance of shooting one almost before I became aware of it.

"The next day I went again with Odanga to the same spot. I had no expectation of seeing gorillas in the same plantation, and was carrying a light shot-gun, having given my heavy double-barreled rifle to the boy to carry. The plantation extended over two hills, with a deep hollow between, planted with sugar-cane. Before I had crossed the hollow, I saw on the opposite slope a monstrous gorilla, standing erect and looking directly toward me. Without turning my face, I beckoned to the boy to bring me my rifle, but no rifle came—the little coward had bolted, and I lost my chance. The huge beast stared at me for about two minutes, and then, without uttering any cry, moved off to the shade of the forest, running nimbly on his hands and feet."

In speaking of the untamable qualities of the animal, he thus alludes to a young

one which was brought to him: "I made at least a dozen attempts to photograph the irascible little demon, but all in vain. The pointing of the camera toward him threw him into a perfect rage, and I was almost provoked to give him a thrashing. The day after, however, I succeeded with him, taking two views, not very perfect, but sufficient for my object.

"During the few days Tom was in my possession, he remained, like all the others of his species that I had seen, utterly untractable. The food that was offered to him he would come and snatch from the hand, and then bolt with it to the length of his tether. If I looked at him, he would make a feint of darting at me, and in giving him water, I had to push the bowl toward him with a stick, for fear of his biting me. When he was angry, I saw him often beat the ground and his legs with his fists, thus showing a similar habit to that of the adult gorillas, which I described as beating their breasts with their fists when confronting an enemy. Before lying down to rest, he used to pack his straw very carefully as a bed to lie on. Tom used to wake me in the night by screaming suddenly, and in the morning I more than once detected him in the attempt to strangle himself with his chain—no doubt through rage at being kept prisoner. He used to twist the chain round and round the post to which it was attached until it became quite short, and then pressed with his feet the lower part of the post until he had nearly done the business."

THE GIBBON.

This genus (*Hylobates**) of apes comprehends several varieties, all of which are natives of the East Indies. They are nearly allied to the oranges and chimpanzees, being tailless, but are more slenderly formed. They are especially remarkable for the enormous length of the anterior extremities. The brain resembles that which is found in larger creatures of the monkey race. The arms, when they stand erect, very nearly touch the ground. The eyes are large and deeply seated, the nose is flat, and the ears small. A circle of gray hairs passes over the eyes, cheeks, and under the lower jaw, completely surrounding the visage and giving a very singular appearance to the gibbons. The hair on the back of the hands and feet is gray, in all other parts it is black, as is also the skin. No one of these creatures has been found exceeding three feet in height. Our illustration of the great gibbon may be taken as a fair representative of the whole gibbon class. There is the common gibbon, found in some parts of India; the agile gibbon of Sumatra; the dusky gibbon, found in Malacca and the Sunda Isles; the Hooloch, a native of the Garoow Hills, and the Siamang, a Sumatran species, and many others. All the gibbons are of gentle disposition, and easily domesticated.

FIG. 10.—HEAD OF GREAT GIBBON.

Nothing is more striking in the Malayan forests, where the gibbons are found to be numerous, than the grandeur of the vegetation. Creepers and vines appear intertwining larger trees, and hanging suspended for more than a hundred feet, in girth not less than a man's body, and many much thicker; the trees seldom under a hundred, and generally approaching from a hundred and sixty to two hundred feet in height. Among the branches of these trees the gibbons display the most astonishing activity. Sweeping from branch to branch with arrow-like velocity, they expend themselves by their long arms and, by an energetic muscular movement launch themselves onward, aiming at a distant branch, which they seize with the most admirable precision. Most of them live in families or troops; some frequent the mountain ranges covered with forests, while others keep to the forests of the plains.

THE BARBARY APE.

This species (*Inuus sylvanus*) is abundant on the Barbary coast, where it was first found. It is, however, native in India, and remarkable as being the only four-handed animal found on the European continent. The most celebrated abode of this species is the Rock of Gibraltar, in Andalusia, the most southern province of Spain, connected with the continent by an isthmus of low sand, and almost surrounded by the waters

FIG. 11.—THE BARBARY APE.

of the Mediterranean. Numbers of these apes have been observed on its summit, breeding in inaccessible places, and appearing in large droves, with their young on their backs, on the western face of the Rock. From these, showmen usually obtain their specimens. In the wild state they grow nearly to the height of four feet, and are remarkable for their docility. They walk most commonly on all-fours, and are very active climbers. They are gregarious, filling the forests with their vast troops, and openly attacking the enemies they think they can overcome, while they drive to a distance, by their numbers and screaming, any intruder of whose powers they are doubtful.

The Spaniards, a few weeks before the memorable siege, attempted the surprise of

* *Hylobates*, from the Greek for "wood-walker," or "one that goes through woods."

one of the British outposts, and they would have inevitably succeeded if they had not had to pass a party of apes, whose assemblage was quite as extraordinary as the project of the Spaniards. These, on being broken in upon by the invaders, set up a loud cry, and alarmed the outpost which was menaced. Shortly after the conclusion of peace, a party of officers belonging to this corps were amusing themselves with whiting-fishing at the back of the Rock, but were disturbed and obliged to shift their ground on account of being pelted from above, they did not know by whom. At last, however, they came to a place where they were left in peace, and where they caught plenty of fish. At this time the drums beat to arms, on some unexpected occasion, and the officers rowed their boat ashore, and left it high and dry on the beach, hurrying where their duty called them.

On their return, their surprise was excessive to find their boat beached, not half so high as they had left it, and at some little distance from its former position. Their

FIG. 19.—THE BABOON.

amazement was increased, on examining their tackle, to find some hooks baited which had been left bare, and to see the disposition of many things altered. The cause was afterwards explained. An officer of Hanoverian grenadiers, who was amusing himself with a solitary walk, happened to be a close observer of animal and vegetable nature. This man, hearing the

party from behind some rocks, arrived, who drove the youngsters away from the small proceedings of the whiting-fishers. The fishing party having beached their boat, the time was come for turning their backs to sea, and they launched the boat, put to sea, but the sport was small, as might be anticipated, but what few fish they caught was all they were tired they landed, placed the boat on the rock with their gear.

The Nshlego Mbouwe, or nest-building inhabits the gorilla country. It is of moderate size: its face when its head is bald, and its body is covered with the tops of huts in trees, with the tops of calvus is not gorgeous abide until the berries in the vicinity are consumed, when they remove and construct another nest. These huts are so well built that Du Chaffin was for a long time unwilling to believe that other than work of human hands.

The Kookra, or ape, was covered with hair, and resided in the

the human. The eyes are round, reddish, and have great vivacity. The hinder parts are naked and callous, and instead of a tail there is a small prominent piece of skin of five or six inches in length. The general color of the body is olive brown. According to M. Desfontaines, these apes live in great troops, and at Sara, in ancient Numidia, are exceedingly numerous. Their food consists chiefly of pine-apples, nuts, Indian figs, melons, and various kinds of roots and vegetables. Like many others of their tribe, they often go in a body to attack gardens and plantations, and notwithstanding every precaution that is taken in the way of defense, their depredations are frequently successful.

The varieties already considered belong to the first division of four-handed animals, or the apes which have no tails. We come now to speak of the second division, of short-tailed apes, commonly known as baboons.

THE BABOON.

The common name of this class of monkeys is supposed to have been derived from the Latin word *papio*, applied to them by the writers of the fifteenth and sixteenth centuries, which is itself a diminutive of the Italian word *babbo*, answering to *papa*. Cynocephalus, the name given to them by Cuvier, meaning *dog-headed*, is far more appropriate, as the marked resemblance to the head and face of dog is very striking. (See illustrations.) Their size is very large, their strength enormous, and their disposition usually fierce and malign, which renders them dangerous.

FIG. 20.—THE BABOON.

real or imagined danger. Their tones of voice on these occasions are so distinctly varied, that a person much accustomed to watch their movements will at length fancy—and perhaps with some truth—that he can understand their signals.

"The main body is composed of females, inexperienced males, and young ones of the tribe. Those of the females who have little ones carry them on their backs. Unlike the dignified march of the leaders, the rabble go along in a most disorderly manner, trotting on and chattering, without taking the least heed of anything, apparently committing in the vigilance of their scouts. Here a few of the youth linger behind to pick the berries off some tree, but not long, for the rear guard coming up forces them to regain their places. There a matron pauses for a moment to suckle her offspring, and not to lose time, dresses its hair while it is taking its meal. Another younger lady, probably excited by jealousy or by some sneering look or word, pulls an ugly mouth at her neighbor and then uttering a shrill squeal, highly expressive of rage, vindictively snatches at her rival's leg or tail with her hand, and gives her perhaps a bite in the hindquarters. This provokes a retort, and a most unladylike quarrel ensues, till a loud bark of command from one of the chiefs calls them to order. A single cry of alarm sends them all halt and remain on the *qui vive*, till another bark in a different tone summons them, and they then proceed on their march.

"The scouts, he scouts take their positions on the eminences all around, and under the tribe collect provision with the utmost expedition, filling their pouches as full as they can hold, and then tucking the heads of wheat there be a partition of the collected spoil, now do seem several times, and never observed them was time for the tribe to return, or till moment. They show also the same places where it is most best as men would, ved is con-

waited his turn. Eagerly did he follow the bottle with his eyes, and hold out his plate for his coveted portion; it having been found that, in drinking out of a glass, his impatience generally caused some of the spirits to run up his nose, which kept him coughing and sneezing for hours afterward. Le Vaillant was engaged in sealing a letter, when Kees was stooping to drink the brandy poured into his plate, and his master adroitly introducing a slip of lighted paper under his chin, the spirit was fired, the whole plate suddenly burst into flame, and the terrified animal, with a yell of indescribable horror, leaped backward, at one bound, twelve or fifteen feet. There he sat, looking intently and chattering loudly, so long as the spirit continued to burn; but from that time he could never be induced to taste it again, and the mere sight of a bottle was sufficient to fill him with terror.

FIG. 19.—THE MITRED MONKEY.

appearance—the cheeks being of a clear violet-blue color, with various oblique furrows, which are produced by a singular development of the bone, forming a socket for the roots of the immovable canine teeth, and furrowed also deeply. A bright vermilion begins a little above the eyes, runs down the nose, and spreads over the lip. The hair is small, but acute and sparkling—the iris being of a blue hazel color. The hair of the head is long, mostly growing upward, and terminating in an acute point. The head is long, erect, and of a yellowish hue. The body is covered with stiff bristle-like hairs, each of which has rings of black. The tail is small, taper, and well made; and the chest is extremely hairy. These monkeys generally live in troops, and are said to put to the test of being domesticated unless taken very young. I exhibited some years ago in England in a menagerie.

was placed, and in this, when directed, he was at a variety and evident satisfaction, he smoked some pipes were performed with great alacrity. He smoked his pipe and presented it to him, he was so eager, as if to know it was when introduced almost up to the it was retained without any smoke was not done, and he was actually but his cheeks puffed out and this smoke from his mouth, nose, and Still, he does not appear to eat taste to humanity itself—the commencement of the that time, smoking and the combination of the and his fondness for that was given him, to

quadrumana which termed monkeys, are denominated of quadrumana

pouches are wanting. The body is slender; the limbs long and thin; the thumbs of the hands small; the tail is long and slender; and the fur soft, flowing, and often glossy. One of the most singular of these varieties is

THE NASALIS OR PROBOSCIS MONKEY.

This animal is remarkable for a peculiar development of the nose, rudimentary at an early age, but afterward forming a proboscis capable of being dilated, having apertures underneath the bent down point, and divided from each other by a thin cartilage. The ears are small, and the face, together with the palms, are of a leaden color, with a slight tinge of yellow. On the sides of the neck, which is short, and on the shoulders, the hair is long compared with that of the rest of the body. The top of the head

FIG. 20.—THE WANDERBOO MONKEY.

It can leap fifteen feet or more. Its fur is thick, and is not long or woolly. The engraving furnishes a good representation of this animal.

Portions of India literally swarm with monkeys. For instance, Bangalore, a city of Mysore, is completely hidden by a dense grove, which stretches round it, and is penetrated at different points by roads leading to the gates. This grove is said to be "a perfect metropolis of monkeys." Swarming in thousands, they chase each other on the roads, caper on the hedges, chatter on the boughs, grin hungrily at every one who passes with any cask, and are a constant pest to every housewife in the city, discovering unsuspected passages to her larder, forestalling the meat, and, after rioting in the spoil, making a hasty retreat.

Among those which are the most worthy of notice, or which the natives specially esteem, are the long-tailed and graceful Entellus, the Douc, and the Talapoin. The Entellus, of which we have no apt illustration, is held sacred in some parts of India, particularly in Lower Bengal.

The origin of the veneration which multitudes cherish for this animal is involved in the obscurity of their early history, and may be traced back to the most remote periods. The superstitions and traditions of the Brahmins, in reference to monkeys, hold a prominent place in the "Ramayan," which has been styled a "great epic poem." It describes a struggle between the Hindoo gods, on the one hand, under Rana, and a nation of demons on the other, who are called Rackschases, and who, under their King Ravana, are supposed to reside in the island of Ceylon. The former, assisted by an invulnerable tribe of monkeys, under their chief, Hoonuman, at length triumphed over the latter.

THE DIANA MONKEY

is distinguished by the peculiarity of its hair, and was so named by Linnaeus, from the fancied resemblance of the crescent-shaped bar which ornaments its brow to the ancient poetical representation of Diana, the goddess of light, or the moon. Its color is peculiarly varied and graceful. The head, neck, sides, and middle of the body beneath are of a deep ash color, which becomes gradually darker on the outside of the limbs, and is finally converted into a deep black on the hands.

The sides of the face are ornamented with broad tufts of white hairs, which are somewhat bushy, and terminate on the chin in a thin flat beard of two or three inches in length. The length of the animal is about eighteen inches, and that of the tail about two feet.

Mrs. Bowdich, in describing her "Voyage Home" from Western Africa, gives an interesting account of a Diana monkey which was on board. "We made acquaintance," she says, "very suddenly, and, to me, disagreeably, for I had not till then conquered the foolish aversion with which these animals always inspired me. It was a dead calm, the wheel was lashed, and all, save myself, below; nothing round us but sea and sky, and I had sheltered myself with a book in a corner protected from the equatorial sun. Suddenly, and without noise, something leaped upon my shoulders, and the tail which encircled my throat convinced me that Mr. Jack was my assailant. My first impulse was to beat him off, in which case I should probably have received some injury; but, fortunately, I sat perfectly still, and twisting himself round, he brought his face opposite to mine and stared at me. I endeavored to speak kindly to him, upon which he grinned and chattered, seated himself on my knees, and carefully examined my hands; he then tried to pull off my rings, and was proceeding to a bite

FIG. 21.—THE RHESUS MONKEY.

for this purpose, but I gave him some biscuit which happened to lie beside me, and making a bed for him with a handkerchief, he settled himself comfortably to sleep, and from that moment we were sworn allies.

"The amusement afforded to me and others by Jack made him tolerated when his mischievous propensities would otherwise have condemned him to perpetual confinement. He was often banished to an empty hen-coop, but as this made no impression upon him I always tried to prevent it, which he knew so well, that, when he had done wrong, he either hid himself or sought refuge near me. Much more effect was produced by taking him within sight of the panther, who always seemed most willing to devour him.

"On these occasions I held him by the tail in front of the cage, but long before I reached it, knowing where he was going, he pretended to be dead; his eyes were closed quite fast, and every limb was as stiff as if there were no life in him. When taken away he would open one eye a little to see whereabouts he might be, but if he caught a glimpse of the cage it was instantly closed, and he became as stiff as before. He clambered into the hammocks, stole the men's knives, tools, handkerchiefs, and even the nightcaps off their heads, all of which went into the sea. When biscuit was toasted between the bars of the caboose, and the dried herbs boiling in the tin mugs, he would rake the former out and carry it away, and take out the latter and trail them along the planks; if he burnt his paws he desisted for a day or two; and he often regaled the parrots with the biscuit, biting it in small pieces, and feeding them with the utmost gravity. At other times he would knock their cages over, lick up the water thus spilled, eat the lumps of sugar, and pull the birds' tails. When he thought fit to ride, he would watch behind a cask, on the days the pigs were let loose, dart on their backs as they passed, dig his nails into them to keep himself on, and the faster they ran and the more they squealed, the happier he seemed to be.

"His most important misdemeanors, however, were performed to the injury of his fellow-monkeys, of whom he was very jealous. The smaller ones were very obsequious to him, and when he called them by a peculiar noise, they came, hanging their heads,

FIG. 22.—THE COAITA.

FIG. 23.—THE MELANOCHIEIR.

and looking very submissive; and in one week the two admitted to the cabin were drowned out of sheer malice. I saw him throw the first overboard, and the poor little thing swam after us some time, but the ship was going too fast for even a rope to be effectually thrown out, in the hope he would cling to it."

THE MONA.

More graceful in form and beautiful in its markings than the Diana is the Mona Monkey. The top of its head is of a greenish yellow mingled with a slight tinge of black, and the neck, back, and sides are of a deep chestnut brown, extending as far as the shoulders and haunches, when it changes into a dusky slate color, which is continued on the limbs and the tail. The under surface of the body and the inside of the limbs are of a pure and delicate white, separated from the neighboring colors by an abrupt line. The naked upper part of the face, comprehending the orbits of the eyes, together with the cheeks, is of a bluish purple; the lips, and as much of the chin as is without hair, are flesh-colored. On the sides of the face large bushy whiskers of a light straw color, mixed with a few blackish rings, advance and cover a considerable portion of the cheeks. Above the eyebrows is a transverse black band, extending on each side as far as the ears, and surmounted by a narrow crescent-shaped stripe of gray, which is sometimes scarcely visible. The ears and the hands are of a livid flesh color.

Of the Monstached Monkey several naturalists have spoken, and of it there was a living specimen in the Paris Menagerie. It has a resemblance to the Mona in the forehead and the sides of the face, but its tufts of hair are more gray, and it has no white spots on its body. Cuvier considers the species to belong to a group of which the Mona is the type, gentle in their dispositions, and responding to kindly treatment.

Another curious structure of the hair is seen in the Mitred Monkey, of the head of which we give also an engraving. This animal has curled hair; above, it is bluish gray—below, it is grayish white; a black line runs from the upper part of the ears across the head.

THE GREEN MONKEY.

This animal is a native of the Cape Verd Islands and the East Indies. Its color, which is of a greenish-yellow above, is the effect of the numerous rings of hair of various shades of yellow and black, but it assumes more of a dark grizzled appearance on the sides of the body and outer sides of the limbs, which become gradually darker toward the hands. The face, ears, and naked part of the hands are of a jet black; the face is of a triangular shape, bounded above the eyes by a straight line of stiff black hairs, with a yellowish tinge, meeting in a point beneath the chin. The neck and chest are white; the under parts of the body have a yellowish tinge; and the inside

of the limbs is gray. The length of the head and body is sixteen or eighteen inches, and that of the tail somewhat more. Like most of its family, it is brisk and frolicsome, and has a remarkable tendency to imitation. In this variety the Werner Monkey is conspicuous—so called from an able artist to whose illustrations zoological works are much indebted; it is of a reddish fawn color; its head having, as our engraving shows, bands of hair of two colors, presents a remarkable appearance.

THE MALBROUK.

This creature is described by F. Cuvier as of truly arboreal habits; walking with difficulty on the ground, and exhibiting the greatest activity when sporting on the bars of its cage. The one he observed would sustain itself by a succession of darts from one side of its cage to another, performed by the force of its feet alone, keeping up this severe motion for a considerable time. When young, it was docile and mild tempered, but as it grew old, it became savage and sullen. The chief characteristic of its disposition was extreme caution, or, as it were, an arrangement beforehand, or previous plan of action. Thus, in its attacks, it watched the opportunity, when the person or animal was off his guard and otherwise employed, making the attack from behind. The countenance of this creature becomes more like that of the baboon, as it advances in life.

FIG. 24.—THE WERNER MONKEY.

The feet are black, and so is the skin of the ears; the cheeks, chin, and a band above the eyes are white, as also are the under parts and the insides of the legs; all the rest is of a yellowish green, and the general contour is so similar to the Green Monkey, that when young it has been mistaken for that animal. Our engraving represents a side view of this animal's head. Mr. Parkyns relates the following incident, showing their great natural cunning;

"At Khartûm, the capital of the provinces of Upper Nubia," he says, "I saw a man showing a large male and two females, who performed several clever tricks at his command. I entered into conversation with him as to their sagacity, the mode of teaching them, and various other topics relating to them. Speaking of his male monkey, he said he was the most dexterous thief imaginable, and that every time he was exhibited he stole dates and provisions enough for the day. In proof of this, he begged me to watch him for a few minutes. I did so, and presently the keeper led him to a spot near a date-seller, who was sitting on the ground, with his basket beside him. Here his master put him through his evolutions; and although I could perceive that the monkey had an eye to the fruit, yet so completely did he disguise his intentions, that no careless observer would have suspected them.

"He did not at first appear to care about approaching the basket; but gradually brought himself nearer and nearer, till at last he got quite close to its owner. In the middle of one of his feats he suddenly started up from the ground on which he was

lying, stretched like a corpse, and uttering a cry as of pain or rage, fixed his eyes full on the face of the date-seller, and then, without moving the rest of his body, stole as many dates as he could hold in one of his hind hands. The date man being started out of countenance, and his attention diverted by this extraordinary movement, knew nothing about the theft till a bystander told him of it, and then he joined heartily in the laugh that was raised against him."

THE WANDEROO.

This powerful little animal is a native of Malabar and Ceylon. Some of

FIG. 25.—THE BROWN SAJOU.

this species are described as being as large as English spaniel dogs. Their general color is black; the tail is of moderate length and tufted at the tip; the face is encircled by a mane of long hairs (see illustration) of a white or light ash color. They do but little mischief, keeping in the woods, eating only leaves and buds of trees; but when caught, readily eat almost anything eatable.

THE RHUNDER OR RHESUS MONKEY.

This is a Northern India monkey, migratory in its habits, visiting the Himalaya Mountains in summer. The Hindoos hold this animal in great veneration, and refrain from killing or injuring them, though they commit frequent depredations upon the plantations. The native farmers, however, leave a share for these monkeys, believing this to be necessary for averting their anger, as otherwise next year they would destroy the whole crop while yet green. The Rhesus has a stout frame, short ears, a

short tail, large callosities, the skin hanging loose about the throat and abdomen, the hair rather long, the back brownish, the lower part of the back and haunches bright chestnut or almost orange, the shoulders and arms lighter. It is intelligent when domesticated, but mischievous, cunning, secretive, and rat-like—to which animal the face bears a strong resemblance.

An intelligent traveler living in an Indian bungalow which overlooked a bazaar has graphically described a ludicrous instance of monkey thefts.

"The Rhunder reclined on a roof, fronting a sweetmeat shop, feigning to be asleep, but every now and then raising his head to enjoy a glimpse and catch a stimulus from the piles of good things below. It was, however, of no use, for sitting beside his stores was the seller looking as if he were far from a doze, and absolutely 'wide-awake.' So it was for a good half hour, when the monkey got up, yawned, and stretched himself artfully as if he had only just awoke. He began to play with his tail, and even 'made believe' he was tying knots in it, as if on this he were wholly intent, but ever and anon stealing sly looks over his shoulder at the sweetmeat stall, only, however, to see the seller still there, speculating as to how he could invest the profits of his stock to the best possible account.

"The monkey was now clearly taken aback, and so he again whiled away his time and impatience in some of those amusements so common to his race. But suddenly the confectioner rose from his seat, took up his pipe and turned toward the door of

FIG. 26.—CAPUCHIN SAJOU.

FIG. 27.—HOODED SAJOU.

his back-room for a fresh supply of 'the fragrant weed.' Instantly the monkey was on all-fours, and the sweetmeats were the only things he saw. In another moment he had cleared the street, was banqueting on the coveted dainties, and began to cram his cheek-pouches with them for after-indulgence. But alas! for the spoiler! there were others there—a cloud of hornets had already settled on the sweets, equally voracious as himself. His lightning-like descent so startled them that they were unfitted for immediate revenge, but before he could regain the roof the hornets were on him in a mass, and right heartily did they sting the invader of their feast. His efforts at escape became frantic, smashing and scattering the tiles as he went on; he got on a roof, but it was covered with the branches of a small thorny shrub, the barbed prickles of which cling to the flesh like fish-hooks, and endeavoring to shake one branch off, he became as entangled in them as if he were in the midst of a thicket. Unable to move or turn, and with his wounds bleeding, he sat a picture of helpless misery, if not remorse, spurted out his stolen property from his cheek-pouches, and barked hoarsely through the bushes. The rumble of dislocated tiles without, and the fall of broken plaster within, brought out speedily a crowd of natives to the streets. These were soon joined by the confectioner, who approached them running, with his turban half unwound and streaming behind him for a couple of yards. All laughed at the discomfited thief, but as the culprit was a monkey, and therefore an object of respect and veneration, two Hindoos got on the roof, and with great difficulty rescued him from the thorny branches on which he had become impaled, when he limped off as well as he could to a neighboring grove."

MONKEYS OF AMERICA.

It is a remarkable fact, that while certain species of monkeys are peculiar to the Old World, others are equally so to America—the four-handed animals of the one hemisphere never having been found in the other. The American species may always

FIG. 28.—THE HORNED SAJOU.

FIG. 29.—HORNED AND MOUSTACHED SAJOU

be distinguished, as the engraving shows, contrasting the rhesus and the brown sajou, by the lateral position of the nostrils, between which there intervenes a considerable space. To this invariable sign of distinction may be added another less universal; for no American species has ever been discovered in which the tail is

wanting. This member in every such species is long, and has the under surface naked, which enables the animal to grasp anything tightly with its folds. This peculiarity is not found in any species proper to Asia or Africa. When, too, the tail is extended, it naturally, and without any voluntary effort, forms a hook-like curve at its extremity, just as the claws of a bird contract and grasp with firmness solely by the bending of the leg and sinking down of the body, in the natural posture of rest, on a twig or perch. In both instances, the design is the same—security during sleep, without any effort of the will. A third peculiarity in many American monkeys is the imperfect state of the thumb, which is reduced, in some instances, to a mere rudiment, and in others is altogether wanting. On the ground the American monkeys are exceedingly awkward and embarrassed, dragging themselves along with pain and difficulty, their loosely-jointed limbs apparently yielding no support; but in the trees they exhibit the most astonishing agility, suspending themselves by the tail, and bounding from one distant bough to another with the greatest address, or traversing the smallest branches with the utmost ease and rapidity.

FIG. 30.—THE ERIODE.

FIG. 31.—THE METIS.

In one genus (*Mycetes*) are found the Howling Monkeys, which are robust in form; the lower jaw is expanded, the muzzle is prominent, and they have a thumb well defined, on the fore-hands.

The Indians assert that when these monkeys fill the forests with their howling, one of them always chants as leader of the chorus, and Humboldt considers that the Indians have good ground for this assertion. One solitary and powerful voice is generally distinguished from the rest for a considerable space of time, till its place is taken by another voice of a different pitch. The same peculiarity has been noticed among frogs, and almost all animals that live together and exert their voices in unison. When any extraordinary sounds—such as the groans of a dying monkey—arrest the attention of the band, the howlings are suspended for some minutes. Humboldt's guides gravely assured him that to drink out of the bony drum of one of these creatures is a certain cure for an asthma. This animal has, indeed, such an extraordinary volume of voice, that the Indians ignorantly imagine that the larynx must necessarily impart to the water poured into it the virtue of curing affections of the lungs!

Our illustration of the head of the *Eriode* is a fair representative of this class, though much smaller than some. The head is rounder; their hands are provided with thumbs, their tail is long and prehensile.

THE SPIDER MONKEYS.

The *Coatis* is one of an extensive group called Spider Monkeys, which are remarkable for the ease, rapidity, and freedom of their movements among the branches of the forest. They move onward by means of a series of swinging evolutions, in the performance of which the limbs and the tail take an equal share. In ascending or descending, or in traversing the branches of trees, the tail is constantly put in requisition; they coil it round branch after branch in their passage, turning it in various directions, and applying it with wonderful precision. They often suspend themselves entirely by means of the tail, and swinging until a sufficient impetus is

gained, launch themselves to a distant branch, or, stretching out their arms, catch it as they vibrate toward it. The touch of the tail is finger-like; and it is capable of seizing small objects with great nicety. The extremity of the tail is often introduced as a foot into the fissures and hollows of trees, for the purpose of hooking out eggs and other substances. The Brown *Coatis* is of a uniform reddish-brown color; when full grown, measures rather more than two feet in length; the tail is a little longer. The hair is fine and soft. The *Chuva*, the *Melanocheir*, and the *Metis* are also species of the Spider Monkeys.

FIG. 32.—THE MASKED CALLITHRIX.

THE SAJONS.

The tail in the *Sajon* tribe has not the acute sensibility and mechanical dexterity of the last named. In lieu, however, the strength is diverted to the limbs, which are well developed. These animals are intelligent, mischievous, and inquisitive. Their

activity is surprising. In their native forests in Brazil and the Guianas they live in troops, feeding on fruits, grain, insects, and eggs. So amusing are they in their gambols that the apathetic Indians will stop in their canoes to watch them. As in all their movements, so constant and varying, the females carry their young on their backs, it might be expected that the young ones were constantly in danger of injury from falls. But they are not; for they are provided with an instinct which induces them, in sailor phrase, "to hold on." Nor is this all; structure aids the offspring in clinging to its mother with the greatest tenacity, its extremities, and especially the anterior limbs, being very strong.

Of these, we engrave the head of the Hooded *Sajon*, the Capuchin *Sajon*, the Furred *Sajon*, the

FIG. 33.—THE NYCTIPITHECUS FELINUS.

Horned *Sajon*, and the Horned and Moustached *Sajon*. The Capuchin is distinguished for the roundness of its skull, the shortness of its muzzle, and prehensile tail. Its food consists chiefly of Brazil nuts, of which they are extremely fond. The Horned *Sajon* attains to a considerable size, but is of gentle and tractable disposition. Its name is taken, as the engraving shows, from two bushy tufts of hair issuing from the base of the forehead, and producing a resemblance to horns. These mimic horns do not appear until the animal has reached maturity. It is a native of Guiana. Another singular creature is the Horned and Moustached *Sajon*, who really presents a most comical expression. The organ of Mirthfulness is doubtless largely developed in his head. He is a native of Brazil.

THE MASKED CALLITHRIX.

The engraving shows the very remarkable head of this creature. The prevailing color is a grayish-yellow; the head and the four hands are black, and the tail is of a reddish hue.

Lieutenant Edwards, during his voyage up the Amazon River, saw a monkey that had climbed to the top of a house, and could not be persuaded by threats or entreaties to come down. He ran over the roof, displaced the tiles, peeped into the chambers below—for there are no ceilings in that country—and when he was called, imitated an action he had often observed, by putting his thumb up to his nose. On being shot at with corn, he held before him a rag that he had picked up, and so tried to evade the discharge, every now and then slyly peeping over the top. At last he was left to himself, and then came down of his own accord.

FIG. 34.—THE COUXIO.

The *Nyctipithecus Felinus* is given as a specimen of the *Dorroucouli* genus. Its habits are nocturnal, and it sleeps during the day. Greatly annoyed by the light, it seeks the hollow trunks of trees and similar dark places for concealment. On night approaching, it glides cat-like through apertures so narrow as to be incapable of admitting it, and its movements resemble those of the civet tribe. The nocturnal cry of this animal is extremely loud and sonorous, and resembles that of the jaguar. It has also a kind of mew, like the mew of a cat, and a deep, harsh, guttural note represented by the syllables *quer, quer*. When irritated, its throat becomes distended; and in its posture, as well as in the fluffy state of its fur, it resembles a cat attacked by a dog.

THE COUXIO.

Various are the names that have at different times been given to this monkey. Its head, limbs, and tail are black. The hairs of the body are pale at the roots, sometimes, indeed, nearly white. The under parts are scantily covered. The hair of the head radiates from a point, and on the sides of the forehead forms two large elevated tufts, with a depression between them. These tufts, when fully grown, fold over and conceal the ears, which are black and naked. The face has at its sides full bushy whiskers, which meet under the chin, forming an enormous glossy black beard. The teeth are large, the canines formidable.

The *Couxio* is agile, wild, and very difficult to tame. Its habits are nocturnal. When irritated, it assumes an erect posture, grinds its teeth, rubs the extremity of its beard, and jumps around the object of its dislike. Humboldt says he has seen it in its fury drive its teeth into thick boards. Nothing enrages this monkey so much as wetting its beard. In drinking, other American monkeys bring their lips to the

liquid; this creature inclines its head upon its shoulder, lifts the water in the hollow of its hand, and carries it in this way to its mouth, and drains it with great deliberation. Humboldt thinks that this mode is adopted to prevent the wetting of the beard, which could not be avoided were the water imbibed in the usual way.

THE MARMOSET MONKEY.

The full soft fur which clothes the body of this little creature, the beautiful tufts of hair which, in most species, adorn the sides of the head, the long bushy tail, the small fore-paws, and the crouching or semi-erect position assumed in eating, remind us of the peculiarities of the squirrel. It inhabits the woods of the tropical portions of South America that border on the Amazon and the other great rivers. The conformation of the teeth gives it great facilities in devouring insects, the crowns of the grinders having sharp conical elevations instead of rounded tubercles.

The beauty of the Marmosets, their diminutive size, for some of them are so small that they could be entirely covered with a common breakfast cup, and their freedom from the petulance and malice of many of the monkey tribes, render them great favorites. Even in their native regions they are

sold to the Spanish colonists for a considerable price. They have not the activity for which many monkeys are remarkable. They do not bound from branch to branch with bold and vigorous leaps, yet the expression of Shakespeare was appropriate when he spoke of "the nimble Marmoset." These creatures are often called *Quistiti*, from their sharp whistling cry.

The mode of capturing these beautiful little animals is singular. Arrows dipped in weak poison are discharged at a group, and then a great number of young monkeys are taken alive at once; for the titi, in falling, remains clinging to its mother, and if it be not wounded, it does not quit the shoulder or the neck of its parent, even when dead. Most of those found alive in the huts of the Indians have been thus captured. Those that are full grown, when cured of a slight wound, generally die before they can be used to live in bondage.

The Striated Monkey, or Striated *Quistiti*, is a native of Guiana and Brazil, and is another of the Marmoset family. The head and body of this animal do not exceed twelve inches in length. The tail measures nearly the same. Its face is naked and swarthy; ears large, and like the human. Its fur is long and soft, of a fine dark-gray or reddish-brown color, banded with black. On each side of the face it has a long tuft of white hairs.

The Mico, or Fair Monkey, is another native of the banks of the Amazon. It is a most beautiful specimen of the class. Its head is round, its eyes vivacious and spirited, its face and ears a lively vermillion color; its body is covered with long hair of a bright silvery whiteness and uncommon elegance; tail long, and of a shining chestnut color.

According to Humboldt, the Marmoset or Titi has a face the greatest resemblance to a child of any of its species. There is the same expression of innocence, the same playful smile, the same rapid transition from joy to sorrow; and when frightened, its eyes instantly fill with tears. The head of Weddell's Marmoset, which we engrave, shows that its scale of intelligence does not come up, by any means, to the chimpanzee or orang-outang, and a comparison of their skeletons shows a vast difference in the bony structure of the framework.

The spinal column in these little creatures is especially framed to accommodate itself to the movements and twistings of such agile animals. The tail is most elaborately constructed. The brain is of a low degree of development. The convolutions which are found in the brain of the chimpanzee and orang are here entirely wanting. The skull is well made and in good proportion to the body; the osseous covering of the brain is well compacted with the bones of the face.

A novel mode of catching Brazilian Monkeys recently put in practice is worthy of mention. The hunters engaged in trapping them had a lot of boots made just large enough to be drawn over a monkey's foot, and filled the bottoms with pitch. With these they set out for the woods, and soon found themselves under the trees, where the monkeys went rattling on over their heads, but never for a moment removing their eyes from them. Then they placed the boots where they could be seen, and commenced taking off their own boots. Having

done this, they let them stand awhile near the little boots. All this the monkeys carefully noticed. The hunters were too wise to attempt to catch them by climbing the trees; they might as well have expected to snatch the moon as to lay hands upon one of these little fellows. They had an easier way than this, and one more effectual; they sat down under the trees while the little chatterboxes were rattling on over their heads, but never for a moment removing their eyes from them. The hunters now taking up their own boots, having carefully looked over them, drew them slowly one after the other upon their feet. Not a motion escaped the observation of the monkeys. Having replaced their boots they hurried away into the thicket of undergrowth not far off, where they were hidden from the sight of the monkeys, but where they could see every-

FIG. 38.—THE STRIATED MONKEY.

thing that happened under the trees. They left the small boots all standing in a row. The monkeys soon descended from the trees, and imitating the motions of the hunters, thrust their feet into the boots set as a trap for them, chattering and gesticulating all the time in great glee. As soon as they were fairly in the boots, out sprang the hunters from their hiding-places and rushed among them. The monkeys affrighted at once started for the trees, but only to find that they had destroyed their power of climbing by putting on the boots. So they fell an easy prey to their cunning enemies.

CONCLUSION.

Many other diverting incidents might be recited. In conclusion, we will briefly notice the comparative intelligence of the monkey, the gorilla, and man. The extraordinary instinct displayed by the higher species of apes has led some learned observers to ascribe to them intellectual faculties akin to the human. Let us look at these for a moment. We have already indicated the prominent peculiarities of cerebral organization in the chimpanzee and orang-outang, and have shown how greatly below the human type that organization appears on careful examination. Size, conformation, internal structure, habits, and disposition indicate the brute. The phenomena of instinct in the lower animals vary with the quality and character of organization. The bee, the sparrow, and the beaver exhibit intelligence in the construction of their habitations, and in this respect vie with the best of the ape family. The parrot, the magpie, and the starling are taught to mimic to the extent of clearly uttering words and sentences. The horse, the dog, the elephant, are trained to perform astonishing feats. The chimpanzee, with his relatively larger and superior brain, exhibits a wonderful aptitude for imitation; this faculty, because of occasional instances in which it has been carried by the animal to an unexpected extent, has led some men, without much forethought, to elevate him above the brute. If we visit the native haunts of this wisest of the beasts we do not find any special marks of a more than instinct intelligence. The chimpanzee of to-day lives and acts precisely like the chimpanzee of the past. His habits and disposition are the same. In this respect he is no more remarkable than other orders of the animal kingdom. The instinct which characterizes his race has likewise been transmitted from age to age. Man as an intellectual being gifted with powers above instinct is both subject to and the agent of change. He is progressive and improvable. Even at the lowest stage of ignorance and debasement, man, when influenced by civilizing and refining agencies, exhibits a striking susceptibility to improvement. The missions established in South Africa among the Hottentots and Bushmen have found among even those low races, men whose facility in acquiring education soon made them indispensable as assistants in disseminating the seeds of Christian truth in that darkened region. Looking at the ape from the phrenological point of view, we notice strong perceptive faculties; these enable him to make accurate observations, and his quick instinct, stimulated by strong propensities, or the self-protecting faculties, takes advantage of those observations for animal gratification. We find nothing which indicates moral qualities in the chimpanzee. Its social tendencies, its self-preservative qualities, and its power to imitate, probably, in some respects, exceed those capabilities as observed in other animals, but these after all are but animal instincts, and these are common to all chimpanzees. Those faculties which in man subserve his purposes of mental and spiritual improvement; those which find enjoyment in the pursuits of science, art, literature, and mechanical invention; those which conduce to patience, contentment, sympathy, and devotion; those, in fine, which rise far above the sensuous and animal, are not found in the organization and external characteristics of the ape. The latter eats, drinks, gambols, displaying, it is true, great dexterity in procuring food and providing for its other bodily necessities, and marvelous agility and balancing power, but what more? One can not credit it with conscientiousness, but can with selfishness—an animal quality; or with benevolence, but can with parental affection and attachment; or with reasoning ability, but can with secretiveness, constructiveness, imitation, individuality, size, weight, and other perceptive faculties. And the possession of those we have designated is sufficient to account for all that is claimed as wonderful in the conduct of the animal.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

WOMAN'S WORK IN THE CIVIL

WAR. A Record of Heroism, Patriotism, and Patience. By L. P. Brackett, M.D., author of "History of the Civil War," "Philanthropic Results of the War," "Our Great Captains," "Life of Abraham Lincoln," "The Camp, the Battle-field, and the Hospital," etc., etc.—and Mrs. Mary C. Vaughan. With an Introduction, by Henry W. Bellows, D.D., President U. S. Sanitary Commission. Illustrated with sixteen steel engravings. Zeigler, McCurdy & Co., No. 501 Chestnut Street, Philadelphia; Lombard Block, Chicago, Illinois; No. 509 Olive Street, St. Louis, Mo. 1867. 8vo., pp. 799. Price, from \$3 75 to \$6, according to style of binding.

No account of the tremendous conflict which shook the American continent for more than four years can be called complete if it ignores the important part sustained by many heroic women in the camp, on the field, and in the hospital. The many accounts which have become familiar as "household words," of women who sacrificed the comforts and luxuries of home to share the exposures and privations of the soldier "at the front," and to nurse and cheer him when wounded or sick, evidence the part and lot she had in the matter. How many precious lives were saved by "ministering angels" in the camp, or through the earnest co-operation of those who at home spared neither time or money that they might send to the suffering boy in blue needed supplies, it is impossible to estimate! In the preparation of the volume under consideration, the talented author and authoress strove to include every name worthy a place in such a record.

Three and a half years of labor and correspondence were expended upon it. Here are biographical sketches, more or less complete, of two hundred of the representative women, who, in camp, field, or general hospital, in the not less arduous, though less romantic labors of the Aid Societies, in the relief and instruction of freedmen and white refugees, in volunteer refreshment saloons, soldiers' homes, or other labors sought to benefit those who were sufferers in consequence of the war. In addition to these two hundred, there is a briefer mention of nearly three hundred others. Of course, there are thousands more unnamed heroines of whom these are but the representatives, women of whose noble deeds, as Dr. Bellows well says in his eloquent introduction, "God himself keeps the record! It is too sacred to be trusted to men."

Great care and judgment have evidently been bestowed by the authors of this work in their selection of the representative women who should find a place in it. All sections of the country, all classes of social life, all denominations of religious belief have their representatives, yet with wise care and reticence there is no prominence given to this distribution. The jealousy of sections, the diversity of social position, the variety of religious views are all made subordinate to the intense loyalty and patriotism, the philanthropic zeal and the earnest longing to be of service to a cause so precious.

The sanction and hearty approval which the work has received from the U. S. Sanitary, the Western Sanitary, and the Christian Commissions, sufficiently stamp its authenticity and merits. The narratives are, so far as we have had opportunity of observing, all interesting and

well written, and many of them furnish in their *naïveté* and simplicity the deepest elements of pathos. In its typography, its fine steel illustrations, and its binding, the externals of the book are worthy of its contents. Mrs. Mary C. Vaughan, of 430 Broome Street, is the agent for its sale in New York city.

SIX MONTHS AT THE WHITE

HOUSE WITH ABRAHAM LINCOLN. The Story of a Picture. By F. B. Carpenter. New York: Hurd & Houghton. \$1 50.

We have received from the author's own hands a copy of this interesting book. Every loyal ear has heard of the celebrated picture which Mr. Carpenter produced by months of close study and assiduous labor at the easel—"Lincoln and his Cabinet"—and the book which chronicles the experiences of those months, especially the interviews and associations with the lamented "martyr" during the progress of the work, must command the interest of all who revere his memory and sympathize with the great occasion which that cabinet scene thus pictured forth commemorates. Many incidents are given from the ordinary routine of President Lincoln's daily life while administering the affairs of government which serve to illustrate the man as he was, plain and unpolished yet earnest and humane. Says Mr. Carpenter in his preface, "My aim has been throughout these pages to portray the man as he was revealed to me, without any attempt at idealization." Probably no better collection of characteristic sketches of Mr. Lincoln has been published.

THE BANKRUPT LAW OF THE UNITED STATES, 1867. With notes and a collection of American and English Decisions upon the Principles and Practice of the Law of Bankruptcy. Adapted to the use of the Lawyer and Merchant. By Edwin James of the New York Bar, and one of the Framers of the recent English Bankruptcy Amendment Act. New York: Harper & Brothers. 8vo. Cloth, pp. 325. \$3 50.

This valuable compilation, having for its author a lawyer of acknowledged ability, particularly in cases involving commercial interests, and being issued at a time when much financial embarrassment exists or is imminent, claims special attention. The numerous cases which are quoted as bearing directly upon the subject of the New Bankrupt Law, and showing its equitable bases, are important aids to the lawyer in preparing a case which involves the question of bankruptcy. The numerous decisions in both American and English courts cover an extensive field of inquiry, and present the most complete digest published relating to the subject under consideration. The work is very complete as a law-book, and no well-selected library in an attorney's office or a merchant's counting-room should be without it.

THE LIFE AND ADVENTURES OF NICHOLAS NICKLEBY. By Charles Dickens. With original illustrations by S. Eytinge, Jr. Boston: Ticknor & Fields. Diamond edition. Cloth, \$1 50.

If the truth were known, it would be found that no book published within the past twenty years wrought so much substantial good in the conduct of English schools as Nicholas Nickleby. Certainly no book brought out in such vivid and truthful colors the errors and abuses of juvenile education in some parts of the "Christian land." Nicholas Nickleby is a book which will live green and fresh for generations, and Messrs. Ticknor & Fields present it in such compact and convenient shape that it can readily be accommodated to any library.

WELLS' EVERY MAN HIS OWN

LAWYER, AND BUSINESS FORM BOOK. A Complete Guide in all matters of Law and Business Negotiations. For every State in the Union, etc. New edition, revised and enlarged. New York: Benj. W. Hitchcock. 12mo. 650 pp. \$3 00.

This new edition of a well-known family and general Law Book contains the most recent modifications in the modes of administering justice and equitable rights between man and man, and forms an excellent digest of those matters which affect the business man or the farmer. Forms are prescribed for drawing the necessary papers in suits, and succinct instructions are given for their prosecution, without legal assistance. The general bankrupt law, patent laws, pension laws, with forms and advice, are fully given. Also the provisions of the different States affecting property exempt from execution, the validity of contracts, collection of debts, mechanics' liens, usury, voters, licenses, etc., are clearly defined. The United States excise laws, stamp duties, post-office and custom-house regulations, and a multitude of other matters, relative to which a man may have occasion to inquire, are intelligibly presented. There is no better book of reference so comprehensive in detail as "Wells' Every Man His Own Lawyer," and so well adapted to the requirement of the general public.

GREAT EXPECTATIONS.

By Charles Dickens—"Boz." With twenty-seven original illustrations, from designs by John McLean. Author's American Edition. Philadelphia: T. B. Peterson & Brothers. Green morocco cloth. 8vo. \$1 25.

"Great Expectations," with its quaint portraits of character, is before us, thanks to the Messrs. Peterson. Exhibiting the enterprise which has led them to expend large sums of money for the right to publish Dickens' works, they are certainly entitled to much credit and a liberal patronage. It is hardly necessary for us to commend this book, so thoroughly has it worked its way into general favor.

CHRIST AMONG THE CATTLE.

We have reprinted Rev. Dr. Osgood's beautiful sermon, "The Gospel among the Animals," in a handsome pamphlet, on large open type, and the best of paper. It is a capital missionary document, and should be widely distributed. Single copies will be sent post-paid for twenty-five cents. By the dozen or hundred at first cost.

THE POETICAL WORKS OF

HENRY WADSWORTH LONGFELLOW. Complete. Diamond edition. Boston: Ticknor & Fields. Cloth, \$1 50.

The beautiful little edition of our American Tennyson will serve to render him more popular than ever. The hitherto costly editions of Longfellow "complete" have deterred many a lover of poetry whose pocket had little or no lining, from reveling in their metrical richness. Tennyson and Longfellow, *à la diamant*, though costing almost nothing, grace our library with their neat and graceful covers.

THE MARYLAND EDUCATIONAL

JOURNAL, a School and Family Monthly, devoted to Popular Instruction and Literature—Organ of the State Board of Education and of the Commissioners Association. Editorial Committee: Rev. L. Van Bokkelen, LL.D., State Superintendent; Rev. John N. McJilton, A.M., City Superintendent; Dr. Samuel A. Harrison, Easton; William H. Farquhar, Esq., Sandy Spring; James L. Bryan, Esq., Cambridge; Rev. T. S. C. Smith, Belair; E. S. Zevely, Managing Editor, Cumberland, Md. Terms, \$1 50 a year.

This new candidate for popular favor is nicely printed, and will, we doubt not, do

a good work for education in that State, where it is so much needed. We were a little puzzled by one of the titles in the first number, which reads as follows: "Colored Education in the United States." The writer does not tell us whether it is, or is to be, "red, white, or blue." We wait to be informed as to the color, shade, hue, or tint to be advocated.

AMERICAN POMOLOGY. AP-

PLES. By Dr. John A. Warder, President Ohio Pomological Society; Vice-President American Pomological Society, etc. Large 12mo., pp. 744, and 293 illustrations. Price, \$3. New York: Orange Judd & Co.

One of the best works yet written on the Apple. The author is a ripe scholar, a practical fruit-grower of long experience, and stands at the head of his calling. The first 375 pages are devoted to propagation, nursery culture, selection and planting, cultivation of orchards, care of fruit, insects, and the like; the remainder is occupied with descriptions of apples. A list of selections for different localities by eminent orchardists is a valuable portion of the volume, while the Analytical Index is the most extended American fruit list ever published. A complete classification of apples is given. Fruit-growers will welcome this book as a valuable and long-wished-for addition to pomological literature, and it will be found equally useful to the novice and the experienced orchardist. The book will be sent post-paid, from this office.

A WOMAN'S SECRET. By Mrs.

Caroline Fairfield Corbin. 12mo., pp. 440. Price, \$1 50. Chicago Central Publishing House.

A very creditable piece of Western book-making, so far as paper and printing go. But what of the character of the work? What is its object? This is its dedication: "TO JOHN STEWART MILL. The Author would hereby express her admiration and gratitude for his noble efforts in behalf of the enfranchisement of woman." There! can the reader now guess the object of this portly volume? Here are the mottoes, which further show the spirit of the author.

"Force rules the world still;
Has ruled it; shall rule it.
Meekness is weakness;
Strength is triumphant;
Over the whole earth
Still it is Thor's day."

LONGFELLOW.

Ere long a fairer morn shall rise,
With purer air and brighter skies,
When Force shall lay his scepter down,
And Strength shall abdicate his crown;
And love incarnate sway the race
With wisest power and tenderest grace.

Passing the Preface, which is modest and brief, Mrs. Corbin discloses, in part, what she means, by the Table of Contents. We give it in full.

Chap. I.—A Bachelor and a Baby. II.—The Lion and the Mouse. III.—Woman's Wit. IV.—About Money Lending. V.—A Woman who wasn't Strong-minded. VI.—Business as Love Making. VII.—"They Twain shall be one flesh." VIII.—Some Idea concerning a Woman's Sphere. IX.—Hysterics. X.—An Old Man's Dream. XI.—The Making of Men. XII.—The Silent Shrew. XIII.—Chiefly Metaphysical. XIV.—Hysterics, Male Species. XV.—A Deed Without a Name. XVI.—Honpecked. XVII.—From Jerusalem to Jericho. XVIII.—An Embarrassed Lover. XIX.—A Chapter which Weak-minded Persons are advised to skip. XX.—A Motherless Child and a Childless Mother. XXI.—The Incapables. XXII.—Among the "Vines." XXIII.—Miss Hildauber's Summer Bonnet. XXIV.—A Professional Visit. XXV.—The First Law of Courtship. XXVI.—Joel's Secret. XXVII.—How Mrs. Moss paid the Doctor. XXVIII.—A

Man's Love. XXIX.—The Right of a Woman to have a Husband. XXX.—The Verdict of the Sewing Circle. XXXI.—Milton Gaines, Jr. XXXII.—Rose Color. XXXIII.—The Right of a Man to Whip his Wife. XXXIV.—The Ark of the Lord in Tabernacles. XXXV.—The Power that is Stronger than Love. XXXVI.—A Love that was Free. XXXVII.—The Flower of the Ages. XXXVIII.—Our Best Society. XXXIX.—A Sacrifice for the Public Good. XL.—Two Equal Souls; one Round, Perfected Whole. XLI.—The Pestilence that Walketh in Darkness; the Destruction that Wasteth at Noonday.

To say that this is a most spicy, racy, readable book, would but faintly express the fact. Whether it will meet with favor, depends entirely whether or not the reader agrees with the author. We will neither predict nor prejudice. The work will speak for itself.

KELLOGG'S UNITED STATES MERCANTILE REGISTER. For the year 1887-8. Octavo, 1043 pp. Price, \$3. T. D. Kellogg, 116 Nassau Street, New York.

A want of space prevents at present anything more than this brief announcement of this most useful work. We shall describe it more at length at another time.

THE WINE CULTURE IN CALIFORNIA. By Henry Gibbons, M.D. 12mo, 48 pp. Price, 25 cents. H. H. Bancroft & Co., New York, Publishers.

A graphic history of Temperance in a very small compass. The author says there are three classes of men for whom this work is not intended: 1st. Those who estimate the welfare of society by the standard of dollars and cents. 2d. Those who acknowledge no obligation to their fellow-men in the way of labor or sacrifice. 3d. Those who live to eat and drink. From this it may be inferred where our author stands on the question of Wine Culture in California.

AUNT MARGARET'S TROUBLE. A Tale of Love, Selfishness and Retribution. By a New Writer. Philadelphia: T. B. Peterson & Brothers. 1 vol., octavo. Price, 25 cents.

It is understood that this story has been written by the daughter of Charles Dickens. This is her first work; and if one may judge of the fair author by her book, she is certainly a sweet and modest young lady. It is a charming story, free from all deadly crimes and monstrous vices; a quiet story of selfishness on the one hand and of love betrayed on the other; sorrow is gently touched, and sinfulness dealt with as it should be dealt with in life—tenderly, yet abhorrently.

THE CRITTENDEN COMMERCIAL ARITHMETIC AND BUSINESS MANUAL. Designed for the use of Merchants, Business Men, Academies, and Commercial Colleges. By John Groesbeck, Consulting Accountant, Principal of Crittenden's Philadelphia Commercial College. Abridged Edition. Philadelphia: E. C. & J. Biddle, 508 Minor Street. 1867. Price, \$1.25.

In the 216 12mo pages of this compact volume may be found more of practical utility to the student and business man than in many far more pretentious works of three times the price. "The object of the book," as ably set forth in the preface, "is to impart that practical knowledge which is daily required in business life. Business is based upon comprehensible principles and facts, and a knowledge of them will promote efficiency in actual transactions. Practice only can impart skill in application; but practice enlightened by knowledge sooner acquires proficiency, and saves from many errors and much useless drudgery." Instead of laying down rigid rules, to be blindly followed,

Mr. Groesbeck has adopted the motto, "knowledge is the guide of practice," and explains and fully elucidates all difficult and complicated problems. It is a practical, comprehensive work, and one that we can cheerfully and confidently recommend to our readers.

OVER SEA; or England, France, and Scotland as seen by Henry Morford. 12mo, pp. 371, price \$1.50. New York: Hilton & Company.

The witty, rollicking author started out from home to see something of the Old World, and he saw it. He is a good observer, and can describe to the life just what he sees. He has put his observations and his thoughts in his book. Those going to Europe should read it as a guide to interesting places. Those who have been, should read it as a reminder of pleasant places seen. Those who can not go in person, may, by the aid of this book, go mentally, and see all the sights worth seeing. We could wish the enterprising publishers had printed so interesting a book with better type and on better paper. It is handsomely bound.

MESSRS. A. WILLIAMS & CO., of Boston, have nearly ready for general sale—**CHEMISTRY OF THE FARM AND THE SEA.** By Jas. R. Nichols, M.D., editor of "Boston Journal of Chemistry and Pharmacy." 12mo. Cloth, \$1.25. And **GEYLLIN POULTRY BREEDING**, in a Commercial Point of View. With an introduction by Charles L. Flint, Secretary of Massachusetts Board of Agriculture. 12mo, with 27 illustrations, \$1.25.

These two excellent works contain the most recent and useful information in their respective departments, and are published at a price which brings them within the reach of every enterprising agriculturist.

BACKBONE; Photographed from "The Scalpel." By Edward H. Dixon, M.D. New York: Robert M. De Witt. 12mo.; pp. xii. 306. Cloth, \$1.50.

This volume is made up of gleanings from "The Scalpel," of which Dr. Dixon is editor, but it must not be supposed that those gleanings are merely selections, and not reflections of that editor's own brain, whereas the truth is, that the "backbone" of the compilation is his dictum. One can find amusement and information in the book. Much of a physician's sick-bed experience is divulged, and quackery, stupidity, blundering, and inefficiency in medical practice receive their meed of justice without stint from a pen wielded by a severe censor. The book is not made up even in part of mere professional technicalities, but is clear, cogent, forcible, and in some portions sprightly and graceful. The chapters on "Tartar-emetica," "Tobacco," "Nature as Physician," "Crucifixion of Children," "Fashionable Dress," and "The Life Force," deserve the heedful reading of all classes.

THE OLD PATROON; or, the Great Van Broek Property. By Jas. A. Maitland. Philadelphia: T. B. Peterson & Brothers, 306 Chestnut Street. Fancy Cloth, gilt, \$2.

The author evidently possesses a keen insight into human character and disposition, and though the personages introduced are mainly those of the old Knickerbocker families of New York, some twenty years ago, they are brought before the reader with great vividness of description. The *local* of the story is in the northern part of New York State—the situation of the Van Broek property—with pleasant divergencies to Albany and New York city, rendering the story exceedingly interesting.

CHAMBERS' ENCYCLOPEDIA, a Dictionary of Universal Knowledge for the People, on the Basis of the Latest Edition of the German Conversations Lexicon. Illustrated by wood engravings and maps. In Parts; 25 cents each. Nos. 117, 118, and 119 of this invaluable work are just received from the publishers, Messrs. Lippincott & Co., of Philadelphia, completing the ninth volume. No. 117 contains an excellent article on the United States, bringing its history, in a condensed form, down to the year 1866. Nearly fifteen pages are devoted to this article alone.

New Books.

[Among the late issues of the press not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting:]

THE PAINTER, GILDER, AND VARNISHER'S COMPANION: Containing Rules and Regulations in everything relating to the Arts of Painting, Gilding, Varnishing, and Glass Staining, with numerous useful and valuable Receipts; Tests for the Detection of Adulterations in Oils and Colors, and a Statement of the Diseases and Accidents to which Painters, Gilders, and Varnishers are particularly liable, with the simplest methods of prevention and remedy. With directions for Graining, Marbling, Sign Writing, and Gilding on Glass. To which are added Complete Instructions for Coach Painting and Varnishing. A new edition of this valuable work is now ready, and may be ordered through this office. Price, post-paid, \$1.50.

THE CHILDREN'S TREASURY OF NEW STORIES. By A. L. O. E. Illustrated. Cloth, \$1.10.

THE SIEGE OF WASHINGTON. For Little People. By F. C. Adams. Illustrated. Cloth, \$2.25.

CELIA; or, the Force of Example. Illustrated. Pp. 100. Cloth, 50 cents.

HOW TO MAKE MONEY, AND HOW TO KEEP IT. By T. A. Davies. Cloth, \$1.75.

TEMPERANCE ESSAYS, AND SELECTIONS FROM DIFFERENT AUTHORS. Collected and Edited by Edward C. Delavan. Fourth Edition. Cloth, \$1.75.

NICHOLAS NICKLEBY. (Diamond Edition.) With illustrations, \$1.75.

POST-OFFICE DIRECTORY FOR 1867. Alphabetical List of Post-Offices in the United States, Rates, etc. Revised and Corrected by J. Disturnell, to January, 1867. Paper, \$2.25.

GOOD ENGLISH; or, Popular Errors in Language. By Edward S. Gould. Cloth, \$1.75.

THE BANKRUPT LAW OF THE UNITED STATES. 1867. With Notes, and a Collection of American and English Decisions. Cloth, \$3.75.

FRIENDLY WORDS WITH FELLOW-PILGRIMS. By J. W. Kimball. Cloth, \$1.15.

LOTTIE WILDE'S PICNIC. By Grandmother Hope. Illustrated. Cloth, 60 cts.

OVER-SEA; or, England, France, and Scotland as seen by a Live American. By Henry Morford. Illustrated. Cloth, \$2.

THE RESURRECTION OF THE DEAD. By Rev. George S. Mott. Cloth, \$1.15.

FREDERICK THE GREAT AND HIS FAMILY. A novel. By Clara Mundt (Mrs. Louise Muhlbach.) Paper, \$1.75.

THE RED BRIDGE: a Temperance Story. By Thrace Talmon. Illustrated. Cloth, \$1.

THE NOTARIES AND COMMISSIONERS' HANDBOOK. Containing Forms, Fees allowed, Practical Suggestions and References, etc. Paper, 90 cents.

THE TWELVE DECISIVE BATTLES OF THE WAR: a History of the Eastern and Western Campaigns, in Relation to the Actions that Decided their Issue. By W. Swinton. Illustrated. Cloth, \$4.

HOME OF WASHINGTON AT MOUNT VERNON, and its Associations. By J. A. Wineberger. Illustrated. Paper, 40 cents.

THE BIRTH OF PLEASURE. The Story of Cupid and Psyche. From Apuleius. Cloth, \$1.15.

MAY-DAY, AND OTHER PIECES. By Ralph Waldo Emerson. Cloth, \$2.25.

FAMILIAR LESSONS FOR NEW CHURCH SUNDAY-SCHOOLS. Sq. 34mo, pp. 96. Cloth, 60 cents.

FOLLOWING THE LEADER. Illustrated. Cloth, 90 cents.

GILBERT'S LAST SUMMER AT RAINFORD, and what it Taught. By Glance Gaylord. Cloth, \$1.75.

THE PUBLIC DEBT OF THE UNITED STATES. Its Organization; its Liquidation: Administration of the Treasury: The Financial System. By J. S. Gibbons. Crown 8vo. Cloth, \$2.25.

A TRIP TO THE AZORES OR WESTERN ISLANDS. By M. Borges de F. Henriques. Cloth, \$1.45.

GEORGE LEE; or, Making the Best of Trials. By Mrs. Mary J. Hildeburn. Illustrated. Cloth, 90 cents.

HISTORY OF ENGLAND. In Rhyme. Oblong, pp. 48. Cloth, \$1.65.

THE MODERN CARPENTER AND BUILDER. New and Original Methods for every Cut in Carpentry, Joinery, and Hand-Railing. By Robert Riddell. Illustrated. Cloth, \$5.50.

THE CHRIST OF THE APOSTLES' CREED: the Voice of the Church against Arianism, Strauss, and Rénan, with an Appendix. By Rev. W. A. Scott, D.D. 8vo, pp. 432. Cloth, \$3.25.

MANUAL OF LEGAL STUDY. For the Use of Students. By Scott R. Sherwood. 8vo, pp. 28. Paper, 60 cents.

THE LAWYER IN THE SCHOOL-ROOM. Comprising the Laws of all the States on important Educational Subjects. Compiled, Arranged, and Explained by M. McM. Walsh. Cloth, \$1.40.

AMERICAN POMOLOGY. Apples. By Dr. John A. Warder. 200 Illustrations. 12mo, pp. 744. Cloth, \$3.25.

A MANUAL OF ELEMENTARY GEOMETRICAL DRAWING, involving Three Dimensions. For Use in High Schools, Engineering Schools, etc. By S. Edward Warren, C. E. Third Edition, revised and enlarged. Cloth, \$1.75.

TESTIMONIALS OF AMERICAN STATESMEN AND JURISTS TO THE TRUTHS OF CHRISTIANITY. By Hon. Henry Wilson, U. S. Senator. Paper, 10 cents.

PLEASANT AND PROFITABLE. Besides canvassing for the JOURNAL, and looking to premiums for remuneration, many persons of both sexes, North and South, East and West, are doing well in the sale of our books. **THE NEW PATROON** is found to "take" as a subscription book. A copy is procured to exhibit when persons subscribe. Then the work is ordered in lots of 5, 10, 20, and even 100 copies have been sent to our agent at one time. Young men and women out of employment can engage in this with profit to themselves and usefulness to the public.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—To CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE SLIPS.

SPECIAL NOTICE—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHEROLOGY, and ANTHROPOLOGY, or the general SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

MEMORY—TOBACCO.—I am an old man. For sixty years I have used tobacco. I think my memory is as good as when I was young. I always have, and think I shall ever, enjoy a smoke. You new reformers of the present day are riding theory to death, are you not? I feel confident that I am not any the worse for my constant use of tobacco from boyhood to old age, for I am now sixty-nine years old. Please give the public a faithful view of this subject. —E. C. F.

Ans. Our correspondent has evidently been endowed by kind nature with a tough, energetic constitution; or otherwise so virulent a poison as tobacco, used from nine years of age upward, would have broken him down and sent him full of pains and penalties to an untimely grave. Probably ten thousand people have been induced by our personal advice to quit the use of tobacco; they have gained from ten to forty pounds in weight, and they come in their thankfulness to congratulate themselves and to thank us for their delivery. The human system is capable of enduring great strains before it breaks. Men can learn to use arsenic or laudanum so that they can take enough at once to kill fifty men who are not accustomed to it. But the strain the system receives is evinced by the nervous prostration and delirium occasioned by the withdrawal of the drug. It frequently happens that tobacco users do not apparently suffer in their own person very materially, but their posterity are cursed by all the debility naturally resulting from abnormal indulgence. A medical friend of ours tells us a good story on this point. A man thus accosted him: "Doctor, my father was an inveterate smoker for sixty years, and died at ninety." Our friend replied: "Ah! you look as if you belonged to a family that had some stamina and constitutional vigor, and probably there was a large family of you?" "Yes, there were twelve of us." "How many of you are still alive? What has become of the younger members of the family who received their constitution after your father had been for a long time a great smoker?" The man hung his head and replied, "Well, the six younger ones are dead. They never seemed to have much constitution." "This tells the whole story. The deleterious

effects of the tobacco used by the father were evinced in the children; and while the father's constitution remained comparatively sound, the children born to him first inherited enough of his strength to live and grow up, but the younger ones were born without strength and stamina; and everybody wondered why such robust parents should be so unfortunate with their children. The soundest one of this family will not live to be ninety. If one touches his sixty-fifth year he may consider himself fortunate. Rheumatism or dyspepsia, or both, nearly always attend upon habitual users of tobacco, and we hold that, though a man himself may stagger under the burden of dissipation, he has no right to inflict upon a family of children the damaging influences of his own bad habits. If a man were to poison children one by one with arsenic so that they should not be permitted to see the fifteenth year, he would be called a monster, and be hung accordingly. He who, by the use of liquor, tobacco, or by gluttonous practices poisons the life of his children and sends them to early graves, commits just as great a crime as he who commits the double crime against nature and God by administering the deadly drug direct. We advise our friend to gradually quit his tobacco, to smoke less and less from week to week, until at the end of six months he shall have reduced it to a merely nominal amount, and then drop it altogether; and we doubt not, old as he is, he will be improved by the change, though he is too far gone ever to know how much he has damaged himself, how much better and higher a life he might have lived by abstaining from that poisonous drug. It is only the man who has had experience on both sides of a question who is qualified to form a judgment that covers the whole ground. We remember an illustration of great constitutional vigor enduring dissipation for many years in the case of old Dr. S., of Conn. He was stout and solid, and well made, eminent in his profession, but equally known for his love of liquor. We remember seeing him stand surrounded by a number of rum-drinkers, he holding in his hand a glass of rum. Some one said: "Well, Doctor, some people say that rum hurts men. Now, you are a doctor, and you know about rum; what do you think of it?" "Well," said the Doctor, looking at his glass of rum, "I have drunk liquor pretty hard for forty years, and have been drunk a great many times within that period of my life, and am strong now at seventy-five years of age;" but hesitating a moment, his common sense and his scientific knowledge came to his rescue, and he added: "and perhaps if I had not drunk liquor I might live to be a hundred." That tells the story.

TEMPERAMENT—MARRIAGE.

—A lecturer has advised those with light hair to marry those with dark hair, and *vice versa*. Is this good advice? and would persons marrying companions with hair of the same color be likely to disagree?

Ans. We think this the true method—those who have too much of the vital and mental should marry those who have more of the motive temperament, so as to equalize the extremes. But marrying companions with hair of the same color does not indicate that they would disagree, more especially if the color was the right one—a medium between two extremes. But two persons of very light complexion, or very dark complexion, would not be likely to harmonize so well as two persons of a medium temperament, each possessing about an equal degree of all the temperaments.

DELINEATION OF CHARACTER.

—You should ask your questions of the man who marked your chart. We can not spend our time working out puzzles or interpreting charts marked by others. It is not infrequent for people to get a chart marked by some strolling phrenologist whose name we never heard, and then send the charts thus marked to us to study out and interpret. Some of these men send us a three-cent stamp to prepay the answer, but most of them do not. We wish it understood that this kind of work is not in our line, and mere thanks, if we had the disposition to do it, would not be an equivalent for the work. Ask all your questions at the time your head is under the hands of the examiner, and if there are doubts which you would have removed, send for a "Mirror of the Mind."

FISHING.—We are desired to state the conditions on which a young man may become one of a crew or party about to engage in the coast fisheries for mackerel, cod, etc. Will some one of our readers please reply through this department, stating time of sailing, length of voyage, cost of outfit, of what it consists, and probable profits or wages, together with such other information as a landsman who desires to spend a summer in this pursuit may wish to know.

EXTINCTION OF FACULTIES.—Will any of the faculties become extinct through neglect or inactivity?

Ans. No; but they may become inert and almost powerless. The talent buried may become dim, rusty, opaque, but is not annihilated. It is the use of the powers that gives strength, activity, success, and the approval of the Master. Fish have lived in caves for years, ages perhaps, in total darkness, having no use for eyes, and when caught are found to have only the rudiments of eyes, which daylight and use would develop. So with dormant faculties. Quakers may, and do, ignore tune and music, but they can not destroy the faculty. Every well-formed Quaker baby born into the world will have all the organs of body and brain the Almighty intended it should have, except in cases of idiocy.

FASCINATION—PSYCHOLOGY.

—Can persons communicate their thoughts to each other silently and without gestures? and if so, how? Is there such a thing as psychological fascination? If there is, how can it be acquired?

Ans. This whole subject of psychology, clairvoyance, fascination, and mesmerism will be found explained and elucidated in that large volume entitled "LIBRARY OF MESMERISM." Such questions are constantly being asked, and we must answer them generally by referring to the work above named. It would require fifty pages of the JOURNAL to satisfy inquiries on the subject.

A VICTIM who wishes advice should give us his address, any address, so that we can answer by letter. We can not even name the infirmity in this JOURNAL for which he asks advice. But we may venture to admonish him to keep clear of all quick doctors who swindle and poison their victims.

GAINING WEIGHT.—In having my head examined at your establishment a few weeks since, I was told that I ought to acquire, if possible, a weight of 160 pounds to correspond with the size of my head, which is 22 inches. I am 18 years of age and weigh 120 pounds. I drink neither tea nor coffee, nor smoke or chew tobacco. How shall I increase my weight?

Ans. By living rightly in all respects.

This includes taking all the sleep you need; sleep enough, no matter if it be ten hours. Eat nutritious diet; avoid spices, condiments and stimulants. Eat fruit in abundance, so as to keep the liver in an active condition. Eat coarse bread, that made of unboltheaded wheat meal is best. Eat but little greasy food, no pastry, candies, or pickles. Take active exercise, live in the open air, or be where there is plenty of light, and you will be in the way of gaining size and strength.

LITERATURE.—It is a well-known fact that our leading literary journalists do not even read articles which are sent to them unless they come from their "regular contributors." How, then, can young writers gain an audience with the public by whom they wish to be judged? And how can they proceed in order to obtain pecuniary compensation for articles which are really meritorious?

Ans. Let them start journals of their own. The field is open, and free to all. But it is not a fact that editors read only articles from regular contributors. But there must be something novel, original, rich, or racy, from unknown writers, to warrant insertion. It is much easier to drive a team of well-broken horses than to handle colts. Young writers getting experience and age come to regard their earlier efforts with anything but favor, and would gladly recall the same.

GIRLS AND BOYS.—Should they be educated together?

Ans. We are requested to give our views on this question through the JOURNAL, and will do so at an early day.

Publishers' Department.

CHANGE OF ADDRESS.—Subscribers when stating the fact of their removal give us the place to which the JOURNAL should be sent in future, but fail to state their former address. The following is a sample:

ED. A. P. J.: Sir—Please forward my JOURNAL in future to me at this place.

Truly,

JOHN SMITH,
Smithville, N. Y.

Now, as our subscribers are all entered under the head of their respective residences—towns, villages, or post-offices—it is evident that we should have a difficult task to find John Smith's former residence, or which particular John Smith had removed. The following is a specimen of the style such letters, apprising us of change of address, should be written in:

ED. A. P. J.: Sir—Please to change the address of my JOURNAL from my former residence, Jonesborough, N. Y., to Smithville, Smith Co., N. Y., and oblige,

Truly, JOHN SMITH.

OUR PIANO PREMIUM.—Mr.

John Jones, of Pittston, Pa., to whose blind daughter we sent a piano recently, as premium for subscriptions, writes us in acknowledgment of its receipt: "The piano arrived safe and in good condition. It is an elegant instrument. I can not find words to express my feelings of gratitude for your kindness and liberality in presenting a piano valued at \$450 to my dear blind daughter. * * * I have called in many of my friends to see the piano, and among them teachers and professors of music, and they all unite in pronouncing the piano an excellent instrument." Accompanying the letter are certificates of resolutions passed by Thistle Lodge No. 512, Gahonto Encampment No. 96, and Gahonto Lodge No. 314, I. O. of O. F., of which Mr.

Jones is an esteemed member, awarding thanks to the editor of the PHRENOLOGICAL JOURNAL for his kindness and liberality. To whom shall we send the next piano?

A POCKET KINGDOM.—We have pocket, or small, editions of books, pistols, spy-glasses, and why not of other things? Our aristocratic neighbors across the border want a kingdom. They don't like republics nor provinces. The words kingdom, empire, etc., sound grand in monarchical ears. "Little Hard Scrabble" would never amount to much, but change the name and call it *Great Hard Scrabble*, or *Royal Hard Scrabble*, and it is quite another thing. So Canada, Labrador, Nova Scotia, etc., simply mean certain designated places—unimportant except for fishing, lumbering, plaster, and potatoes. But erect these places into a KINGDOM, and something more *mighty* is indicated. Then let them be backed up by England, Scotland, the Shetland Islands, and "all out doors," wouldn't it be grand? Then what would we be? Only poor republicans and democrats. We should not wear cockades with lions, unicorns, etc., like our neighbors: nor should we have ever so many "footmen," "lackeys," and sycophants hanging on; nor a swarm of hungry beggars, made so by the foolish expenses of foolish fellows aping foolish royalty. But why will Americans submit to such nonsense? Here is a paragraph from a New Brunswick paper, which explains itself:

The St. John's (N. B.) *Globe* complains thus: "That we are to enter upon a course of extravagance in the new kingdom is pretty certain. The President of the United States, who governs about forty millions of people, has a salary of only twenty-five thousand dollars, and greenbacks at that. The governor-general of our little kingdom of four million people is to have a salary of fifty thousand dollars in gold."

And a long line of petty officers in the train. There is no justice in taxing the people to support a useless monarchy, nor will an enlightened people submit to it. It is only an ignorant populace that will consent to pay for needless pomp and ceremony. Have a pocket kingdom if you will—we prefer a republic.

THE TURKISH BATH.—When in "the old country," we were induced to take a Turkish bath, simply to try its effects. We very soon learned that this sort of bath exceeded all similar luxuries. The wet-sheet pack, the vapor bath, the Russian, the douche, shower, and so forth, were not to be compared with this. We procured all the books, pamphlets, circulars, etc., giving information as to the construction and management of the Turkish bath in Europe, and sent the same to our much-esteemed friend and former coadjutor, Charles H. Shepard, M.D., of 63 Columbia Street, Brooklyn, then conducting a first-class water-cure. He "took the idea," and at once erected a Turkish bath, which we believe was the first opened in America. It worked beautifully, and was largely patronized. Others were started in New York and Boston. The Doctor was desirous to learn from personal observation the working of the Turkish bath in Great Britain and Ireland, as well as on the Continent. With this view he set sail more than a year ago on a tour, to visit all the great public baths of Europe, extending his journey even to Constantinople, from whence he brought home all that is known of the Turkish bath, ancient and modern. He saw how potent for the relief of rheumatic aches and pains; how almost magical for the removal of skin diseases; and how *renewing* this, to him, newly discovered

agency proved to be. He decided to enlarge his facilities, so as to accommodate a larger number of applicants—of both sexes—and has recently, at great expense, fitted up on his own premises the most sumptuous set of Turkish baths to be found in any country. They are as clean and as elegant as a Fifth Avenue drawing-room, entirely free from bad odors and sulphurous smells, common in some of these warm places. We congratulate the Brooklynites, so blessed with churches, on this excellent means of *physical* regeneration. Those who wish to know more about this Eastern—heathen—institution, may send to Dr. Shepard a stamped envelope properly addressed to themselves, in which to receive a descriptive circular by return post.

ANYTHING YOU WANT.—Every day letters reach us from "far, far away," asking if we will "be so kind and condescending" as to purchase a paper of pins, a skein of thread, a piece of tape, fish-hooks and lines, photographic pictures, books, maps, writing paper, pens, ink, hats, caps, coats, cloaks, carpets, and so forth, and send them by return post or express, C. O. D. To save time, we give this public answer. On receipt of the cost, we will buy and forward anything merchantable to be found in this market—except poisonous liquors, tobacco, lottery tickets, and other nuisances. These things and the like we will not touch, taste, nor permit others to do so if we can prevent it. All the great express companies call at our store, 389 Broadway, N. Y., daily, and give receipts for all sorts and sizes of boxes, bundles, and parcels. Our country friends may remit what amount they please, by check, draft, or post-office order payable to our order, and we will send anything they wish—from a cake of soap to a grindstone or an anchor. Elephants are scarce at present; but cats, dogs, monkeys, and donkeys may be had in any quantities. Send on your order, and the money with it.

DRAWING TEETH.—The dentist, thanks to recent developments of science, is no longer an object of terror to young and old. Nitrous oxide, pronounced the most efficient and harmless among anesthetics, has wrought the wonderful change. By its administration the martyr to decayed and aching teeth falls into a profound sleep of a few minutes' duration, and awakes to find the osseous troubles no longer festering in his jaw—the source of all his ill departed. A skillful and experienced hand is to be preferred in the delicate operations of dental surgery, and we would recommend no other. Dr. Colton, of Cooper Institute, in this city, probably has drawn more teeth with the use of nitrous oxide than any other American dentist, and some of our assistants speak in terms of strong commendation of his efficiency.

Owing to a surplus of prepared matter for our present number, we have been obliged to lay over until our next our usual instalment on Physiology. On that subject we have in hand "Adulteration of Food," "Water Cure," "Adopting Children," and other items.

The Gymnastic apparatus, or Bacon's "Home Gymnasium," advertised in the JOURNAL, is admirably adapted for the purposes of gradual physical training. Its completeness and portability are unequalled by any other similar device. Dr. Dio Lewis, speaking of it, says: "I congratulate the public and Mr. Bacon upon this important contribu-

tion to our means of physical culture. It is undoubtedly the best apparatus ever devised for home use. It is adapted to the clergyman's study, to the parlor, and, indeed, to any and all homes."

We have the apparatus on sale. Send stamp for circular.

We are indebted to the *Skandinavisk Post* for the following favorable notice: "AF PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED hafva vi emottagit aprilhäftet, och hänvisa till vår rekommendation i numro 47.—Denna journal är af så mangfaldigt intresse, att hvarje skandinavisk familj skulle törmära sitt husbibliothek dermed."

We are compelled, by lack of space, to defer the publication of "Queen Elizabeth" until the August number.

FIFTY DOLLARS SAVED.—Sometimes men come two or three hundred miles to New York solely for the purpose of obtaining a phrenological examination, with advice as to what profession, trade, or business would be best adapted to their talents, health, and success in life. Though this is a good investment, the fifty dollars might be saved, and the information be obtained by means of likenesses. Persons wishing our aid in this way, who can not afford to visit the city, may send us a prepaid envelope properly addressed to themselves, asking for the "Mirror of the Mind." This will give information as to what likenesses are needed, proper measurements, terms, etc.

THE HELIOTYPE PROCESS.—This process of engraving by means of photography and chemicals is now in successful operation in this city, and promises soon to supersede the old methods of wood engraving. Many of the cuts which illustrate our article on "Man, Monkeys, and Gorillas," in the present number, were executed by this method, and they are quite equal to the original "copy" in our estimation. Cuts No. 1 to 4, 7, and 15 to 37 are good specimens. As work can be done much cheaper by heliotype, the new process can not fail to recommend itself to publishers; and we would refer our contemporaries to the advertisement of the Heliotype Company, whose prospectus may be seen on another page.

ROMAN CATHOLICS.—We are making slow progress in procuring portraits and biographies of the more prominent American priests—but we shall eventually succeed. There seems to be a disinclination on the part of some to appear in print. But it is not our intention to either libel or to defly them. They are simply human beings, just as good as others who conduct themselves as well, and will receive courteous treatment at our hands. Public men belong, in a measure, to the public, and may be seen. In showing up the Protestant clergy to our readers we do them no harm; nor shall we treat the Catholics less kindly. It is our intention to give the Jews a similar treat. All want a hearing, and it shall be the aim of the PHRENOLOGICAL JOURNAL to exhibit all the leading religions and religionists, with their preachers, priests, and rabbis, to an intelligent inspection of their various merits. We have already given groups of the Episcopalians, Presbyterians, and Methodists, and now give the Baptists. When ladies who are not before the public beg us to excuse them from appearing in print, we always respect their wishes; but we feel no such tenderness toward white cravats or clerical robes. If we are not mistaken, they are like the rest of us—all sinners. But we will handle them gently, and point out their faults in all kindness. Such as are to be consigned will be judged by a Power higher than themselves.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

ALBANY LAW SCHOOL. The next Term of this School commences on the first Tuesday of September, 1867.

The Professors are HON. IRA HARRIS, LL.D., HON. AMASA J. PARKER, LL.D., AMOS DEAN, LL.D.

Circulars obtained by addressing
AMOS DEAN,
Albany, N. Y.

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

MRS. E. DE LA VERGNE, M.D.,
385 ADELPHI STREET, BROOKLYN.

MUNN & Co., No. 37 Park Row, New York, Publishers of the SCIENTIFIC AMERICAN, Solicitors of American and Foreign Patents.

Twenty-two years' experience in obtaining Patents.

Thirty Thousand Applications for Patents made at their agency.

Consultations and Advice to Inventors free.

Pamphlets Containing Laws of all Countries free.

A Handsome Bound Volume, Containing 150 Mechanical Engravings, and the U. S. Census by Counties, with Hints and Recipes for Mechanics, mailed on receipt of 25 cents. 2m.

THE QUINTETTE ORCHESTRA. A collection of Quadrilles, Contra Dances, Waltzes, Polkas, Polka Redowas, Schottisches, Mazourkas, and Serenade Pieces, arranged for TWO VIOLINS, CLARINET, CORNET, and BASS. In Five Books, one for each instrument. Price of the Set, \$6. Sent post-paid on receipt of price.

OLIVER DITSON & CO., Publishers,
Boston.

CHAS. H. DITSON & CO.,
711 Broadway, New York.

WATERS' SQUARE AND UPRIGHT PIANOS, MELODEONS, AND CABINET ORGANS, the best manufactured, to Let, and rent allowed if purchased. Monthly payments received for the same. Second-hand Pianos at bargain, from \$60 to \$225. Old Pianos taken in exchange. Liberal discount to teachers and clergymen. Cash paid for second-hand pianos. Pianos tuned and repaired. New 7-octave Pianos for \$275 and upward. Warerooms, No. 481 Broadway, New York.

HORACE WATERS.

DR. DIO LEWIS' TRAINING SCHOOL for Teachers of the NEW GYMNASIUMS will hold its ELEVENTH SESSION in the Gymnasium in Essex Street, Boston, beginning on the 1st of July, 1867. For a circular, address DR. DIO LEWIS, Box 12, Boston. 2t.

FOR SALE.—A file of New York Daily Times, from January, 1862, to the present time. Terms low. Address "ART," care of Mr. S. B. Wells, No. 350 Broadway. 1t.

GOVERNMENT AGENCY AND DESIGNATED DEPOSITORY OF THE UNITED STATES.—JOSEPH U. ORVIS, President; JOHN T. HILL, Cashier.

THE NINTH NATIONAL BANK OF THE CITY OF NEW YORK,
363 Broadway, Corner of Franklin Street.

TERMS FOR BANKS AND BANKERS' ACCOUNTS:

Takes New England Money at 1-10 and New York State at 1-4 per cent. discount. Checks on Albany, Troy, Boston, Philadelphia, and Baltimore, etc., at par. Interest collected, and credited in Gold or Currency, as directed. Revenue Stamps supplied—\$20 with 4 per cent. discount. Revenue Stamps supplied—\$100 with 4 1-2 per cent. discount. Revenue Stamps supplied—\$1,000 5 per cent. discount. All classes of Government Securities bought and sold. 7-30's exchanged into 5-20's. Redeems for National Banks, at present, without charge, using the Bills in our business.

J. U. ORVIS, President.
JOHN T. HILL, Cashier.

June, 2d.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 35 cents a line, or \$35 a column.]

DR. S. B. SMITH'S ELECTRO-MAGNETIC MACHINES.—The only ones where a true *unmixed* Direct Current with strong intensity and strong magnetic power is developed. Send for a circular wherein is exposed the trick of the "Six current" contrivance, and where it is shown that there is *but one current* in electricity, and but one important modification in that current; as well as the falsity that the so-called "Six current machine has nearly double magnetic power." The book I allude to will be found interesting and instructive. No charge, and sent postage prepaid.

N. B. The Magnetic power of my *intensity* Direct Current raises nine pounds. "The arrangement in Smith's apparatus gives a much stronger physiological effect than I have seen from any other apparatus."

"B. SULLIVAN, Jr., Yale College."

Price, with single cup battery, \$18; double cup, \$20.

Address DR. S. B. SMITH, 309 Broadway, New York.

WANTED—AGENTS—\$75 to \$300 per month, everywhere, male and female, to introduce throughout the United States the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, blind, braid, and embroider in a most superior manner. Price only \$18. Fully warranted for five years. We will pay \$1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth can not be pulled apart without tearing it. We pay agents from \$75 to \$300 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

BOARDING IN NEW YORK.—Persons visiting the city, either for business or pleasure, can obtain board at the Turkish Bath establishment, Nos. 13 and 15 Lighthouse Street. We have good rooms, wholesome diet, and are located near street cars that will take you to any part of the city.

TURKISH BATHS, Vapor Baths, Electric Baths, Water Cure, and Swedish Movement Cure applied to those needing such.

MILLER, WOOD & CO., Proprietors.

THE AMERICAN EDUCATIONAL MONTHLY.—Devoted to Popular Instruction and Literature.

Price, \$1 50 per annum. Specimens by mail, prepaid, 15 cents.

CLUB RATES ARE LIBERAL.

Teachers and Clergymen may obtain, in exchange for a little work in the Educational field, a copy of Webster's Royal Quarto Dictionary, Price, \$12.

J. W. SCHERMERHORN & CO., Publishers.

430 Broome Street, New York.

THOSE DESIRING A SUPERIOR ELECTRO-MEDICAL APPARATUS,

(HIGHEST PREMIUM.)

should obtain Dr. Kidder's SELF-OPERATING, latest improved, bearing the PATENT LABELS of 1860 and 1861.

Address for full information,

DR. JEROME KIDDER,

480 Broadway, New York.

HERALD OF HEALTH.—In

order to let those who have never seen this valuable monthly judge of its merits, we will send it three months on TRIAL for 80 cents. \$2 a year, 30 cents a number.

MILLER, WOOD & CO., 15 Lighthouse Street, New York.

IMMENSE PRICES PAID FOR OLD BOOKS.

CHEAPEST BOOK STORE IN THE WORLD! 100,000 Old and New Books on Hand.

Catalogues free. Send a stamp.

LEGGAT BROTHERS, 113 Nassau Street, New York.

AN ILLUSTRATED CIRCULAR,

showing the facts in regard to the many different qualities of electricity, as now recognized by scientific men, will be sent to any address, free of expense.

Address DR. JEROME KIDDER, 480 Broadway, New York.

SCALES.—A large variety of

improved Weighing Scales for Stores, Markets, Factories, Families, etc., at reduced prices—every Scale warranted.

D. YOUNG, Agent, 54 Courtland Street, below Greenwich, New York.

Fairbanks' and Howe's Scales always on hand.

FOR THE DEAF.—Haslam's

Magnifying Tubes can be worn on the head and concealed from view by the hair, and enable persons to hear in church or other public assemblies. Send for a pamphlet to E. HASLAM, 32 John Street, New York.

Feb. 6t

NEW YORK HYGEIAN HOME

AND SWEDISH MOVEMENT CURE.—N. D. Thompson, M.D., has rented house No. 117 Waverley Place, New York, a few doors west of Washington Square, where patients can promenade in the grove at pleasure, and convenient to Sixth Avenue cars.

He has secured the services of competent associate physicians, male and female, and efficient help in all departments; and is prepared to afford the best facilities for the successful treatment of all forms of disease.

He is also prepared to visit patients in city or country; and to lecture on Hygiene at any convenient point where all necessary preparations have been made, and from twenty to thirty days' notice has been given him. He may also be consulted by letter, stating fully the patient's symptoms, manner of living, and age, and inclosing five dollars for prescription.

The table is strictly vegetarian, but freely supplied with the best fruits and vegetables that can be procured in this market.

The cooking department is under the direct supervision of a graduate of the Hygieno-Therapeutic College, one of superior ability and experience in that department.

The moral and religious influence of a Scriptural Christianity will, so far as possible, be encouraged throughout the entire Institution, and devotional exercises will be conducted daily, to which all are kindly invited to attend.

For further particulars address N. D. THOMPSON, M.D., 140 West Sixteenth Street, until the first of May, 1867, after that 117 Waverley Place, New York. M. 3t.

THE AMERICAN NATURALIST,

a Popular, Illustrated, Monthly Magazine of Natural History, published by the Essex Institute, Salem, Mass.

TESTIMONIALS.

BALDNESS CURED.

Messrs. A. A. CONSTANTINE & Co.: It is with pleasure that I can recommend your Persian Healing Soap for baldness; it is bringing my hair in beautifully. I consider it the best Hair Renovator in use, and would recommend it to every one who is troubled with baldness, or falling out of the hair. M. M. COMBS, 218 Atlantic Street, Brooklyn, N. Y.

Rev. J. D. ADAMS, Pastor of the M. E. Church, Bloomfield, N. J., writes: Of your Persian Healing Soap I can speak with confidence and in high eulogy. It is a charm. It heals with unusual rapidity. I don't want to be without it.

The cleansing, healing, and tonic properties render it valuable for the toilette, as well as in cases where cutaneous diseases prevail. For washing the wounds of horses, the Soap is highly recommended.—Ed. Turf, Field, and Farm.

According to promise, I inform you of the success that has attended your Persian Medicated Soap. It has cured Pimples on the Face and Neck, Itch, Salt Rheum, Sunburn, Chapped Hands, and Indolent Ulcers; and knowing the medical ingredients, will say it is the best medicated soap in the market. Yours respectfully, WILLIAM WYNN, Chemist and Druggist, 160 Fulton Avenue, Brooklyn, N. Y.

HYGIENIC CURE, BUFFALO,

N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y. 1t

AGENTS WANTED in every

County of the United States, to sell the New Double Map of the United States and World, showing Russian America, Pacific R.R., Atlantic Cable, and population of every County in the United States. All of the Railroads, as well as proposed roads are plainly shown. This is a rare chance for Map and Book Agents, as well as all out of employment. Send for Catalogue, giving full particulars and terms. Address GAYLORD WATSON, 16 Beekman Street, New York, or A. B. CLOSSON, Jr., 28 West Fourth Street, Cincinnati, Ohio.

General Items.

WANTED.—Repeated calls for competent phrenologists reach us from all quarters. The last call is from several subscribers in Honolulu, Sandwich Islands. We are promised a warm reception by the natives and others. Who will go? We must stick to the large audience we now address through the PHRENOLOGICAL JOURNAL.

Another "call" is from SYDNEY, New South Wales, Australia. Another from Jamaica, West India Islands; and still more pressing calls come from several parts of the new Dominion of Canada. These applicants object to anything "green," with a "brogue." In fact, we are obliged to spend considerable time writing letters declining invitations. Good phrenologists, like physicians, will always have enough to do where they are.

THE NEW ANNUAL OF PHRENOLOGY AND PHYSIOGNOMY FOR 1868 will be put to press early in the autumn. A limited space will be given to appropriate advertisements, at \$50 a page; \$30 for half a page; or \$15 for a quarter of a page. We expect to print at least 50,000 copies, on good paper, and the whole will be illustrated with numerous portraits of distinguished personages, including biographies and characters. It will be an excellent medium for advertisers.

"MONSIEUR TONSON COME AGAIN."—A former generation had their laugh over the persecutions and annoyances suffered by the poor distracted Frenchman. We reproduce the poem, with illustrations by CHAPMAN, for the entertainment of the present generation. We think it equal to the best of modern comic literature, and worthy a place in "LIFE ILLUSTRATED."

THE LAW.—We have received the catalogue of the Law School of the University of Albany, N. Y., for 1866-7, from which we learn that the institution is in a flourishing condition. There is some satisfaction in having for professors such men as Hon. IRA HARRIS, Hon. AMASA J. PARKER, and AMOS DEAN, LL.D. The next term commences in September. There is no better law school in America. Anyone contemplating the study of law should send stamps to Prof. DEAN for a circular.

SOAP! SOAP! SOAP!—We sing to beautiful soap, not the soft slimy soap used to scrub floors, wash dirty linen, or scurry pigs; but the fine, creamy, toilet, which leaves no unpleasant odors, is the sort. Such is COLGATE'S AROMATIC, advertised in this JOURNAL. Then there is Griswold's Soney Toilet Soap, and the Soney Floating Bath Soap, which claims to be "buoyant upon the water, floating on its surface like a cork, and never softening or wafting like other so-called soaps. Its effect upon the body is invigorating and healthful." Then there is CONSTANTINE'S PERSIAN HEALING SOAP, noticed in a former number. This is also highly perfumed with an odor very much like tar—not in the least disagreeable to one accustomed to it. We regard this an excellent soap in all respects.

OUR BOOKS IN UTAH.—THE photographic artists, Messrs. SAVAGE and OTTINGER, of Salt Lake City, recently opened a somewhat extensive book store in that Rocky Mountain paradise, and have ordered from us a stock of books,

busts, etc. It is the intention of these gentlemen to do what they can to place within reach of the Western pioneers all that is new and useful in literature. We send many JOURNALS to all the Western Territories, of which UTAH must become the great central mart, a stopping-place on the road across the continent.

IN THE WORKS.—Our neighbor Bogardus, photographic artist, corner of Broadway and Franklin Street, is taking some of the finest pictures to be seen on this great thoroughfare. Besides the merit of clearness and sharpness, his pictures have the special merit of correct posture. The artist goes places his sitters as to bring out his "character." To one he gives a front view; to another a side view or profile; to another a three-quarter view, depending on the expression. He must, indeed, be something of a physiognomist to be so uniformly successful in catching the spirit of his subject. Among those recently taken for the PHRENOLOGICAL JOURNAL, now being engraved, are portraits of Du Chailu, the gorilla hunter; Naat, the artist, who has been called the Doré of America; and Hon. Richard B. Connolly, our comptroller of New York.

Mr. Bogardus is one of the earliest and one of the best photographers in the city. Whether he is competing for a Paris medal, we know not. His work commends itself.

FOR THE LADIES.—The Fashion Magazines are all recommending Bradley's celebrated Duplex Elliptic or Double Spring Skirt as the most graceful and elegant as well as the most durable and economical skirt made.

See advertisement.

A NEW KEROSENE BURNER.—Dr. A. H. Platt, of Ann Arbor, Mich., has invented and patented a lamp, which he calls the "Victory"—described in advertisement—said to be superior to all similar burners. It is described on another page.

HOW TO SWIM.—We have a little book entitled "THE SWIMMER'S GUIDE," illustrated with several engravings, showing how this healthful and interesting art may be learned. Besides these, it contains those most sensible "Hints to Swimmers," by Dr. Franklin. Also, the Effects of Bathing on Health; Time and Places for Swimming; Aids in Learning to Swim; the Cramp; Entering the Water; Striking Out; Diving or Plunging; Swimming in Deep Water; Treading Water; Thrusting; Floating; Artificial Aid; Swimming Under Water; on the Back, etc. With remarks on the Causes of Drowning; How to Save Persons from Drowning; Resuscitating the Drowned, and all that is necessary for a person to know preparatory to leaping into river, lake, or sea. The "SWIMMER'S GUIDE" will be sent by mail, post-paid, for 25 cents. Address this Office.

SOME of the engravings which illustrate the article entitled "Monsieur Tonson," were engraved for us by Dr. E. Alexander Anderson, of this city, who is now ninety-one years old! He has been engaged in engraving for over seventy years, and is known among artists as the "father of wood engraving," although his first attempts were on type metal. He first illustrated a work published over seventy years ago, entitled the "Looking-Glass," a book of instructive and short moral stories, well known even now. Although independent, the Doctor—who is a regular graduated M.D.—is never idle. He is hale and hearty still, and we hope he has many long years of usefulness before him yet.

By John Collins.

HERE lived in London, in the days of yore,
A Frenchman, exiled from his native shore;
Poor, friendless, forced by fortune long to roam,
At last he found within its walls a home.
Nor wife nor children cheered his lonely hours,
For him no sunshine brought the birds and flowers
But, hermit-like, he loved the world to shun,
In quiet solitude, till life was done.
He read, or smoked, or dozed the livelong day,

Or with his spaniel whiled the time away.
Yet he was kind; the beggar knew his door,
And starving children blessed him o'er and o'er.
The neighbors proudly claimed him for their own,
Till "Bon jour, Monsieur!" seemed no foreign tone.

Thus peacefully the worthy man grew old,
Unvexed by care or cankering thirst for gold;

In close retirement, each succeeding year
 Rolled on unmarked by doubt, or hope, or fear.
 It chanced, howe'er, a wicked wag, who knew
 How much our friend withdrew from public view,
 Resolved to tease him, merely out of fun,
 And thus the plot mischievously begun.
 One night when Monsieur had retired to rest,
 A rousing knock his slumber deep distressed.
 He rubbed his eyes—"Mon Dieu! vat 'ave we here?
 Who-o-o's dat?" he stammered, in suspense and fear.

I ha-
 Is M.

Whose name is Thompson, if I guess aright,
 For I must know his whereabouts to-night."

"Ah! sare, we
 know your
 voice—de oder
 day

You knock so loud,
 you fright my
 vits away.

Indeed, sare,
 no M
 Ton

And his poor victim raised his drooping head,
Glad to believe his vile tormentor fled.

Years passed, and yet his strength knew no decay,
Though sober thought had tinged his hair with gray

voice, still strong, in patriot numbers rung,

And the Marsellaise he sung;

Ands disturbed his nightly rest,

And by danger pressed:

peace he hoped to die

—than an alien sky.

were howling loud,

—ivy shroud;

—not stone—

—led alone.

—sed,

Is it the tread of fast approaching day,
Or speeds the storm along its furious way?

A louder sound his very soul appalls,

As if a crash of thunder burst the walls.

His hair on end, and shivering with the cold,

The night-robe slipping from his nerveless hold,

The unwieldy door, with pain unlocked at last,

He steps aside to shun the piercing blast.

A spectral form, in deep sepulchral tone,

Solemn and slow began to speak—a groan,

One wild despairing cry escaped him then,

"Begar! here's Monsieur Tanson come again!"

Down fell his lamp—he rushed outside the door,

With terror frenzied, and was seen no more!

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

THE HON. SCHUYLER COLFAX.

PORTRAIT, WITH PHRENOLOGICAL DESCRIPTION AND BIOGRAPHY.

MR. COLFAX has a very large brain on a well-formed though lithe and slender rather than corpulent body. The quality of the whole organization is excellent. The shape of his head is peculiar considering its circumference. It is very long, very high, and narrow between the ears. Causality with the perceptive faculties are the largest organs in the intellectual group, while Benevolence and Conscientiousness predominate in the moral region. Approbativeness is sufficiently large to make him ambitious to excel, and to merit the good opinion of worthy men; the affections are strong enough

PORTRAIT OF HON. SCHUYLER COLFAX.

to hold him to the domestic circle. Self-Esteem is barely sufficient to give him the necessary dignity to command attention; but this lack is counterbalanced by his large Firmness and Conscientiousness, which make him steadfast in the

right, and a firm opponent of that which he can not approve.

Cautiousness is well developed, imparting care and prudence. Acquisitiveness is moderate; the acquisition of property for its own sake would be with him a

secondary matter. Secretiveness is not large. He is candid, outspoken, and free, though his large Cautiousness acts as a check upon what would otherwise make him too transparent.

His Language is well evinced by the fullness of his eyes; those features are in him very expressive. They have a peculiar laughing brightness, and their frank glances straight-forward at their object indicate a kindly, open, upright nature; taken as an indication of character, they seem to embody all the peculiarities of his being. Mirthfulness is well indicated by the broad, high, almost square forehead. The mouth is expressive of humor and good-nature, while the finely cut lips indicate genial affection and decision combined.

Mr. Colfax does not live in the lower region of his brain. The great comparative height of his head would show him to be possessed of an intellectual, moral, and spiritual nature. The imaginative and esthetic faculties are well developed, inclining him to be a lover of the beautiful; but his tastes in that respect would usually be subordinate to the useful.

He should be a clear, practical reasoner; a just though merciful judge; an earnest advocate, a warm and ardent lover, a brilliant wit, and a sound, sensible man. He is not cruel or vindictive, but would incline rather to the side of lenity; though his Conscientiousness and Firmness would hold him to his duty to God and his country. Taken altogether, his would pass for a good head. He has a good, honest face, and is genial, amiable, and companionable.

BIOGRAPHY.

The Hon. Schuyler Colfax, Speaker of the House of Representatives, was born in New York, March 23d, 1823, and is a lineal descendant from General Schuyler and Captain Colfax, both of Revolutionary celebrity. Of his early life in New York little can be gleaned; but all the academical instruction he was favored with was received before he had reached the age of ten years, and that was obtained chiefly through his own diligent application. That he assiduously made use of his leisure time for mental improvement while following the vocation upon which he depended for support, is manifest in the superior cultivation and rare abilities which characterize him at the present day.

At the age of thirteen he went to Indiana, where he entered a printing-office, and continued to follow the pursuit of printing, with degrees of advancement, until about the year 1844, when he became editor and proprietor of the *South Bend Register*. Mr. Colfax was then only twenty-one years of age; but by his energy and his sterling integrity he had worked his way up into a position of influence and responsibility. The paper he published was a political organ in the interest of the Whig party. Its circulation was not extensive, but its editor strove to render it a useful and healthy journal; and it was not long before he obtained considerable reputation for his bold

avowal of honest sentiments, for his temperate habits, and his substantial abilities; and eventually he became an influential leader in the politics of Indiana.

Fortunately, we are enabled to gain an insight into the character of Mr. Colfax as he appeared when an editor. At an entertainment given by the representatives of the press in Washington to Mr. Colfax, an address was made by Mr. Wilkinson, in which occurs the following passage:

"Eighteen years ago, at one o'clock of a winter moon-lighted morning, while the horses of the stage-coach in which I was plowing the thick mud of Indiana were being changed at the tavern in South Bend, I walked the foot-way of the principal street to shake off a great weariness. I saw a light through a window. A sign, '*The Register*,' was legible above it, and I saw through the window a man in his shirt sleeves walking quickly about like one that worked. I paused, and looked, and imagined about the man, and about his work, and about the lateness of the hour to which it was protracted; and I wondered if he was in debt, and was struggling to get out, and if his wife was expecting him and had lighted a new candle for his coming, and if he was very tired. A coming step interrupted this idle dreaming. When the walker reached my side I joined him, and as we went I asked him questions, and naturally they were about the workman in the shirt sleeves. 'What sort of a man is he?' 'He is very good to the poor; he works hard; he is sociable with all people; he pays his debts; he is a safe adviser; he doesn't drink whisky; folks depend on him; all this part of Indiana believes in him.' From that day to this I have never taken up the *South Bend Register* without thinking of this eulogy, and envying the man who had justly entitled himself to it in the dawn of his manhood."

Mr. Colfax replied to this in the following modest but pleasant speech:

"I have had to listen to-night to a eulogy from your distinguished chairman, of which I can only wish I was worthy. What he has said has called back to my mind, what is often before it, the years of my early manhood—and I see a friend seated at this table (Mr. Defrees) who knows much of it about as well as myself—when, struggling against poverty and adverse fortune sometimes, I sought in the profession to which you have devoted yourselves, to earn an honest livelihood for myself and family, and a position, humble, but not dishonored, among the newspaper men of America. I can not remember the exact evening to which he alludes, when, eighteen years ago, a stranger then, as I am glad he is not now, he saw me through a window in my office, with the midnight lamp before me, and heard the commentary on my life from the lips of some too partial friend among those who from my boyhood have surrounded me with so much kindness and attention. But well do I remember, in the early history of the newspaper that numbered but two hundred and fifty subscribers when I established it, I was often compelled to labor far into the hours of night. And little did I dream, at that time, I was ever to be a member of the American Congress; and far less that I was to be the recipient of the honor whose conferment you commemorate and indorse to night. I can say of that paper that its columns, from its very first number, will bear testimony to-day that in all the political canvasses in which I was engaged, I never avoided a frank and outspoken expression of opinion on any question before the American

people. And that, as these opinions had always been honestly entertained, could not have hesitated to frankly and manfully avow them. Though the effect of these avowals was, from the political complexion of the district and the State, to keep me in a minority, the people among whom I live will bear testimony that I was no less faithful to them then than I have been when, in later years, that minority has by the course of events been changed into a majority."

In the same speech we find another passage which we appropriate, showing as it does the elevated opinion which Mr. Colfax holds of journalism, and its position and influence in the country. How characteristically does he preface it by his humor and suavity! His compliments all tell; and his speech reflects back upon himself the elevated opinion he held of that profession while engaged in it:

"I can not avoid saying a few words in relation to the profession to which we have devoted our lives. I think you can not but acknowledge that the American Congress has not overlooked the press. Not only have they seen fit, for the first time in the history of Congress, to select a printer for the grave responsibilities which cluster around their presiding officer, but from the ranks of the same profession they have taken a gentleman for the next office in order, the Clerk of the House, and one whom, with a modesty equal to his worth, I see blushes as I allude to him (Mr. McPherson). And besides these we have also in the American Congress another gentleman a printer, acting as Postmaster of the House. Having thus generously given a majority of all offices to the press, they have magnanimously allowed 'the rest of mankind' to take the remaining two offices. [Laughter and applause.] In the other branch of Congress we have a Secretary of the Senate, (John W. Forney), one of the most gifted and distinguished journalists of our time. The Vice-President of the United States also was a newspaper man, and I doubt not a good one. And so, also, was the Sergeant-at-Arms of the Senate, Mr. Brown, of Illinois. And if our excellent President (Mr. Lincoln) was not directly connected with the press, I think we can bear testimony to the fact of his having furnished material for innumerable editorials in its columns.

"You do not expect me to make an elaborate after-dinner speech to-night, because the usage of a Speaker is not to make speeches, but to listen to them, and I expect to have considerable of that latter duty to perform during the eventful Congress just opening. A few words before I sit down in regard to your profession. Next to the sacred desk, and those who minister in it, there is no profession more responsible than yours. The editor can not wait like the politician to see the set of the tide, but is required, as new necessities arise, not only to avow at once his sentiments upon them, but to discuss them intelligently and instructively. It is also his duty to guide and protect public opinion in the proper channels, and to lay before the readers of his sheet such matter as shall tend to the elevation of their character. I have sometimes thought that newspapers in their sphere might be compared to that exquisite mechanism of the universe whereby the moisture is lifted from the earth, condensed into clouds, and poured back again in refreshing and fertilizing showers to bless the husbandman and produce the abundant harvests. So, with the representatives of the press, they draw from public opinion, condense public opinion, and finally reflect and re-distribute it back again in turn to its elevation and purification."

In the year 1848 Mr. Colfax was appointed a delegate from his adopted State to the Whig National Convention, of which he was elected secretary, and although extremely young, he discharged the functions of his office commendably. In 1860 he was elected a member of the Indiana State Convention, having for its object the preparation of a State Constitution. In this body he proved very efficient in bringing about the adoption of the present constitution of his State. In 1851 he was the candidate of the Whig party in his district for a seat in the House of Representatives at Washington. The result was unfavorable to him, yet as an indication of the increasing strength of his political party in Indiana, it was regarded as very encouraging. In 1852 he was again sent as a delegate to the Whig National Convention, of which also he was appointed secretary. In 1854 Mr. Colfax was elected to Congress as a Republican nominee; and from that time to the present he has always occupied his seat as a representative.

At the opening of the Thirty-fourth Congress occurred the memorable contest for the Speakership, resulting in the election of Mr. Banks to that position. During that session Mr. Colfax took his stand as one of the most promising of our Congressional debaters. His speech upon the then all-absorbing topic of the extension of slavery and the aggressions of the slave power was a masterly effort, and stamped him at once as a most influential orator. This speech was circulated throughout the country at the time, and was used as a campaign document by the Fremont party during the canvass of 1856. Mr. Colfax labored zealously for John C. Fremont, who was his personal friend; the result of that campaign is well known. In the Thirty-fifth Congress Mr. Colfax was elected to the important position of Chairman to the Committee on Post Offices and Post Roads, which place he continued to hold until his election as Speaker to the Thirty-eighth Congress on the 7th of December, 1858; to which responsible position he has since been twice re-elected—to the Thirty-ninth and Fortieth Congress—honors awarded before only to Henry Clay.

In Congress the same energy and industry has characterized him which was so prominent in his private life and personal vocation. His course while in the great council of the nation has been one of straightforward, unswerving integrity; and he counts many friends among even his political opponents. He has so discharged the important duties of the Speakership, that he is considered one of the best presiding officers that has ever been called upon to conduct the proceedings of a great body. So general, indeed, are the expressions of approval from all sides, that we may confidently look for his further promotion ere long.

Mr. Colfax is only forty-four years of age. In personal appearance he is of medium height, solid, and compactly built. His hair and whiskers are brown, now a little tinged with gray. His countenance has a pleasing and

intellectual expression. His person is graceful, and his manner denotes unusual energy. His eyebrows are light in color, and overshadow eyes which sparkle with intelligence and good-humor. He is strongly affectionate and kindly in disposition. Whenever his mother-in-law appears in the gallery of the House, Mr. Colfax generally calls some member to the chair, and goes immediately to her side. Such a trait in his character serves still further to deepen the respect and esteem in which he is held everywhere.

As a speaker, Mr. Colfax is earnest, frank, pointed, and fluent. His manner is pleasing, and his language is always well-chosen and refined. Urbane in demeanor, and courteous and fair toward opponents, he always commands respect and attention on both sides of the House. He is zealous and fearless in maintaining his principles, though his benevolence and good-humor so temper his speeches that he gains few or no enemies. He is one of the few whose personal qualities have secured exemption from the bitterness of feeling generally displayed by the friends of pro-slavery aggression toward their opponents. He seldom indulges in oratorical flourish, but goes straight to his subject, which with his keenly perceptive intellect he penetrates to the bottom; while his close, logical reasoning presents his aspect of a question in its strongest light. He has obtained also a popularity as a lecturer equal to any. His "Across the Continent" has been delivered in the chief cities of the East, and is always fresh. We shall close our description of Mr. Colfax with a portion of a patriotic address lately delivered by him before the members of the Union League Club, New York. In reviewing the past, and while speaking of the duties of the present hour, the following brilliant passages occurred:

"How rapidly and yet how gloriously we are making history; but posterity will read it on the open pages of our country's annals. Six years ago—how brief it seems—but a fraction of an individual's life—but a breath in the life of a nation—the banners of Rebellion waved over hostile armies and stolen forts from the Potomac to the Rio Grande, and the onlooking world predicted the certain downfall of the Republic. Now, thanks to our gallant armies and their gallant commanders—Grant the inflexible—Sherman the conqueror—Sheridan the invincible—and all their fearless compatriots on sea and shore—but one flag waves over the land—the flag that Washington loved, and that Jackson, and Scott, and Taylor adorned with their brilliant victories—the flag dearer to us in all its hours of peril than gilded by the sunshine of prosperity and fanned by the zephyrs of peace, at last triumphant, unquestioned, unassailed. Six years ago, millions of human beings born on American soil, created by the same Divine Father, destined to the same eternal hereafter, were subject to sale like the swine of the sty or the beasts of the field, and our escutcheon was dimmed and dishonored by the stain of American Slavery. To-day, auction-blocks, and manacles, and whipping-posts are, thank God, things of the past, while the slave himself has become the citizen, with the freedman's weapon of protection—the ballot in his own right hand. Nor can we forget, while rejoicing over this happy contrast, the human agencies so potential in its

accomplishment. First and conspicuous among the rest rises before my mind the tall form of a martyred President, whose welcome step no mortal ear shall ever listen to again. Faithful to his oath, faithful to his country, faithful to the brave armies his word called to the field, he never swerved a hair's breadth from his determination to crush this mighty rebellion, and all that gives it aid, and comfort, and support. Unjustly and bitterly denounced by his enemies, and yours, as a usurper and despot; compared to Nero and Caligula, and all other tyrants whose base deeds blacken the pages of history, your noble League stood by him amid this tempest of detraction, cordially and to the end; and you have now your abundant vindication and reward. Though the torch of slander was lit at every avenue of his public life while he lived, the civilized world would become mourners at his coffin; and with those libelous tongues hushed, our whole land enshrines his memory to-day with the Father of the Country he saved."

"I can not doubt the future of the great party which has won these triumphs and established these principles. It has been so brilliantly successful, because it recognized liberty and justice as its cardinal principles; and because, scorning all prejudices and defying all opprobrium, it allied herself to the cause of the humble and the oppressed. It sought to enfranchise, not to enchain; to elevate, not to tread down; to protect, never to abuse. It cared for the humblest rather than for the mightiest—for the weakest rather than the strongest. It recognized that the glory of states and nations was justice to the poorest and feeblest. And another secret of its wondrous strength was that it fully adopted the striking injunction of our murdered chief: 'With malice toward none, with charity for all, but with firmness for the right, as God gives us to see the right.' Only last month the British Chancellor of the Exchequer, in defending his Reform bill, which holds the word of promise to the ear to break it to the hope, exclaimed: 'This is a nation of classes, and must remain so.' If I may be pardoned for replying, I would say: 'This is a nation of freemen, and it must remain so.' Faithful to the traditions of our fathers in sympathizing with all who long for the maintenance or advancement of liberty in Mexico or England, in Ireland or Crete, and yet carefully avoiding all entangling alliances or violations of the law, with a recognition from ocean to ocean, North and South alike, of the right of all citizens bound by the law to share in the choice of the law-maker, and thus to have a voice in the country their heart's blood must defend, our centennial anniversary of the Declaration of Independence will find us as an entire nation, recognizing the great truths of that immortal *Magna Charta*, enjoying a fame wide as the world and eternal as the stars, with a prosperity that shall eclipse in future all the brightest glories of the past."

Mr. Colfax's sympathies, in the House, are with the Republican party, of which he is one of the ablest supporters and best representatives. But he is not bigoted or prejudiced. When the times demand it, he rises above party strife and ambition, and appeals earnestly and eloquently for the good of the country. His long and faithful service in Congress has created a kindly feeling toward him from all classes of the community. He has been nominated by several committees as a candidate for the next Presidential election, and his well-known sterling worth and ability doubtless fit him for the highest position which it is in the power of the nation to confer upon him.

PHRENOLOGICAL THEORY OF MAN'S ORGANIZATION.

(CONTINUED.)

CONSTRUCTIVENESS. *Mechanical ingenuity and talent; ability to make, build, construct, and manufacture.*—The commands of the Lord for the erection of the tabernacle and Solomon's temple are ample proofs that man is constituted a constructive, tool-using animal. The superintendent sent for by King Solomon needed a very large development of this and the kindred faculties to come up to the requirements of Solomon. "Send me now therefore a man cunning to work in gold, and in silver, and in brass, and in iron, and in purple, and crimson, and blue, and that can skill to grave with the cunning men that are with me in Judah and in Jerusalem.—2 Chron. ii. 7. Bezaleel the son of Uri, Exodus xxxi., is spoken of as a man skilled "in all manner of workmanship, to devise cunning works, to work in gold, and in silver, and in brass."

IDEALITY. *Imagination; the love of the exquisite, the beautiful, the splendid, the tasteful, and the polished; that impassioned ecstasy and rapture of feeling which give inspiration to poetry and oratory.*—A subdivision of this is—

SUBLIMITY. *Love of the grand, vast, endless, and infinite.*—The well-known 38th, 39th, 40th, and 41st chapters of Job are directly intended for these faculties, and no further proof need be required that the Lord supposed man to possess those faculties, otherwise it would have been out of place to have addressed anything so admirably adapted to reach them. The Psalms of David abound in appeals to these feelings, and St. John, in the magnificent description of the Apocalypse, challenges the most exalted admiration of man.

IMITATION.—*Ability to represent, copy, and do what we see done; the power of imitation; copying in general.*—"And let them make me a sanctuary, that I may dwell among them. According to all that I shew thee, after the pattern of the tabernacle, of all the instruments thereof, even so shall ye make it. * * And look thou that thou make them after their pattern which was shewed thee in the mount."—Exod. xxv. 8, 9, and 40. The pattern for the temple of Solomon the Lord also gave: "All this," said David, after giving Solomon instructions for the building of the temple, "the Lord made me to understand by writing by his hand upon me, even all the works of this pattern."—1 Chron. xxviii. 19. There can be no doubt, then, that the Lord considered man possessed of a faculty which would enable him to imitate, or he would never have given him a pattern for him to imitate. Religiously, Paul is given for a pattern: "Howbeit for this cause I obtained mercy, that in me first Jesus Christ might shew forth all long-suffering for a pattern to them which should hereafter believe on him to life everlasting."—1 Tim. i. 16.

MIRTHFULNESS. *A quick and lively perception of the ridiculous and absurd; facetiousness; pleasantry; humor; fun.*—This faculty is recognized in Holy Writ, as appears in the fol-

lowing: "Then will I cause to cease from the cities of Judah, from the streets of Jerusalem, the voice of mirth, and the voice of gladness, the voice of the bridegroom, and the voice of the bride, for the land shall be desolate."—Jer. vii. 34. Elijah, when he ridiculed the priests of Baal, exercised this faculty within due limits. It is this faculty which causes editors of religious journals to slip in their papers, now and then, a column of "religious anecdotes." They know very well their readers have such a faculty as will enable them to relish those "religious anecdotes." This faculty requires great watchfulness on the part of Christians. Jest-ing which is not suitable is strictly forbidden.

INDIVIDUALITY. *Intellectual power of noticing single objects as separate existences, and of considering each a distinct individuality; desire to see and to examine objects.*

FORM. *That mental power which takes cognizance of the shape or configuration of objects and remembers them.*

SIZE. *That mental power which takes cognizance of magnitude and proportion, imparting ability to judge of length, breadth, height, depth, distance.*

LOCALITY. *Cognizance of the relative position of objects; recollection of the looks of places; knowledge of the geographical position of things, the points of the compass, etc.*

These faculties are all largely concerned in the acquisition of knowledge, and it is better to group them together. King Solomon had these faculties largely developed. "He spake of trees, from the cedar tree that is in Lebanon, even unto the hyssop that springeth out of the wall; he spake also of beasts, and of fowl, of creeping things, and of fishes."—1 Kings iv. 33. The remarkable 38th, 39th, 40th, and 41st chapters of Job recognize the existence of these faculties, for the numerous questions propounded there are all founded upon the supposition that these faculties had been actively engaged in the acquisition of knowledge. It would lengthen this article unnecessarily to examine those chapters in detail, and as any one can see at a glance when any one of these faculties is exercised, we shall without further comment pass on.

WEIGHT. *Intuitive perception and application of the principles of specific gravity; ability to judge of the force of bodies, and of equilibrium; to preserve the center of gravity.*—Of the exercise of this faculty in building, from the days when "Cain built a city" downward, three columns of references in Cruden's Concordance are full proof of the active exercise of such a faculty by man.

COLOR. *Ability to perceive and recollect the various colors of objects, to compare them and judge of the contrast of their different shades when mingled.*—The brilliant display of colors ordered by the Lord in the construction of the tabernacle and of Solomon's temple is proof enough he considered man the possessor of a faculty which would enable him to obey the commands given, and properly appreciate the result after the commands had been obeyed.

ORDER. *System, method, going by rule; desire*

to have things in their places.—"Let all things be done decently and in order."—1 Cor. xiv. 40. So determined was the Lord that man should do things "in order," that he struck Uzzah dead for presuming to touch the ark when unauthorized so to do. The Jewish temple service was performed in a special order, any infraction of which was followed by the severest penalties, and we may therefore logically conclude the Lord would never command things to be done in order if man had no inherent faculty which would enable him to comply with that command.

CALCULATION. *Intuitive perception of the relation of numbers and proportions; ability to count and reckon.*—The commands of the Lord in relation to the dimensions of the tabernacle and temple clearly demonstrate he considered man able to calculate. The sands of the sea and the dust of the earth are mentioned by the Lord as beyond the power of man to calculate, and this of course implies that minor quantities could be calculated. The places in the Bible where numbering and reckoning are mentioned are too numerous to quote.

EVENTUALITY. *Memory of events; power of calling to mind those circumstances, occurrences, incidents, historical facts, etc., which have previously come to the knowledge of the individual.*—"Thou shalt well remember what the Lord thy God did unto Pharaoh, and unto all Egypt."—Deut. vii. 18. The books of the Bible are filled with commands to remember events, and as the Lord would not give commands unless man was able to obey, it is clear that the existence of this faculty is recognized by the Scriptures.

TIME. *Telling when events transpire, time of day, how long.*—The Jewish law required the exercise of this faculty in a high degree, not merely for the remembrance of dates of remarkable events, but a monthly, daily, and hourly use of it. The faculties of Eventuality and Time were brought largely into exercise in the oral tradition of the Jews, who were commanded to hand down from generation to generation. "And when thy son asketh thee in time to come, saying, What mean the testimonies, and the statutes, and the judgments, which the Lord our God hath commanded you? then thou shalt say unto thy son, We were Pharaoh's bondmen," etc.—Deut. vi. 20, 21.

TUNE. *Love of music; ability to learn tunes and detect discord; singing and playing by ear.*—David possessed this faculty in a high degree. "And it came to pass, when the evil spirit from God was upon Saul, that David took a harp and played with his hand, so Saul was refreshed and was well, and the evil spirit departed from him."—1 Sam. xvi. 23. There were singers and players upon the harp and cymbal: "And David spake to the chief of the Levites to appoint their brethren to be the singers with instruments of music, psalteries, and harps and cymbals, sounding, by lifting up the voice with joy."—1 Chron. xv. 16. All this could not have been accomplished unless these performers had possessed the faculty of Tune, or, metaphysically, an "intuitive sense of harmony."

LANGUAGE. *Power of communicating ideas by means of particular signs of vocalization; memory of words; recollection of words and arbitrary signs as expressions of ideas.*—This faculty was small in Moses and large in Aaron. "And Moses said unto the Lord, O my Lord, I am not eloquent, neither heretofore nor since thou hast spoken to me, but I am slow of speech and of a slow tongue. * * And the anger of the Lord was kindled against Moses, and he said, Is not Aaron the Levite thy brother? I know that he can speak well."—Ex. iv. 10, 14. This is a clear recognition of the fact that Aaron possessed a larger faculty or organ of speech than did Moses, for the inability of Moses to speak fluently could not be attributed to want of sense or great inferiority to Aaron, for it is affirmed that Moses was learned in all the wisdom of the Egyptians, and was mighty in words and in deeds. Had the mind been a unit, as maintained by the metaphysicians, Moses could have spoken well, for on that supposition any one that could learn all the wisdom of the Egyptians could certainly learn to speak well; but, as was really the case, his organ of Language was only moderate, while that of Aaron was very large, and the result was that the latter could "speak well," while Moses was "slow of speech." St. Paul was also moderate in oratorical ability, as is shown in 2 Cor. x. 10, where he writes: "For his letters (say they) are weighty and powerful; but his bodily presence is weak, and his speech contemptible."

CAUSALITY. *Ability to discover and trace out the connection and relations existing between causes and effects; to plan, invent, and adapt means to ends; to draw conclusions from given premises; to reason; disposition to investigate and ask why; keystone of common sense.*—"I applied mine heart to know and search and to seek out wisdom and the reason of things, and to know the wickedness of folly," etc. "Behold, this have I found, saith the Preacher, counting one by one to find out the account (marginal reading), weighing one thing after another to find out the reason."—Eccles. vii. 27. "Come, let us reason together, saith the Lord."—Isa. i. 18. Unless there was a special faculty in man adapted to reason and discussion, such statements would be quite absurd.

COMPARISON. *Disposition and ability to compare various things for the purpose of ascertaining their points of resemblance and difference; power of classification; perception of the principles of analogy; ability to discover truths that are unknown by discovering their resemblance to those already ascertained; critical acumen.*—It is needless to make quotations in proof of the existence of a faculty of Comparison, for scarcely any three pages can be found in the Bible without some comparison. The parables chiefly exercise this faculty of the intellect.

HUMAN NATURE. *This faculty furnishes its possessor with an intuitive knowledge of human character, and enables him readily to perceive the state of mind or feeling possessed by others, and thus successfully to adapt himself to and operate upon the minds and feelings of his fellow-men.*—

As there can not, in the very nature of things, be any commands addressed to this faculty, we need only look for incidental cases of its manifestations. We read, "And it came to pass after this that Absalom prepared him chariots and horses, and fifty men to run before him. And Absalom rose up early, and stood beside the way of the gate, and it was so that when any man that had a controversy came to the King for a judgment, then Absalom called unto him, and said, Of what city art thou? And he said, Thy servant is of one of the tribe of Israel. And Absalom said unto him, See thy matters are good and right, but there is no one deputed of the King to hear thee. Absalom said moreover, Oh, that I were made a judge in the land, that every man which hath any suit or cause might come unto me, and I would do him justice. And it was so that when any man came nigh unto him to do him obeisance, he put forth his hand and took him and kissed him. And in this manner did Absalom to all Israel that came to the King for judgment; so Absalom stole away the hearts of the men of Israel."—2 Sam. xv. Absalom had this organ large, and so adapted himself to the people as to win their favor.

SUAVITY. *Ability to render one's self agreeable; pleasantness, courtesy, blandness.*—"Be courteous."—1 Pet. iii. 8. Julius courteously entreated Paul."—Acts xxvii. 3. "Publius received us and lodged us three days courteously."—Acts xxviii. 7. The conduct of Abraham in entertaining the three strangers was a manifestation of a large development of this faculty, and his course was a fine development of the harmonious working of Suavity and Benevolence.

We have thus carefully examined the phrenological exposition of man's organization, and have found it triumphantly sustained by the Bible. Our references to Scripture evidence are not a tythe of those which we might have mentioned, had there been space or had necessity required their mention. The few we have selected are sufficient for our purpose, though not in all cases the best to be had. And whenever we hear any one say that Phrenology is a humbug and antagonistic to the Bible, we at once without the least hesitation classify him with those who talk on subjects of which they are ignorant. When old metaphysicians can harmonize their crudities and absurdities with man's real organization, without putting forth mystic theories concerning his organization, to reconcile their dogmata with well-known facts, and when they can make their notes accord with that glorious revelation from the God of harmonies, instead of turning the whole civilized world into a horrible Babel of discord, by the jarring, grating instruments they have furnished to the theological performers on the stage of life, then it will be time enough to denounce Phrenology as a humbug; but until then they had better think soberly, not more highly of themselves than they ought to think, lest their fall, as fall they must before the light of phrenological revelation, be more mortifying and galling to them.

FAMOUS HISTORICAL PERSONAGES.

No. 1.—ELIZABETH, QUEEN OF ENGLAND.

BY E. W. TULLIDGE.

RISTORI's great but almost hideous rendition of Elizabeth of England has made her fresh. Let us, in a journal devoted to the faithful portraiture of famous personages, give an epitome of her life of seventy years and a correct view of her character.

Elizabeth was one of those remarkable beings in whose very birth the soul of destiny is concentrated. An age was incarnated in her, and a world suspended on her life and mission. Born in the great crisis of human affairs, her long life was a bridge of transition from the night of past ages to the looming future. She was conceived when the very destiny of the world was transmuting itself into the body of a new civilization; and into her hands were given the issues of the times. She represented the rising empire of Protestantism. In her was the struggle of the stripling Future with the giant Past. Which should be victorious was the problem of the age, and this met the imperial maiden not only at the very foot of her throne to challenge her for the solution, but it also embraced her even in her cradle. Elizabeth in her youth was the female David, of a young new era, to meet and slay Goliath, or be herself given to the eagles and her kingdom torn to pieces by the vital antagonisms of the times.

We must neither consider Elizabeth in her abstract womanhood, nor in the simple unity of a private lady, nor even in the character of a plastic female sovereign like Queen Victoria. We must look upon her as an imperial soul born to a mission, and, therefore somewhat losing her very sex—as a woman multiplied into all the mighty issues of her nation and of all Christendom—as a potent instrument of that Mysterious Power who was molding a rising age, and giving to the world a new civilization.

The fate of Elizabeth's life was born before her. She was the daughter of the divorce. When Harry the Eighth deposed Cardinal Wolsey, married Anna Boleyn, overthrew the ancient church in his kingdom, and asserted the supremacy of England above that of Rome, he was laying out a great programme of necessities and complications for his unborn child to solve, and they were all on the side of Protestantism, the opening new era of progress and innovations. Thus an overruling Providence directed the passions of Harry the VIII. to the accomplishments of its own purposes, in the daughter of Anna Boleyn. And following this vein of thought, it is worthy of note that an imperial *lioness* was born for the work, and not a lamb for the lions of the times to devour. She was mightier than them all, and though she brought not forth kings as her children, she brought forth lions as her issues.

However the case might stand with her sister Mary, or her brother Edward, or all the world, Elizabeth is predetermined in her father's acts. She must stand by her legitimacy, re-establish

the supremacy of England, lead the vanguard of the future, crush everything that called her bastard, and win the age after the stern controversy which, in its culmination, terminated in the destruction of the Spanish Armada. All this was in the pre-decrees of her life, indexed in her father, and worked up as so many fates around the daughter of Anna Boleyn.

It was much in this view that all Europe looked upon Elizabeth, in her lifetime, from her very birth. To the Protestants, on one side, she was the child of hope and promise, and to the Roman Catholics she was the prophetess of the new faith—the very “end-all” of their every issue, if she was herself not cut off before her day had come. This destiny, to which she was born, suspended the axe over her head every day during her sister Mary's reign, but fulfilled at last her great career of empire. The burden thereof grew with her from her cradle, and in her very childhood began to unfold itself to her consciousness, and consequently to the development of her character.

Elizabeth was born on the eve of the day observed by Romanists as the Virgin's Nativity, and died on the eve of the day so observed as the Virgin's Annunciation, seventy years afterward. This is very singular; and, probably, the event of her birth on the eve of the Virgin's Nativity had considerable to do with her long persistency and jealous pride in proclaiming herself by the sanctified title of the “Virgin Queen;” and her dying on a corresponding day, seventy years afterward, is coincidently strange. Elizabeth had all the splendid superstition which so often marks great characters, as seen in the vast influence of astrology over her long life, and probably very early she was struck with the circumstance that she was born on the eve of the Virgin Mary's Nativity. It is more than likely, also, that many of those who looked into the future to Elizabeth as the rising star, pointed out everything oracularly propitious in her prospect; and such men as Dr. Dee, the astrologer, who held a long unbroken charm over her life, would be certain to make capital out of matter that had the least shadow of fanciful reference to her destiny and mission. Even men like Cecil, her famous prime minister, looked upon her much in the light of a daughter of destiny, and, as a far-seeing, ambitious young statesman, actually played the prologue of his rôle of prime minister to her when yet princess, and that, too, in the dangerous reign of Mary. On his part, the immortal Shakspeare has boldly come out in his play of Henry the Eighth as the prophet of her destiny and mission, and unfolded to her and the future (for Shakspeare wrote for the future) his scroll of her fate, much as Dr. Dee might have done in casting the figure of her nativity. The scene described by the immortal dramatist is the one of her baptism, when Archbishop Cranmer, who, as her godfather, is made Heaven's oracle of her great mission and virgin destiny, as though Providence claimed her as its bride for the work of the age:

Cranmer.

Let me speak, sir,
For Heaven now bids me; and the words I utter
Let none think flattery, for they'll find them
truth.

This royal infant (Heaven still moves about
her!).

Though in her cradle, yet now promises
Upon this land a thousand thousand blessings,
Which time shall bring to ripeness: She shall
be

(But few now living can behold that goodness)
A pattern to all princes living with her,
And all that shall succeed: Sheba was never
More covetous of wisdom and fair virtue
Than this pure soul shall be: All princely graces
That mold up such a mighty piece as this is,
With all the virtues that attend the good,
Shall still be doubled on her; truth shall nurse
her;

Holy and heavenly thoughts still counsel her:
She shall be loved and feared; her own shall
bless her;

Her foes shake like a field of beaten corn,
And hang their heads in sorrow.

Wherever the bright sun of heaven shall shine,
Her honor and the greatness of her name
Shall be and make new nations.

She shall be to the happiness of England
An aged princess; many days shall see her,
And yet no day without a deed to crown it.

But she must die,
She must, the saints must have her; yet a
virgin,

A most unspotted lily must she pass
To the ground, and all the world shall mourn
her.

Our royal heroine was named after her grandmother, Elizabeth of York, the daughter of Edward IV. and sister of the young princes whom, according to Shakspeare, Richard the III. had murdered in the Tower. Her great-grandmother (on the side of Anna Boleyn), the Duchess of Norfolk, bore the child in great pomp at her baptism, and was her godmother, and Elizabeth well fulfilled even all that Shakspeare makes the famous Protestant archbishop and martyr promise for her. Cranmer, in a letter to a friend, exulted in the part that he took with the Duchess of Norfolk at the infant princess' baptism; and had her father then foreseen the great imperial career of his mighty daughter, perchance Anna Boleyn would not have been given to the headsman.

For a short time only this royal heroine, destined to play such a long and glorious part in a world's great course, was cradled as became her then presumptive right, as heiress to the throne, but in the sequel of her father's capricious and despotic acts after her birth, her mother was beheaded, and she, like her sister Mary, was made now legitimate, and then illegitimate, to become legitimate again with equal consistency, and both to take rank after their brother Edward the VI., son of Jane Seymour, the successor of Anna Boleyn.

After the star of her ill-fated mother began to wane, and finally expired in blood, the infant princess suffered from actual destitution, such as no private gentlewoman's child would be expected to experience. Her governess, Lady Bryan, in a letter, said in pathetic complaint, “She hath neither gown nor kirtle [slip], nor petticoat, nor no manner of linen, nor for-

smocks [day chemises], nor kerchiefs, nor ruffs [night dresses], nor body stichets [corsets], nor handkerchiefs, nor sleeves, nor muffers [mob caps], nor biggins [night caps].”

The salutary adversity of her very childhood, and the storms and perils of her girlhood and young womanhood, doubtless superadded strength and self-reliance to the lioness-like character which nature endowed her with, and made at once much of her imperial greatness, and much of her marriages of gentle womanhood.

The first public act of her life was her carrying the chrim of her infant brother Edward VI., at the christening solemnity of that prince. On the second anniversary of his birth, when the nobles and ladies of the realm made their costly presents, she gave the simple offering of a shirt of cambric, worked by her own hands. She was then only six years of age.

Notwithstanding that Anna Boleyn was sent to the headsman to give place to the mother of Edward, who died in giving him birth, between the young heir to the throne and Elizabeth there sprung up, from the first, a strong and tender love; and the young princess played much the part of the girl-mother to her pet brother Edward, while the boy invariably spoke of her as his “dearest sister.”

From her earliest age she was a child of the fairest promise, and possessed the art of attracting the regard of others. Anne of Cleves, when she first saw Elizabeth, was charmed with her beauty, wit, and endearing manners; and she conceived the most tender affection for her. Indeed, when she was divorced from Henry VIII., she plead with him to be allowed to have the young princess near her.

Katharine Howard, who was kinswoman of her mother Anna Boleyn, and Harry's next wife after Anne of Cleves, also favored the young Princess Elizabeth and desired to take her under her protection, but our heroine, whose attachments formed in childhood, were ardent and enduring, still clung to Anne of Cleves.

This art, and natural qualities of mind and manners, to win the affections of all around her in her childhood, and which as a woman made her among her subjects the most popular sovereign that ever lived—the idolized heroine of her age—speaks much for the goodness and genuineness of her native character, in spite of the marriages which appear in her long life of seventy years.

The charm, to win the love of those around her, also drew Catharine Parr, her father's last wife and widow, wonderfully toward her, as it had done Anne of Cleves before. This fourth stepmother of Elizabeth greatly admired her wit and manners, and appreciated her character. Under this lady, the young princess received a very superior education, which in due time she further perfected under Sir Roger Ascham. When but a young girl, budding from very childhood, she understood geography, the principles of architecture, mathematics, and astronomy. She astonished her instructors by the facility with which she acquired knowledge,

and her skill in languages was wonderful. Her handwriting was also beautiful; she was fond of poetry, and wrote verses of merit; but this she only regarded as an exercise agreeable to her classic tastes and to while away her leisure hours. The principal portion of her time was spent in the study of history, and she devoted three hours a day to this branch of education, in all languages affording information on the subject. She was even thus early, in her judicious study of history, preparing for her mission and fitting herself for the throne; but she endeavored to conceal her object by the semblance of the most perfect humility, and affected a love for the leisure and quiet of private life. There are in such characters as an Elizabeth or a Napoleon the great instincts of their destinies, speaking with clamoring voices to their souls, making them hear the prophecies of their lives long before they fully understand them. Thus a Napoleon will rehearse his epic of wars and empire at school before there is a France for him, or a revolution to open the way for his great leap to the throne. Thus also was Elizabeth's soul instinctive of a mission and empire. Moreover, those who most appreciated the character of the young princess were in the habit of saying of her "that God, who had endowed her with such rare gifts, had certainly ordained her to some distinguished employment in the world;" and her stepmother Catharine Parr often said to her, "God has given you great qualities; cultivate them always, and labor to improve them, for I believe that you are destined by Heaven to be Queen of England." All such oracular sayings of her friends doubtless fanned into a flame the prophecies of her own soul, and filled her mind with visions of her great future, while all tended to prepare her for its coming.

We are told that when Elizabeth and Edward were children, as soon as daylight came they would call for their books, and so eager were they for their studies, that their enthusiasm for knowledge stole from them their natural desire for sleep. Their first hours were spent in religious exercises and the study of the Scriptures. In all this we see the imperial and conceptive mind of Elizabeth unfolding and stamping itself on the more plastic mind of her brother Edward. She absorbed him, inspired him, molded him, and had not Providence taken him away in his youthful reign, to give place for one thrice mightier than he for its work, still it would have been Elizabeth that first fashioned him; but the rising age of Protestantism needed a greater soul than a plastic, gentle Edward, and of all created beings his "dearest sister" was the fittest one to stamp the impress of a new era on the world, for she inherited a kingdom whose emblem is the lion, and she was a lioness to mount its throne. Thus we see the preparation for the times going on in these royal children, and Elizabeth, even then, as afterward, during her forty-five years' reign, leading and molding all around her.

At the death of Henry VIII., the Earl of Hertford and Sir Anthony Browne brought

young Edward privately from Hertford to Enfield, and there, in the presence of the Princess Elizabeth, declared the death of their father, whereupon they gave way to such a passionate burst of tears, and united in such lamentations as moved all present. Elizabeth was then fourteen years of age and Edward nine.

In spite of the fact that Henry gave her mother to the axe, Elizabeth, evidently, all through her life, entertained a strong attachment for the memory of her father, and was proud in being the daughter of Harry VIII. She loved his greatness and imperial strength, for she herself was great and strong; yet, perhaps, she had more of her mother than her father in her, and especially the heroic enthusiasm of her mother's race, with "her mother's constitutional levity," in her character. The Boleyns themselves were lions, and not lambs. The subject of her mother was a sealed volume to her; but after she came to the throne she never lost an opportunity to advance her mother's kindred.

After her brother Edward became king of England, under the protectorship of the Duke of Somerset, his uncle, the political claims upon the young king somewhat broke up the near and dear association which had from his infancy existed between him and his "dearest sister;" but still for a time she held her great influence over the young king. But in a year or two from the death of her father came the love intrigues of Admiral Seymour, the brother of the Lord Protector, to win the affections of the young princess, who refused him upon the score of her youth and indisposition to encourage his addresses. The Admiral afterward married her stepmother, Catharine Parr, but upon her death renewed his courtship to the young Elizabeth. This in the sequel cost him his head, the Lord Protector Somerset, his brother, consenting to his execution. There was much scandal at the time touching the Admiral and the Princess. He was her first lover.

Lord Protector Somerset fell, and a mightier schemer arose in the person of the Duke of Northumberland, who estranged Edward not only from his sister Mary, but also from his "dearest sister" Elizabeth; and at his death, at the age of sixteen, both of the daughters of Henry VIII. were excluded from the succession in favor of Northumberland's daughter-in-law, Lady Jane Grey.

But England was outraged by the setting aside of Henry's daughters by the machinations of the ambitious Northumberland, and the royal Elizabeth promptly and vigorously supported the claims of her sister Mary, to the overthrow of Lady Jane Grey, the nine days' queen.

July 29th, 1553, the princess Elizabeth came riding from the country along Fleet Street to Somerset House, attended by 2,000 horse, armed with spears, bows, and guns; and when she rode through Aldgate the next day to meet her sister, she was accompanied by 1,000 persons on horseback, a great number of whom were

ladies of rank. The sisters met at Wanstead, where Elizabeth paid her first homage to Queen Mary, who received her and her train very graciously, and kissed every lady Elizabeth presented to her. On the occasion of Mary's triumphal entry into London, the royal sisters rode side by side in the grand equestrian procession. The youthful charms of Elizabeth, then in her twentieth year, the majestic grace of her tall and finely-proportioned figure, attracted every eye, and made a striking contrast with Mary, who was nearly double her age, small in stature, and prematurely faded. Mary never condescended to practice those arts of courting popularity with which Elizabeth, who was ever playing for empire, never lost an opportunity to steal the hearts of the people.

But now came the storms and perils of Elizabeth's life. Mary no sooner came to the throne than she began to oppose the Reformation in England. The Romanist prelates were restored, and the Reformed prelates deposed and imprisoned; and all the acts of the preceding period of change repealed. The Protestants were in despair, or recklessly disposed for revolution; and more than ever Elizabeth became the hope of the nation and the star of the rising age. All the issues of the times were now centered in the very persons and lives of Elizabeth and Mary. On one side, the Past again, and Mary; or, on the other, the Future, and Elizabeth. All the world knew it, felt it, throughout Europe; and herein was our heroine's imminent peril every hour thenceforth till Mary's death. And what, too, enhanced this peril a hundred-fold, was the general consciousness of both the Protestant and Catholic powers that the mighty Elizabeth was equal to her part, and that once upon the throne the Catholic reign in England would pass away forever, and the foundations of Protestantism be established beyond the rooting up.

A breach was made between the daughters of Henry VIII., which Noailles, the French ambassador, helped to make with fiend-like subtlety and satisfaction. His business was to pave the way for the young Queen of Scots to the throne of England, and the destruction of the heiress presumptive. The insidious caresses of Henry II. of France and his ambassador led the princess into a trap, and fostered an ill-advised Protestant conspiracy, the design of which was to unite Elizabeth and Courtenay in marriage and place them upon the throne. She might not have sternly forbidden these popular manifestations in her favor, but she ever protested, and, doubtless, truthfully, her innocence of all designs against her sister; but Spain as well as France was seeking her destruction, and her enemies found enough to handle against her.

She was ordered to London as a prisoner. They commenced to remove her from her seat at Hatfield on the very day appointed for the execution of the Lady Jane Grey. The day was ominous to the mind of the royal prisoner. Thrice she was nearly fainting, as she was led between two of her escort to the royal litter

sent by the queen to fetch her. On her way to London she was taken very ill, in consequence of which her journey was suspended, and she lay for several days seemingly in a very dangerous state. It is thought that this illness saved her life, for every moment was to her precious that lengthened the interval between the execution of Lady Jane Grey and her entrance into London.

But when the moment came for the public entrance of Elizabeth into London as a prisoner of state, her firmness returned; and the lofty spirit of the lioness of England triumphed over the weakness of the invalid and the terrors of the woman. Simon Renaud, the Spanish ambassador, who thirsted for her blood, was an eyewitness, and in a letter to her great enemy, Charles V., his master, thus writes:

"The Lady Elizabeth arrived here yesterday, dressed all in white [emblematic of her innocence], surrounded with a great company of the queen's people, besides her attendants. She made them uncover the litter in which she rode, that she might be seen by the people. Her countenance was pale and stern, her mien proud, lofty, and disdainful, by which she endeavored to conceal her trouble."

Every inch a heroine was the royal Elizabeth. It was only eleven days before that the head of the Lady Jane Grey fell at the block; and that very morning the Duke of Suffolk was executed; and not many years before, her own dear mother perished in the same way, and in the Tower where she was soon to be consigned. From Highgate to London, where she passed the road was thronged with gazing multitudes, some of whom wept and bewailed her. It was a pageant of almost tragic interest; but she, though "pale," was "stern; her mien proud, lofty, and disdainful" in the very presence of fate herself. Such was Elizabeth when not yet queen. MIRIAM.

BY HOPE ARLINGTON.

BENEFIT OF FRIENDS.

Of money, the hard world said of virtue,
Where could she go? To her the poor-house doors
Alone were open, and through those she passed,
Seeking a shelter from the unkind storm,
And the unkind world.

The night came on,
But ere she sought the rest her humble cot
Reached out to her, the pitying angels bore
Her tearful prayer to Heaven.

"Oh, Lamb of God!
That taketh all my sins away, to-night
I bring my worn, bruised, burdened heart to Thee!
Just Searcher of all hearts! search mine, and if
Ingratitude to Thee, my only Friend,
Or hatred toward the unforgiving world,
Lurk there, oh, do thou cleanse and purify!
Oh, Son of God! that once did wander on
The earth, and had not where to lay Thy head,
Thou knowest all my wanderings, all my
Sufferings and wrongs! I do not fear Thy
Judgments!

Oh, in mercy take to Thy sweet
Heaven my poor lone life before another
Feebler one shall dawn from it, and let me know
Without the bitterness of earth, the pure
And holy joys of motherhood! But if
Our lives are parted, oh above, where soon
I feel that I shall be, and one below,
Oh, let my spirit hover near and guide
Through all life's lonely way, up to the gates
Of heaven, my child!"

Before another night,
Her soul had reached the peaceful haven where

The wicked cease from troubling, the weary
Are at rest; and near her side a little
Babe lay waiting for the warmth and food its
Mother could not give.

A golden circle
On her finger bore the one word "Miriam."
This was all, all that could be known of her;
And on the board that marked her grave, after
Long years had gone, the idle passers-by
Have gazed and wondered when they read only
The one word "Miriam" written there. A
Half-year glided by, and one, a stranger
In the place, from whose warm mother-heart her
Lord had called the birdling that had nestled
There, gave with her love her name and home
To Miriam's child.

The years went on, all full
Of gladness and of love for Mary Joy;
And very fair she grew, blessing with her
Pure trust the hearts that loved her as their own.

* * * * * One golden day in June,
The ninth bright happy June that came to place
Another pearl in Mary's crown of years,
She, with her loving guide, was wandering through
The city of the dead. On every side
Bright lovely forms were springing from the dust
Beneath. Fragrance of flowers and music sweet
Of birds floated through all the air to fill
The soul with harmony; and Mary stood
Entranced, a new life being born in her
At Beauty's touch; when, suddenly, as if
By magic drawn, she turned aside, and looked
In sadness on a lone neglected grave.

"Oh, mamma, see! there are no flowers upon
This grave. How very naughty 'tis to make
The pretty flowers grow all around, and not
One here. But I will have this grave for mine,
And plant my daisies and my violets here.
'Miriam,' 'Miriam!' That's a pretty name.
I wonder who this Miriam was!" And with
Her little brain full of strange thoughts and plans,
Mary reached home, and went to sleep that night
To dream of a young girl, with hair and eyes
The color of her own, and face that wore
A sad sweet smile, and in her small white hands
The loveliest flowers she ever saw, who came
To her, and told her to be pure and good,
And some time she would come again and guide
Her to her own fair home; and then she went
Away, but Mary, in her dream, felt sure
That it was Miriam.

The morning came, and with it new resolve
In Mary's heart that she would be a friend
To Miriam's grave; and every day until
The flowers faded and were gone, a garland
Fresh was woven there by Mary's hands.
And through the years that followed, all the years
Of her short life on earth, as soon as spring's
First blossoms raised their tiny heads, they shed
Their fragrance upon Miriam's grave.

Alarmed
At Mary's fading form and brightening eye,
Her friends entreated her to leave her charge
To other hands, and seek repose. "Oh, urge
Me not," she answered; "dearly as I love
My parents and my friends, 'tis strange, so strange
A mystery I can not understand,
Yet nearer, dearer than aught else of earth
To me is this lone grave. My purest and
My holiest thoughts are here, and when my heart
Grows troubled with its sin and sorrow, there
Is something here can take it all away
And make me calm again. And here my soul
Is often filled with such bright visions of
Another life, that I have sometimes felt
That glimpses of the glory, harmony,
And peace of heaven had been revealed to me.
Oh, mystery! What is there in this name
And grave, or what beside this name and grave
That holds my soul in such sweet thralldom, fills
It with such longings for the freedom of
The spirit-life? How I have tried to think
It foolish fancy, and as such to drive

It from my heart—but all in vain. The spell
Is o'er me, and I can not break it. Death,
It may be, can. It may be, Death can solve
The mystery. Then welcome, welcome Death!"

With eighteen summers, Mary's frail hands ceased
Their work. The spirit conquered, leaving one
Word "Miriam," and not "Mother," trembling on
The faded lips. The veil at last was rent,
And Mary's spirit soared away from earth,
To know in heaven who Miriam was.

Among some papers folded carefully,
And neatly written o'er by Mary's hand,
Were found the verses that we give below.
And there were sketches, too, of faces fair
And beautiful, most delicately drawn
And finely shaded; and the one of all
Most perfect and most beautiful, because
It had in it a look of Mary's, was
Marked "Miriam." And this for Mary's sake was
Hung in costly frame, within the room in
Which she died.

A traveler passing by, one
Day, called at the door to ask for water,
And a place where he could rest awhile; but
Ere his errand was made known, his eye fell
On the picture. Pale and trembling, he could
Only gasp—"Has she been here? Has Miriam
Been here?"

More wonderful to those who heard
Than prophet's vision, or the miracles
Of old, was this new revelation. All
There was to tell was told. They did not doubt
That God had been among them, and had wrought
A miracle. The stranger, gazing still
Upon the picture, murmured, "Oh, my poor
Deserted, orphaned Miriam! driven from
My father's house because she could not prove
She was a wife, and I her husband. And
All the search of years to give me only
This." All efforts were in vain to learn the
History of Miriam's death, or Mary's
Birth, for Mary had been given away by
One who called herself her mother. She was
Dead, and no one lived who knew that Mary
Was the child of Miriam.

So mystery
Enshrouded all, and he, the husband and
The father, went away from earth to meet
His long-lost Miriam, and to find in heaven
Who Mary was.

AT MIRIAM'S GRAVE.

Beautiful spirit, that hovered near me!
Beautiful presence, to comfort and cheer me!
Magical spell, that in chalice ever holds me!
Influence sweet, that surrounds and enfolds me!
Beautiful spirit, to strengthen and love me!
Beautiful presence, around and above me!
Angel of hope, bringing gladness in sorrow!
Angel of patience, with faith for the morrow!
Angel of light, through my soul ever stealing!
Angel of love, God's dear mercy revealing!
Heavenly messenger, leave me, oh, never!
Yield I my soul to thy sweet guidance ever!

THE LATE REV. JOEL HAWES, D.D.

DIGNITY, steadfastness, integrity, devotion,
and kindness may be named as among the lead-
ing traits which marked this character. There
was also great prudence and sense of propriety.
No one could associate this head and face with
that of a rude clown or a blatant comedian.
Dignity is marked in every lineament. See
how high the head at the crown, and how long
and full the upper lip! His high sense of honor
and propriety prevented him from letting him-
self down in his own estimation or in that of the
public. There was comparatively little strug-
gle between the flesh and the spirit in his case.

The former was subordinated to the latter. His animal propensities rarely if ever brought his moral sense to shame. His was a self-regulating organization, and it was in this that whatever greatness may be accorded to him consists. No one would claim this as the head and face of a butcher, a money-getter, or a boxer. But it is at once apparent that he must have been a preacher, a teacher, or an author—that his pursuits being in accordance with his make-up, would partake of one or all of those indicated. There was strong affection here. (Note the under lip and the chin.) There was also considerable executiveness, without cruelty; moderate force, with great uniformity; a good degree of taste, without fastidiousness; economy without parsimony; imitation without mimicry; good language without verbosity; and he was altogether one of the noblest works of God—an honest man. The following interesting biographical sketch we appropriate from the *Hartford Daily Courant*:

BIOGRAPHY.

"About fifty-five years and a half ago an earnest and zealous young man from one of the country towns in Massachusetts, with one hundred and thirty dollars in his pocket, a plaid suit upon his person, three books under his arm, and a hopeful spirit, ascended for the first time the hill on which Brown University in Providence is placed. He had just given up a half-learned trade, under the stimulus of a new-found hope in Christ, and started out with his little store of funds to obtain the education necessary to preach the gospel. The ministry commenced in intention on that autumn morning, and continued in the zealous and successful labors of half a century, was suddenly terminated by death, and the young man, grown old, passed quietly from earth yesterday.

"Joel Hawes was born in Medway, Massachusetts, December 22d, 1789. After receiving a common school education, he was engaged in various mechanical employments, and at last commenced learning the clothier's trade. While at work at this trade, when about twenty years old, he was converted, and soon began to cast about for the means of obtaining an education, with a view to becoming a minister. He finally entered Brown University with but little money to support him, but with the determination of working his way through. He took the regular course, supporting himself so far as he could by working during term time, and teaching during vacations. He also received some assistance from a benevolent lady, but this he always considered a debt, and with his first savings after beginning to preach, he refunded the amount, telling the lady to give it again to some student or young minister. After graduating at Brown University in 1813, he entered the theological school at Andover, from which he graduated in 1817. He was here very zealous as a Christian, and a close Bible student. In fact, his close attention to the Bible com-

THE LATE REV. JOEL HAWES, D.D.

menced earlier than this, for when at work in the clothier's shop, he used to paste leaves from the Bible on the wall before him, and commit verses to memory as he worked, a practice of which he often spoke afterward with a great deal of pleasure, as it had given him such a good command of Scripture texts.

"After graduating at Andover, he preached several times at Newburyport, Mass. The following winter he preached five or six Sabbaths in Center church, Hartford, and soon afterward received and accepted a call, becoming its pastor. On March 4th, 1818, he was installed as pastor of the church, a fit successor of that "able and faithful minister of Christ, the Rev. Thos. Hooker," who, in 1833, according to the inscription on his tombstone, planted in Hartford, "ye first church in Connecticut." From Mr. Hooker's time until 1818, a period of one hundred and eighty-five years, this church had never settled a pastor who had previously been settled elsewhere, nor dismissed one until death separated him from them, but six faithful ministers had spent the whole ministerial portion of their lives in its service. Dr. Hawes was also installed here without being previously settled elsewhere, and his ministry proved one of the longest and most useful of all. He remained sole pastor till October 22d, 1862, when the Rev. P. W. Calkins was installed as his colleague. Unfortunate differences of opinion between the two, and among the members of the church, led to the resignation of Mr. Calkins after a ministry of about two years, and the separation of Dr. Hawes from the nominal pastorate of the church. December 14, 1864, the Rev. George H. Gould was installed as pastor, though Dr. Hawes was still retained on a salary, often occupied the pulpit, and performed much acceptable pastoral work. After this time he preached very often in other towns, particularly in the smaller towns of that section of Connecticut, and thus became personally dear to many who had before known him chiefly by reputation. During the last three years, there were only three Sundays on which he did not preach in some church, and these

last scattered pulpit labors were blessed in the conversion of very many persons.

"It was on one of these visits to outside towns that he was attacked by the illness which resulted in his death. He preached morning and afternoon of Sunday, June 5th, in the Congregational church in Gilead. He had intended also to go out to service in the evening, but felt too unwell. About midnight he had an attack of hemorrhage, and through the night and part of the next day was in very great pain. When he seemed aware that he had not long to live, in reply to a remark that he was almost home, he said, 'Oh, yes, I am so thankful that the great work of preparation has not been put off till now.' Some one referred to his two solemn sermons of the previous Sunday, in which he had referred to the fact that we none of us knew how near we were to the close of life, and in which he said that he might be very near eternity, when he replied, 'I was struck with the thought when I was laid upon this bed, that I was led to preach those sermons last Sabbath.'

"Dr. Hawes was an earnest and effective preacher, and though not possessed of extraordinary abilities, he was very influential and successful. His words carried conviction to the hearts of his hearers, for they knew him to be earnest, sincere, and truthful, and he became one of the most useful ministers in New England. Wherever he was known he was respected, almost revered. His writings for publication were somewhat meagre, his pulpit and pastoral labors occupying nearly all his attention. His first published work was 'Lectures to Young Men,' originally preached in Hartford and New Haven, and printed in 1828. He also published a 'Tribute to the Memory of the Pilgrims' in 1880, a 'Memoir of Norman Smith' in 1839, 'Character Everything to the Young' in 1843, 'The Religion of the East' in 1845, with occasional addresses and sermons. Among his last employments was preparing a volume of his sermons for publication. When printed he gave an edition of eight hundred copies to the American Home Missionary Society, that one might be sent to each of their missionaries, and the remainder distributed where they would be valued.

"Dr. Hawes was married in June, 1818, three months after his installation, to Louisa Fisher, of Wrentham, Mass. They had six children, four of whom, two sons and two daughters, died when quite young. Their oldest daughter, Mary Elizabeth, was married September 4th, 1843, to the Rev. Henry J. Van Lennep, missionary under the American Board in Smyrna, Turkey. In October of the same year Mr. and Mrs. Van Lennep sailed for their missionary home, accompanied by Dr. Hawes. He returned the following July, and a few months afterward heard of the death of his daughter, which occurred September 24th, 1844. The youngest of the family, Erskine J., was born in July, 1828. He graduated at Yale College

in 1851, and was installed pastor of the Congregational church in Plymouth, Conn., in January, 1858. In July, 1860, he was out riding, when he was kicked by a horse, and died two days afterward from the effects of the blow. Memoirs of this son and daughter were prepared by Mrs. Hawes, and published. The old couple were by this accident left childless, yet scores of people, young and old, have cherished for them a kind of filial regard, and many will hear with deep regret of the death of the good Doctor. The funeral sermon was preached by President Woolsey, of Yale College, in accordance with an agreement made between the two some time ago."

In appearance Dr. Hawes was tall and athletic. His complexion was dark, his features prominent, and his countenance remarkably strong. He carried with him an air of self-confidence and easy self-possession. There was about him nothing like style or starch. His great brown hand was offered to farmers and laborers anywhere, and he had about him a generous and beneficent manner, which gave every one assurance that he could be approached easily, and that he would listen kindly to any request which poverty or obscurity might desire to make. He was a great, good, genial, generous man of the people.

Scarcely had the good Dr. Hawes been laid in his final resting-place on earth, when the aged companion of his long and useful life was called to join her husband in immortality. Mrs. Hawes died on June 11th. She had faithfully watched by the bedside of her husband during his last illness, and the consequent exhaustion resulted in an attack of congestion of the lungs, under which she sank rapidly until death intervened. She was seventy-six years old, one year younger than her husband, and has shared with him the labors and duties of forty-nine years of service in the church. She was a woman of great good sense and strong character, and was ever active in Christian works.

SUCCESS.

—O:—

"Tis not in mortals to command success."

Addison's Cato.

Success! This is the word which causes many a heart to leap and many a brain to burn with ambitious yearnings. "Oh," says the young man, "if I could only succeed in attaining a reputation for scholastic ability, for professional skill, I could then rest on my laurels and be happy." Success! What is it people generally mean by this term? Should we appeal to one hundred men as we meet them on the busy street, in open day, five sixths would reply substantially: "the lucrative prosecution of business enterprise—the accumulation of a fortune;" while the remaining sixth would be variously divided, according to the bent of each one's mind or disposition; but the underlying principle which actuates all in the strife for success is the reputation—the respect—it will inspire in others for them.

The man of wealth hears remarks thrown

about here and there that he is possessed of a princely fortune, and capable of accomplishing great results if he chooses, and he chuckles triumphantly within himself over the thought, "I am successful." The lawyer who has patiently and laboriously plodded from insignificance up to influential eminence, smiles when men speak of his profound legal ability, and thinks it, if he does not utter aloud the sentiment, "I am successful." The man of science—the *savant*—who for years has devoted himself to searching investigations among the great arcana of nature, and has unraveled a few folds in the great mesh of complicity, receives the loud applause of admiring multitudes as a substantial token of his success. The diligent scholar, whose brain is stored by the lucubrations of many years, hears his name on the lips of the intellectual, sees it on the printed page, and accounts himself successful. The soldier who has ridden victoriously over many a bloody field; the statesman who has seen many a political measure inaugurated, of which he was the prime mover; the adventurous explorer, whose startling experiences on arid plains, in pestilential jungles, or amid fields of eternal ice, are the themes of many a journalist; the wordy novelist, whose highly painted stories feed the craving marvelousness of a gaping multitude, one and all congratulate themselves with being successful.

Such are indeed successful. We would not deny them one jot of the merit to which their zealous and persistent efforts have won; but the question comes home to us: Are they happy in the success thus attained? Do they feel in their hearts a contented enjoyment of the fruits of their years of physical or mental toil, reaped as those fruits are, from the applause of the world? This is the vital point which strikes at the root of all human exertion. Though many a man can say

"Chaplets of fame enwreath my brow,"

or "honors thickly clustering press upon me," very few can say, "I am happy in my success." And why? Simply because the success of the mass of mankind has ministered to the gratification of but a portion of their mental organization, and left the remainder to "feed on husks."

The quotation at the head of this article would supply us with thought sufficient for a voluminous discourse did we think it expedient to be lengthy. It contains, however, in itself the gist of what we would say.

The constitution or organization of man mentally—that part of his nature which is capable of experiencing the feeling of satisfaction—is composite. The distinctive parts; intellectuality, morality, sociality, and propensity, or the organism which ministers to his personal security, have each their appropriate spheres, yet are so constituted that they can, when properly directed, operate harmoniously together or in mutual correlation. The more harmonious their activity, the more nearly perfect their mutual reciprocity, the more composed, the more efficient and the happier will be the man. On the other hand, the more one

part is exercised to the neglect of the others, the more irregular and inharmonious will the organization, taken as a whole, become. Therefore it is that men who, having yielded to predominant mental influences, and pursued earnestly the bent of such inclinations until they have attained the object of their pursuit, do not attain also a satisfied mind, but exhibit usually a restless avidity for greater achievements in the same direction. "Increase of appetite hath grown by what it fed on."

The wealthy man may be said to have succeeded in pleasing his selfish nature; but that selfish nature is not satisfied—it is clamorous for more. The learned man may have gratified, to a great extent, his intellect, but it is not surfeited. The demagogue may have succeeded in pleasing his ambitious nature, and the sensualist may have drunk deep of the fountains of pleasure, but there is no happiness pure, unalloyed for them. Contentment flows from an organization which is harmoniously developed by the exercise of all its parts, especially of those which minister in spiritual things. "The contented mind is a continual feast," says the old proverb, and herein only is true happiness. The first step to be taken in the process of securing this greatest of all successes—happiness—in comparison with which all other acquirements pale into insignificance, is to satisfy the moral nature. Bearing in mind the motto, "Tis not in mortals to command success," we will look to the Author of all things for those spiritual instrumentalities which we shall need to aid us in securing "our being's end and aim"—

"For He satisfieth the longing soul,
And filleth the hungry soul with
Goodness."

The cravings of the man-spiritual once ministered unto, the "end" is about accomplished. Then "all things will work together for good" in us, and success—which before appeared so difficult of attainment—which required so much toilsome study, so much painful exertion—will meet us on every hand. Stimulated by proper motives—sustained by a Power omnipotent, all our objects will seem easy of acquisition—the man moral, the man intellectual, the man social, the man physical, will each be fed, satisfied, contented, and happy. Thus, each faculty acting for and in harmony with all the others, will procure that universal desideratum, success.

SIGNS OF RAIN.—Just before rain, flowers smell stronger and sweeter, because the vapors of the air prevent the scented particles of their perfume from ascending, as they would in a drier atmosphere. Instead of rising above the earth, the odor is disseminated by the moisture. Because the plants are stronger in fragrance just before a fall of rain, we see horses stretch out their necks and sniff the air in a peculiar manner. Animals are more observing than men, and nature speaks to them in a silent manner. They thus are able to prognosticate the coming storm with unerring certainty, while man often stands bewildered and lost in doubt.

HON. C. A. SHAW.

PHRENOLOGICAL CHARACTER.

This gentleman has a very large brain, exceeding twenty-three inches in circumference, and high in proportion. He also has a somewhat powerful framework, which is amply filled up in all the vital parts, and he has constitutional vigor enough to last him into old age, provided he uses it economically.

He should be known for his powers of observation, analysis, criticism, and for his perseverance. He is remarkable for his mechanical ingenuity, ability to plan, contrive, invent, and execute. He is much more original than imitative, but can do what he sees done quite readily, and make one part fit another.

He is intuitive in his intellectual perceptions; reads the motives of others at the first interview; seems to know at a glance whom to trust, and is not easily misled. He has a great love for all that is grand and sublime in nature—appreciates the beautiful in art—all things, indeed, which appeal to the emotions. He is well developed in the devotional sentiments, readily impressed by psychological influences and religious matters. He is somewhat prophetic in the cast of his mind—capable of anticipating to a considerable extent future events. In this, and in many other respects, he resembles his mother in feature as in character.

It should be comparatively easy for him to comprehend principles, to work out difficult problems in science and philosophy. His is a comprehensive, far-reaching mind, more like a telescope than a spy-glass, more like a cannon than a pocket-pistol. He is full of enterprise and push; would leave no stone unturned to accomplish an undertaking upon which he was fully bent. He has become self-relying, whereas, when younger, he was sensitive and diffident; contact with the world has given him assurance and confidence.

He is not very hopeful, but he usually realizes more than he anticipates, succeeds better than he had promised, and comes out of the big end, instead of the little end, of the horn.

He has much kindness—sympathizes with all who suffer, and would even make personal sacrifices for their benefit. His is a reforma-

PORTRAIT OF HON. CHARLES A. SHAW

tory cast of mind. He would not cling to the old because it was old, nor reject the new because untried. His mind is open to conviction—ready to investigate, to look into new things, but not incredulous, nor yet liable to believe too much. His religion is, first of all, a matter of kindness; next, of justice—next, of humility and devotion—last, of faith and trust in Providence. He would become fluent as a speaker, if trained to it, and would communicate his ideas freely in writing. He can impart what he knows upon a subject with facility. Would make an excellent teacher. His mind is strongly scientific in mold, practical and usable, as occasion may demand. In temper he is quick and sharp, but not cruel. There is *force* in him, resolution, and sufficient firmness, steadfastness, and decision.

He is quite versatile—can readily transfer his thoughts from one subject to another, and keep several irons in the fire at the same time. He is sociable, fond of the society of ladies, enjoys his home, and soon becomes attached to persons and objects of interest. If a father, he would find much enjoyment in his children—

take an interest in pets or some kind—possibly a fine horse or an intelligent dog.

All things considered, his, in many respects, is quite a remarkable organization, possessing high capabilities and talent. He has been blessed above many, and will be held accountable according to the measure of the gifts and graces given him. If educated for a learned profession, he would have taken a good position in the law. Next to that he might have succeeded in the ministry. In something artistic or mechanical he would have attained eminence already.

He would have made an artist, an architect, an engineer, a projector, a navigator—in short, his organization is such, that whatever he might take up and prosecute with a reasonable degree of diligence would conduce to his success. There is timber enough in him to build up a very considerable edifice; and if rightly placed in life he ought to attain to eminence and success.

BIOGRAPHY.

HON. CHARLES A. SHAW,
Mayor of Biddeford, Me.,
was born in the town of
Sandford, York County,

Maine, November 5th, 1831, and is a direct descendant of distinguished New England ancestry. He is a grandson of General Shaw, formerly a prominent politician and business man in the Eastern States. His father was a farmer, but being in moderate circumstances, and having a large family to support, was unable to give his son any other than an ordinary education, and that, too, such as could be acquired in four or five weeks of study yearly in a cold school-house, to which it was necessary to travel on foot for more than a mile each day in mid-winter—for winter is the only school term of a large portion of our New England farmer youths. During the summer he worked on the farm, even from his early boyhood, and at thirteen was required to do a man's work. Toiling on the scanty soil of his native State tended to develop the capacities which were inherent in him; and naturally philosophical and mathematical in the cast of his mind, the long winter evenings found him deeply absorbed in study, with an earnestness which almost amounted to enthusiasm.

At fourteen he left home and commenced

teaching, which he followed for a while with good success, and after attending one or two terms of an academy at Alfred, in his native county, he prepared himself for college, under the instruction of Hon. Henry Holmes, a distinguished scholar then residing at that place. Limited pecuniary means, however, prevented him from fitting himself for a profession, and he abandoned the idea and turned his attention to mercantile life.

Shortly afterward he took charge of a newspaper in Boston, which he managed with ability and success; and here he became impressed with the great value of advertising to the business world—a knowledge which he has since used with great advantage to himself. But the newspaper world did not offer facilities sufficient for such a versatile intellect as his. He left that occupation, and engaged in various other pursuits of an adventurous and novel character; but to follow the events of his life during the few following years would far exceed the limits of a single article. Suffice to say that, after serving a regular apprenticeship at the watch-maker's and jeweler's trade, he commenced business for himself in the city where he now resides, as senior partner of the firm of Shaw & Clark, long well known as one of the most enterprising and successful business concerns in the country, and which has but recently been dissolved, after an existence of nearly fifteen years. During this period the radius of his business constantly extended and widened. He engaged in numerous speculations and enterprises, all of which, under his management, were successful.

Invention was a subject to which he paid particular attention, and he has probably taken out more patents than any other man in the country. Among the more important of these may be mentioned various improvements in cotton machinery, tanning apparatus, agricultural and domestic implements, sewing-machines, etc., in all amounting to more than one hundred in number. The well-known Shaw & Clark sewing-machine, the original foundation of all cheap sewing-machines, is of his invention. He is also the inventor of "Shaw's Perpetual Pocket Almanac," of which several millions have been sold, and which is copyrighted in nearly every civilized country of the globe. This little invention, although comparatively unimportant, is recognized in the scientific world as a wonderful mathematical achievement, overcoming obstacles which had previously been considered insurmountable. He has also, what is exceedingly rare with inventors, the faculty to make money out of his own inventions.

He has brought out, under his own management, several exhibitions, entertainments, and lectures. The reputation of the late Artemus Ward is mainly due to Mr. Shaw's early interest in him. The Hon. Edward Everett often lectured for him, and until his death remained his intimate friend. As an instance of his keen foresight and intuitive perception in speculative matters, his offer of five thousand dollars for the original manuscript of President Lin-

coln's Emancipation Proclamation may be cited.

At present Mr. Shaw is president of the Shaw & Clark Sewing-Machine Company, with three hundred thousand dollars capital, a corporation employing a large number of hands and doing a very extensive business; president of the Ne Plus Ultra Collar Company, with two hundred thousand dollars capital, besides being a director in several other corporations in which he is largely interested. He is also managing agent and attorney of the Union Paper Collar Company of New York, with a capital of three million dollars, and having under his control all of the legitimate paper collar manufacturers in the country, consisting of twenty different corporations, ranging in capital from one hundred thousand dollars to five hundred thousand dollars each. Besides all of this, he has under his immediate direction over one hundred important suits at law and in equity in the United States Courts, enough, of itself, to overwhelm almost any ordinary mind, to say nothing of such minor matters as conducting two large advertising establishments for furnishing agents' supplies (being a firm believer in the value of printers' ink to the man of business, he has long been one of the most extensive of advertisers, his advertisements frequently appearing in more than two thousand papers simultaneously), attending to his real estate, with other matters too numerous to mention, which are either directly or indirectly in his charge. Notwithstanding all of this, however, he finds time to contribute, under a well-known *nom de plume*, to some of the leading magazines and papers of the day, with ample leisure to spare for recreation!

Mr. Shaw has served two terms as Mayor of Biddeford, Me., being a most efficient officer, and very popular with all parties. His inaugural addresses, extracts from which have been extensively copied by the press, exhibit a thorough knowledge of national as well as municipal affairs, and treat in a masterly manner the various subjects discussed. He has also represented his city in the Legislature of the State, where he took the lead of his party, which, although in a minority, by his shrewd management and judicious course in relation to all matters of general interest, enabled him to hold the balance of power and secure the passage of many important measures. As a speaker, he is ready in debate, quick to analyze the subject at issue, logical and convincing in his arguments. As a writer of both prose and poetry, he has already acquired some distinction.

Mr. Shaw has been twice a candidate for State Treasurer, and at the last Congressional election was tendered the nomination for Member of Congress from his district, but he declined to contend for that honor. He is Commissioner from Maine to the Paris Exposition, in which he has taken great interest, having been appointed by the unanimous request of all parties, as peculiarly adapted for the position. He was also recently appointed Consul-General to Russia, one of the most important

and lucrative foreign offices under government, but declined to accept the position on account of his numerous and pressing business engagements.

In general deportment Mr. Shaw is of pleasing address, modest and unassuming, frank, open-hearted, witty, without affectation, and making friends at once of all with whom he comes in contact. With the keenest shrewdness of the genuine Yankee, he combines the broad, genial liberality of the South and West, being every way what is generally termed a whole-souled gentlemanly man.

In stature he is five feet eleven inches in height, of good form, and weighs about one hundred and seventy-five pounds. He is possessed of ample means, and contributes liberally to every good work, especially to the aid of those less favored than himself. Generosity is a part of his nature, and he attributes his success to this trait of character, feeling within himself that it is far "more blessed to give than to receive."

Mr. Shaw has traveled and seen much, both of his own country and of Europe, and his experiences with the world, its pleasures, cares, troubles, and responsibilities, have already far exceeded what usually falls to the lot of most men. His acquaintance is very extensive, and among his intimate friends he probably numbers as many personages of note as any man living.

The *Saco (Maine) Democrat*, in speaking of Mr. Shaw, pays him a well-merited compliment: "The numerous instances of men in our country who have raised themselves from the humblest walks of life to the most eminent positions of usefulness and influence, not only furnish proof of energetic effort to make the most of small means and commonest opportunities, of honest working and a persevering application of all the faculties given to man, but they are also the best proof that riches and ease are not essential to man's highest culture, else the world would not have been so largely indebted at all times to those who have sprung from the humbler ranks of life and exhibited those traits which have made them such bright examples of all that goes to make up and adorn true manhood. On the contrary, men are not trained to effort and encounter difficulty, or awakened to that consciousness of power which is so necessary for energetic and effective action in life, by an easy and luxurious existence; and hence, so far from poverty being a drawback, it may oftentimes be converted into a blessing, rousing to that struggle with the world in which all true-hearted men find strength and victory.

"One of the best illustrations of what can be accomplished by the proper exercise of these qualities is afforded in Mr. Shaw, who undoubtedly embodies, in the highest degree, as many of those peculiar traits and qualifications which go to make up what may be termed the strictly American character as any man living, and we are happy to see that he is not unappreciated."

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one fate
Their hearts, their fortunes, and their beings blend.—*Thomson.*

WOMAN.

BY SAMUEL CAMERON.

[Lines suggested on hearing the atrocious sentiment, uttered by a distinguished legal gentleman, that "the word of a bishop is worthier of belief than oaths of women."]

In the chivalric days of old,
When woman's name was purest gold,
A woman's name and word were then
The worthy pride of worthy men,
And kings and knights of first degree
To virtuous woman bent the knee,
And no one dared, as now, to say,
That any wayward prelate's word—
The libel utterance of our day,
Alike dishonoring and absurd—
Is worthier of belief, by far,
Than oaths of virtuous woman are.
Our day is boastful of its mind,
Its high intelligence refined,
And frowns upon that distant time
When virtue was the true sublime.
But, give this godless doctrine wing,
Its poisonous breath around us fling—
Around our homestead or our hearth,
And what remains to halo earth?
Where were the solace—where the pride,
That since creation's earliest morn
Sat smiling by our mother's side,
And blest the hour when we were born.
Oh! 'tis a dangerous thing to stir,
From its foundation in the heart,
Which has been woman's worshiper,
Untouched by time, unstained by art,
The beautiful and holy love,
So linked to that we owe above;
That from our infancy we owe
To her, all, all we feel or know
Of good and pure, and fond and mild,
Thro' manhood, from the absorbing hour,
When first her lips in worship smiled
Upon the beauty of her child,
And prophesied its future dower—
Its dower of glorious fortunes here,
For Heaven would bless a mother's prayer.
Away with this most foul attest,
The venom'd shaft will harmless fall,
When aimed at noble woman's breast.
Wherefore the libel, and for whom?
Why, ere yon mitred man was born,
Now trembling downward to the tomb,
She was the starlight of the morn,
The bringer in of light and love,
To people God's own realm above.
Oh! let us pause, and as of yore,
Sparta, beside the deathless shore,
Defied the vaunting Persian king,
Let us our strength chivalric bring
In aid of woman's glorious name,
And, as our lives, defend her fame.
Thus, while we look on woman's face,
Her beauty, loveliness, and form,

We'll feel she's Heaven's embodied grace,
The shielding Angel of the Storm—
The pure, the beautiful, the only,
Without whose smile, without whose love,
Man were a creature drear and lonely;
No joy below—no hope above,
And life, a wild tempestuous river,
Where life and love are lost forever;
HAIL! GLORIOUS WOMAN, as the sun,
Careering in his noonday might
Outshines the stars, the morning one,
And all the galaxy of night,
Even so does woman—brightest, best
Of all God's works—outshine the rest.
The beggar whom we daily meet,
Craving his pittance through the street,
If pure in principle and heart,
And free from infamy of art,
I reverence as pure and bright,
As he arrayed in priestly light.
He is God's own since time began,
Make bishops better—if you can.
And when our day shall pass away—
As pass away it will—
Their every word will be revered,
Among the virtuous still;
THEIR every word, so purely given,
Which testifies of truth and Heaven.
Those virtuous woman's words compare—
Words, pure as new-born fountains given,
With the high oaths that man could dare
To breathe like blasphemies to Heaven,
And they will stand, supremely grand,
A power, from Truth's unerring hand.
Where—where is all remembrance gone,
Of that great votive time,
When, as 'twas taught us, called upon,
To ministries sublime—
Where is the memory that should be,
The star that never falters,
But shines as purely, faithfully,
Above the billows of life's sea,
As o'er the temple's altars?
Where is this memory? Like a river
That was, and is not, that, whose name
Forgot its nature, not its fame,
Which rolled by Ilium, gone forever.

HOW TO SAVE MONEY.

BY MRS. GEORGE WASHINGTON WYLLIE.

THERE are some lost arts, and some arts that never have been found. What is the use of covering ourselves, figuratively speaking, with dust and cobwebs hunting through the lumber-rooms of the dark ages for things that we don't want, and can't use, and are ten times better without, when the real, actual wants of to-day are crying aloud in the streets?

We need no alchemist's crucible to coin gold now-a-days. The question is, not how to make money, but how to save it. Almost any man or woman with a clear head, a quick wit, and industrious hands can earn money, but not one in twenty—we might almost say, not one in a hundred—knows how properly to

economize that money after it is earned. Here is an art that may be studied to some advantage. We have schools, conservatories, academies almost without limit—establishments that profess to turn out graduates by the dozen, full blown and ready for all the requirements of life. They are *not* ready, and they can not be ready until they have in some degree learned the uses and abuses of money.

As a nation, we are supposed to identify ourselves altogether too much with the "almighty dollar." Now that is the greatest mistake our sapient critics ever made. We only wish an Englishman's pound note could once "compare notes" with an American's five-dollar green-back. Twenty to one that pound note has been turned, and twisted, and meditated over, and calculated upon, and made to compass more purchases and include more items than three times its equivalent in Republican currency! In our anxiety to avoid the imputation of "stinginess," we rush blindly into the opposite extreme, and become reckless and extravagant.

Our money comes too easily. We have never been through the agonizing ordeal consequent on glutted markets and supply far exceeding the demand. Our "hard times" have been children's play compared to the famine-stricken want of other nations. May we never become any wiser—but, and if, we *should* pass through that fiery furnace of trial, we should emerge more sensible, far. It is a lesson that we can only learn in the bitter school kept by that sour old pedagogue, Experience!

Now, we don't pretend to dip into the deep sea-soundings of political economy. We are not "strong-minded;" we don't wear short hair, nor speak in a deep, gruff voice; and, moreover, we have a vague sort of idea that gray-haired statesmen who have devoted their life's study to the science, may know rather more than we do about it! But of one thing we are morally certain—that women have more to do with the practical workings of our financial system than they have any consciousness of.

Any one can earn—few can save. We must *all* learn to save. If a man works hard, whether with brain or muscles, to bring home money to his household, he has a right to expect that it will be properly expended and carefully economized. It is not enough that daily expenses should be met, and daily bread provided. Something should be laid aside for the great unreliable future—for the "rainy day" that comes to every home, sooner or later. When a man has worked a lifetime patiently and constantly, and finds out at the last that he has but just kept pace with time—that he stands no farther ahead in the world than he stood a quarter of a century ago—that he has no actual, positive result to show for the strength and time and persistent effort he has invested, who can blame him for being discouraged?

"But I am not extravagant," says the woman whose eyes may chance to fall upon these columns.

Are you not? What right have you to make the assertion? The fact that you own no cashmere shawls, no thread laces, no diamonds—that you do not buy *moire-antiques* at eighteen dollars a yard, nor imported china worth its weight in coined money, is nothing at all to the point. Extravagance has its degrees; it is like a great flight of stairs, and although few women may have reached the top, there are plenty half way up, and the second or third stairs is quite dangerous enough.

You are not extravagant? Look at your expense-book for the last twelve months; or, if you do not keep such a record, run over the list in your mind. How many articles have you purchased that were actually *necessary*—that you could by no possibility do without? and how many have you bought that were useless, save to gratify the passing impulse of the moment or the short-lived fashion of the day—mere wells of folly into which you dropped your money and saw it no more! Add up the price of these foolish investments, and imagine it nicely laid away in some savings bank, or turned into treasury bonds. Then ask yourself whether or not you have chosen the “wiser part.”

Look at a woman's “shopping-bag” after she comes home from a stroll through one of our tempting thoroughfares. “She didn't mean to buy a thing” when she went out—which, being translated into the vernacular, means that she did not want anything. But that ribbon was such a lovely shade, and those buttons were so cheap, and she found a remnant of nice lace—a “bargain”—lace is *always* useful in a family, you know—and she could not resist that delightful French cambric, and after all, shirtings might not be so cheap again, and Mr. Smith would need a new set of shirts next spring at the latest—and so the money melted out of her purse, she herself can scarcely tell how.

And yet if you told this woman she was not economical, she would look upon you as one demented. *She* not economical! Why, she is the very one who would bring dyspepsia into the family stomachs with second-rate butter for cooking, “because it is cheaper,” and pay her servants half price for work half done, and persuade her seamstress to strike the odd half dollar from her bill, “money comes so hard now-a-days,” and closes her ears against the plaint of poverty. “She really can not afford to give anything in charity, Mr. Smith's business is so dull, and her expenses for house-keeping are so numerous!”

That is the way *she* economizes. Do not believe in this warped version of the “golden rule!” The truest economy is the truest generosity. Of all our bread, that which we cast upon the waters is the only one that comes back to us!

Let no one think the art of economy below her study; on the contrary, it should enter into all her calculations and be a daily object. Economize in small things—the great ones are very apt to take care of themselves. Remem-

ber the old maxim, “what is wasted does nobody any good!” There is neither merit nor profit in scattering money profusely on all sides. The wealthiest people are those who look most closely to seemingly insignificant expenses and minor details. Poor people, too, often fancy they “can not afford to be economical!”

The hardest of all lessons to learn, albeit, the most necessary, for a woman brought up as women are now-a-days, is *how to save money!*

TRUE, AND UNTRUE MARRIAGES; OR, NOTES BY THE WAY.

BY A. A. G.

EAVES-DROPPING always deserves to have the stamp of disgrace set upon it, but every man—be he bachelor, or married man—has an undoubted right to hear what he can not help hearing, as, without curiosity, he goes quietly on his daily way. He has also an indisputable right to jot down what he hears, particularly when taking notes may be profitable to others.

The above will suffice, without anything further, to introduce a listener, and his “Notes By The Way.”

Note I. I am a man who owes all I have been, all I am, and all I ever shall be, to women. Many of them have been bright, particular stars in my otherwise cloudy firmament. Without them I should have stumbled, even at noonday, and I believe that to be united, in true marriage, to a true woman is the greatest blessing of a man's life. But as there are spots on the sun, so there are great defects in the sex, and one of the greatest is their lamentable ignorance of what constitutes true marriage, and this ignorance is a great obstacle to true marriage.

Note II. Walking, not long ago, behind two demoiselles with jaunty hats and bright blue and red scarfs and engaging manners, I overheard the following colloquy:

“There's one thing I'm determined I'll never be, and that's an *old maid*.”

“Neither will I,” was the answer. “I've always had a horror of being one, but I'm almost twenty-two years old, and I shall have to stir myself, or I shall be on the list of the *horrid creatures*.”

“There's half a dozen fellows I can have,” replied the first demoiselle, as she tossed back her long blue scarf over her shoulder. “I could bring any one of 'em to his knees just by holding out my hand to him.”

“Then why don't you do it? It seems to me you've lost many a *good chance to get married*.”

“Well, maybe I have; but, to tell the plain truth, I'm looking out for *money*, and every man who has been after me yet is poorer than ‘poverty's picked ghost.’ Now, my father is always *raving about heart and intellect*, and they are good enough in their place, I know; but if I can't have plenty of money to spend,

I'd about as lief as not stay I as am, although it would be a little mortifying to turn brown and be an old maid. The fact is, I want about a dozen pair of kid gloves a year, and everything else to match. Anything for me but scrimping and screwing and living on *love*, as some married people do.”

“I don't know that I care to marry *rich*,” said the young lady with the red scarf, “but I don't want one of these *pokey domestic* men who don't believe in any other joys than the joys of the *fireside*, and who always want their wives tied up to 'em. I believe in keeping young as long after marriage as possible, and going to parties, even if your husband does persist in staying at home, with his toes in the ashes.”

“Well, the truth of the matter is,” replied the fair maiden—for fair she was—with the blue scarf, “men are unreasonable creatures. They think that women were made on purpose for them, and just to be sticking-plasters, nothing more; and if a woman only could make up her mind to live single, it would be a *great* deal better for her—that is, if her father can support her in the style in which she wants to be supported.”

“A dilemma, with two girls in it,” answered red scarf. “We, neither of us, know what we want. Oh, do you know who *Mary Deming* is going to marry?”

“No, I don't.”

“Well, guess.”

“I'm sure I couldn't guess in an age. She don't belong to my circle, and I don't know much about her.”

“She isn't exactly in our set, to be sure, but then she's highly respectable. She belongs to one of the *first families*, and she *dresses beautifully*, too. Well, she's going to marry that soldier, Harry Doolittle; and that isn't the worst of it, you know. He's got a *cork leg*! But I suppose she's bound in honor to marry him, for she was engaged to him before he went into the army.”

“Engaged to *him*!” exclaimed red scarf. “She was engaged to a man with *two legs*; the *cork leg* wasn't in the bargain. I'd break the engagement quick, if I were in her place, but she won't do it. He has ‘served his country so splendidly,’ *Mary says*, ‘and is worthy of some one who is a great deal better than she is.’ You know she has *very romantic* ideas of marriage. Now, if I were she, I'd let his *country* pay him splendidly, if he *has* really done his country such splendid service. I wouldn't sacrifice *myself* to pay him for what he has done for his *country*; but then she *fell in love* just as thoroughly as any one falls down stairs, and I believe she'd have him if he had two cork legs and two cork arms.”

Pardon the listener, all you of the dear fair sex, if he gives you no more notes just now, but proffers a little advice. He is not a man of caustic spirits, and he delights rather in praise than in blame. But as the fair demoiselles in the red and blue scarfs, who so kindly furnished him with material for notes, are mirrors in which

many of you may see yourselves, forgive him if he ask you to look in and see yourselves reflected. Excuse also the liberty he takes in asking and answering the question: "What is a true marriage?" In other words, what constitutes a happy marriage, for a true marriage is a happy marriage, and a happy marriage is a true marriage.

"Similarity in tastes," answers one. Not always. You, young lady, may be very domestic and fond of staying at home, and the same being true of your liege lord, you decline the invitation to Mrs. B.'s large party, and stay at home together, to exchange hard words and thrusts, and prove that yours is not a true marriage. You may be strikingly alike in your fondness for the *last* word, and both may possess so much self-will as to be determined to have that last word at any cost. Similarity in tastes and similarity in marked characteristics will not by any means always make a true marriage.

We believe that *love* is the foundation-stone of the sacred institution of marriage. We believe that "*falling in love*," much as it has been ridiculed by sages, and made the theme of wild romances, is an essential pre-requisite to a true marriage, and that love alone makes that harmony without which marriage is a great failure. "*Falling in love*," said a writer, "belongs to the ignorance and shallowness of *sixteen*. Lads and lasses, knowing nothing of real life, breathe out their love on rose-colored paper, and all their notions of marriage are colored like their paper. They sigh and almost die for each other, and really believe they were made on purpose for each other. The most important question of all: What shall we live on? occupies an inferior place among other questions, and they *fall in love* when they had better keep out of it.

Now, as a roof over the head, and food and clothes for the body are, to say the least, very convenient, proper thought should be given to them; but "*falling in love*" is just as indispensable to a true and happy marriage as a shelter and food and clothes are to the body. And you, young lady in the jaunty hat and blue scarf, will certainly fail of the only marriage—a true marriage—that can make a woman happy, if, instead of falling in love, you keep your eye out for some prosperous business man who will spare you the pain and the plague of economy, and give you what you say you must have—"about a dozen pair of kid gloves a year, and everything else to match."

Money is no objection to a man, provided other things are equal; but if you are "looking for money," as you say you are, I fear you will get both money and misery, and you may get more of the latter than of the former. I was a kind, compassionate listener to *your* conversation, my dear demoiselle, and should be only too happy could I enlighten your ignorance and raise your ambition, and lead you to aspire after a true and happy marriage, but I am afraid I shall fail; for there is a very poor prospect

indeed of your falling in love, so long as you look not at what men *are*, but at what they *have to give you*. You seem to seek rather a *marriage de condescendance* (marriage of convenience) than the true marriage of the heart. Being supported in just that style which so much pleases you, and having a house with all the modern improvements, and a wardrobe with all its modern improvements, and modern *expenses*, too, would be so delightful—yes, and so much better than "scrimping and screwing and living on *love*, as some married people do."

Ah, my fair friend, money is a very useful article; but if you marry with the idea of not "*living on love*," you will live a very wretched life. You may find out what you *now* do not seem to suspect—that you have a heart, and that even "a dozen pair of kid gloves a year, and everything to match," will not satisfy it. And then you will repent at your leisure and spend your years in pouring out the lamentation: "What a fool I was to marry for money, and not for love!" It is to be hoped that you will be wise in time, but the obstacles that prevent your true marriage with any man are many and great. The eye so firmly fixed on money will not easily look at anything else.

Then, too, there is another obstacle, and a serious one it is. There are "so many after you." Yes, "there are half a dozen fellows" all waiting for you, and you will, I fear, take up with one of them without waiting to fall in love.

And you, too, my dear demoiselle with the red scarf, have obstacles in your way. You can not fall thoroughly, deeply in love while you think and speak so lightly of "the joys of the *fireside*," and of "*pokee domestic men*," and of those noble men who have given their country a leg of *flesh and blood*, and taken a *cock* one in exchange.

And all you fair, not yet married, but confidently expecting to be, "straight is the gate and narrow is the way" that leads to a true marriage. Selfish motives that so easily obtain supreme control in the heart, lead to ill-assorted, wretched marriages. To marry for money, to marry for position, to marry that you may not "turn brown and be an old maid," is to marry in the spirit of selfishness, ruinous selfishness, and not for love.

"Hasn't every woman a right to look out for herself?" indignantly asks one of the fair. Yes; but when you begin to talk about looking out for yourself, you venture on dangerous ground. You should remember that your married life may call you to self-sacrifice, not to self-indulgence. The constantly turning wheel of fortune may bring poverty and sickness, and if you have not love enough for a man to go through fire and flood for his sake, you had better never marry him. If you marry for anything but love, you marry for what may perish in a night. Now, do not talk selfishly or frivolously about that union which, if it be a real union of hearts, is of God, for "love is of God," and destined, for aught you know, to run parallel with eternity. There are two lines, often sung, and said to be sacred, but we think they are not:

"There is no union here of hearts—
That finds not here an end."

No, a true union of hearts, not even death can end, and may your marriage, my fair friend, be a true union of hearts, a true marriage—such as will be yours not only through life here, but in the life beyond, where souls rejoice forever in a perfect union.

HOW TO GET A HOME.

OF land, there are in the United States millions on millions of acres, rich as nature can make it, ready for the plow, which may be had for the asking and the cost of surveying. They lie in Texas, Kansas, Nebraska, Dakota, Minnesota, New Mexico, California, Oregon, Utah, Colorado, Nevada, Montana, Washington—not to mention vast tracts of unbroken forest and prairie in many of the older States—Michigan, Illinois, Wisconsin, Iowa, Missouri, Tennessee, Arkansas, Alabama, Mississippi, Florida, Louisiana, and others. In all these States there are thousands of acres of excellent lands suited to growing various fruits, and any crops adapted to the latitudes in which they lie. When the facts concerning these lands—their cheapness, accessibility to market, healthfulness of climate, etc.—become known in the old country, immigration to the new must rapidly increase. The poor working-man can not even hope to better his condition in *that* country. He may live on from hand to mouth, with family increasing, till he becomes too poor to get away, and hence must remain poor, if not a pauper, in the land of his birth.

WHO OWNS ALL THE LAND IN ENGLAND, SCOTLAND, AND IRELAND?—Mr. John Bright, in a late speech delivered at Glasgow, Scotland, put the following questions: "Are you aware of the fact, that one half of the land of England is in the possession of fewer than one hundred and fifty men? Are you aware of the fact, that one-half of the land of Scotland is in the possession of not more than ten or twelve men?" [Americans, think of that!]

A few persons called princes, dukes, lords, nobles, etc., own nearly all the land, and will not sell an inch on any condition. Everybody who occupies any portion thereof must pay rent to them. They get the cream, while others get only skimmed milk. Is there no cause for complaint on the part of those who do *all* the work in that country, and can not, by any possibility, get houses of their own? In America, whoever will may own his own home. He may buy from one acre to a hundred or more, at any price, from a few shillings to a few dollars, and improve it as he pleases.

It is the habit of Roman Catholics to keep together as much as possible, and hence they remain—many of them in subordinate positions—in the larger cities. Would they colonize and go to the country, buy lands and occupy them, they would at once greatly benefit themselves and the country of their adoption.

Protestants, on the other hand, from England, Scotland, Germany, Sweden, Norway, etc., push into the country, take up lands, and plant themselves. They soon become wealthy farmers, and begin to cultivate the arts as well as the soil. Soon, they enjoy all the refinements of older society. It is the same with enterprising Americans. Those of the East go West and build up cities, get rich, and enjoy the luxuries of life. To landless, houseless Europeans we say, look to America. Here you will find many of your own countrymen, or the descendants of your own forefathers. Buy lands, build houses, plant fruit trees, and "make yourselves perfectly at home."

E. B. FAIRFIELD.

I HAVE but a slight acquaintance with President—sometimes called Governor—Fairfield. He is a graduate of Oberlin College—a Free Baptist preacher, and President of Hillsdale College. He has been a member of the Michigan State Senate, and Lieutenant-Governor of the State, and is distinguished somewhat as a lyceum lecturer and eloquent preacher. As a political stump speaker he has few equals, and during a political campaign his services are in great demand. His readiness of utterance seems now and then to stand in the way of careful preparation, and like many other natural speakers he sometimes leaves to impulse that which should be toned and tempered with reflection. Although he is an untiring student, passionately fond of the beautiful in art and science, and a great lover of belles-lettres, he does not always bring beaten oil into the sanctuary, nor his best thoughts into the lyceum. Being one of the master spirits of the denomination to which he belongs, he has been petted and praised so much that he has become careless, and does not always put his entire strength into the efforts which he makes in public. It is charged against him that he is jealous of rivals and impatient of criticism, and that he is not disposed to yield to his equals that homage he expects from them. Notwithstanding these failures he is an able man—one of the ablest men of the State. He stands abreast with the noted men of learning and eloquence, and for impassioned oratory he has few equals in Michigan or elsewhere. When he enters heartily upon his theme, his mind and heart and body speak at once. His voice and face and gesture utter the thought and emotion that stir his nature. At such times the pulse of his soul becomes a tidal flow in the breasts of his auditors. His eyes speak before his lips can coin the sentiment into words; his hands assist in shaping the impression he makes upon the masses. He is Rufus Choate seen from a new stand-point, and toned down to a more moderate style of speech. If he has less fire than the Massachusetts man, he has more sympathy with the public. He is a capital type of the Western speaker, and lyceums of the East can not do better than secure his services. He is about forty-five years of age, of average size and height; has an earnest, thoughtful face, full forehead, and eyes that kindle in conversation. He has not what may be termed a literary look—he resembles rather a well-to-do farmer in his Sunday suit. He has a brilliant future before him, and will probably distinguish himself more and more in the world of politics and of letters.

The following extracts from an address delivered before the Amphictyon Society of Hillsdale College afford good examples of Mr. Fairfield's style of oratory:

"I have wondered that when Shakspeare put into the mouth of Hamlet that almost inspired utterance: 'What a piece of work is man! How noble in reason! How infinite in

PORTRAIT OF E. B. FAIRFIELD.

faculties! In form and moving how express and admirable! In action how like an angel! In apprehension how like a God!"—I have wondered that in this sublime, though fragmentary outline of man's exalted being there had been no more particular mention of that other of the crowning gifts of God to man—the gift of speech—the Divine expression of breathing thoughts in burning words. But he has made his hero illustrate that, and perhaps he deemed that sufficient, leaving it somewhat as the Washington letter-writer who undertook some years since the description of the person of Henry Clay; after going through with his other striking features, he added: 'As for his mouth, that can speak for itself.'

"The cultivation of eloquence has always been, and will always continue to be, in every civilized society, and the more so as civilization advances, a chief end and aim of education. We are very far, therefore, from subscribing to that remark of the ingenious and acute author of Lacon, in which he says: 'Oratory is the huffing and blustering spoiled child of a semi-barbarous age. The press is the foe of rhetoric, but the friend of reason; and the art of declamation has been sinking in value from the moment that speakers were foolish enough to publish, and hearers wise enough to read.' Mere declamation—a fictitious oratory all mere gibberish, balderdash, rhodomontade, wish-wash—that bombastic, inflated, frothy style which is sometimes known as *hyfalutin*, and which consists of 'great swelling words of vanity'—that style of oratory is destined to pass away before the light of general intelligence, as the moving fog that gathers from the fen passes away before the sun.

"But a high-sounding grandiloquence, or a pompous magniloquence, is at an infinite remove from true eloquence. The mire which gathers upon a coach-wheel is no essential part of the vehicle. Whoever comes with that fustian stuff, brings the incense of Baal to the altar of Jehovah, and no heavenly fire shall ignite the unhallowed offering, albeit it may consume instead the sacrilegious offerer.

"Words without thoughts never to Heaven go," exclaimed the king in Hamlet, when he strove in vain to pray; and it is just as true of men as of God, that words *merely* meet no response—only such as are loaded with thoughts. All else is firing blank cartridges.

"Words," says Hobbes, 'are the counters of wise men, but the money of fools'—a most suggestive comparison. A banker may have a

counter, and be very poor; so let no speaker imagine that he is rich because he has 'words—only words.' 'Literature hath her quacks,' says Lacon, 'no less than medicine, and they are divided into two classes: those who have erudition without genius, and those who have volubility without depth; we shall get second-hand sense from the one, and *original nonsense* from the other.' College faculties generally, I fear, encounter much of this *originality*!

"Besides, plain, earnest words not only do the most execution when spoken first, but they are the best remembered afterward. For example, in one of John Randolph's splendid speeches in the Senate of the United States (and he sometimes made such), he paused, and fixing his eyes on the presiding officer, exclaimed: 'Mr. President, I have discovered the philosopher's stone—it consists in these four plain English monosyllables, PAY AS YOU GO!' These words have been by far the best remembered and the most quoted of any which that splendid speech contained. THE SPEECHES AND THE BOOKS THAT CAN NOT WELL BE SHORTENED, ARE THOSE THAT ARE DESTINED TO LIVE.

"Akin to condensation is *brevity*. Sometimes a speech of six days, such as that of Burke in his impeachment of Warren Hastings, may be not only endurable, but tremendously powerful, and increasing in interest and intensity from beginning to end. But ordinarily, and especially in these times of lightning expresses and magnetic telegraphs, a speech of even four hours demands for its apology and even for its patient endurance a most remarkable occasion and most transcendent abilities.

"Eloquence is a sort of majesty—a species of kingly power; and men acknowledge the mastery of no one who has not in his nature a *strong element of self-assertion*. A born king is acknowledged, but none other. A strong man went to the grave a while ago whose chief element of power over men as a popular orator was his imperial positiveness of character. The very authority, and even audacity, with which he asserted a thing, made half the world believe it true.

"Closely allied to this is another essential constituent element of an impressive speaker, *strength of feeling*. 'Si me vis flere, primum tibi dolendum est,' wrote the Roman poet many centuries ago. This is sometimes translated: 'If you wish me to weep, you must first weep yourself.' But it will be observed that it is stronger than that: 'If you wish me to weep, you must first *wail* yourself.' If you wish me to feel a little, you must first feel *deeply* yourself.

"It may safely be asserted that no orator ever lived who was deficient in this respect. A stoic might possibly be a philosopher, after a fashion, and within narrow limits, but he could never be an orator. His philosophy even must never traverse the department of the sensibility, unless he have such a department in his own nature. The volcanic fire which moves others must be kindled in the soul of him who speaks."

A glance at Mr. Fairfield's portrait shows strong firmness. The compressed lips seem to be accustomed to curt remarks, and to emphasis. His word would be law; not to be gained or repealed. Large Combativeness and Conscientiousness, a clear intellect, with a touch of censoriousness, may be found in this very strong character. Benevolence is evidently large, but the sweet and the tart are so mixed, that they may not be easily separated. His more natural sphere is in law and legislation. He possesses, in a marked degree, ability to discipline and govern others.

ON THE STUDY OF LANGUAGES.

BY JOHN NEAL.

Most people of education, no matter how acquired, have a desire to understand at least one more language than that which they have inherited from their fathers; many for business purposes, and others for pleasure. To the professional man, to the man of the world, to the finished gentleman, as well as to the student or scholar, an acquaintance with French, at least, seems to be an indispensable accomplishment—a necessity, indeed; and not an acquaintance with French dictionaries and grammars and literature only, but a *speaking* acquaintance with the language itself. And this necessity, acknowledged by men of high breeding, from the days of Chesterfield, is becoming more and more evident with every generation.

With languages, too, as with everything else, the more you do, the more you may. One acquisition leads to another, until you find it easier to learn two languages a year, than it was at the beginning to learn one in three, four, or five years—to say nothing of a lifetime, passed in the study of Latin and Greek, only to be forgotten, if the study be intermitted for a few years. But he who has mastered one language is quite sure to venture upon another, if he can afford it, for although "one tongue may be enough for a woman," in the judgment of such learned Thebans as John Milton, it is never enough for a full-grown man, with something to do in this world. Having once acquired a relish for the study, "the appetite doth grow with what it feeds on."

THE TEACHERS.

But the acquisition is costly. Time and money can not always be spared. When business is good, the business man can not spare the time; and when it is bad, he can not spare the money. And so, sometimes, will the man of pleasure—and so always will the poor scholar. And then, too, after you have engaged a master, every way qualified, and wholly unexceptionable, you are obliged to fix upon certain hours, and you are not always in the best of humors, nor is he—always punctual. What then is to be done?

Let me give a little of my own experience. I have learnt many languages *without a master*; without a *living* master, I should say; and yet I have always had the best of masters, and masters who were always in good humor, always ready *when I was*, and always patient with my backwardness or stupidity, and willing to repeat a lesson, as long as I might wish, and as often, without losing their temper. And who were these masters?—the best writers of the language I wanted to be acquainted with. How much better than the itinerant language-masters from France and Spain and Italy and Germany, who leave other callings, that of the dancing master, the confectioner, or the fencing master—or perhaps that of a man milliner, to teach us the language of their country. How well qualified the majority of

such persons are for such business, may be guessed at, by asking how large a proportion of our retail shopkeepers, attorneys-at-law, loafers, and wandering adventurers, the drift of our larger cities, who have been caught in the eddies of business, or pleasure, would be qualified to teach their mother tongue over sea, even though, like poor Moses in the Vicar of Wakefield, they should happen to find out, before it was too late, that, to teach a Dutchman English, one ought to know something of Dutch.

COMMON ERRORS.

Observe how few of our people, even among the well-educated men of business and professional men, speak our language with scrupulous precision; and how few there are—how very few—who are not in the constant habit of mis-pronouncing familiar words, and violating the best established principles of grammar; saying for example, "*It was me*"—"between you and I"—"*If anybody asks for me, tell them I shall be back*," etc.; "*was you there?*" and "*who did you see?*" or pronun-ciation, instead of pronunhiation, and *oft-en*, for often, while they would never think of saying off-ical, but offishal, nor *soft-en*, but soffen, according to the genius of our language. How often you will find men of high reputation saying, and not only saying, but writing, "*a historical*" for *an* historical, "*a historian*" for *an* historian (Bancroft and Motley do this), "*such an one*" for *such-a-one*; being, it would seem, ignorant of that law, whereby, of the accent before, the initial aspirate be transferred, the article *a* becomes *an*, as a hero *an* heroic, a history *an* historian, as well as of that other law, whereby the article *a* becomes a consonant by relation, with the power of *w*, as in "*such-a-one*." And yet, with the floating population of other countries, they not being so well educated as our people are, errors of speech and of pronunciation, provincialisms, patois and argot (cant or slang) are likely to be more abundant and more contagious. In learning a new language, if we take writers of established reputation, and make use of them, as hereinafter mentioned, we avoid all this, and have the best of teachers for little or nothing, instead of being obliged to pay from one to two or three dollars a lesson—teachers who are always punctual, always good-tempered, and always ready when we are.

PERSONAL EXPERIENCE.

And now for my own experience. At the age of twenty-four, I knew not one word of any other language than that which I had inherited. Having just failed in business, with little or nothing to do, beyond what I could manage with my pen, it occurred to me that I might employ my time to advantage in learning to *parlez-vous*. From early boyhood, in consequence of the mortification I felt, on hearing one of my schoolmates talk French—a phrase or two at most—which I affected to undervalue, as the Fox did the grapes, when my poor mother was too poor to gratify me, I had always a longing for what seemed to me

the forbidden fruit, and was determined to learn, at least, that one language, if I ever had a chance.

Now it happened that my partner in business—"John Pierpont, Esquire"—was a pretty good French scholar. He had studied the grammar faithfully, translated at sight, and actually wrote French verses with much readiness, though he was never able to talk the language decently. His "accent," as the French call it, was deplorable from the first, and it grew worse and worse, to the very last. And yet, he did not lack ear, and the organs of speech with him were always uncommonly flexible. What then was the trouble? I believe now, though I did not know it then, that being poor and proud, he began to study the language by himself, before he had mastered the pronunciation by the help of a native teacher—a fatal error, with solitary and self-confident men, who having a little acquaintance with the dead languages, begin to study living languages, by the help of grammars and dictionaries, before they have had their organs—the ear and the tongue—exercised by a living teacher. The fact is, that no man ever reads, or tries to read, even a tablet in a strange language, without pronouncing the words to himself—as for example, the inscription upon the Rosetta stone, or that of the handwriting at Belshazzar's Feast, "Mene, Mene, Tekel, Upharsin," or that lamentable cry, recorded in our Scripture, "Eli, Eli, lami sabacthani!" and if he continues the study of a language by himself, that pronunciation will soon be fixed for life.

Having made up my mind to face the music, I broached the subject in a straightforward, business-like way to Mr. Pierpont, and asked him to help me. "Not for the world!" he replied, without giving a reason. Perhaps he distrusted himself—perhaps me; for at the time I had never shown either aptitude or inclination for study; and had revealed little or nothing of that unconquerable resolution, which within a few years after, when my self-esteem and love of approbation supplied the want of obstinacy, came to be regarded, by all who knew me, as a leading characteristic. He was in labor just then with the "Airs of Palestine," and I was beginning to exercise myself in the heavy armor, which, after a while, I flung aside, as the young Spartans did theirs, when they combed out their locks, and prepared for battle.

MY FIRST FRENCH TUTOR.

Not long after this, when I had begun a course of reading, which, by little and little, came to sixteen hours a day at last, remembering that Milo began carrying the bull when he was a calf, a friend, who knew something of my purpose, and had been told by Mr. Pierpont that I never should have patience for the work—which settled the question with me at once and forever—informed me of a worthy man, very poor, who had been a tutor in Judge Marshall's family, and was now trying to obtain a few private scholars to keep him out of

the workhouse. I engaged with him at once, and for a few months took private lessons, with so little advantage to myself, that although I studied the grammar and the dictionary, and *Télémaque*, and translated and re-translated Paul and Virginia, without his knowledge, for pastime, he lost all patience with me; and one day, when I told him that I should never undertake to learn whole pages by heart—nor even the verbs—he came down upon me with—“Maister Nee-al! dere iss long time dat you have study zee lang-age, boat, you shall nevair speak him—no, nevair—zo you shall onderstand him, and read him, pitty vell.”

This was a little too much. If you will undertake to teach me, my excellent friend, in my own way, said I, I will promise to speak better French than you do in six months. And well I might, for Mons. Victor Le Roy was from Normandy, as I learnt there in after years, and being one of the best Latin scholars of the day, had acquired a habit of talking three languages at once—French, Latin, and a barbarous English, acquired in Judge Marshall's family, according to his belief—in such a way as to be well-nigh unintelligible. I proceeded to explain my views; but he only shook his head, with tears in his eyes; when I urged that he might as well give *Paradise Lost* to a Frenchman, desirous of learning our language, as *Télémaque* to me; for if I should commit the whole to memory, of what use would it be to me in the business of life? I should not be able to inquire the way, or to ask for a cup of cold water in that language. No, no—and that, as for learning to spell *a b ab*, as little children do, or to sound the letters of the alphabet by themselves, or count, as he wanted me to do—that was wholly out of the question.

I wanted to read at once, and to talk a little every day—and if he would indulge me, how could I keep getting the sound of the letters, and learning to count, as I had learnt my mother tongue? Instead of *Corneille* and *Racine* and *Voltaire* and the classics, I wanted dialogues and phrases, and newspapers and farces—in short, anything and everything where the language that men *talked* might be found. Nothing else would satisfy me. He heard me with patience—and we parted forever, except that he afterwards gave me the great case of *Chirac* to manage, as it appears in *Wheaton's Reports*, and with it, my first retainer at law, though it was many a long year before it was decided.

The more I considered the subject, the more satisfied I was, that what I called the *natural way* was to be followed. Soon after this, I met with a young man who had obtained a pretty good knowledge of the Spanish needed in business, by the help of Duffie's “*Nature Displayed*,” in a single voyage; a work, by the way, which deserves to be regarded as the original germ of what now, on its consummate fullness of adaptation, is called the system of Ollendorff; with the improvements of Signor Forresti in Italian and of Señors Velazquez and Simone in Spanish; but unfortu-

nately for the poor fellow, he had begun studying by himself, and of course reading to himself and pronouncing the words he met with, in his own way, before he had thought of reading with a native Castilian. The consequence was, that, although he succeeded in writing the language well enough for ordinary business purposes, he was never able to talk it, nor to understand it, when spoken—so unlike the truth were his ideas of the pronunciation.

Being satisfied upon this and two or three other points, I engaged a master in French, and after reading with him for a few weeks, turned him adrift—having no further occasion for his services, till I should be far enough advanced to speak the language. Having mastered French, I undertook Spanish, Italian, and German, all of which I studied in my own way, together with Latin, Greek, Hebrew, and Saxon, all of which I had to manage through interlinear translations, according to the method of Locke, and of Roger Ascham with Queen Elizabeth, not being able to find *live* talkers in the dead languages.

QUACKERY IN TEACHING.

Meanwhile a man had appeared in Baltimore who undertook to teach the French language in forty-eight lessons. His name was Hamilton, and he was the author of what was called the Hamiltonian System. People went half mad about him, and many of the middle-aged, and some of the grey-headed members of the Baltimore bar—William Gwynn and General Winder among the rest—were perfectly convinced, before they had got through with the first twelve lessons, that they were in a fair way of overtaking the best French scholar of their day; but long before they had finished the course, they began to have their misgivings, and then to drop off one by one—averring as they did so, that the fault was not in the teacher, nor in the system—no indeed, but in themselves! And yet, the method of Hamilton, for it was no system, and ought never to have been called a system, was excellent up to a certain point. Beyond that point, however, it was impudent quackery—and insolent pretension.

His plan was to take the first chapter of *Genesis* “an commencement,” or one of the Gospels in French; and choosing a portion with which all his pupils had been familiar from their childhood, either at home, or at church, and read over a few lines, very slowly and distinctly, followed by the class, word by word. Then he gave a liberal translation of the passage; repeating it two or three times; and then the pupils were required to read, each for himself, and to render the passage, word for word, into English. This he did in public, with eminent success, and strangers wholly unacquainted with the language would learn to translate and retranslate half a dozen lines or so at a single sitting, to the unspeakable amazement of outsiders. For a time, the New Testament in French was to be found in the pockets of people who had never read it in English; and so great was the diligence of some, for the first month, that people began to

talk about *Racine* and *Rousseau* and *La Harpe*, as if they already understood the language; after awhile their diligence began to relax, and when they found that their familiarity with a part of *St. Matthew* did not help them much in reading *St. Pierre*, or *Chateaubriand*, or *Voltaire*, their ardor cooled off, and they found that, instead of acquiring the French language in forty-eight lessons, so as to read, write, and speak it with fluency and correctness, they were fast losing all confidence in themselves; having acquired such a distaste for the language, that, before six months were over, it was hardly safe to mention the subject in their presence, or to ask what had become of the “professor.”

But I availed myself of what I believed to be good in the system, and have persisted from that day to this in learning whatever language I took a fancy to, whenever I could find a native teacher to give me the pronunciation, and to talk with me after I had made myself acquainted with the language. Cicero learnt Greek in his old age, and, if I do not mistake, Dr. Samuel Johnson studied German after he had passed the age of three score and ten. What should prevent others from doing the same, and thereby avoiding one at least of the dangers that beset old age—that of rusting out?

MY OWN SYSTEM.

And now for the course I should recommend alike to the poor and the rich. In the first place, it may be well to bear in mind that all beginners are children, and are to be treated as children, whatever may be their age. They are not to be reasoned with, any more in languages than in orthography. They are to take upon trust whatever the teacher may say. The less they employ of reasoning power the better. What adult would ever be able to learn the orthography or pronunciation of our language, for example—as a child learns both—in a spirit of criticism? Would a full-grown man ever be able to remember the difference between the pronunciation of *hough*, *rough*, *slough*, and *though*, if his faith had not been exercised in his childhood? or the orthography of *phthisic*, or *drachm*, or *hostelry*?

Next—in languages, as in all other studies, only one thing at a time should be attempted—first, pronunciation, then translating, then retranslating, then writing from dictation, then talking; first the eye and then the ear, and then the tongue must be trained separately at first, and then altogether, as in reading after the teacher.

Let the learner begin with choosing for himself the language he desires to be acquainted with. Shall it be French, Spanish, Portuguese, or Italian? German, Dutch, Swedish, or Danish? If wholly indifferent, or if he would learn both Spanish and French for business purposes, let him begin with Spanish; or French and Italian, as accomplishments, let him begin with Italian. The idiom and construction of all three, Spanish, French, and Italian, being so much alike, and the pronunciation of Spanish and Italian being so easy, that a child may

learn it in a few hours, while that of the French may require months, half the work is over in learning French, when you have already got familiar with the construction, by learning either Spanish or Italian.

Having made choice of a language—the Spanish for example—let him engage a native who understands English and speaks the pure Castilian, get a copy of Ollendorff, with the key, and read a dozen or twenty pages of the dialogues and phrases, after the teacher, without giving the least attention to their meaning, and then a dozen of the conjugations, following the intonation and accent of the teacher as nearly as he can. At the end of three lessons of one hour each, he will have as good an idea of the best Spanish pronunciation as he can ever hope for till he understands the language. But he must never try very hard in any case. I remember having made my throat sore in sounding the *x* in Mexico, the *j* in reloj (watch), the *g* in muger, under the direction of Señor Mariano Cubi y Soler, author of Cubis grammar, when, if I had been told that precisely the same sound is heard in alcohol, I should have found no difficulty. And so with most languages—the most difficult sounds are met with in English.

Let him now dismiss the teacher for a while, get one of the comedies of Moratin, or, "La Conquista de Mexico," by Solis, or Voltaire's "Las Costumbres," or any other prose work of merit, with an interlinear translation, and read a few pages every day, or every other day, alternating with Ollendorff, *by himself*, that is, without help.

Next, let him write out at length the verbs *Haber* and *Tener*, and *Estar* and *Ser*, the two forms of *to have* and *to be*, with the pronouns, though the pronouns are seldom used in speech; and then re-write them, without the pronouns, from recollection; going over them, without looking into the grammar, again and again, till he has made himself somewhat familiar with the general type.

Next, let him read over some of the regular and irregular verbs, so as to get a general idea of the laws that govern both—without learning any by heart, and he will soon find the anomalies and exceptions diminishing, and by their inherent self-arranging power crystallizing into shape, and fastening on his memory.

Next, let him take Ollendorff, and after reading over the first lesson carefully and *aloud*, pronouncing every word distinctly, let him translate the Spanish phrases into English, *word for word*, and as literally as possible, and writing them distinctly on alternate lines of ruled paper, leaving blank lines between, without looking at the key; then, having completed the translation, let him compare it with the key, filling the blanks, and supplying the omissions, word for word; the next day, let him take the second, and the next, the third, going on regularly, and laying aside the manuscript, until he has reached the tenth lesson; after which let him begin with the first of his translations into English and return it into Spanish,

without opening the key, until he has finished—leaving blanks for the words he can not supply, the first time in going over the lesson, and correcting and supplying by the key: and so with the subsequent lessons.

After a few weeks, he will be astonished at the facility with which he renders, not only Spanish into English, but English into Spanish without looking at the vocabulary or key. Short exercises every day are better than longer exercises, with intervals of sluggishness and forgetfulness; as O'Meara found out, when he was teaching Napoleon English, on their way to St. Helena, and lost his scholar for not knowing it, or not remembering it in season.

Having learned to translate by the *eye*, let the pupil now try his hand at translating by *ear*. To this end, let him find somebody who is learning in the same way; or, if such a person is not to be found, let him take a little brother, or an obliging sister, and after teaching her the pronunciation without regard to the meaning—let her read over the lesson to him in Spanish, while he renders it in English *on paper*—leaving blanks in the lines for such words as he can not recall, and blank lines between for corrections. Having continued this for a month or so, let him return these exercises into Spanish, correcting them by the key, and reading his Moratin or Voltaire (*Las Costumbres*) at intervals, and always aloud. This, by the way, must not be done with French or German, the pronunciation being so much more difficult, until after months of practice in reading with somebody who has a pure accent.

Having translated and retranslated long enough to be acquainted with the general structure of the language, let him now recall his master, and read with him for a few days in some pleasant, simple, sprightly book—not in Don Quixote, however—the teacher translating, word for word, as literally as possible, and the scholar following him.

And now let him get up a class, if he can, of people who have some little acquaintance with the language, no matter how obtained, if the pronunciation be good, and take up Ollendorff with them—each in turn reading the Spanish, and each in turn translating that Spanish by *ear*, into English; and then, each in turn, the English into Spanish, so that the ear is trained, as in conversation with different persons of both sexes, and of different ages, and of course with different styles and voices.

CONVERSATIONAL PRACTICE.

And last of all—that he may understand what is meant by learning Spanish, or Italian, *without a master*, having been patient, regular, and persevering, let him recall the master, and begin to talk Spanish with him, at occasional half hours, for practice. But how? What shall he talk about? Everybody knows how hard it is to write a letter, or to make a speech, when you have nothing to say. But conversation, with nothing to say, is yet harder. There are usually two difficulties in the way, which very few have power to overcome until they go abroad, and are obliged to talk, or

starve; 1st. The pupil does not know what he wants to say: and 2d. The master himself, not knowing what the pupil wants to say, can not help him, without much circumlocution, much delay, and a great waste of English words. Nevertheless, there is a way, and a capital way, which most professors overlook. Let the pupil take up any simple book written in the language of the streets, or a newspaper, in English, and seating himself by the side of his teacher, let him try to render the English into Spanish, not word for word, but in the plainest and simplest language he can, to be understood, the master helping him, not by supplying the most beautiful words, or equivalent phrases, in a higher style, but such words only and such phrases as are in common use and may be easily understood. In this way, he is learning to talk Spanish, without knowing it, and as he already reads and writes it, and begins to understand it, when spoken, his progress will be in a geometrical ratio. With the printed page before him, the master knows just what the scholar wants to say, and no time is lost. These exercises may be greatly varied—and in this way, and in this way alone, may a *living* language be learnt "*without a master*." With the *dead* languages a somewhat different and shorter course may be followed.

REPUDIATION.—*Bad men*, men without moral principle; men who would borrow your money and then refuse to pay it; or your coat, or your horse, and then deny the like favor; ungrateful men, very mean men, men with bad heads and worse spirits; low-lived gamblers, pot-house politicians, and thoroughly corrupt men may be heard slyly whispering, *Repudiation*. But the moral sense of all *honest* men will instantly frown down any such wickedness. Whatever person, or whatever party projects such a scheme, is unworthy the name of American and should have no part in the management of our public concerns. No; the NATION will never repudiate its debts, whatever individuals of satanic tendencies may propose. No honest man, or honorable man, no good citizen, no one worthy of any trust will assent to the repudiation of a just debt. We repeat, the man who even whispers such a thing, is bad at heart. He is unworthy of trust. Beware of him!

CHIROGRAPHIC.—Authors who take no pains to write legibly for the papers, and not the printers, are responsible for most of the mistakes that occur in rendering hieroglyphics into print. The following was printed according to copy:

"Alone toss'd rolls a tear by Moses,
A many things we mourn by day;
Tom and the shouting Indian chorus,
And see the their limbs at play."

The author subsequently gave the correct rendering in a more legible hand, as follows:

"I love to stroll at early morn
Among the new-mown hay;
To mark the sprouting Indian corn,
And see the lambs at play."

PORTRAIT OF FERDINAND MAXIMILIAN JOSEPH.

MAXIMILIAN AND JUAREZ.**MAXIMILIAN.**

A SMOOTH, round Teuton. There is a fair show of brains, but more of ambition. Born to be petted, courted, and adored, we have no doubt he likes it. His Approbativeness and Self-Esteem seem to be large, especially the former. There is evidently fair ability, but no great power. While he would delight to be in the lead, to have the honors and wear the trappings of royalty, he would be subject to wiser or stronger minds. There is more imitation than originality, more taste than force, more pride than pluck. Such an organization is adapted to the lap of luxury rather than to a pioneer life of the American, and he would be as much out of his right sphere ruling or attempting to rule Mexicans as an American would by playing the sycophant to the Emperor of France. Judged by the style of wearing his beard, of parting his hair, and other externals, he is what would pass in London for a snob or a swell. But in his own country he would no doubt pass for a nice young man; and judged on his merits he is very much like other folks who like to rule.

In assuming to manage Mexicans he evidently mistook his calling, and would better grace the opera, the studio, or the museum. Rigged up in regimentals, with straps and spangles, and put on a horse with a high head and tail, he would, no doubt, astonish little boys. But both Mexicans and Americans would look on the show with a feeling something like contempt. The fact is, the man was not adapted to the work his master set him to do, and of course he failed. The good points of our subject are named in the following biographical sketch, which seems an impartial view.

Ferdinand Maximilian Joseph, Archduke of Austria, late nominal Emperor of Mexico, was born at Schonbrunn on the 6th of July, 1832. His father was Francis Charles Joseph, Archduke of Austria, and his mother Sophie Dorothea, daughter of Maximilian I., King of Bavaria. Upon the abdication of Ferdinand, Emperor of Austria, the Archduke renounced his claim to the succession in favor of his eldest son, the present Emperor, the brother of the subject of this sketch. The abdicating Emperor, in giving up his throne, unequally divided his power, and gave an advantage to the Archduke Maximilian, to the detriment of his elder brother.

This was the origin of constant, and at times very warm differences which arose between the two brothers.

Maximilian received his education at Vienna. At an early age he entered the navy of the empire, where he saw considerable service at sea. At the age of twenty-two he was placed at the head of what is termed by courtesy the Austrian marine, and with a squadron visited the coasts of Syria and Palestine. He went also to the Red Sea, and took great interest in the works of the Suez Canal, which were then just begun. In 1856 he paid a visit to Paris, and spent a fortnight at St. Cloud with Louis Napoleon. The year following he was appointed Viceroy of Lombardy and Venice, and in the exercise of the powers attached to the position soon made himself quite a favorite among the Italians. This popularity was, however, displeasing to Francis Joseph, and in 1859 he was removed.

Maximilian remained idle after his removal from the governorship of the Lombardo-Venetian kingdom until 1863, when Napoleon decided upon making a cat paw of him in Mexico. The crown of Mexico was offered to him by Napoleon in August, 1863, and the diplomats were put to work to arrange for his acceptance and occupancy of the throne. Nearly a year was occupied in this work, and it was not until the 10th of April, 1864, that he formally accepted the proffered crown. By the terms of the acceptance he made a conditional renunciation of the right of eventual succession to the throne of Austria, and an unconditional renunciation of his share of the family estates, amounting to 20,000,000 florins. The condition reserved in the renunciation of the right to the succession was, that such renunciation might be revoked should Maximilian, finding his foothold in Mexico insecure, choose to resign within six years from the date of his acceptance of the crown of Mexico.

The career of Maximilian while in Mexico is well known to the people of this country. His first official act was to offer terms to Juarez, looking to the submission of the latter. These were rejected, and then followed the past years of war and bloodshed, with alternate success, and the final defeat of the Imperialists. His efforts to attract emigration and to develop the resources of the country are well known, as are also his personal sacrifices for the success of his cause. That he failed was only a natural and expected result; but it is doubtful if he would be now in his present position had he not issued his famous order declaring the Republic President and his supporters bandits and outlaws. Personally, Maximilian had the reputation of being a most accomplished gentleman and scholar. That he was kind-hearted and humane we are assured from the frequency with which he saved the lives of many unfortunate liberals who fell into the hands of his generals and were condemned to death. That he had courage and administrative abilities is not doubted. He was led to believe that the people of Mexico wished to have him for their ruler;

and when deserted by Napoleon, he bravely attempted to keep up the state of his waning empire until the force of circumstances compelled him to seek refuge in flight. On the 15th of June the telegraph announced to us the fall of the imperial works at Queretaro and the capture of the convent at La Cruz; the garrison of the city, after having retreated to the Cerro de la Campana, was, with all the generals, and Maximilian at their head, forced to surrender.

PRESIDENT JUAREZ.

Juarez is an original. Contrast the faces of these two men. If the one is pretty, the other is powerful. If the one is ideal, the other is natural. If the one shows delicacy and high culture, the other shows vigor, force, and common sense. That is not a bad head, nor is it the head of a saint. It is long and high, rather more than low and broad. It is not remarkably wide between the ears, nor is it over large. There is more prose than poetry in his make-up. Vitality, strength, and endurance are depicted in these features. With equal education and culture, he would be vastly the greater man of the two. Nature has done all for him, while Art has been exhausted on the other. Firmness, Self-Esteem, Combativeness, Comparison, and all the perceptive are largely developed in this head. There is less Destructiveness, Acquisitiveness, Constructiveness, and Causality. Language is fairly indicated. He would work or fight easier than he could talk. There is no lack of sympathy or kindness here, nor is he wanting in the moral brain. Benevolence and Veneration are large; but he would be incredulous, and require proof beyond question to convince him. In conclusion, the way to manage him is to let him have his own way, or prove to his reason that some other course wherein his liberty would not be restrained would be a better way. This gentleman would no doubt be as much out of place in Vienna as the other was in Mexico.

Benito Juarez, now President of the Republic of Mexico, is a descendant of the Indian race of the Tapatecos, and was born in 1807, at Ixtlan. He studied law and rose to be Chief Judge in the State of Oajaca, and a member of the Legislative Assembly. From 1852 to 1858 he was Governor of his native State, Oajaca. In 1853, when Santa Anna became dictator a second time, Juarez was banished. In 1855 he joined Alvarez, and became Minister of Justice. Under Comonfort, the next President, Juarez was President of the High Court of Justice, and on the overthrow of Comonfort, became President of the Republic. His government was, however, resisted by Zuloaga, who headed the Church party, and subsequently by Miramon. The rule of the last was recognized by the European powers, while that of Juarez was recognized by the United States. Since then has followed the events of the last few years, but now it appears that Juarez is again successful.

Among other and prominent actors in this Mexican rôle were the late Gen. Miguel Miramon, commander of the imperial forces, and Gen. Mariano Escobedo, commander of the liberal army of Mexico; the former showed much military ability, and was one of the chief supports of Maximilian until his death. To Es-

PORTRAIT OF BENITO JUAREZ.

cobedo, with the army under his command, is due the glory of the capture of Maximilian and his generals, which, if the liberal party in Mexico prove true to themselves, is the most important action which has been performed there for years. The following dispatch gives an account of this capture:

CAMP IN FRONT OF QUERETARO, May 15th—4 P.M. CITIZEN MINISTER OF WAR:

At three o'clock this morning La Cruz was taken by our forces, who surprised the enemy at that point. Shortly after that, the entire garrison were made prisoners, and our troops occupied the plaza. Meanwhile the enemy retreated toward the Cerro de la Campana, which our artillery forced him to occupy in disorder. At about eight A.M. Maximilian and his generals, Castillo and Mejia, unconditionally surrendered from the above-mentioned point.

You will please give the President my congratulations on this important triumph of the national army.

ESCOBEDO.

Such is the story, in brief, of a few years marked with war and bloodshed in the life of the Mexican Republic. Let us hope that the annals of Mexican warfare are past, and that her future history may be decorated with a page of peace and mercy, of brightness and honor, to which she has been so long unfamiliar.

P. S.—Since the above was put in type, Maximilian and his generals were tried, condemned, and, on the 19th of June, executed. Strong appeals from royalty were made that the lives of the ambitious usurper and his aids be spared, but in vain. Here is a bit from a Prussian sympathizer.

"In the name of humanity and of honor I conjure you to order that their lives be not taken; and I again repeat that I am certain that my sovereign, his Majesty the King of Prussia, and all the crowned heads of Europe, united by ties of blood and kindred to the prince prisoner—his brother, the Emperor of Austria; his cousin, the Queen of the British Dominions; his brother-in-law, the King of the Belgians, and his cousins, the Queen of Spain and the Kings of Italy and Sweden, will readily agree to give his Excellency, Senor Don Benito Juarez, all security that none of the prisoners shall again tread on Mexican soil.

"A. V. MAGNAR."

He spoke too late. Mexico has simply vindicated her rights, as any of the aforesaid "crowned heads" would have done in their own interests. Let this serve as a warning to all European meddling with other people's affairs. When crowned heads are wanted here, they will be sent for. The last words of Maximilian were "Poor Carlotta!"

NEW YORK, AUGUST, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiassed truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself!"—*Dr. Mc.*

STATE PRIDE.

REPUBLICANISM VS. ARISTOCRACY.

Now that all the States are again united; now that all are in the great national family—let us try to put away that narrow, selfish feeling known as "State pride." It was, years ago, the policy of politicians—not true statesmen—to look after local or sectional interests only; to seek appropriations for their particular section or State. They could only comprehend a section. To secure measures favorable to *that* was the end and aim of all their efforts. Was the member from Virginia? He had an eye single to her supposed interests. Her oysters, tobacco, and other products, demanded all his care. Was he from Massachusetts, Pennsylvania, or Michigan? it was the same. His cotton mills, iron mills, mouse traps, and machine shops must be "protected." Was he from the West? His ambition was to secure grants of land for railroads, and to open rivers and harbors for the benefit of *his* State. Now, all this is quite natural, if not quite right; but a broader view of statesmanship would include the entire domain. And instead of legislating exclusively for Maine or Minnesota, the representative should keep the whole country in view, and deal as impartially as possible with all its interests. One is none the better or worse for having been born in Hoboken or Kinderhook, in Virginia or Alabama, in Canada or California, and it is a foolish egotism to boast of birth-place. One boasts of being a "Yankee," another, of being an "F. F. V.," a "Buckeye," a "Hoosier," a "Badger," or a "Sucker." Now, all this is childish, and should be put away with childish things. Let us be AMERICANS. Should you go abroad

and claim to be an AMERICAN, *that* will be enough to secure due respect. Saying you are from Connecticut, or Carolina, will add nothing in the estimation of the world. In this country, where our rights are more equal than in any other, we should do all we can for the *mutual* good. This is being done to some extent in building lines of railways East and West, across the continent—and North and South, from Canada to Mexico. These means of communication will tend to unite us still more closely. And if they do not wipe out town, county, and State lines, they will render them less and less barriers of separation and exclusiveness. We are rapidly conglomerating into *one* people. We shall absorb the young and freshly imported European blood, and all traces of Saxon, Celt, and Teuton will be blended into a harmonious and powerful whole, the like and might of which will nowhere else be seen on earth. Then it will be American Democracy *vs.* European Aristocracy—American Equality *vs.* European Inequality. Here, all will be free, educated, industrious, thrifty, virtuous, and self-regulating, and each eligible to every office in the Government, from postmaster to President. *There*, all are "subjects," save the few who are *born* to rule over the many; few will be educated—those only work who must; few are thrifty; many live from hand to mouth, and millions are miserable paupers, with no hope of bettering their condition while on earth. Ignorance, dissipation, and crime go hand in hand, and poor-houses, prisons, and penal colonies are rapidly filled and stocked with human beings. What a contrast to the condition of *our* millions of ambitious, enterprising, wide-awake, go-ahead Americans! But have *we* none of the European drawbacks in our social system? Have we no paupers, criminals, vagabonds? Aye, verily, but *nine out of every ten are IMPORTED*. They are the riff-raff and flood-wood of European aristocracy and despotism, who come here to ply their vocation. Expert pick-pockets, thieves, and robbers among us are generally European—not native Americans. Examine our prisons and poor-houses and learn the facts. Abroad, we have the reputation of being great rogues. Our accusers forget that it is

their sort of people who bring this disgrace on *us*. But if we can not reform *them*, we can shut them up and keep them out of mischief.

We disapprove the forming of our new-comers from Europe into separate organizations. Why should the naturalized Irishman, German, or Scot seek to perpetuate his idiosyncrasies on our soil, his former habits and customs? Why keep up the snobbery of aristocracy? If he proposes to become an American citizen, let him drop his Irish, English, and German monarchical fashions and customs, and learn the ways of his betters. European etiquette is one thing. Democratic Republican etiquette is quite another. Here, one in homespun or in broadcloth, in calico or in poplin, is entitled to the same rights, privileges, and respect. God is no respecter of persons; and in *this* country we bow to no other power. As to the rest, one is as good as another, if he conduct himself as well. Then let us enlarge our views in regard to State pride, and count each other—native and naturalized—as Americans!

It is not desired, nor expected, that we should ignore or suppress the love of home. On the contrary, we would increase it; but instead of confining it to a town, county, or a State, we would include in our affectionate embrace all the States in the Union, and open our arms to receive any new-comers on the North or on the South, till our flag—the glorious Stars and Stripes—shall wave over the entire continent. Let kings, queens, and emperors practice their policy on those who will endure it. Americans want none of it, nor will they permit it to be planted in America.

BOYS AND GIRLS.

YOUNG MEN AND YOUNG WOMEN.

SHALL they be educated together? There are two sides to every question. In discussing this, we will first take the AFFIRMATIVE. Our points are these: Boys and girls are born together, of the same parents, in the same family, and under precisely the same circumstances. There may be twins—and the twins a boy and a girl. They are organized very much alike—so nearly alike that there are no differences except in sex—none in the number of bones, muscles,

nerves, etc. They are alike in faculty, in emotion, sentiment, and in feeling. Phrenologically, there are no differences, save in the size and quality of brain—precisely the same as may be found among males or females of the same species. Children of both sexes remain together from choice till grown; when they separate only to choose mates with whom they shall hold relations closer still than those of brother and sister. There is no natural bar to this natural arrangement. Boys become the natural protectors of their sisters as husbands do of their wives. When separated from girls and women, boys and men become more rude, careless, unrestrained, and unmanly. Girls and women are less guarded, restrained, gentle, and self-regulating when left by themselves. Being born and brought up together, mutual association is the normal condition of boys and girls. Being separated for any considerable period, an abnormal state of mind and body is produced. What is it but a forced separation from the opposite sex, respectively, that begets in each a disposition to break away from authority, from compatible or incompatible acquaintance, culminating in foolish—often ruinous—run-away matches? Being kept from those who would be deemed suitable associates, a morbid feeling is generated, which increases till the whole nature becomes perverted, and the impulsive victim consorts with a servant, a footman, hostler, or waiter, for the want of an equal. *Without* suitable companionship, the worst results sometimes follow. There is nothing more disagreeable, tiresome, or distressing than the feeling of loneliness.

The person—suppose it be a young lady—is now in this unhappy condition, almost delirious, craving that society which is rigidly denied her, and she becomes dull, spiritless, without ambition or purpose. This state continues. The patient goes into a decline—a physician is consulted; he finds “nothing the matter,” but prescribes tonics, out-door air, and a season at Saratoga or Newport. She must pursue her studies. The tonics are swallowed, and the young lady is kept in school. She loses flesh, becomes thin and sallow, cheeks and lips colorless. Finally she has fits. Teachers become alarmed, and the young lady

student, in the dawn of womanhood, is sent home to linger out a weary life, if not to die. On the other hand, suppose it to be a young man. If the son of careful parents, he would be closely guarded at home, and seldom, if ever, thrown on his own judgment or resources. He would feel that his parents were in all respects responsible for him. He is to be educated. One of the “best schools” is selected—a school where boys alone—sons of the rich—are taught. For the first time in his young life the boy is “at sea,” as it were, and his own captain. He is away from his anxious father, mother, brothers, and sisters, wholly among strangers, and they of his own sex, without sympathy or affection for him. A sense of the fullest freedom comes over him. Who is to check, criticise, guard, or warn him? The duty of his preceptor is to hear him recite his lessons—and his boarding-house keeper to feed him on the smallest and cheapest living allowance. He soon makes the acquaintance of his elders, from whom he learns—not that which his parents would have him know—their vices. Habits which sap the constitution—and in a few years leave the growing boy a withered wreck. He can not get along now without pipe or cigar! In *his* young eyes—seeing professors and the larger boys smoke—he must do so too, to be a man. Of course it made him deathly sick at first; but there being no girls around to make fun of him, or to shame him out of the foolish thing, he fixed for life the nasty habit on his clean soul. *Now*, he may retire at night when he pleases—and he pleases to do as the other boys do—namely, carouse, visit fruit orchards, melon gardens, and hen roosts—*vide* Dr. Nott’s account of “Old Prex,” “Marm Prex,” etc. There are no sisters or young ladies near, and “nobody will know it.” As to the dissipation and moral apathy in many of the colleges, we do know. And as for the wild rudeness, and the almost insane desire for society, experienced in some of the young ladies’ seminaries, we do believe it. If it be said ill effects are sometimes seen in schools where the sexes are educated together, we grant it; but maintain that *still worse* effects are seen in schools where the sexes are kept strictly by themselves. And the reasons

must be self-evident to all who think or know anything of human nature. How is it with men? Go to a public meeting where there are no women. How noisy, rough, rude, and almost savage! Let a lady unexpectedly enter. How quickly “hats off” and all come to order! and how modest, respectful, and well-behaved the whole! Then go into a room where there are only women. They are careless, slipshod, untidy, and indifferent. Let a gentleman be announced, what a fluttering and bustle in putting things to right, in smoothing the hair, and making all things tidy and decorous. This is a fact—both men and women are better behaved in the presence of each other. It is so with girls and boys. The ambition to grace the situation, and to excel each in his or her sphere, is natural to all *unperverted* human beings. The one gives zest and enterprise to the other. Boys raised in a family where there are no sisters are not so easy or graceful in woman’s society, nor as likely to be moral and correct in conduct as where there are sisters; and we fancy we can tell whether a lady has been brought up in a family with brothers, or has been secluded from male society during her character-forming years. A girl brought up without the society of boys knows nothing of the masculine character, and is very likely to be fascinated by the first attention she receives; she has no means of understanding the character of men, and a miserable match and an unhappy married life is likely to result. The boy having had no sisters or cousins about his own age, goes into society at adult age afraid of woman—is green, awkward, unsophisticated, and knows neither how to show his own capabilities nor how to understand those of others—and if he do not fall a victim to the arts of some designing, selfish woman, or take up for life with some half-developed, eccentric partner, his escape may be considered providential.

If it be objected that a student’s thoughts would be diverted from his books by the presence of one who would win and absorb him or her through the affections, thus preventing close application to study, we reply: let the sexes—say at the ages of twelve to twenty—have separate apartments in which to *study*, but let all come together at reci-

tations. The presence of young women would inspire the young men with ambition to do their best—and the same would be true of the other; so the presence of one sex would tend to sanctify and give a grace to the other. We are aware that this view of the subject is contrary to long-established custom; we know that in some religious bodies or churches the sexes are divided off—the wives and daughters on one side of the house, and the husbands and sons on the other. We are not Shakers, and *much* prefer a seat with the fair sex—both at church and elsewhere. Indeed, we *always* did. Our mother was a woman! So is our wife and sister! Why should we not sit together? Who is wise above the Creator? And on what authority are we separated and herded off, each sex by itself, like cattle? Is there so much of the "Old Adam" in us that we can not be trusted in the society of each other? We plead for those who suffer this wrong—those whose natures are being sacrificed or crucified for no good purpose. If the sexes be educated together, under judicious supervision and wise direction, it will be a safeguard to both, and every way better for all concerned. This is the *affirmative* side of the question.

CAUTIOUSNESS SMALL.

"I LET IT RUN OUT." Let what run out? My insurance; and when the great fire swept away my "house and home, it left me poor indeed." Another let the policy on his life insurance "run out," or, rather, the annual payment thereon—just a few days before an accident deprived him of life, and when his wife was made a widow—his children were left destitute. Another neglected to pay the interest on a mortgage when it was due; a foreclosure followed, and he lost all he had paid, and all he had *hoped* to realize. Another neglected to pay his taxes at the proper time; his property was advertised to be sold by the sheriff, considerable additional expense incurred, and everybody who heard of it wondered what it meant; watching, at the same time, for the sale to come off, hoping they might benefit by the incautious man's poverty or neglect. Another noticed that the children had left the gate open, or the bars down, but small Cautiousness neglected to close it, or put them up in time to prevent the "old sow and pigs" from getting into the garden and rooting up and tramping down lots of plants, vines, and shrubs, worth more than all the fore-legged grunners that did the mischief. Another—in-
stead of looking after the poor and infirm—

failed to keep up his subscriptions to the several charities he helped to set on foot, with which his name had been honorably identified—and he has felt so "mean" and "self-condemned" since, that he can not hold up his head, look at himself in the mirror, and speak his once benevolent name without remorse. It is fortunate for him that "it is never too late to mend." Another, with small Cautiousness, let his subscription to the PHRENOLOGICAL JOURNAL "run out," and there is something wanting in that house. Wife looks gloomy, children feel sad, the dog and the cat partake of the same spirit, and are grave or cross, and the whole are under a cloud.

There is but one remedy for this state of things, namely—*re*-subscribe at once, and thus let daylight, with the invigorating sunshine, into the minds and hearts of that desolate family. Can't afford it! What, not afford less than one cent a day, for this means of spiritual, moral, and intellectual enlightenment? Let us see. Look here, Mr. Moses, how many cigars do you smoke in a day? How much tobacco do you chew? How much beer, wine, or other liquors do you drink? How much money do you spend on knick-knacks, gew-gaws, circuses, negro minstrels, acrobats, and the like? No, no—it won't do to say you "can't afford it." However, if you *will* indulge a perverted appetite, and neglect to provide the wife and children with what they need, then wife must go hungry, and do without that "food for the mind," without which nothing satisfieth; or she must save her "pin money" and secure the JOURNAL for herself and children. But, reader, whatever else you do, or fail to do, never let anything "run out." Keep up your insurance—keep up your subscriptions—keep up your charities—keep up your self-respect—and keep up the supply of good reading—keep *down* bad habits, and all will grow in intellect, in social feeling, in moral sentiment, and in all things which beget success in life, growth in grace, and the promise of peace, prosperity, and happiness.

SURRATT.

WHAT of this conspirator? What had he to do with the assassination? Only this. He was simply a poor "tool" in the hands of more wicked men—a "cat's-paw"—nothing more. As to his guilt, there was no doubt, from the conviction and execution of his miserable mother, with her fellow-conspirators. Another wicked Satan planned the work; he simply helped in its execution. As the electric telegraph was the result of many minds—indeed, of all past and present prophets, poets, philosophers, and inventors—so that assassination was the concentration and culmination of all the wickedness in that struggle for the perpetuation of the "peculiar institution." Bad, ambitious men had sworn to "rule or to ruin." This was one of the modes by which it was to be done. Who were the managers? Whisky-drinking, cock-fighting, horse-racing, lottery-vending, pot-house politicians, and play-house actors were employers and employed to do the wicked work. A few of the lesser criminals, as usual, will lose their poor lives, while the older Satans will, as usual, escape unhung. As to what becomes of the insignificant Surrott, nobody cares. Let him be forgotten.

GENERAL GRANT AND THE PRESIDENCY.—Why spoil a good General to make a — President? Have we in this great nation no other or better material? Is General Grant ambitious? He is too sensible a man to foolishly jeopardize the reputation he now enjoys for any uncertain successes in politics. He is a soldier—not a statesman. All his education and experience have been—not in the forum or halls of legislation, but—in the field. Should he now be sacrificed—as General Zachary Taylor was—on the score of *availability* rather than *capability*? Besides, he is needed where he is. Our relations with other nations are not yet settled, and it may be very convenient to have a good general "in the house," on whom we may call in an emergency. Have we not now, within easy reach, the "right man for the right place?" Ah, we see the question is, What man will poll the most votes? Is it Grant, Chase, Colfax, or—What's his name? It is not, Who would make the best President? This is a fault with our system. We do not get the **BEST MEN**. Our misfortunes in the past should be a warning for the future. Mediocrity, respectability, or temporary availability are not the qualifications needed. We need not enumerate the weak men who have been inflicted on the nation within the past twenty years—men of the most common capacity, mere weather-cocks, or ignorant bombasts. There are enough good and capable men from whom to select—who would preside with honor and influence. Why not select such as these? Again we see, it is "the party," rather than the NATION, which is to be served in the selection of a candidate.

A new Presidential campaign is about to be projected, and all other interests must be suspended or subordinated to this great squabble. But they say it is "educational," and we submit, believing it not so bad as a monarchy, where reigns supreme, king, queen, or emperor. We had rather have a four-years' President than any of those or a Pope for life.

"DO THY LITTLE."—A certain king would build a cathedral, and that the credit of it might be all his own, he forbade any from contributing to its erection in the least degree. A tablet was placed in the side of the building, and on it his name was carved, as the builder. But that night he saw in a dream an angel, who came down and erased his name, and the name of a poor widow appeared in its stead. This was three times repeated, when the enraged king summoned the woman before him, and demanded, "What have you been doing? and why have you broken my commandment?" The trembling woman replied, "I loved the Lord, and longed to do something for his name, and for the building up of his church. I was forbidden to touch it in any way; so, in my poverty, I bought a wisp of hay for the horses that drew the stones." And the king saw that he had labored for his own glory, but the widow for the glory of God, and he commanded that her name should be inscribed on the tablet.—*Ralph Wells.*

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—Spurzheim.

THE CHINESE EMPIRE.

THE MANCHUS.

THE condition and characteristics of the various races inhabiting the great Empire of China, with its four hundred millions of inhabitants, are deeply interesting to the student of ethnology. The Chinese and the Tartars have generally been classed with the great Mongolian race; and though all may have sprung originally from the same stock, yet they now present many important differences. The ruling power or family in China is the Manchu. This people formerly inhabited a portion of Chinese Tartary, and as late as the seventeenth century were considered by the Chinese in the same light as we look upon the Sioux or Pawnee Indian tribe, and an armed force was constantly employed in keeping them in check. But finally a peace was concluded with them, and their assistance obtained in quelling one of the internal wars of the empire. The Manchus, taking advantage of the disturbed state of the empire, established themselves in Peking in 1644, and, after a seven years' struggle, acquired the sovereignty of the whole country. Their number was very small in comparison with the conquered country, being only about half a million of men, yet their superiority over the more indolent and luxurious Chinese soon asserted itself. They first took possession of all the governmental offices, placed Manchu soldiers in the garrisons, and then ordered the Chinese, as a symbol of submission, to conform to the then prevailing fashion among them of shaving the hair from the head, except at the crown, where now grows the, to us, ridiculous "pig-tail." Great was the consternation among the followers of Confucius, who had always taken such pride in their glossy, black hair bound in simple style around the head, at this arbitrary law, from which there was no appeal. The penalty of death was attached to the non-adoption of this sign of allegiance, and the fashion thus begun by compulsion is now followed by choice, and one of the greatest insults a *barbarian* can offer now to a Chinaman is to cut or disfigure his caudal appendage.

The chief hindrance in studying the Chinese character has hitherto been their exclusiveness. Only a few travelers have been able to give us much information about them. Their manners and customs differing greatly from our own, have been ridiculed and distorted, and instead of having a picture of their real life presented to us, we have generally had nothing but miserable comparisons. S. Wells Williams, in his "Middle Kingdom," has perhaps given us as fair an account of that curious people as any writer. He says: "The Sons of Ham are indeed a remarkable race, whether regard be had to their antiquity, their numbers, their government, or their literature, and on these

A MANCHU OFFICER AND LADY.

accounts deserve the study and respect of of every intelligent student of mankind, while their unwearied industry, their general peaceableness and good-humor, and their attainments in domestic order and mechanical arts commend them to the notice of every one who sees in these points of character indications favorable to the permanence of Christian institutions, when once established."

The Chinese always cultivated the arts of peace, which is or should be the aim of all civilized nations. A fighting nation they look upon in the very lowest light, regarding trade and commerce of vastly more importance. The Dutch and the Russians long held the exclusive right to trade with China, and we find that their intercourse was generally very pleasant. After a while, England and France becoming jealous of this "favoritism," as they called it, attempted to force their presence upon the unwilling Chinese. The English obtained a slight footing, and immediately began to flood the country with opium from their Indian colonies. The Emperor, looking to the good of his people, remonstrated with the English, but to no avail; they poured in the opium until the whole country was demoralized by it. Then the Emperor sent a force down to the warehouses of the English merchants, seized 20,291 chests of the poison and completely destroyed it, "a solitary instance," adds Mr. Williams, "in the history of the world of a pagan monarch preferring to destroy what would injure his subjects than to fill his own pockets with the sale." This was in 1839. Then followed the English "opium war." The French helped their allies, and finally China was compelled to open her ports to the introduction of opium, and England and France forcibly secured a foothold.

Had the picture been reversed, and had China attempted to introduce opium, or arsenic, or

corrosive sublimate into England, and it had become a rage among the people, would the trade have been allowed to go on? It is doubtful. There is a trade in that very country, legalized by acts of Parliament, which every day destroys more than ever the opium did; and yet it is allowed, because such enormous revenues are derived from it.

The Americans have fared better in China than either England or France. Seeing the destructive policy pursued by the former, they have endeavored to gain the goodwill of the people, and to a great extent have been fortunate in the attempt. President Tyler made overtures for a treaty of peace and trade in 1844, which was afterward ratified. The Americans were well received

by the officials, but the people were not friendly. Now, however, the United States have gained a prominent foothold there, and are regarded in a good light by the Chinese generally.

But to return to the characteristics of the people. Mr. Williams, from whom we must again quote, says: "The physical traits of the Chinese race may be described as being between the light and agile Hindoo and the muscular and fleshy European; their frame is well built and symmetrical. Their color is a brunette, or a sickly white, rather approaching to a yellowish tint than a florid, but this yellow hue has been much distorted by travelers. In the south they are swarthy, but not black, differing in shades of complexion in different latitudes. The hair is lank, black, coarse, and glossy; the eyes invariably black and apparently oblique. This is owing to the slight degree in which the inner angles of the eyelids open, the internal canthi being more acute than in Western races, and not allowing the whole iris to be seen. This peculiarity in the eye distinguishes the Eastern races of Asia from all other families of man. The cheek-bones are high, and the outline of the face remarkably round. The nose is rather small, much depressed, and nearly even with the face at the root (better developed among the upper classes, as seen in our engraving), and wide at the extremity. There is, however, considerable difference in this respect, but no aquiline noses are to be seen. The lips are thick, the hands small, and the lower limbs well proportioned, with the exception of the feet. The height is about the same as the average of Europeans. The women are much smaller, but plump. The Chinese female face is not destitute of some beauty, especially when animated by good-humor and an expressive eye tinted by the glow of youth and

health. But it is a Chinese style of beauty, not always admired by Europeans. Age does not affect them so soon as in many races; they generally retain their vigor to a good age.

"The Manchu, or governing class, are of lighter complexion, heavier build, and more intellectual. Originally they lived in Manchuria, the natives of which are hardy and powerful, being an agricultural and hunting people. Their soil is poor, while the long winters leave but a few months of summer. Millet, barley, tobacco, etc., are among their chief products, while the deep forests in the south furnish abundant lumber and grazing. Thousands of cattle are found on the high steppes of the interior. The climate being so rigorous, necessarily makes the people self-supporting, energetic, and warlike; hence their ability to conquer the more luxurious and sensual inhabitants southward. Among the Manchus a few are found of fair hair and florid complexions, blue eyes, straight or aquiline noses, and brown hair, evidently the result of a mixed race. The countenances of these present greater intellectual capacity, and they are generally regarded as the most improvable race on the continent."

The Chinese skull has a larger proportion of its bulk back of the opening of the ear, and less prominence and elevation of the forehead than that of the Caucasian. Breadth at the base and narrowness at the top distinguish the Mongolian head. Phrenologically considered, Combativeness, Destructiveness, Acquisitiveness, Secretiveness, Cautiousness, and Constructiveness are all generally full or large, while Ideality, Mirthfulness, and Causality are more or less deficient, and we herein see the organic cause of the half blind but persistent mechanical activity, the tireless, patient industry, and energetic, though instinctive rather than intelligent pursuit of material ends which distinguish the race.

The real religious belief and practices of the people are decidedly heathenish, but of their precise nature it is not easy to form a fair and impartial judgment; and those who have resided long in the country have arrived at very different conclusions. M. Huc asserts that they are "destitute of religious feeling and belief," but Mr. Meadows thinks that this charge is not true. The worship of ancestors is a remarkable feature in their social life, and is dictated by a deeply imbedded principle of filial piety among them. The rich have a chamber dedicated to the memory of their forefathers. The future state troubles them very little, while the quality of their coffins, however, is of vital importance, and a coffin is reckoned a most acceptable present, and is frequently given by children to their parents. "To be happy on earth," say the Chinese, "one must be born in Lu-chow, live in Canton, and die in Lianchau"—Lu-chow being celebrated for the beauty of its women, Canton for its luxury, and Lianchau for furnishing the best wood for coffins. Death is never alluded to by them in direct terms; they say, the person "exists no more"—"he has saluted the age"—"ascended to the sky," etc. In China marriage is universal, and

within the reach of all. The sexes, however, never mingle before marriage. The betrothal is undertaken by the parents, or by professional match-makers, and frequently the bride and bridegroom see each other on the wedding day for the first time. Women hold a very inferior rank, and are considered as little better than slaves. Polygamy is not recognized by law, but secondary wives are not uncommon. Infanticide is the great crime of China. Mr. Williams says, that on asking the question as to how many female children were destroyed in a particular village, the reply was: "More than one half." The reasons he assigns are first, poverty; second, that great numbers of the men emigrate to the Archipelago, thus creating a large surplus of females, who not finding husbands would have to be sold by their parents. Again, the expenses of marriage are so great that the poorer classes, unable to dispose of their daughters profitably, kill them. Among the educated the crime is not so frequent.

APOSTROPHE TO THE ALLEGHENY.

Oh, Allegheny, bright and bold and free!
From the dark grandeur of thy mountain home,
Who rushest forth in wild impetuous glee,
Rejoicing thy wayward course to roam;
Down rapids steep and over rocks of foam
Thy current speeds in swift impulsive flight,
Between thy banks of fruitful yellow loam,
That rise on either side to noblest height,
Or spread afar in landscapes blooming fair and bright.
Well doth thy lustrous current bear the name*
Bequeathed thee by that dusky hunter race,
Who once in savage freedom roamed thy stream,
Or skimmed in birch canoe across thy face,
And who with oaken bow and spear did chase
The bounding deer thy wooded banks along,
Ere yet the white man's boat had learned to trace
The windings of thy current; while yet rung [song.
The sounding war-whoop or the captive brave's death
That race has passed; all have been swept away
Like autumn leaves before the whirlwind's scorn;
Thy waves have hymned their requiem, for they
Had none besides thee o'er their fate to mourn.
Thy banks, of their primeval forest shorn,
Have given birth to city, forge and field;
And now upon thy noble breast are borne
Those stores of riches which the earth doth yield
To man, when taught aright her subtle powers to wield.
Thy name, oh, Allegheny, bright and clear
Upon the page of history doth stand;
On thy banks Brady, that bold pioneer,
With the red warriors grappled hand to hand;
Among the rivers of this broad free land,
Thou hast a record which shall yield to none;
'Twas here, even where thy minstrel now doth stand,
Thy stream had well-nigh been the grave of one,
The proudest of earth's heroes, our great Washington.
While but a youth, ere yet his star of fame
Had reached its height, in winter, bleak and cold,
His country's faithful messenger he came
Through pathless forests, till he stood where rolled,
Half choked with ice, thy wintry torrent bold;
He launched upon a feeble raft—midway
His frail support was crushed—thy waves unfold
The dawning hope of liberty; to-day
Where had our freedom been had he been swept away?
Be thou, oh, stream, the emblem of my thought;
Have I not listened to thy ceaseless song,
And quaffed thy crystal waves, till I have caught
The spirit of thy waters? Deep and strong,
Yet pure as mountain dew, thou speed'st along,
A thing untamed as thought, and wild and free;
And in thy course what mingling beauties throng!
So may the utterance of my spirit be
A thing of life and light and glorious melody.

* Allegheny in the Indian tongue—clear water, or crystal water.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—Oshens.

My people are destroyed for lack of knowledge.—Isaiah lv. 4.

WATER-CURE.

It must be confessed that some of the processes of water-cure in the treatment of disease are most efficient in producing desirable results. Probably the first in importance among those processes is the bath or application known as the "wet-sheet pack." This consists generally in first wrapping the patient snugly in a sheet wrung from cool or tepid water, and then overlaying the sheet with blankets or comfortables. According to the *Herald of Health*, it is one of the most powerful, most useful, and most abused of all the hydropathic appliances; and among those who know but little about water treatment, much dreaded. It is efficient for allaying irritation, and for restoring the healthy action of the glandular system. It is powerful as an absorbent of effete matter. Dr. Shew says: "The wet-sheet-pack draws morbid matters out of the body, as any one can see who applies it for a short time only, and then washes the sheet; observe what an odor arises from it when a diseased, tobacco-nized, narcotized, pork-eating patient has been packed."

This process is certainly more agreeable for purifying the blood and skin of morbid humors, and for restoring the healthy action of the digestive organs, than the nauseous and sometimes painful results which follow the taking of drug preparations. Our own experience strongly indorses the wet-sheet-pack, properly used, as an excellent remedial agency. For full instruction, see "The Hydropathic Encyclopedia."

ADULTERATIONS OF FOOD.

THE times and principles of men are so out of joint, that when we sit down to a table the chances are ten to one that we will not eat some substantial, healthful edible, as we may suppose. Eggs have not yet been counterfeited; but as to milk, is there any in our large cities that is not a mixture? A hundred mixtures make our ground coffee; and our tea, to a great extent, is made over after it has been used at the tables of hotels. There is a substance called terra alba, or white earth, brought from Ireland, and sold for two and a half cents a pound, which enters largely into many of our confections. When sugar costs from fifteen to twenty cents a pound, the temptation to adulterate with this stuff is scarcely to be resisted by unprincipled shopkeepers. The body of candies and the coating of lozenges and almonds are made of this in many cases, as it is whiter than plaster, and is largely used in the adulteration of flour. In one ounce of lozenges, two thirds of the weight, when dissolved in water, was nothing but this white earth. Gum-arabic is too costly for pure gum-drops to be

made to advantage, so a substitute is made which, although it is beautiful to look at, is very poisonous.

Liquorice drops are made for the trade of the poorest kind of sugar and lampblack, and merely flavored with liquorice. Twenty parts of liquorice and eighty per cent. of white earth are dexterously mixed, and sent to the South and West as pure liquorice. Traders do not hesitate to use the most virulent poisons to make pickles appear fresh and green; while it is a notorious fact that skilled persons can by a combination of drugs make almost any liquor known, and which will so nearly resemble the taste of the true article, that experts are deceived. To escape these impositions, it is not sufficient that a man has the utmost confidence in his grocer, for he, too, may be profoundly deceived. Let every family have the courage to make its own bread—even buying the grain in the berry, and grinding it with a hand-mill, if convenient; to prepare its own fruits; and as to every compound article of food which comes to the table, let it do its own mixing.

STRAWBERRIES.

Not half enough of these healthful and delicious berries are raised in this country. Sidney Smith was right when he said, "Doubtless God *could* have made a better berry than the strawberry, but doubtless he never *did*." Wherever this berry grows vigorously, the people need it as an article of diet. Our theory is, that fruits are best adapted to the use of the people who live in the climate where they grow. In New England and the Middle States, oranges, lemons, pineapples, and bananas are not half so well adapted to promote health, as articles of diet, as they are among the people in the regions where they grow. The apple and the strawberry belong specially to the northern part of the temperate zone. The grape is excellent as an article of diet when it flourishes in open culture. Melons taste best when they are really native to the soil and climate, than in more northern regions to which they may be carried. A kind Providence has wisely diversified the products of the earth in such a way that each region which is fit for the residence of man, produces mainly the articles best adapted for food to people residing in the vicinity where they grow. We always fancied that beans and peas, wheat and corn, were articles much better adapted to Northern people as food than rice. But we wander from our text—the strawberry. We would encourage its culture, and we speak now for next year.

A friend of ours from Vineland, N. J., informed us, recently, that one man is capable of attending one acre of strawberries, and that the crop will net on an average, if well attended, from \$600 to \$800 a year, after paying for the labor of culture and for transportation. We clip from an exchange the following, which will show the business to be good:

"Mr. Sims, of Marion County, Illinois, on the 12th June, 1867, contracted his strawberry crop, the product of forty acres, to parties in

Chicago for the snug little sum of fifty thousand dollars (\$50,000), or at the rate of \$1,250 per acre."

This price, of course, pays for the work as well as the nett profit. Who says the business is not good? Our farms are too large. Too few people are engaged in tilling the soil, and there is not one fifth as much fruit raised and eaten as there should be. Let more land be devoted to fruit and less to raising food for swine and for raising grain for whisky, and mankind will be less swinish and vastly more human, not to say angelic.

It is not for us to decide the respective merits of the numerous varieties. Suffice it to say, the best, nay, the *very* best, we have tasted this year were grown by Mr. Hyatt, of Morrisania, N. Y., and they were simply seedlings!

TWELVE WAYS OF COMMITTING SUICIDE.

A MEDICAL cotemporary thus enumerates the fashionable modes of doing it:

1. Wearing of thin shoes and cotton stockings on damp nights and in cool, rainy weather. Wearing insufficient clothing, and especially upon the limbs and extremities.

2. Leading a life of enfeebling, stupid laziness, and keeping the mind in an unnatural state of excitement by reading trashy novels. Going to theaters, parties, and balls in all sorts of weather, in the thinnest possible dress. Dancing till in a complete perspiration, and then going home without sufficient over-garments, through the cool, damp night air.

3. Sleeping on feather beds in seven-by-nine bed-rooms, without ventilation at the top of the windows, and especially with two or more persons in the same small, unventilated bedroom.

4. Surfeiting on hot and very stimulating dinners. Eating in a hurry, without half masticating the food, and eating heartily before going to bed, when the mind and body are exhausted by the toils of the day and the excitement of the evening.

5. Beginning in childhood on tea and coffee, and going from one step to another, through chewing and smoking tobacco and drinking intoxicating liquors; by personal abuse, and physical and mental excesses of other descriptions.

6. Marrying in haste and getting an uncongenial companion, and living the remainder of life in mental dissatisfaction; cultivating jealousies and domestic broils, and being always in a mental ferment.

7. Keeping children quiet by giving paregoric and cordials, by teaching them to suck candy, and by supplying them with raisins, nuts, and rich cake; when they are sick by giving them *mercury*, *tartar emetic*, and *arsenic*, under the mistaken notion that they are medicines and not irritant poisons.

8. Allowing the love of gain to absorb our minds, so as to leave no time to attend to our health; following an unhealthy occupation because money can be made by it.

9. Tempting the appetite with bitters and niceties when the stomach says No, and by forcing food into it when nature does not demand, and even rejects it; gormandizing between meals.

10. Contriving to keep in a continual worry about something or nothing; giving way to fits of anger.

11. Being irregular in all our habits of sleeping and eating; going to bed at midnight and getting up at noon; eating too much, too many kinds of food, and that which is too highly seasoned.

12. Neglecting to take proper care of ourselves, and not apply early for medical advice when disease first appears; taking celebrated quack medicines to a degree of making a drug-shop of the body.

The above causes produce more sickness, suffering, and death than all epidemics, malaria, and contagion, combined with war, pestilence, and famine. Nearly all who have attained to old age have been remarkable for equanimity of temper, correct habits of diet, drink, and rest—for temperance, cheerfulness, and morality. Physical punishment is sure to visit the transgressor of nature's laws. All commit suicide and cut off many years of their natural life who do not observe the means of preventing disease and of preserving health.

[The case is well made out by the Doctor, and we submit it to the world. Premature death is more frequently the result of these causes than by any direct curse from God. If we do not hold our lives in our own hands, we certainly have the ways and the means of committing suicide in divers ways and manners. Let us be sensible and law-abiding.]

THE LAUGH OF WOMEN.—A woman has no natural gift more bewitching than a sweet laugh. It is like the sound of flutes on the water. It leaps from her in a clear, sparkling rill; and the heart that hears it feels as if bathed in the cool, exhilarating spring. Have you ever pursued an unseen fugitive through the trees, led on by a fairy laugh, now here, now there, now lost, now found? We have; and we are pursuing that wandering voice to this day. Sometimes it comes to us in the midst of care, or sorrow, or irksome business, and then we turn away and listen, and hear it ringing in the room like a silver bell, with power to scare away the evil spirits of mind. How much we owe to that sweet laugh! It turns prose to poetry; it flings flowers to sunshine over the darkness of the wood in which we are traveling; it touches with light even our sleep, which is no more than the image of death, but is consumed with dreams that are the shadows of immortality.

WOULD NOT "BILE."—The following ingenious trick at advertising is as amusing as it is "fowl!" A man in Clark County having made preparation for a big dinner, selected one of his finest turkeys to boil. Dinner time came, and with it the turkey, but to carve it he could not—the fork refused to enter and the knife refused to cut. Fearing some fiend in human shape had made an attempt to poison the family, the turkey was sent to a chemist to examine for the deadly poison. In the mean time the servants were closely questioned, when the truth came out that a box of "R—'s Blood Pills" were accidentally thrown out, and the turkey eating some of them, they had taken all the "bile" out of him.

MAP OF NORTH AMERICA.

OUR NEW POSSESSIONS.

By a treaty with Russia, lately consummated, the United States has acquired sovereignty over all that portion of the continent known as Russian America. As this region is neither a new Eden, as represented by one of the partisan papers, nor an entire Arctic waste, as represented by others, we present the following facts in regard to it, derived from the most authentic sources. The descriptions found in our geographies and encyclopedias are meager in the extreme, but the recent investigations and surveys by the projectors of the Behring's Straits Telegraph Company have given us many interesting facts, which are of great value at the present time. In the preparation of this article, we have accepted the statements of these surveyors in regard to the character of this region, taking care that they are corroborated by the general conditions which are known to exist.

EXTENT.

This territory extends from the 141st meridian west of Greenwich to the Sea of Kamchatka and Behring's Straits, and from latitude $54^{\circ} 40'$ north to the Arctic Ocean. The main body is a quadrilateral, about six hundred miles square, lying north of latitude 60° . From this compact portion, two long arms extend southerly to latitude $54^{\circ} 40'$; the peninsula of Alaska in a southwest direction, and a narrow strip of sea-coast to the southeast, the two inclosing a wide bay opening to the south. A large number of islands adjacent to the coast are also included in the purchase. The whole area is variously estimated at from four hundred thousand to six hundred thousand square miles.

FACE OF THE COUNTRY.

A high and broken range of mountains, known as the Northwest Coast Range, extends from the southern boundary, along the coast, to the extremity of the peninsula of Alaska. The main ridge of this mountain chain, from twenty to fifty miles from the coast, and nearly parallel to it, constitutes the boundary between

the Russian possessions and British America south of latitude 60° . Numerous high spurs, from this range, extend to the water, dividing the coast into a great number of islands, promontories, and headlands, separated by deep and irregular straits and inlets. Among the most peculiar features of the coast are the long, narrow bays, which stretch far inland, and appear to fill the valleys of a half-submerged mountain system. These bays are surrounded by lofty summits, and are similar to those which, on the coast of Norway, take the name of fiords. The culminating peak of the Coast Range is Mount St. Elias, nearly eighteen thousand feet above the level of the sea, and the highest mountain in North America. Between these mountain spurs are deep sheltered and secluded valleys, through which small mountain streams flow to the ocean in a series of rapids and cascades.

The main body of the territory north of latitude 60° is little known. Our information is gathered principally from fur-traders and the telegraph surveyors. The northern portion, bordering on the Arctic Ocean, is mostly low, flat, and swampy. The central and southern parts are also generally level, here and there broken by low mountain spurs, which extend from the Rocky Mountains westerly to the ocean. The whole tract is well watered by numerous rivers, the principal of which is the Knitcheik, a large stream flowing into the Sea of Kamchatka, north of latitude 60° . This stream is said to be navigable for steamboats for nearly one thousand miles. A large number of deep sluggish streams drain the swampy regions of the north, and flow into the Arctic Ocean.

CLIMATE.

In regard to the climate of this region, we must bear in mind the difference between the temperature of the eastern and western coasts of the two continents. In the Atlantic, a cold arctic current, accompanied by a cold northeast wind, flows along the coast of America, greatly intensifying the severity of the climate, while a warm, tropical current, attended by a genial southwest

wind, bathes the coast of Europe, moderating the severity of the cold, and carrying tropical influences to high latitudes. It thus happens that there is a remarkable difference of temperature upon the opposite sides of the Atlantic. Naples is in the latitude of New York; Venice, of Montreal; Paris, of Newfoundland; London, of Labrador, above the region of trees on the Atlantic coast of America; and St. Petersburg is on the parallel which extends through regions of perpetual snow, on the American coast.

In the Pacific like influences prevail. A warm oceanic current from the southwest continually bathes the northwestern coast of America, carrying the warmth of the tropics to so high latitudes that Behring's Straits are never frozen, and very little ice is found along the coast.

In the interior the winters are long and severe, and snow falls to a great depth, but on the Pacific side of the Coast Range snow rarely falls except on the tops of the high mountain peaks. In summer, the moisture of the warm southerly winds is condensed by the mountain chain, causing heavy fogs and frequent rains. The general temperature, therefore, is not to be compared with that of the Atlantic coast of America, but rather with that of similar latitudes in Europe. There is, however, a slight bend in the isotherms, which makes a difference in favor of Europe of about one degree of latitude.

The southern extremity of our new possession is in the latitude of the northern counties of England. New Archangel, the capital, is on the same parallel as Edinburgh, and Fort St. Nicholas, at the northern extremity of the Bay of Alaska, is on the parallel of St. Petersburg. The portions lying between Alaska and Behring's Straits correspond in latitude to the southern half of Norway, and the climate of these different places on the same parallel does not greatly differ. The telegraph surveyors report that the Knitcheik River was clear of ice last year on the 27th of May, so that boats made the passage from Fort Yukon to the ocean.

PRODUCTIONS.

The islands and valleys along the coast from Prince of Wales Island to the extremity of Alaska, a distance of twelve hundred miles, are generally covered with forests of pine, fir, and other resinous evergreens. In many places, these forests, with a dense growth of underbrush, come down to the very edge of the water. It is also reported by the telegraphic surveyors that the whole region north of Alaska, as far as Fort Yukon, is heavily wooded. North of this point the trees begin to diminish in size, so that only dwarf trees and shrubs are found on the borders of the Arctic Ocean. Along the sides of the mountains, and on the high table-lands in this extreme northern latitude, the only kinds of vegetation found are mosses, lichens, and the small fungous plants which find their nourishment in the snow.

Grass grows along the coast as far north as 60°. Barley and oats, the only cereals that can be grown, are produced on the islands and in the valleys of the western coast south of 60°. The tables at New Archangel are plentifully supplied with garden roots and esculents grown in the country, and there is no doubt but that nearly the entire southern half of the territory can be made to yield a considerable quantity of bread products.

MINES, FISHERIES, ETC.

Native copper in considerable quantities is found near Copper River, and at several other places along the coast. Iron ore has been smelted and worked by Russian miners, producing an excellent article of iron. It is said to be found in inexhaustible quantities. Surface gold has been found to some extent upon the head waters of the rivers east of the Coast Range. Bituminous coal of a good quality has been found in large quantities, sufficient for the wants of the people and to supply the prospective steam navigation of the North Pacific.

The fisheries along the coast are extensive and important. The vicinity of Behring's Straits, in both the Arctic and Pacific oceans, is the best region for the whale fishery in the world. Salmon of the finest description swarm in all the fresh-water streams, furnishing food for the Esquimaux and their dogs. Herring and cod abound along the islands and reefs of the whole coast, and there is no reason why these fisheries may not become as important as the cod fisheries of the Grand Banks, or the herring fisheries of Scotland.

The fur-bearing animals are the sable, otter, furred seal, and the black, silver, and red foxes. Reindeer abound in the north, and the red deer in the south. A large share of the fur trade is in the hands of the British Hudson Bay Company, and Fort Yukon is one of their stations. Russian trappers and fur-traders have occupied the country to a certain extent.

INHABITANTS.

The inhabitants consist of about six thousand Russians and fifty thousand natives, most of whom are Esquimaux. The Russians are principally engaged in the fisheries, and have done little to develop the resources of the country. The Esquimaux population consists principally of nomadic tribes, ignorant and filthy, but mild and peaceable.

There is doubtless a fair chance for American enterprise upon this northwest coast. The pine forests will furnish the supplies of timber so much needed in Oregon and California, and any surplus will readily find a market in China and Japan. The fisheries will give remunerative employment to large numbers of enterprising mariners for all time to come, the teeming millions of China furnishing an exhaustless market for all possible supplies. Ship-building, for the navigation of the Pacific, may be profitably carried on by the side of the forests which supply the timber, and the three indispensable articles of coal, iron, and copper may be dug from the adjacent hills. Ice, formed upon the fresh-water streams and ponds in the vicinity of Cook's Inlet, can be easily gathered, and cheaply furnished to California and all the tropical coasts of the Pacific.

The scenery along the coast south of Alaska is among the finest on the continent. The bold rocky shores rise from an almost unfathomable sea, presenting an endless variety of precipitous ledges, rocky cliffs, and deep chasms. From the calm surface of the narrow fords steep mountains rise in every direction; the somber evergreen forests stretch downward to the very edge of the water, and, in the distance, the grand and solemn

mountain peaks rise far into the regions of perpetual snow.

When the empire of the Pacific arrives at its full stature, and San Francisco becomes the commercial emporium of the West; when a busy, thriving, vigorous, and intelligent Yankee population shall inhabit the whole coast from Lower California to Vancouver's Island, then these now desolate regions of Russian America will become favorite summer resorts, and will be as well known as the Vale of Chamouni or the lakes of Como and Maggiore.

OUR COUNTRY.

ACCORDING to the report of the United States Census of the year 1860, we then had—

Free Population	27,439,561
Slave Population	3,953,760
Aggregate	31,443,321

—upward of a million more than England, Scotland, and Ireland combined.

Acres of land in the Union, exclusive of the new territory just acquired from Russia	1,926,636,300
--	---------------

—for each inhabitant, all told, sixty-one acres.

Number of families, counting only the people who were free in 1860	5,210,934
Average number of persons in a family	5 1/4
Acres of land in farms	407,212,538
Acres to each family	78
Acres of improved land in farms	163,000,000

—or thirty-one acres to each family, or a little less than six acres to each three persons.

Cash value of farms	\$6,645,000,000
Average value per acre	\$16
Horses	6,349,174

—or more than one horse for each family.

Milk cows	3,581,735
-----------------	-----------

—or nearly two to a family.

Sheep	22,471,000
-------------	------------

—or four and one-third to each family.

Swine	33,513,000
-------------	------------

—or about six and one half to each family.

Wheat (bushels)	173,104,934
-----------------------	-------------

—or thirty-three and one quarter bushels (about nine barrels of flour) to a family.

Indian corn (bushels)	838,793,000
Rye	21,101,380
Oats	173,643,185
Potatoes	111,149,000
Buckwheat	17,572,000
Wool	60,265,000
Butter	459,681,372
Cheese	103,664,000
Maple sugar	40,120,300
Honey	23,366,357
Hops	10,992,000
Hay (tons)	19,084,000
Animals slaughtered, value	\$213,619,000

By these facts and figures it will be seen that we have land enough for millions more of the landless sons of other nations, and abundant resources developed or undeveloped for hundreds of millions of people; and the genius of our free institutions and the spirit of our people unite in offering to the sons of industry throughout the world a cordial welcome among us and a permanent home on our soil. The farm, the factory, the workshop, the school-house, and freedom of the press, of religious opinion and worship are the basis of our greatness, and a share with us in these we tender to all our brethren of the human race. Let us thank God that our lot was cast in a land so large, so good, and so promising.

THE GREAT WEST.

NEBRASKA.

THE tide of emigration is ever setting westward. Rivers and deserts present no obstacles to our hardy pioneers and settlers. Now Nebraska is opened up to us, and it is doubtful whether the Rocky Mountains will present any greater barrier to our farther progress westward, and the development of more new States and Territories. Already the railroad is cutting its way through the new State, and the Rocky Mountains will soon be reached and pierced. In Nebraska we have a rich mine of wealth at present unexplored, and only a portion surveyed and settled.

Nebraska was admitted into the Union as a State on March 1, 1867, having been organized as a Territory since the passage of the Kansas and Nebraska Bill, May 30, 1854. It comprises an estimated area of 833,883 square miles, lying between the fortieth parallel on the south and the forty-ninth on the north; being bounded by Kansas on the south, the British Possessions on the north, the Missouri River, with Iowa and Minnesota on the east, and on the west by the Rocky Mountains, beyond which are the Territories of Utah, Idaho, Oregon, and Washington. The State has a frontage of nearly 300 miles on the Missouri River, a breadth of about 450 miles, and a length of above 700 miles, covering a surface as varied as it is extended.

ITS EARLY HISTORY.

Originally Nebraska was a part of the old province of Louisiana, and partook of the fortunes of that State; was finally ceded to the United States in 1803, then being known as the Indian Territory. Previous to 1854, when it was organized as a Territory, this wide extent of country afforded capital hunting-grounds for the Indians, where millions of buffaloes, elk, and antelopes were found in abundance. In 1853 the first white settler crossed from the Iowa shore. Other emigrants soon followed, slowly at first, but in 1854 emigration began to flow thither rapidly, and the rich bottom and prairie lands were soon populated. The population that year was 2,723; in 1860 it had reached 36,903, and to-day it is estimated at upward of 75,000.

Of course the increase of the white settlers drove the Indian farther westward to the Rocky Mountains. Some of the tribes remaining in the State have partially adopted civilization, and all of them are peaceable. Fifteen years ago the Omahas had their wigwams where now stands the city of Omaha. They are now only about 1,000 strong, and live in the northeast corner of the State, friendly and peaceable. There are but a few scattered tribes over the whole State, numbering in the aggregate but little more than 5,000. The most powerful are the Pawnees, who have a reservation of twenty miles by thirty, located twenty miles north of Columbus. They are partly civilized, and have a saw and grist mill and blacksmith shop, built for them by the Government, which they run themselves. The Ottos and the Missouries occupy a tract twenty miles by thirty on the Big Blue River, seventy-five miles from Nebraska City, and number about 1,000—peaceable, and allies of the whites. In the southern and eastern corners are the Sacs, the Foxes, and the Iowas, about 1,500 strong, partly civilized and peaceable. Soon, by the tide of emigration, they will have to seek other homes, perhaps amid the wild canons of the Rocky Mountains.

LAND IN NEBRASKA.

The general character of the land, with some exception, is a gentle rolling prairie, upon which neither ponds, lakes, nor stagnant waters emit noxious exhalations to infect the pure air of the region. Rich bottom lands, save on the Sandy Desert, stretch across the State from the Missouri to the base of the Rocky Mountains. These are intersected by the Platte, the Niobrara, and the Yellow Stone rivers, and numerous other small streams. The whole is diversified by small knolls, but is destitute of hills until the Black Hills are reached. The valley of the Platte, which is from ten to twenty miles in width, which seems to have been designed by nature for a grand highway, and through which now runs the Union Pacific Railroad, is of great fertility, and here the most desirable locations are to be found. The same remark

OMAHA CITY, THE CAPITAL OF NEBRASKA, ON THE MISSOURI RIVER.

is true to a great extent of the valley of the Missouri, and the valleys of the Elkhorn, Wood, and Loup rivers. Very desirable locations are along the line of the Union Pacific Railroad through the Platte Valley, the company having nearly a million acres of fertile land near their road for sale. The valley of the Elkhorn River, which for 100 miles from its mouth is equal to the Platte Valley for fertility, is also rapidly settling.

That portion of the State lying between the Missouri River, the Kansas line, and the ninety-ninth parallel of longitude is most thickly settled. The land there is generally of a superior character. Near the Platte are the rich bottom lands, which is the deposit of the river after ages of overflow. It is easy of cultivation, and productive to an astonishing degree. Above these bottom lands, farther interior, are table-lands, now and then broken by bluffs, running abruptly into the river. Along the Missouri these table-lands run from the Kansas line up to where the ninety-ninth longitudinal meridian crosses the river, on the picturesque site of which one continuous city might be laid out. Beyond these two descriptions of land is the rolling prairie, which is well watered by springs and streams of pure water. So plentiful is the water, that there is scarcely a quarter section of land that has not its spring, nor a township that has not its stream. The soil of the prairie is of much the same character as the other, having a larger proportion of minerals and a smaller proportion of vegetable matter. These prairies are about equal in richness to the wheat-growing districts of Illinois.

Between the Black Hills and the Rocky Mountains the land is a succession of valleys, walled in by lofty wooded mountains which abound in scenes of grandeur and beauty. The valley of the Yellowstone River is fertile, and so is the valley of the Maria, abounding in timber, pine, cedar, and fir trees. A portion of the bottom lands of Nebraska are wooded with heavy cotton-wood, and the bluffs or hills with the harder growths of oak, black walnut, hickory, elm, etc.

PRICE OF LAND.

In the Platte Valley the Union Pacific Railroad is entitled to the alternate sections for twenty miles on each side of the road, and the moment the lands are surveyed they are withdrawn from the market. But the even sections along the road are open for settlement in lots of eighty acres, upon paying the sum of \$2 50 per acre, under the provisions of the homestead bill. The land in the Platte Valley within 100 miles of Omaha, owing to its proximity to the railroad and its richness, has been extensively settled upon, and improved land,

when it can be bought at all, must be paid for at the rate of from \$5 to \$12 an acre. The same remark is true to a great extent of the land in the bottom of the Missouri, and the valleys of the Elkhorn, Wood, and Loup rivers. There is no doubt, however, but that the Union Pacific road will dispose of their lands at terms so moderate as to invite settlement.

Improved farms can be purchased, in tracts of one hundred acres, with from forty to eighty acres under cultivation, with small dwelling and out-buildings for from \$5 to \$25 per acre. There are 1,500,000 acres of government lands subject to be entered under the Homestead Law or located with land warrants or cash in the Omaha District. These lands lie in the most fertile sections of the State, being in the great valley of the Platte and along the Elkhorn River, Shell Creek, Loup, Fork, and Wood rivers. The names of the counties in which these lands lie are as follows: Douglas, Izard, Washington, Dodge, Platte, Monroe, Madison, Burt, Cumming, Dacotah, Dixon, Pierce, L'Eau-qui-Court, and Archer.

PRODUCTS OF THE SOIL.

The soil is free and lively and easily brought into cultivation, producing Indian corn, wheat, oats, hemp, and sorghum. Hay and clover are also grown in abundance. All kinds of vegetables, fruits, etc., thrive well. The fertility of the soil, especially in the rich bottoms, is wonderful and unlimited. Radishes six inches in diameter, sweet potatoes weighing from eight to ten pounds each, beets that almost fill a flour barrel, and cabbages with solid heads thirty-six inches in circumference, are said to be among the vegetable marvels. Eighty bushels of corn per acre are raised in the valley of the Platte, and in the Decatur bottom. The wheat raised in the Elkhorn bottom weighed sixty pounds to the bushel; that in the Tekama sixty-two, and in the Dacotah sixty-three. The potato yields are immense, and owing to the dryness of the atmosphere and soil, rot is unknown; nor has the wheat been attacked by a variety of those diseases to which it is liable in the East. Grapes of an excellent quality are also produced in quantities.

As a grazing country Nebraska can not be surpassed, and stock-raising is extensively carried on. The wild buffalo grass predominates here as in Utah, and cattle, horses, and mules fatten on it very readily. In regard to the advantages of Nebraska for raising sheep, an old and well-informed settler of that Territory writes: "I know of no part of the United States where sheep are so healthy or do so well, and I doubt if there is a place on the globe equal to Nebraska for wool-growing." The surplus corn, grain, animal and vegetable products culti-

vated in this "Nile of Nebraska" can find ready market by the proximity of the Union Pacific Railroad. Timber is somewhat scarce. Skirting the streams is sufficient for ordinary uses, and it can be grown with great profit and success. Water is pure and plentiful, and well distributed by springs, streams, and wells.

The following is the estimated number of bushels of wheat, oats, and corn for 1886, compared with those given in the last census report:

	1860.	1886.
Wheat.....	147,867.....	1,000,000
Corn.....	1,482,080.....	4,000,000
Oats.....	74,509.....	500,000

Part of these crops which is not consumed in the Territories, either finds its way down the river to St. Louis, up it to Montana, or across the plains to Colorado.

MANUFACTURES, MINERALS, ETC.

Nebraska has as yet but few manufactures. Agriculture is probably the destiny of the eastern part of the State, and the mining districts will consume all that can be grown here. The southeastern part abounds in limestone, and in some places the sandstone crops out along the bluffs and ravines. In Cedar County, on the Missouri River, and in some other places, there are, but a few feet below the surface of the soil, large deposits of a soft, pliable, calcareous substance, which hardens upon exposure, and makes excellent lime. Alum has been discovered in Dixon County, and salt springs in Salt Creek, as well as oil wells near Columbus and Fremont in the Platte Valley. Around Omaha, and for some distance up the Platte and up the Missouri, are to be found lime and building stones of a gray or yellowish color. Geologists are of the opinion that bituminous coal is to be found about six hundred or a thousand feet below the surface. It is expected that the salt springs will be a source of great profit to Nebraska. Of course, the advent to railroads will naturally increase manufactures to a large extent. The railroad shops in Omaha are but the commencement of the thousands of workshops and manufacturing factories that will spring up in the course of a few years along the lines of railroad.

PRICES OF LIVING, LABOR, ETC.

Unskilled labor is in good demand in the State, and commands good wages. Farm hands find ready employment at \$25 to \$50 per month with board. Carpenters, blacksmiths, bricklayers, and mechanics generally make from \$4 to \$6 per day. The best hands readily obtain the latter figure.

Considering its recent settlement, Nebraska is a cheap

place in which to live, almost every article of consumption being abundant. The excursionists who celebrated the completion of the Union Pacific Railroad to the 100th meridian in autumn, 1866, in one of their dispatches report the market prices as follows: Buffalo meat per lb. 15 c.; elk meat per lb. 12 and 15 c.; antelope 16 to 18 c.; prairie chickens per pair 50 to 60 c.; wild ducks 75 to 81 c.; wild geese each \$1 25 to \$1 50; sage hens each 50 to 65 c.; snipe each 25 to 30 c. Other things are in like proportion.

THE CLIMATE.

The settled portions of the State, lying in the same latitude as Southern Iowa, Indiana, Ohio, and Pennsylvania, partake to a great extent of the same peculiarities of climate, somewhat milder, however, than the same latitudes east. The atmosphere is dry, clear, buoyant, and pure, and is exceedingly favorable to pulmonary difficulties. In spring and fall there are rains, but the summers are generally dry. The thermometer does not usually indicate a higher temperature than 100° F., and in the extreme cold weather the mercury rarely falls lower than 10°. The wind blows with great force, and with much constancy; of snow there is not much on the plains. Western Nebraska is, in point of fact, warmer than places in the same latitude on the seaboard, as shown by the fact that the isothermal line of summer heat of 80° F. which strikes the Atlantic coast near Charleston, S. C., curves northward, and crosses the forks of the Platte a little west of their point of junction. Then, too, the isothermal line of winter heat of 40° F. which touches the ocean at New York, and which passes through Southern Illinois, curves northward as it approaches Nebraska.

Spring opens early, and the seasons afford time for two crops. The heat is great in summer, but is relieved by cool winds from the prairies. The winters are alternately mild and severe; rarely deep snows. December is often found to bring severe weather, which breaks up in March. Fever and ague are unknown. Stock of all kinds require some shelter to enable them to keep through the winter, and notwithstanding the cold winds which prevail, slight sheds, sufficient to break their force, will answer for cattle, and sheep fatten rapidly on the rich buffalo grasses of the State.

EDUCATION AND RELIGION, GOVERNMENT, ETC.

Ample provision has been made by the appropriation of public lands in the State for the benefit of common schools and the encouragement of education generally. This will be a great inducement to respectable emigrants. At present these schools are free, on the average about six months in the year, but will doubtless soon be made free all the year round. Churches of nearly every denomination are scattered through the State.

The government of the State is established by organic act, and acts of the Legislature, and is the same as in other States. The capital at present is Omaha, but will eventually be, doubtless, owing to its central position, Columbus. The civil code of Ohio and the criminal code of Illinois were adopted with few modifications in 1866, and are now in force.

COMMUNICATIONS.

Nebraska is fortunate in occupying the position she does, being on the direct line of travel from the great emporiums of the East—New York, Chicago, St. Louis, to the Pacific coast and San Francisco. The Union Pacific Railroad, starting from Omaha, as the great Western terminus, will be the main channel of communication with the West. Trains are now running 300 miles west from that point, and the route is far superior to all others to the Rocky Mountains. Starting from Council Bluffs, opposite Omaha, on the Missouri, which will soon be connected by a bridge, the terminus of the Iowa division of the Chicago and Northwestern, Burlington and Missouri, and Mississippi and Missouri roads—the first of which has lately been completed, while the others are being pushed rapidly forward—will connect with the East and South. Chicago is now reached—a distance of 500 miles—in twenty hours, without change of cars. From the south, the capital is reached by a daily line of packets, running in connection with the Hannibal and St. Joseph and North Missouri railroads, and by steamers

from St. Louis, Kansas City, Leavenworth, Atchison, and all points on the Missouri River, which is navigable as far as Fort Benton. Between Sioux City, Iowa, and Omaha there is a semi-weekly line. Stage and express coaches run in direct connection with the passenger trains of the Union Pacific Railroad between North Platte and the mountains, taking emigrants to all the large cities and populous portions of the State. Omaha is the starting-point for a daily line of stages, via Denver City to Salt Lake City; to the gold-mining districts; in fact, all points westward—Utah, Idaho, Montana, Colorado, California—may all be reached from there. Roads in all parts of the State are generally good. Postal communication is well established, the length of the post routes within the State being 1,872 miles. The Platte Valley was the route taken by the cattle trains to Utah and Colorado and the mining regions, and will continue to be until the Union Pacific Railroad is completed. For the guidance of intending emigrants we append the following table of distances, from Omaha, the capital, to the chief points in the Union:

The distance from Omaha to Chicago, is 500 miles; to St. Louis, 450; to Portland, Me., 1,643; to Boston, 1,522; to New York, 1,450; to Philadelphia, 1,419; to Baltimore, 1,349; to Washington, 1,320; to Charleston, 1,466; to Mobile, 1,999; to New Orleans, 1,210; to Denver, 630; to base of Rocky Mountains, 517; Lamarie River, 578; Salt Lake City, 1,835; Humboldt City, 1,595; Nevada and California State Line, 1,500; Sacramento City, 1,716; San Jose, 1,695; to San Francisco, 1,890.

OMAHA—THE CAPITAL.

Omaha is one of the most striking evidences of the prosperity of Nebraska, and is aptly called the "New Chicago of the West." It is situated opposite Council Bluffs, on the Missouri River, by which it is reached by a ferry, sixteen miles above the mouth of the Platte, in latitude 41° 15' 39", and longitude 189° 48' 37" from Washington. Situated upon an elevated position, she looks proudly down upon the swiftly-flowing Missouri below, with its scenes of industry and commercial life. Nearest the river are the busy shops of the Union Pacific Railroad and the dwellings of the workmen; on higher ground, sixty feet above the level of the river, and 968 feet above the level of the sea, is the city proper; while sixty feet higher still is the prairie, on the verge of which stands the State House. On this plateau the town is also built, extending along the river for four miles. Farther back, tree-covered hillsides appear, where elegant dwelling-houses are beginning to make their appearance. To the south are the newly erected cottages of the *Credit Foncier*, a moneyed association, having for its object the development of the principal towns on the railroad. This association owns some eighty acres of land in Omaha; they have divided it into lots, and are now building cottages, neat frame buildings, which readily rent for \$30 per month. The city was originally laid out into streets crossing each other at right angles, none of them being less than one hundred feet wide; while Capital Avenue, which leads to the State House, is one hundred and twenty. The streets running north and south are numbered up to Twenty-third Street, while those running east to west are named either after individuals or the forest trees. Streets are planted with trees, giving in summer a beautiful appearance to the whole city.

ITS GROWTH AND EARLY HISTORY

have been remarkable. Previous to 1853, it was left to the Indians. In November of that year, Mr. A. D. Jones crossed the river from the Iowa side, and settled on what is now the main business portion of the city; and others following, in 1854 the Indians were obliged to dispose of their lands. Then the Golden State opened, and Omaha formed one of the main routes for the New Eldorado. As a consequence, speculation became rife, and the prices of property ran up to an extraordinary height, and it was fondly believed that Omaha, which is nearly the geographical center of the United States, would at once become the foremost city in the West. But with 1857 came bankruptcy and temporary despondency, and it was not until 1859 that signs of vitality began to re-appear.

It then became the outfitting point for the mining trains to Idaho and Colorado, which, returning in the autumn laden with gold, again clothed and equipped before proceeding East. Its population, wealth, and size have since increased to a wonderful extent. The establishment of the large machine shops of the Union Pacific Railroad, and the consequent influx of a large number of mechanics, whose high wages enabled them to pay high rents, thus causing the erection of a great number of new buildings, was another great cause of its rapid growth. During 1866, about 600 houses of various sizes were erected. The city is constantly extending its limits northward. It has swallowed up the rival village of Florence, and even two others, and now stands unrivaled in the State.

The city now boasts of a large gas-works, having a capacity of 40,000 cubic feet; above a dozen churches of all denominations, Presbyterian, Episcopal, Methodist, Lutheran, Congregational, Baptist, Catholics, all being represented; three beautiful cemeteries, Prospect Hill and Cedar Hill, the first of which contains 12,000 trees, and Mount St. Mary's; five public schools, constantly increasing in number, besides an excellent female seminary, under the auspices of the Episcopal Church; a Methodist College in embryo; a board of trade organized November 4, 1865; two newspapers, the *Herald* and *Republican*; four large and successfully managed hotels—the Herndon, Douglas, Farham, and Fremont—together with numerous banks, manufactories, private buildings, railroad shops, etc., etc. The extensive shops of the Company have added greatly to the value of the land in their vicinity. When fully completed they will be able to turn out several cars daily, being limited at present to about one per day.

THE LOCAL AND WESTERN TRADE

of Omaha is immense. In the prosecution of the latter, over one hundred steamers ascended the Missouri above Fort Benton during the year, many of them taking their entire freight from Omaha. Packets leave regularly for St. Joseph, Sioux City, and other points on the river. Stage lines radiate in all directions, and hence is the shortest line to Virginia City and other points in Montana and Idaho, following a route which possesses the advantage of an abundance of good water. Being the terminus of the Union Pacific Railroad, the trade of Omaha will increase with every year. It will inevitably be the starting-point to all places west of the Missouri.

THE FUTURE OF OMAHA

is thus described by a correspondent of the *Buffalo Express*: "Omaha has, during the past two or three years, transacted an amount of business and increased with a rapidity that really astonishes herself, whenever she takes time to pause and figure upon her past and present prosperity. Is it destined to continue its ever-lengthening strides until Omaha shall become the recognized commercial center of the two thousand miles of rich country lying between Chicago and San Francisco? It does not require a very extraordinary reach of the imagination to conceive the practicability of this latter suggestion. Providence seems to have made ample provision for the commercial demands of the American nation, in the natural adaptation of certain localities, conveniently distant from each other, for the establishment thereon of important cities. Thus we find occupying a more southern parallel, situated, respectively, from three to five hundred miles apart, the principal cities of Philadelphia, Pittsburgh, Cincinnati, and St. Louis, while along the northern line are located the flourishing cities of Boston, New York, Buffalo, Chicago—and why not Omaha, between the "Garden City" and San Francisco? Geographically considered, Omaha certainly occupies a favored location, with over a thousand miles of river navigation stretching away to the northward, bringing down to her wharf from the snow-capped mountains of Montana the rich products of that far-off region of the great Northwest; while into her lap is being poured the entire trade from the Missouri River to Salt Lake City."

Such is Omaha, the capital of Nebraska, the eastern terminus of the Union Pacific Railroad, and the great city that is to be of the Missouri Valley.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THE SOLITUDES OF NATURE AND OF MAN; or the Loneliness of Human Life. By William Rounseville Alger. Boston: Roberts Brothers. 12mo. cloth, \$1 75.

We like the name on the cover of this somewhat peculiar book better, viz., "The Genius of Solitude." The author is a man not altogether unknown to fame through his recently revised "Doctrine of a Future Life," and can lay claim to a superior grade of scholarship with little fear of its not being promptly accorded. The object of the book is briefly stated, that its "readers may learn from it how, at the same time, to win the benefits and shun the evils of being alone." The philosophy and tendencies of solitude are discussed, and much attention given to those authors who, in the fastnesses of seclusion, produced their most valued works. Under the head of "Sketches of Lonely Characters, or Personal Illustrations of the Good and Evil of Solitude," we find names of world-wide renown—Confucius, Demosthenes, Cicero, Dante, Descartes, Milton, Zimmerman, Wordsworth, Byron, Channing, Thoreau, and even our Saviour, are included. With reference to the last the author is somewhat speculative, and diverges a little from the regular connection of his subject, yet there is nothing in such digression calculated to offend a broad-spirited Christianity.

THE SMALL FRUIT CULTURIST.

By Andrew S. Fuller, Practical Horticulturist, Ridgewood, Bergen Co., N. J. Beautifully illustrated. New York: Orange Judd & Co. 12mo. cloth, \$1 50.

Many valuable works for the use of the gardener or family have been recently issued by Messrs. Judd & Company, but none of a more practical character than the above. Each of those delicious berries which are welcomed in their season, and out of it, too, when they can be had in a palatable state, is plainly treated of, and clear directions given for its production. Every householder who owns a rod of soil can, with a little effort, make it yield fruit in astonishing abundance, and thus save himself some of the many dollars which a table well supplied with good fruit costs him now-a-days, to say nothing of the physical benefit derived from a little open-air exertion with the spade.

GOOD ENGLISH; or, Popular

Errors in Language. By Edmund S. Gould, author of "Abridgment of Alison's Europe," etc., etc. New York: W. J. Widdleton. 12mo. cloth, pp. v., 224. Price, \$1 50.

Since the issue of "The Study of Words," by Dean Trench, and of the valuable volume by Swinton, entitled "Ramblings among Words," many persons more or less cultured in philology have given to the world their views on the subject of our modern English. The author of "Good English" is an educator of long experience, and a philologist of no mean reputation. In his book he endeavors to indicate the popular errors in language by the use of plain Anglo-Saxon terms and definitions, briefly disposing of each error as it is introduced, so that in the pages of a moderately-sized volume he has included all that are familiar. Among Americans there is a grave tendency to looseness or inaccuracy in ordinary conversational parlance.

From this tendency our more cultivated class is not altogether free. If Gould's book be generally read, we have no doubt but that it will correct this tendency to a considerable extent. Introduce it to your reading tables, gentlemen.

THE GOSPEL AMONG ANIMALS; or, Christ with the Cattle. By Samuel Osgood, D.D. Revised and reprinted from the PHRENOLOGICAL JOURNAL. 12mo. paper, 25 cents; flexible muslin, 37 cents. New York: S. R. Wells, Publisher.

"A righteous man regardeth the life of his beast, but the tender mercies of the wicked are cruel."

Rev. Dr. Osgood is a home missionary. He takes in to his sympathies not only all mankind, but all living kinds. He sees something of the Divine will even in the lowest of God's creatures, and he looks at all through kindness, justice, and affection. He who reads this little book will be more considerate of the poor dumb animals who are subject to the use—and abuse—of man. Let those who would kindle a feeling of kindness and mercy in the hearts of others, place a copy of this appeal in their hands.

NEW AMERICA.—By William

Hepworth Dixon, editor of the "Athenaeum," and author of "The Holy Land," "William Penn," etc. With illustrations from original photographs. Complete in one volume. Philadelphia: J. B. Lippincott & Co. 12mo. fancy cloth. Price, \$2 50.

This book has already created a considerable sensation. Mr. Dixon is a traveler of great experience. He has visited so many countries, and found so much in each for a susceptible temperament to admire and learn, that he has acquired the broad impartiality of a true cosmopolite. He visited America not long ago, with the view, as appears in his book, to study her domestic institutions. He acknowledges, pleasantly, that his visit was profitable, that he learned much; and unlike former English writers, who hurriedly glanced at a few of our public buildings and caught their cue of American progress from a momentary inspection of towns, villages, and landscape, as the iron horse bore them swiftly along, and then returned home to disparage and sneer at us, Mr. Dixon comments favorably on American institutions in general. The Mormons, the Shakers, and the Communists of Oneida especially interested him; to the description of their organization and internal management he devotes the larger part of his book. The wild border life of the far West exerted a strong influence on him; he reveled amid the dangers of the mountain passes of the Sierra Madre and the Black Hills, and several of the prevalent accounts of murder and vengeance peculiar to those regions are detailed. He alludes feelingly to the late conflict which drenched our land in blood, and while deploring the sad results entailed upon the South, admonishes it to adhere to the old flag and cherish its influences in the spirit of concession. He says of those who would have disintegrated our country: "Happily for the world they failed and lost; failed by a law of nature, lost by an ordinance of Heaven. No calamity in policy could have equaled the success of a slave empire founded on the ruin of a strong republic. All free nations would have felt it, all honest men would have suffered from it, etc." The whole tone of the book is frank and hearty, and one of the most readable of its kind that has issued from the press during the last decade.

A VIEW AT THE FOUNDATIONS;

or, First Causes of Character, as Operative Before Birth from Hereditary and Spiritual Sources. Being a Treatise on the Organic Structure and Quality of the Human Soul, as determined by Pre-natal Conditions in the Parentage and Ancestry, and how far we can direct and control them. By W. M. Fernald. Address this office. Price, \$1 50.

The object of this book is to show the importance of a good natural or constitutional character, and the extent of our agency in producing it. In other words, to show how much human beings are responsible for the kind of children they bring into the world. Much is said by Christians, and said truly, about the second birth; this is an attempt to show how the first birth is equally under our control. A considerable amount has been written of late upon this subject, but it has been chiefly on the natural plane. The author of this treatise does not overlook or disparage the natural at all; on the contrary, the book is profusely illustrated by facts from the operations of nature. But, differently from the common run of books of this order, this is an attempt to blend more fully the spiritual with the natural, and to look at the whole subject from a higher point of view. The hereditary transmission of moral and intellectual qualities from parents to children forms a prominent part of the work. Many facts of such transmission are given, and some of a character showing how, by design and effort on the part of the parents, the most beautiful and marked results can be procured in the offspring. We commend these facts to universal attention. The great fact of marriage, and the right adjustment of human pairs, come in for a prominent place in the author's views of human destiny; and the possibilities and impossibilities of human perfectibility, as based upon the laws of hereditary descent, are set forth in a forcible and conspicuous manner.

A TREATISE ON GENERAL PATHOLOGY AND ITS RELATION TO PRACTICAL MEDICINE. By Charles L. Carter, M.D., Honorary Member of the St. Louis Medical Society; lately Surgeon in the United States Army. St. Louis, Mo. Cloth, 8vo. Price, \$1 50.

The subject of Pathology is carefully yet succinctly considered in this volume. Many statements here and there occurring in its progress impress us with the notion that the author is not only well acquainted with the primal features of Phrenology, but has wisely applied them in his practice as a physician, and to his book. In Chapter VI. we find this paragraph:

"It remains yet to notice some facts in support of the localization of particular faculties of the mind in special regions of the brain. This proposition is established by many conclusive evidences that the brain does not act as a unit. The faculties of the mind are not developed contemporaneously, but at different periods of life, and in the same independent manner do these faculties decline; thus conforming to the general mechanism of the system, in which each organ is assigned special functions and periods of activity. That each of the powers of the mind is as independent of, as distinct from the others, is well exemplified in disease. In typhoid fever, the sufferer readily recognizes acquaintances when every other faculty of the mind is perverted or abolished. Some insane persons have more sense on some subjects than they ever had before. Monomaniacs are perfectly rational in some of their faculties, while the other faculties are entirely abolished. Indeed, the whole nervous system is constructed on this prin-

ciple of special localization and definite independent functions, as shown by the separate localities and definite functions of the ganglia and nerves of sensation, motion, and vision."

Dr. Carter appreciates the pre-ordinating influence of the brain in disease, and is enabled like many other physicians to be clear-sighted in diagnosis because of such appreciation. The book can be read with profit by all medicists.

EARLY AND LATE PAPERS

HITHERTO UNCOLLECTED. By William Makepeace Thackeray. Boston: Ticknor & Fields. Cloth, \$2.

Who does not like Thackeray, whose brilliant wit never palls on the sense, but seems to freshen the more we read him? The above collection is in many, if not in all respects equal to any of his already well-known productions. There is an easy off-hand freshness in these stray dottings which pleases the reader, who generally reads Thackeray as much for intellectual amusement as for profit; and he is more pleased by their apparently unstudied, yet always refined style than by the same author's more carefully prepared volumes. "Bluebird's Ghost," "Dickens in France," and "Little Travels and Roadside Sketches," parts of this collection, are charmingly written sketches in their way, and in fact are fair specimens of Thackeray in his happiest vein. The volume contains an excellent steel portrait of the late author.

THE POSTHUMOUS PAPERS OF

THE PICKWICK CLUB. By Charles Dickens. With twelve original illustrations, from designs by George Cruikshank. Price, \$1 50 in cloth. Philadelphia: T. B. Peterson & Brothers.

The large and clear type in which this volume, the first of an entirely new edition of Dickens' works, is printed, its completeness, its illustrations which would dispose the most ascetic to laughter, and its cheapness are well calculated to make it popular. The edition, which will consist of twelve volumes, each containing a complete story, is called the "People's Edition."

THE PRACTICAL FAMILY

DENTIST. A Popular Treatise on the Teeth. Exhibiting the means necessary and efficient to secure their health and preservation; also the various errors, and pernicious practices which prevail in relation to dental treatment. With a variety of useful receipts, etc., etc. By Dewitt C. Warner, M.D. For sale by us as Publishers. Price, \$1 50.

It is unnecessary for us to describe in detail a work of this character. Suffice it to say that the subject is treated from a point of view reasonable and hygienic, and that whosoever reads it carefully and follows its suggestions will save himself much time, inconvenience, and pain. We would help humanity to cure their aching jaws, and to save those useful instruments whose proper tuncement for a lifetime is the human mouth.

THE RECTOR'S WIFE; or, the

Valley of a Hundred Fires. By the author of "Margaret and Her Bridesmaids," "Lords and Ladies," "Queen of the County," etc. 1 vol., 12mo. pp. 371. Philadelphia: T. B. Peterson & Brothers. Price, \$4.

A charming story, full of simple country life, and written in a simple yet attractive style. The scenery is laid in a romantic portion of Wales; the story is well developed, closing admirably. The book has an intensely moral tone throughout, and should command a large and extended sale. It is pronounced by some to closely resemble "Jane Eyre," by Charlotte Brontë, in the *moral* and in the delicacy of its treatment. The fact of such resemblance should give it ready sale.

THE ELECTROPATHIC GUIDE, prepared with particular reference to Home Practice, containing Hints on the Care of the Sick, the Treatment of Disease, and the Use of Electricity; with Cuts Illustrating the Apparatus used in Medical Treatment, and full directions for treating over One Hundred Cases. By S. M. Wells, Medical Electrician. Price, \$1 25.

A plain, practical, common-sense, and comprehensive treatise on Medical Electricity, especially suited to private practice and family use. It is a well-known fact that diseases of certain kinds are frequently successfully treated by this method, when other remedies have been unavailing—such as stiff joints, paralysis, tumors, ruptures, etc. The authoress has presented the subject in a popular manner, avoiding all technicalities, putting forth her views in language so plain and simple that all may understand. The principle upon which electricity is applied to the treatment of disease is ably treated, and we have no doubt that the book will prove highly useful and valuable.

THE UNIFORM TRADE LIST

CIRCULAR. For the benefit of Publishers, Booksellers, News Dealers, and every branch of trade connected with these interests. Philadelphia: Howard Challen, 1,308 Chestnut Street. 8vo. Price, \$3.

The object of this work is set forth in its preface: "Its value to the trade consists in every publisher contributing his complete list to its catalogue, so as to present under one cover and in uniform shape the Trade Lists of all who have hitherto published their individual circulars in so many forms as to make it impossible to preserve or to refer to them."

The compiler promises to revise constantly and correct his work to the latest date, asking only the adequate support of the trade. This we hope he will get. All booksellers and publishers must be aware of the difficulty experienced by not having publishers' catalogues on hand, corrected; but here we have them altogether, well bound, and nicely printed in large 8vo form.

LECTURES ON THE NATURE OF SPIRIT, AND OF MAN AS A SPIRITUAL BEING. By Chauncey Giles, Minister of the New Jerusalem Church. New York: Published by the General Convention of the New Jerusalem in the United States of America, at its Publishing House, 20 Cooper Union, New York. 12mo. Cloth, gilt, \$1 25.

The Rev. Mr. Giles is too well known a minister of the Swedenborgian Church to require special notice at our hands. He is earnest, forcible, and profound as a preacher, and his book as a compilation of specific discourses carefully prepared, on so profound a theme as the spiritual nature of man, possesses the merits of earnestness and force. The answer given by the author to the question, What is the Spiritual World? is evidently from the Swedenborgian point of view, viz. "It is a real world composed of all the forms that are necessary to constitute a world. It is objective to the senses of those who dwell in it, and far more distinct, substantial, and real to them than this world is to us. And yet it is not material, but is as distinct from every form of matter as the soul is from the body." The death, resurrection, and state of man hereafter are discussed at considerable length, and as clearly as such occult subjects may be dealt with by an intelligent mind this side of "the river."

OUR NEW ANNUAL FOR 1868.—The engravers are at work on the illustrations. "Copy" will be given to the printers soon. We hope to have it out in October. A few pages will be given to

advertisements. **THE ANNUAL** will be larger and better than ever before. For advertising terms, send stamp for circular. We shall print 50,000 copies, or more.

THE PUBLIC DEBT OF THE UNITED STATES. Its organization; its liquidation; the administration of the Treasury; the financial system. By J. S. Gibbons, author of "The Banks and Clearing House." Pp. 376. Price, \$2. C. Scribner & Co., New York.

The first section of this work shows the public debt to be in a state of disorder. It is represented by near twenty different loans, each subject to a number of contingencies. The bonds have nineteen different dates of maturity, six different rates of interest, and options without number. Of the six per cent. loans, there are twelve kinds; of the five per cent. loans, five kinds; of the seven-thirties, there are six different issues. Twelve Acts of Congress, full of the unintelligible jargon of law, make the napkin in which all are wrapped up. Mr. Gibbons dispels the obscurity and confusion of the debt by classifying each kind apart, and shows how the whole might be reorganized so as to come within the popular understanding. He proposes that all the different securities, including the legal tender notes, shall be converted into one six per cent. stock, payable without date, and with quarterly interest. He thinks this would make the credit of the United States the choice investment of capitalists in all countries, and there is little doubt of it.

As to the liquidation of the debt, he proposes to adopt a scale of gradual reduction, and to put the process under the control of fixed laws instead of leaving it in the secret discretion of a bureau. To use a common expression, he "blows up" the notion that "one generation has no right to transmit debt to another," and proves it to be absurd, unjust, and brainless.

Mr. Gibbons lays down, as the "natural law" of taxation, the simple rule that governs all private business. That is, to put the tax at the lightest that will effectually bring the debt within the power of resources. This is in contrast with the present policy of the Treasury, which is, to screw out of the people the last cent they can or will pay. The consequence of this policy is, that the taxes are not only oppressive, but destructive, and property is concealed, or its income misrepresented, and the revenue defrauded. This process is, we fear, becoming rather popular. The Government would get a larger revenue by reducing the rates.

The two last reports of the Secretary of the Treasury show a deplorable state of industrial oppression and embarrassment. It is cheaper to send our timber to the British Provinces and pay for the building of ships there than to build them at home, so destructive are the high taxes. Business generally languishes from the same cause.

In this volume, we find, also, a clear demonstration that the cause of high prices has been wrongly attributed to the currency. The "inflation" of paper money has never been so great as commonly believed. Editors and Members of Congress have represented it at near one thousand million of dollars, whereas the highest it ever reached was five hundred and sixty-five million in 1864. The currency as a whole has not been higher than the average before the war. Taxes, high taxes, cruel and unnecessary taxes, levied with a view to carry out the policy of paying off the debt in one generation, are the sole and sufficient cause for excessive prices.

We commend this volume to the deliber-

ate perusal of all persons who wish to get an intelligent view of our debt and finances. Every bond-holder ought to have it on his table, and every man or woman who expects to be a bond-holder. Every business man ought to have it for the light that it throws on our present commercial embarrassment.

The tables of liquidation are full, and show how the entire debt may be paid off, while the taxes may at the same time be gradually reduced, even from the start.

ELSIE MAGOON; or, The Old Still-House in the Hollow. A Tale of the Past. By Mrs. Frances Dana Gage. Philadelphia: J. B. Lippincott & Co. 12mo. Cloth, \$1 50.

A powerful story, well written. Not in the interest of whiskey, but dead against it. No one can read it without deep emotion. The portraits of character, the scenes and incidents, are too vivid to be merely imaginary. Its influence, if the book were widely distributed, would be highly salutary.

BREAK HOUSE. By Charles Dickens. With thirty-seven original illustrations. From designs by H. K. Browne. Price, \$1 25 in cloth; or, \$1 in green paper cover, sewed. Philadelphia: T. B. Peterson & Brothers.

This ingenious and very amusing novel appears in this edition in a shape decidedly adapted to please. The numerous illustrations command our approval, while the type is large enough to suit the general reader.

THE RIGHT WORD IN THE RIGHT PLACE. A Pocket Dictionary and Reference Book; embracing collections of Synonyms, Technical Terms, Abbreviations, and Foreign Phrases; Chapters on Writing for the Press, Punctuation, and Proof Reading, etc., etc. By the Author of "How to Write," "How to Talk," etc. New York: Fowler and Wells, 339 Broadway.

In this snug little volume is condensed and made available to every writer, speaker, and reader, what can be found elsewhere only by consulting ponderous volumes, which few private libraries contain. The collection of synonyms is of the greatest value to writers, especially those in whom the faculty of Language is not largely developed. The Dictionary of Technical Terms is not less valuable, and the list of Foreign Phrases comprehensive, reliable, and indispensable. The chapters on Proof Reading, Punctuation, Writing for the Press, add additional value to the book.

TEMPERANCE IN THE AMERICAN CONGRESS. Addresses by Hon. Schuyler Colfax, Hon. Henry Wilson, Hon. Richard Yates, Hon. William E. Dodge, Hon. Hiram Price, Hon. Samuel McKee, Hon. F. E. Woodbridge, Hon. J. B. Grinnell, Hon. J. W. Patterson, delivered on the occasion of the First Meeting of the Congressional Temperance Society, Washington, D. C. Held in the House of Representatives, February 17, 1867. With a list of Pledged Members. New York: Samuel R. Wells, Publisher, 389 Broadway, 1867. Small 12mo vol., pp. 43. Tinted paper. Beautifully printed. Price, 25 cents.

"Temperance in Congress" is beautifully printed on tinted paper, in large, clear letter, and is in every way worthy of the great occasion which called it forth. We would have a copy placed in the hands of every young man in the nation. It would serve to fortify him in resisting temptations, which will sooner or later beset him. Walled in with the best resolutions, he is still liable to fall. This concentrated and powerful appeal will help such a one to keep his resolutions, and must produce conviction in the heart of the skeptic, and hold the convert. Reader, place a copy of

"Temperance in Congress" in the hands of the one you love best.

A NEW BOOK ON ORATORY.

—We have in course of publication a new and valuable treatise entitled "How to Preach and Speak Extempore," by Rev. William Pettenger, author of "Daring and Suffering." It is written in a clear and concise style, conveying the information so much needed by youthful aspirants to the honors of Demosthenes and Cicero, in an emphatic and impressive manner. As soon as the book is ready for sale we shall announce it more at length.

IN PRESS.—We are now re-printing, from the JOURNAL, POPE'S ESSAY ON MAN, with all the notes and illustrations. It will be published in two styles, one on tinted paper, handsomely bound in fancy muslin, beveled boards, gilt—a companion for AEsop's FABLES—a beautiful gift book. Price, \$1. And the other on plain paper, only 50 cents. It will be ready in October.

New Books.

[Among the late issues of the press not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting.]

MODERN INQUIRIES: Classical, Professional, and Miscellaneous. By Jacob Bigelow, M.D. Crown 8vo. Cloth, \$2 75.

GLEANINGS FROM THE HARVEST FIELDS OF LITERATURE. A Melange of Excerpts. Compiled by C. C. Bombaugh. Third Edition, revised and enlarged. Cloth, \$2 75.

MARRIAGE IN THE UNITED STATES. By A. Carlier. Translated from the French by B. J. Jeffries. Third Edition. \$1 50.

CLASSIC BAPTISM. An Inquiry into the Meaning of the word *Baptizo*, as Determined by the Use of Classical Greek Writers. By James W. Dale. 8vo. \$3 25.

OLD CURIOSITY SHOP; and Sketches, Part 1. By Charles Dickens. (Globe Edition.) Illustrated by Dalry and Gilbert. 4 vols. in 1. Cloth, \$1 75.

TEMPERANCE CATECHISM, for Bands of Hope and other Temperance Societies. By Rev. J. B. Dunn. Paper, 7 cents.

ON THE BORDER. By J. R. Gilmore (Edmund Kirke.) 12mo, pp. 333. \$2.

HANEY'S PHONOGRAPHIC HANDBOOK: being an Introduction to Munson's Complete Phonographer. Paper, 30 cents.

THE HISTORY OF THE CHURCH IN VERMONT. For the Use of Bible Classes, Schools, and Families in the Protestant Episcopal Church of the United States. By J. H. Hopkins, Bishop of Vermont. Cloth, 60 cts.

OLD ENGLAND; its Scenery, Art, and People. By James M. Hopkin, Professor in Yale College. Cloth, \$2 25.

THE INVISIBLES: an Explanation of Phenomena commonly called Spiritual. 12mo. Cloth, \$2.

LIBER LIBERUM; its Structure, Limitations, and Purpose. A Friendly Communication to a Reluctant Skeptic. \$1 75.

THE McDONALDS; or, The Ashes of Southern Homes. A Tale of Sherman's March. By W. H. Peck. Cloth, \$1 25.

RIP VAN WINKLE; or, The Sleep of Twenty Years. 8vo. Paper, 30 cents.

JOSEPH REED. A Historical Essay. By George Bancroft. Paper, 30 cents.

WOODWARD'S RECORD OF HORTICULTURE FOR 1886. Edited by Andrew S. Fuller. Cloth, \$1 15.

THE AMERICAN ANNUAL CYCLOPEDIA AND REGISTER OF IMPORTANT EVENTS. 1886. Vol. 6. Cloth, \$4 50.

PRACTICAL AND SCIENTIFIC FRUIT CULTURE. By Charles R. Baker. Illustrated. Royal 12mo. Cloth, \$4 50.

THE LAND OF THOR. By J. Ross Browne. Illustrated by the Author. Cloth, \$2 25.

THE GREAT AGRICULTURAL AND MINERAL WEST, a Guide to the Emigrant. With Itinerary of Routes, and Journal of Residence in Idaho and Montana. Maps. Illustrated. Fourth Annual Edition. By J. L. Campbell. Paper, 30 cents.

FAITH'S WORK PERFECTED; or, Francke's Orphan House at Halle. By A. H. Francke. Edited and Translated by W. L. Gage. Cloth, \$1 15.

GARDENING FOR PROFIT; a Guide to the Successful Cultivation of the Market and Family Garden. Illustrated. By Peter Henderson. Cloth, \$1 75.

HANDBOOK OF GRAPE CULTURE; or, Why, Where, When, and How to Plant and Cultivate a Vineyard. Manufacture Wines, etc. Adapted to the State of California and to the United States generally. By A. Hart Hyatt. Cloth, \$2 25.

THE CAXTONS: a Family Picture. By Sir E. B. Lytton. Globe Edition. 3 vols. in 1. Cloth, \$1 75.

THE RESURRECTION OF THE DEAD. By Rev. George G. Mott. Cloth, \$1 75.

COMMON SCHOOL READINGS: containing New Selections in Prose and Poetry for Declaration, Recitation, and Elocution. By John Swett, Superintendent of Public Instruction, California. Cloth, \$1 75.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—TO CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE slips.

SURPLUS HAIR.—Being one of the fair sex, I want to know if superfluous hairs will grow again when pulled out by the roots? Having read your JOURNAL for three years, I think I am entitled to an answer.

Ans. We are informed that the N. A. Indians pull out their whiskers by the roots and thus keep down the growth. If the scalp is in a healthy state, the hair will in most cases grow again, although its forcible extraction will tend to retard the new growth.

RAILROADS.—The first instance of the use of rails as a means necessary for conveyance, appears to have been early in the seventeenth century, at the collieries near Newcastle-upon-Tyne, England. Here coals were conveyed from the mines in bulky carts, the rollers of which were adjusted to fit on rails of timber; the motive power used was horses. It was not until 1767 that iron was substituted in the place of wood for rails.

CHILLS AND FEVER.—I am living in a miasmatic district. The whole community here is complaining of derangement of the liver. "Chills and Fever," as well as all other kinds of fever, are visiting almost every family. The doctors here have not the ability to give more than temporary relief. What advice can you give that will be useful to us?

Ans. We do not approve the use of drug medicines. Any family who will purchase and read any good work on Hydropathy, such as the "Family Physician," by Dr. Shew, or the "Hydropathic Encyclopedia," by Dr. Trall, will be able to acquire enough knowledge respecting how to live, to be able, in the main, to avoid all the avoidable difficulties belonging to such a region as yours. There are several causes entering into the production of diseases incident to many parts of the West, especially your State and Illinois. The soil is rich and full of decaying vegetable matter, consequently the water is not so good. This leads to bilious difficulties; besides, the atmosphere is more or less impregnated with the miasma arising from decaying vegetable matter upon and in the soil. The water question could be, in the main, obviated as follows: Let there be a cistern dug in the ground, say eight feet in diameter and twelve feet deep. Then let it be finished on the inside with hydraulic cement. If the hole can be dug so as to be smooth, the wall of cement may be put on with a trowel, as plaster is applied, until it is, say, three inches thick. A top should be put on, and may be made of the same material arching. This would have to be put on as brick arches are laid, namely, a scaffolding put inside, with an arched frame at the top, boarded over, and after the cement has been put on and dry, this scaffolding can be taken down, so that there shall be no wood inside. There should be a round or square hole, large enough for a man to go down, left on the top; and this cover or arching on the top should be at least four feet from the top of the ground. And when the cement is thoroughly dry and strong, let the earth be thrown in over the top, all except the opening for the man hole and the pump. It may be necessary to pump out the first water that fills such a cistern, and let the walls be scrubbed with a brush, so as to remove as much as may be the limy influences from the walls, after which the water will not be hard. Such a cistern will last a dozen lifetimes, and is comparatively inexpensive. In the spring of the year, when the rains are abundant, and the roof is clear from dust and from the influences of smoke, and the cistern filled up full, and then, as soon as the weather begins to be warm, turn the spout away from the cistern and cover it up tight, and the water will be cold, clear, sweet and wholesome through the entire summer, remembering this is for family use, for cooking and drinking. This water will be free from miasmatic tendencies. There should be another cistern to supply water for washing and purposes of general use, unless the main cistern furnishes enough for all purposes. Good water procured in this way would obviate one half of the difficulties complained of. The other half might be greatly mitigated by pursuing the following suggestions, namely: Eat no pork or other greasy food except, sparingly, a little butter, and perhaps the less of that the better. Eat but little sirup or sugar, and make free use of tart fruits, apples, and tomatoes, which might be abundant. All districts where the soil is rich and the climate miasmatic should furnish enough of the fruit acid element to keep the people in health. The liver being

torpid should be kept active by the use of fruits. Western people eat too much greasy food, especially pork; they eat pretty largely of saccharine matter, both of which tend to produce a torpid state of the liver, and, consequently, bilious complaints. If meat be eaten, that which is lean should be chosen. We believe if these suggestions were followed, the standard of health in all southern Illinois, southern Indiana, and Ohio would be increased fifty per cent.

NEWSPAPERS.—These found their origin, in ancient times, in the popular demand for current information, when they were but manuscript reports of public occurrences. These written "newsletters" were continued in Italy, Germany, and England until 1622, when the first regular series of newspapers were printed in England, and issued weekly under the title of the "Weekly Newes from Italy, Germanie, etc."

DYSPEPSIA.—A subscriber wishes a prescription for the treatment of this malady. The best thing we can do at present is to refer him to the little book recently published by us, entitled "The Story of a Stomach," which may be had for 50 cents in paper, or 75 cents in muslin. If the gentleman had given us his address, we could have written him direct.

SHOULD a child learn nothing except that which he thoroughly understands?

Ans. The only solid mode of administering instruction to children is adapting to their opening intellects those branches of practical knowledge which will prove serviceable to them in maturer years. And in order to its being of practical use to them it is evident that they should thoroughly comprehend it, otherwise they become wholly or partly mere chatters of memorized sentences. Knowledge of a subject suggests new ideas and much reflection, and is therefore productive of mental benefit to the person comprehending it. But statements, obscure or unintelligible, laid away in the memory, because of their reputed value, are like indigestible food in the stomach, cumbering space and conferring no benefit.

DANDRUFF—CORNS.—1. Can you give me a remedy for dandruff? 2. How can corns be removed?

Ans. 1. Wear the hair short and wash the head twice a day in cold soft water with a very little fine toilet soap. 2. The best preventive for corns is easy shoes and stockings—the best cure is to go barefoot. A piece of a lemon may be bound on a hard corn over night, and generally it can be peeled off in the morning. It is well to soak the feet at night in warm water, and pare corns as closely as may be. When they become inflamed, the tepid foot-bath is indispensable. Wash the feet every morning in cold water before dressing.

STRENGTHENING THE MIND.—1. Will you please inform me if the mind can be strengthened? 2. Also, what is the difference between a man's head and a woman's?

Ans. 1. Yes, at least practically. The instrument through which mind is manifested can be strengthened just as the body through which power is manifested can be strengthened. Let it be understood once for all, that the proper exercise of the muscle enlarges it, gives it tone and strength. The proper exercise of the brain gives it vigor, consequently force and clearness of mental vision.

In regard to the difference between the head of man and woman we can not here speak at length; suffice it to say, that it would require a lengthy article to do the subject justice. This has been set forth in the JOURNAL some years ago, and copiously illustrated, and may be again at some future day. 2. Woman generally has more Parental Love, Veneration, Cautionness, and Approbativeness than man. Man has more Combaticiveness, Destructiveness, Self-Esteem, Firmness, and Causality than woman.

BADLY MATED.—If "Conscience," writing from Taunton, will give name and address, we will answer by post. We can not publish the letter, nor give public answer to the question. To insure answers to questions, correspondents generally had better inclose a stamped envelope with their address. We can not answer one quarter of the questions sent us monthly in an issue of the JOURNAL.

THE NEGRO.—Will he ever attain the same degree of intellectual eminence as the Caucasian?

Ans. We do not know. There are fools and philosophers of various degrees among both. There are black Topsyies and white Topsyies; but far more crazy whites than crazy blacks. All have the same number of bones, muscles, nerves, senses, and are alike human. As to the possible capabilities of either, no man can take the exact measure. Our planet is believed to be comparatively new, and the races young; what there may be concerning the races of man in the womb of time, the future alone can reveal. God, the author of all, will, in his good infinite wisdom, exalt, humble, destroy, or perpetuate such as he pleases. Let it be ours to study His laws, and obey them. If "man proposes, God disposes." All human beings have equal rights to life, liberty, and the pursuit of happiness. Whatever differences there may be in natural capacity, in relative strength of body or of mind, do not imply privilege to rule over the weak, except by love and wisdom. Let God be the judge as to whether I am better than another, of whatever color, race, or nation.

JUDGE HURLBUT, E. P.—We sent a package, as per your order, to Albany, N. Y., which has been returned to us. Please give us your present address, that we may re-send the package.

Publishers' Department.

PHRENOLOGICAL JOURNAL, New York, is devoted to its designated specialty, but not slavishly confined to it. Its philosophical and theological positions are not identical with our own; but it is able, courteous, and often instructive.—*N. Y. Christian Advocate*

Our venerable cotemporary has our thanks for its words of approval—may we continue to merit the same. But is it not slightly in error? Is it not the aim of the C. A. to disseminate the truth? We claim nothing less than this for the A. P. J. Then wherein do we differ in our "philosophical and theological positions?" It is true that the one is professedly religious, and the other professedly scientific. But do not the truths of science and religion harmonize? We decline being counted out of the category of the highest philosophy and the best theology. Our science is but a stepping-stone to the temple of spiritual truth revealed in the works of God to man. We return the compliment

of "ability, courtesy, and instruction" to the *Advocate*, which we have read with profit for nearly thirty years.

WHAT TO BELIEVE.—The ever-recurring question, "What to believe?" is not so easily answered. The sense of sight is easily deceived by optical delusions and false appearances. The sense of hearing by ventriloquism. The senses of taste, touch, and smell are each liable to deception. Then, if we can not depend on our senses for the truth, what can we depend on? Truth is a *principle*, and we may arrive at it by the exercise of a *combination* of the faculties, if not by any *one* faculty. Thus Individuality, Form, Size, Weight, Order, Number, Color, Comparison, and Causality are all brought to bear on a question, and when agreed in their verdict we may take the answer as *probably* correct. But to believe all we see or seem to see, or all we hear or seem to hear, would lead us into all manner of foolishness. The safer way is to keep *probability* in view when looking at a new question. The microscope reveals hidden facts and truths which are below the power of our unaided vision, and the telescope reveals distant wonders which are beyond the reach of the unaided eye. Thus it is that we, with our finite faculties, can never reach the infinite, nor know it all. Let us then pursue our studies in a modest and humble spirit, without pretension, nor permit impostors to mislead. "Spiritual things can only be discerned with spiritual eyes."

"HARD TIMES."—We have noticed that those who complain most are generally extravagant, if not really wasteful. Is not work plentiful? We refer to really productive work, such as growing crops, navigating ships, railroading, manufacturing, etc.; not counter-jumping, tape-measuring, or selling peanuts. Think of a great stout six-footer rolling on a counter, standing behind a bar selling liquor and tobacco! There ought to be a law to prohibit it! No wonder there are "hard times" when so many lazy, foolish people do nothing but eat, drink, and doze. There is no good reason why we may not have "good times" steadily, throughout the United States. Let the people be temperate, industrious, and economical; let each plant, reap, or work in some useful calling, and we should hear no more of "hard times." PHRENOLOGICAL JOURNAL readers will suffer less and enjoy more than any other equally large number of people. For, do we not observe the laws of life, health, and happiness? We have fewer tobacco users, liquor drinkers, idlers, loafers, and rogues, than may be found among those who do not believe in Phrenology. There are very few good phrenologists or good farmers who complain of "hard times." There will always be "hard times" for rogues, when police officers and justices of the peace do their duty. The way to have good times, we repeat, is for all hands to "go to work," earn something, and then enjoy it.

THE FASHIONS.—Several of our lady readers have requested us to open a Fashion Department in this JOURNAL, to represent the ever-changing styles, and thus keep our phrenological family posted in that respect. We had not felt the importance of this subject before. In the event of our adoption of the suggestion whether we should block out and work up something original and American in this line, or whether we should simply imitate Paris—whether we should lead or follow the fashions, are the questions. We will think of it. If we see the way clear, our lady friends shall hear from us in good time. Who shall be the American Eugenie?

A. A. A.—The American Advertising Agency, formerly at 389 Broadway—in which we had an interest—is now wholly owned and conducted by Mr. Enos Alvord, of 37 Park Row, New York. The publishers of this JOURNAL have no further connection whatever with it. We find it quite enough for us to manage our own affairs, and can not consistently give personal attention to matters entirely disconnected with our immediate sphere.

SPECIE PAYMENT.—Of course we are in favor of the resumption of specie payment as speedily as is practicable. We object, however, to receiving coins by mail inclosed in the letters of our correspondents, for the reason that we are charged extra postage upon them. A Canada correspondent inclosed to us thirty cents in silver, on which he had paid ten cents postage, and we had to pay a further expense of twenty cents! We sent the JOURNAL, however. Another correspondent sent us a two-cent piece to make up a small amount, upon which we had to pay six cents extra postage! For such small sums U. S. postage stamps are more readily transmitted and quite as acceptable. Correspondents will also be careful, when remitting moneys, to see that the currency is not counterfeit, as it is at a considerable discount in the market here.

We are pleased to find frequently in the columns of cotemporaries wholesale transfers of JOURNAL matter. They indicate the esteem in which some editors hold us and our specialty. There are a few of these, however, who are inclined to appropriate occasionally a paragraph or two from our columns without giving the credit which professional courtesy if not strict justice requires. We notice in a recent edition of a leading weekly, an uncredited excerpt from our May number, having reference to "shopping," which excerpt is included in other matter apparently editorial. Let justice be done, etc.

OCCASIONAL CONTRIBUTORS.—We have always sought to encourage youthful talent, and have frequently opened our columns to contributors whose names never tickled the ear of the literary world, but in whose articles we discerned something good. This fact appears to be established in the minds of the reading public, if the large number of gratuitous articles sent us weekly may be taken as evidence thereof. But did we attempt to print all that is so sent, we should need the space of four JOURNALS instead of one. Of course, the reserved rights of the editor enable him to select what matter he deems most suitable for his columns, and of course, in order to secure the most appropriate matter, he must engage writers of acknowledged ability to prepare it. Articles eloquently and aptly treating of general subjects can be obtained for the asking, but articles of a scientific character, adapted to our own field, are not easily prepared or procured. Probably no magazine or editor of a periodical experiences the difficulties and embarrassments of the editor of the A. P. J. in keeping his subject fresh and attractive.

With respect to those who "would like to have this or that article appear in the JOURNAL," or "would have the editor's opinion of its merits," we feel compelled to say: If you would have your article read by us, write it clearly and legibly. We can not afford the time required to spell out a badly scrawled or microscopically penned essay. Besides, our eyes are

too much used and too valuable to be put on the strain gratuitously. Whenever we open a paper and find it closely and minutely written, we feel inclined to lay it on the shelf indefinitely. But when we receive an article fairly written, in bold outlines, on one side only of clean letter paper, we are at once favorably impressed with the literary character of the effort, and if a perusal do not confirm or heighten that impression, our criticism of its merits at least is softened and encouraging. Ye who aspire to literary fame, and would make the PHRENOLOGICAL JOURNAL your channel to glory, be careful to use good paper, good ink, and good pens, and write as legibly as nature and education will enable you to write.

OUR COMMERCIAL COLLEGES.—There is competition here as in other enterprises. In one, students are "put through with a rush"—a short term of a few weeks being all that the professors require to fit their pupils for bankers, brokers, merchants, etc. Another deems it necessary to thoroughly drill the student as many months, to properly qualify him for a place of trust and care. We do not believe in granting medical diplomas to "six weeks' doctors," nor business diplomas to "six weeks' students." We hear favorable reports from the Springfield, Mass., Business College, conducted by Mr. Burnham, in which both young men and women are fitted for mercantile pursuits. His advertisement may be found in our present number. For further information in regard to terms, etc., send for a descriptive circular.

CASH, CREDIT, COUNTRYMEN.—When strangers visit New York to see sights or to purchase goods, we advise them to deposit their valuables at once in a safe place before being swindled or robbed. One of the safest and most convenient is believed to be THE NINTH NATIONAL BANK, 363 Broadway, corner Franklin St. This is a government agency and depository of the United States. Every facility for banking business is afforded by The Ninth National Bank.

General Items.

TIMBER GROWING IN THE WEST.—J. S. Merrill, Onawa, Iowa, says, in a late number of the *Iowa Homestead*: "Two years ago a neighbor of his and a hired man drove twelve miles to a sand-bar on the Missouri River, got fourteen thousand cottonwood trees, returned home and heeled them in the same day. They planted three thousand per day, with a spade, till all were in, and they have since grown finely. Last year he went to the Little Sioux, eight miles distant, with a scoop shovel, and quickly filled his wagon with maple seed and planted them. They promise well." He says that in seven years these will make three rails each, as he has tried them, and knows whereof he affirms. They will grow, planted 4½ feet one way and 36 inches the other, 4,300 to the acre, producing an aggregate of about 13,000 to the acre in seven years from planting out. For confirmation of this estimate, reference is made to Judge C. E. Whiting, West Fork, Monona County, who has thousands of living witnesses of what is affirmed of timber-growing prairie regions of the West.

If the legislators of the Prairie States of Illinois, Iowa, Kansas, Missouri, Nebraska, Minnesota, etc., will loan the credit of these States, and raise a fund with which to plant trees, and then make it incumbent on every landowner to plant one acre in the hundred or more to forest or fruit trees, it would enrich the value of the whole more than a thousand per cent. on the cost in ten years. Timber for building, fencing, ma-

chinery, implements, etc., all indispensable to a high state of civilization and to health, to say nothing of the enhanced beauty of scenery which trees everywhere give to a landscape, are among the advantages of this proposed improvement. Then plant trees. Who will take the lead in making it incumbent on every prairie farmer or land-owner?

STATISTICS OF THE WAR.—During the war, the number of men called for by the Federal Government was 2,759,649; the number actually furnished, 2,656,553. Of colored troops there were 189,097. By aid of railway lines, the armies sometimes made rapid marches; 33,000 with artillery, baggage, and animals passed from Rapidan, Va., to Stephenson, Ala., 1,193 miles, twice crossing the Ohio, in 7 days. Railways were many times destroyed and repaired. Etowah bridge, 685 feet long, 75 feet high, was burned, and rebuilt by 600 men in 6 days; Chattanooga bridge, 740 feet long, 90 feet high, was rebuilt by 600 men in 4½ days. The Federal losses during the war are estimated at 275,000. The State of New York, with a population of less than 4,000,000, sent 233,886 volunteers; of whom remained at the close 125,000. There was an annual loss of one third, half of which was by wounds in battle. The statistics of the Confederate forces are imperfect. In 1864, the army consisted of 20,000 artillery, 128,000 cavalry, 400,951 infantry—total 548,951, commanded by 300 general officers. The Confederate losses are unknown.—*Chambers' Encyclopedia.*

CURSING AND SWEARING.—When Sir Christopher Wren was engaged upon the erection of St. Paul's Cathedral, he resolved to do all in his power to check the unmanly practice of swearing. He accordingly had large placards posted on the walls in various parts of the Cathedral, as follows:

"Whereas, among laborers and others, that ungodly custom of swearing is so frequently heard, to the dishonor of God and contempt of his authority; and to the end that such impiety may be utterly banished from these works, which are intended for the service of God and the honor of religion, it is ordered that profane swearing shall be a sufficient crime to dismiss any laborer that comes to the call; and the clerk of the works, upon a sufficient proof, shall dismiss him accordingly."

We are gratified to be able to state that an eminent London architect is following the good example of Sir Christopher Wren. He has the above "notice" placarded in the churches and chapels which he is engaged to erect, with the addition of the following words: "The above rule will be strictly carried out."

WHEN Andrew Jackson was President, a member of Congress from North Carolina told him that a gold mine had been discovered in the district he represented. Jackson replied, "It would be better if it had been an iron mine." "Why?" said the member. "Because," said the President, "iron is more generally useful than gold, and miners for precious metals are a more idle people than those who dig out iron, for they depend on the value of what they find more than in their labor in procuring it."

It appears from recent experiments conducted by the Pneumatic Dispatch Company of London, that tons of goods can be sent through eighteen miles of tubes every hour, at a cost of less than one penny per ton per mile.

BOGUS REPUTATION.—We have heard that a popular orator of New York, after having made a speech at the Cooper Institute, went to the newspaper office for the purpose of revising the report for the press, and inserted by interlining all through the speech, "tremendous applause," "shouts and laughter," "deafening applause," "bravo," etc., where they really did not occur. The following shows how to attract attention and how to acquire popularity:

At a political meeting the speaker and audience were very much disturbed by a man who constantly called out for Mr. Henry. Whenever a new speaker came on, this man bawled out, "Mr. Henry! Henry! I call for Mr. Henry!"

After several interruptions of this kind at each speech, a young man ascended to the platform in magniloquent style, striking out powerfully in his gestures, when the old cry was heard for Mr. Henry.

Putting his hand to his mouth like a speaking-trumpet, this man was bawling out at the top of his voice, "Mr. Henry! I call for Mr. Henry to make a speech!"

The chairman now rose, and he remarked that it would oblige the audience if the gentleman would refrain from further calling for Mr. Henry, as that gentleman was now speaking.

"Is that Mr. Henry?" said the disturber of the meeting. "Thunder! that can't be Mr. Henry! Why, that's the little fellow that told me to holler!"

WASH THE TEETH AT NIGHT.

—A few who inherit good teeth, and care nothing for "looks," neglect brushing their teeth; but none who study cleanliness and a sweet breath, or who wish to preserve their teeth, good or bad, as long as possible, should neglect to brush them well one or more times a day, with a brush so stiff as to clean them well, but not so hard as to wound and irritate the gums. They should be brushed both night and morning; but if only once, let it be done the last thing before retiring. Portions of food, sweets, etc., left on or between the teeth during the night, decay or acidify, and corrode the enamel, and thus gradually injure them. If the cavities between and in decaying teeth be thoroughly brushed out with water at night, and when rising, it will add years to their effective use and freedom from pain. Most of the tooth-powders sold contain an injurious acid, which, though it gives the teeth a clean, white surface, does it at the expense of some of the natural surface. A little hard soap, pleasantly perfumed, is the best possible application. We would not recommend even the finest charcoal, or prepared chalk or clay, for though inert, they wear upon the enamel.—*American Agriculturist.*

THE SKY AN INDICATOR OF THE WEATHER.—The color of the sky at particular times affords wonderful good guidance. Not only does a rosy sunset presage good weather, and a ruddy sunrise bad weather, but there are other tints which speak with equal clearness and accuracy. A bright yellow sky in the evening indicates wind; a pale yellow, wet; a neutral gray color constitutes a favorable sign in the evening, and an unfavorable one in the morning. The clouds also are full of meaning in themselves. If their forms are soft, undefined, full and feathery, the weather will be fine; if their edges are hard, sharp, and definite, it will be foul. Generally speaking, any deep, unusual hues betoken wind and rain; while the more quiet and delicate tints bespeak fair weather. These are simple maxims, and yet not so simple but that the British Board of Trade has thought fit to publish them for the use of seafaring men.

THE UNION PACIFIC RAILROAD.—376 MILES OPEN FOR TRAVEL—TO JULESBURG.—The telegraph has announced the completion of this road to Julesburg, three hundred and seventy-six miles from Omaha, and the materials are nearly all on the ground to lay the track to the base of the Rocky Mountains—one hundred and forty-one miles farther—by September next. This is certainly very rapid work, but intelligent correspondents say it is well done, and that the road is well equipped; that its depots and stations are of brick and stone, and its locomotives and cars of the best. The United States Commissioners are also compelled to testify that it is in all respects a first-class road before the Government will accept it. The business of this road is already surprising. The thousands of teams that once spent a summer in toiling over the prairies have transferred their loads to the rail-track, and by autumn the locomotive will be at the base of the Rocky Mountains. The editor of *Harper's Weekly* remarks, that "when the Union Pacific is completed, all other lines of railway will become, to a certain extent, its feeders. Along its entire route over the great Plains lateral branches will be constructed, which will pour into it their way-side contributions to an extent that can not to-day be approximately estimated."

"Already, with less than one third of its length complete, it is earning several times its operating expenses, as officially stated. Such success is without precedent. When it reaches the already populous gold regions of Montana, Idaho, and Nevada, the freight to and from those points alone is likely to be almost fabulous. And population follows the road as it extends. A town or village marks each stage of its progress. Who can calculate the quantity of way freight that the road is destined to carry for these rising communities? Who, indeed, can estimate the passenger traffic alone? When hundreds of thousands of persons, with their faces toward the West, have tramped over the Plains at the risk of their scalps, how many peradventure will ride, when they can make the journey with safety in a few days? But a short time will elapse before the demands of trade will call for a second track, to be used exclusively as a freight road, over which an endless line of slowly-moving vans shall continuously pass, leaving the other track for the use of impatient passengers only."

Our readers will perceive by reference to the Company's advertisement, that it offers its First Mortgage Bonds, paying six per cent. interest in gold to subscribers, at ninety cents on the dollar. These bonds are a *first lien* upon the road, and are limited in amount to \$16,000 to the mile.

The Company state their net earnings for the month of May, while only two hundred and ninety miles of road were in operation, at \$261,782—a sum which, after deducting operating expenses, is several times the interest on the bonds they are by law permitted to issue upon it. If the earnings are so large upon the *very* business, what may we not reasonably expect when the connection is made in 1870 with the Pacific coast? We can see no reason why the First Mortgage Bonds of such a road are not a safe security, and they are fifteen per cent. cheaper than Government bonds at the market rate. Subscriptions are already large, and are received by banks and bankers generally throughout the country.

THE ADELPHI ACADEMY, advertised elsewhere, is, without doubt, one of the best schools in America—may we not say in the world? We shall give further account of it in our next. Meantime, we advise those interested to send for a circular.

ENTERPRISE OF NEW YORK MERCHANTS.—In no other city in the world are so many remarkable examples of indefatigable enterprise presented as among the merchants of New York. No disaster is able to overcome the sleepless industry, the determined, enterprising spirit which rules our mercantile community. The frequent fires, which, during the past two years, have swept down, one after another, hundreds of fine buildings and palatial stores, in which the mercantile business of the city was transacted, and nearly prostrated scores of our Insurance Companies, might well have appalled men less bold in expedients. But the disasters of one day were repaired the next, and the sign which in the morning was defaced by the flames, would presently be restored, and inform the passers-by that the firm "still lived," and were able to furnish goods with their customary promptness. Meanwhile, from the debris of their ruined warehouses, like the phoenix from its ashes, more costly palaces arise, with a rapidity which must astonish those who move only in beaten paths, and are governed by precedents. These reflections are inspired by a recent inspection of the GROVER & BAKER SEWING MACHINE COMPANY'S ESTABLISHMENT on Broadway. Three months ago a fire, which gutted in the night their handsome store, drove them to seek temporary quarters in the vicinity. But the smoke of the ruins had scarcely subsided before the officers of this enterprising Company, which manufactures the best FAMILY SEWING MACHINE in the world, had commenced to repair the damage and to finish the interior of their store in a far more elegant and substantial style than formerly. The Company have lately moved into their rejuvenated edifice, and it is a pleasure to contemplate the elegance which reigns within. The New York House, of course, takes precedence of all others, and is the headquarters whence are sent out Sewing Machines to all parts of the land. But this Company have branch establishments not only in all the chief cities of the United States, but of the world, from which have been distributed to perhaps a hundred thousand households, the inestimable boon of the Grover & Baker Sewing Machine, which is better adapted, undoubtedly, to the various wants of the family than any other machine manufactured. Its simplicity, durability, variety of adaptations, and the facility with which it may be operated by inexperienced hands, are attested by multitudes who have been benefited by its use. A machine possessing so many excellences must have a great career of usefulness before it.—*N. Y. Working Farmer.*

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

THE ADELPHI ACADEMY, Nos. 338 and 340 ADELPHI STREET, BROOKLYN, L. I.

GROWTH OF THE SCHOOL.

Number of pupils at the re-opening under the new regime (Sept., 1863),	11
Whole number of pupils for 1863-4,	28
Whole number of pupils for 1864-5,	61
Whole number of pupils for 1865-6,	156
Whole number of pupils for 1866-7,	309

This Institution (hitherto for boys alone) has made itself a name for the careful systems of instruction and training which it has employed. The system of physical training known as the *Calisthenic drill*, which has been introduced and carried to a high degree of excellence, is one of its most popular features.

Its success has been such as to warrant the belief that an effort to afford the same advantages to girls would be appreciated by the public. As a test of the adaptability of the drill to girls, a private class has been conducted during the past year in this institution with entire success. Accordingly the proprietors of the Adelphi Academy have concluded to re-organize the school, and admit at the re-opening (about the 10th of next September), boys and girls together, from five to twelve years of age, to the Preparatory Department, and the enjoyment of all its benefits, removing the Academic Department, which will continue, as at present, to be exclusively for boys, to a new building erected for the purpose.

Scores of letters from parents of pupils who have enjoyed the benefits of the drill during the last year bear unequivocal testimony to its value.

The intellectual training of the school is as carefully conducted as the physical. The school comprises eleven grades, under fifteen to twenty teachers in constant attendance.

Pupils from a distance are accommodated with board in teachers' families.

Pupils crossing Fulton Ferry, from New York, can ride within a square of the school by the Greene Avenue cars. Those crossing the South Ferry should take the Atlantic Avenue cars.

Send for Circular to 336 Adelphi Street, Brooklyn, N. Y.

LOCKWOOD & ELLINWOOD.

MRS. E. DE LA VERGNE, M.D.,
335 ADELPHI STREET, BROOKLYN.

Agents and canvassers wanted in every part of the country.
Clergymen and Teachers supplied with the Magazine one year for \$2.

HURD & HOUGHTON, Publishers,
1t No. 459 Broome Street, New York.

WANTED—AGENTS—\$75 TO

\$300 per month, everywhere, male and female, to introduce throughout the United States the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid, and embroider in a most superior manner. Price only \$18. Fully warranted for five years. We will pay \$1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth can not be pulled apart without tearing it. We pay agents from \$75 to \$300 per month and expenses, or a commission from which twice that amount can be made. Address
SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.
Jn., 4t.

HERALD OF HEALTH.—In order to let those who have never seen this valuable monthly judge of its merits, we will send it three months on TRIAL for 30 cents, \$2 a year, 20 cents a number.
MILLER, WOOD & CO., 15 Light Street, New York.

BURNHAM'S AMERICAN BUS-

INESS COLLEGE, SPRINGFIELD, MASS.—The Popular Trade University of New England, where the young and middle-aged of both sexes are properly educated for business. Recently removed to a MAGNIFICENT NEW COLLEGE BUILDING, erected at a cost of \$125,000. "Its great success is the legitimate result of thoroughness and intrinsic merit."—Springfield (Mass.) Republican.

BOOK-KEEPING, PENMANSHIP, Commercial Calculations, and Correspondence taught by the best masters. Banking Houses, Merchants' Emporium, and fifteen Business Offices practically operated. The departments of Mercantile Law, Physical Culture, and Telegraphy receive special attention. Students enter at any time; no particular degree of advancement required. Ladies and gentlemen prosecute their studies together, and enjoy equal advantages. Graduates have averaged over six months in completing the course of study, and, as a result, seven eighths of them have readily secured lucrative situations in business. Strict attention given to the moral and social welfare of students. Excellent board in pleasant families.

NOTE.—This institution relies for its patrons upon its intrinsic merits, as attested by hundreds of its graduates, who are now filling responsible positions in the great commercial cities of the United States. It affords every advantage found elsewhere, and many educational improvements never before introduced.
SPRINGFIELD is situated in the charming Connecticut River Valley, has 25,000 inhabitants, is a city of great business activity, and the most healthy and delightful place of residence in New England.

CIRCULARS, PAPERS, etc., containing full particulars relating to the course of study, expense of board and tuition, may be had gratis. Persons in pursuit of the most complete educational facilities should address LOUIS W. BURNHAM, President, Springfield, Mass.

AMERICAN ARTISAN AND PATENT RECORD.—New Series.

The *American Artisan*, now in the second year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COMBS & CO.,
Proprietors of the *American Artisan*,
1t, No. 189 Broadway, New York

To Book Buyers!!! To

Sunday-Schools. Our stock of Sunday-school books includes all the latest and best books from all the publishers. School District, Family, and General Libraries—many times these Libraries can be made up for half the price usually paid.

THEOLOGY

is a specialty with us. We do not hesitate to say that ours is the place for the Theologian to buy his books, and also stationery. *Sermon Paper*, every style and price.
N. TIBBALS & Co., 37 Park Row, New York.

UNABRIDGED AMERICAN

EDITION OF DR. WILLIAM SMITH'S DICTIONARY OF THE BIBLE—REVISED AND EDITED BY PROF. H. B. HACKETT, D.D., with the co-operation of Mr. EZRA ABNORT, A.M., Assistant Librarian of Harvard University.—The publishers reprint the entire work, without abridgment or change (except the correction of misprints and of mistakes in quotation); but they also use the opportunity thus afforded to make the American edition superior to the English.

The Dictionary will be published in monthly parts, medium octavo size, each containing 112 pages, and profusely illustrated. Price, 75 cents. The whole work will comprise about thirty parts.

Clergymen, Theological Students, and others are invited to act as agents for the work, and a liberal commission will be allowed to them.

Subscribers can remit to the publishers direct for one or more numbers (at 75 cts. each), and will receive them by mail, postage paid.

THE LATEST INVENTION.—
PATENT APPLIED FOR.—Book-holder, Writing Desk, Invalid's Tea Table, and Ladies' Work-stand combined. This article is designed to be attached to the arm or seat of a chair, to a lounge or bedstead, for any of the above purposes. It is neat, ornamental, portable (can be put in a small valise), and practically useful in every household. We commend it to the notice of persons spending the warm season in the country, and to each of the following classes: Aged and Infirm Persons, Invalids and Convalescents, Teachers and Clergymen, Students, Amateur Artists, and Young People commencing to draw, and to every person who reads much. Every private library should be supplied with it. We will send it to any part of the United States free of charge on receipt of retail price, \$5. Discounts to the trade. Agents wanted everywhere. Sold by Stationers and Book-sellers.

JOHN COMMACHER & CO.,
 Aug. 1st. 238 Broadway, New York.

THE "HEALTH REFORMER,"
 is the name of a monthly journal devoted to an exposition of the principles of Health Reform. It teaches that Nature is the true restorer of the sick, and that she can be aided in her work—not by poisonous drugs, but by a judicious use of water, pure air, exercise, rest, proper social influences, and all true hygienic agencies, which do not poison or deplete the system.

TERMS—\$1 per year, in advance.
 Address H. S. LAY, M.D., Battle Creek, Mich.

HEALTH REFORM INSTITUTE, Battle Creek, Mich.—Diseases of every kind are treated at this Institute without the use of drugs, or poisons of any kind.

MARRIAGES — FIRST MARRIAGE IN HYGIANA. The first marriage which has occurred in Hygiana—the new colony in our country—was celebrated at the Auditor's Office, Tuesday. The happy parties were Dr. Ezra Yoder, and Miss Harriet Briscoe, and the ceremony was performed by Colonel Sifford. The gentleman was dressed in the ordinary black cloth suit. The lady was dressed in brown silk, American costume, with a white scarf and rosette, and wreath of white flowers.—*Chillicothe (Ohio) Advertiser.*

FILTER THE WATER.—The best preventive of cholera and kindred sickness is pure water. Get one of McKenzie's Filters. Sent by express, with directions how to use it, on receipt of \$7.
 S. R. WELLS, 389 Broadway, New York.

TEACHERS.—A lady, an experienced teacher, desires a situation as Governess (no objection to act also as private secretary), or would teach in a private school or seminary. She does not understand foreign languages well enough to teach them; has a good understanding of Mathematics, General Literature, Composition, Elocution, the Physical, Mental, and Moral Sciences. In a school or seminary, she would prefer to teach Mathematics and Elocution, or Natural and Mental Philosophy. Her method of teaching is thorough and philosophical. Address

FREDERICK BLUME,
 208 Bowery, New York.

CHOICE NEW CROP TEAS.

THE SHIP "GOLDEN STATE" has arrived from Japan with 22,000 half chests of the finest Japan Teas to the GREAT AMERICAN TEA COMPANY, Nos. 31 and 33 Vesey Street, New York.

These Teas by the ship "Golden State" were purchased direct from the Japanese factor, and in consequence of the magnitude of the transaction, were transferred at about half the usual commissions. This is the largest cargo ever imported from Japan by about seven thousand packages. By this operation the GREAT AMERICAN TEA COMPANY put these Teas into the hands of the consumers with but one very small profit—an achievement in commercial enterprise seldom if ever before attained. These Teas are acknowledged, both here and in Japan, as being the finest full cargo ever exported from that country.

Also the ship "George Shotton" has arrived from Foochow with 12,000 half chests of the finest Foochow Oolong Teas.

The cargo of the ship "George Shotton" is the second in size that has ever come to this port from Foochow (which is the finest Black Tea district in China). These are the *finest first-picking contract Teas*—rich, fresh, and full-flavored. This will enable us to supply our trade with uniform fine-flavored Teas for a long time to come. These Teas were contracted for before the picking. Contract Teas are always far superior to any others. A large proportion of contract Teas of first pickings go to the European markets. That is one of the principal reasons why the English people consume three pounds of Tea, on an average, to one in an equal number of population in the United States. Heretofore, the United States have been compelled, to a considerable extent, to put up with lower grades of Teas and later pickings. This unfortunate result for the consumers of this country has been brought about heretofore in consequence of the many and great profits of the "middlemen" in the Tea trade. But this has been in a great measure remedied by the establishment of the GREAT AMERICAN TEA COMPANY, and their system of furnishing Teas to the consumer direct from the Chinese and Japanese factors, thus saving them many intermediate profits.

The receiving of these two large cargoes by the GREAT AMERICAN TEA COMPANY for their own trade is acknowledged by the mercantile community as the largest transactions ever made in this country. They were deemed of so much importance, that the fact was telegraphed to all the principal commercial papers in the country by their correspondents here, and thus appeared as an important news item throughout the United States at the same time.

The importance of these transactions in this market is thus noticed by the oldest and most respectable commercial paper in this city—the *New York Shipping and Commercial List*—which says: "The trade have again been startled by the arrival of two large cargoes of Teas to the GREAT AMERICAN TEA COMPANY; the ship 'Golden State,' from Japan, with 22,000 half chests; and the ship 'George Shotton,' from Foochow, with 12,000 packages." And in another place it says: "The recent large operations of the GREAT AMERICAN TEA COMPANY have taken the Trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 12,331 packages Black, and 22,849 packages Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands."

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivaled for fineness and delicacy of flavor.

This is the season of the year when we receive new Teas, and, consequently, our customers will not fail to notice a marked improvement in freshness from this time forward.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small

additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well), can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey Street.

Parties sending Club or other orders for less than thirty dollars had better send post-office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the custom-house stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the List of Prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70 c., 80 c., 90 c., best \$1 per pound.
MIXED (Green and Black), 70 c., 80 c., 90 c., best \$1 per pound.

ENGLISH BREAKFAST (Black), 80 c., 90 c., \$1, \$1 10, best \$1 20 per pound.

IMPERIAL (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.

YOUNG HYSON (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.

UNCOLORED JAPAN, 90 c., \$1, \$1 10, best \$1 25 per pound.

GUNPOWDER (Green), \$1 25, best \$1 50 per pound.

COFFEES ROASTED AND GROUND DAILY.

Ground Coffee, 20 c., 25 c., 30 c., 35 c., best 40 c. per pound. Hotels, Saloons, Boarding-House Keepers, and Families who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30 c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50 c. to \$1 per pound by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,

Nos. 31 and 33 Vesey Street,

Post-Office Box, No. 5,643, New York City.

The GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, New York City, Orange Judd, Editor.

Christian Advocate, New York City, Daniel Curry, D.D., Editor.

Christian Advocate, Cincinnati, Ohio, J. M. Reel, D.D., Editor.

Christian Advocate, Chicago, Ill., Thomas M. Eddy, D.D., Editor.

Evangelist, New York City, Dr. H. M. Field and J. G. Craighead, Editors.

Examiner and Chronicle, New York City, Edward Bright, Editor.

Christian Intelligencer, E. S. Porter, D.D., Editor.

Independent, New York City, William C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

CLUB ORDERS.

ST. CHARLES, WINONA CO., MINN., March 23, 1867.

To the Great American Tea Company,
Nos. 31 and 33 Vesey Street, New York.

I send you a fifth order for Tea. My neighbors think I have "learned the road," and insist on my doing the business for them. I will simply say that all kinds of Tea received from your company have given complete satisfaction. Your Teas are fresh—well flavored—strong. The Merchants can furnish for \$2 25 to \$2 50 per pound no better article than you give us at \$1 25; some say you are a humbug. Please humbug us again on this order.

Truly yours, in behalf of Tea drinkers,

SAMUEL S. BEMAN.

June 6—11.

Post-Office Box, 5,643.

THOMAS FRANCIS MEAGHER.

THE subject of our closing notice, whose recent death has stirred the depths of public sentiment, was a man whose active participation in the cause of Irish liberty, both in Ireland and America, had years ago rendered him conspicuous. He possessed, originally, a compact and vigorous organization, with a great amount of vital force. The brain was large and very symmetrically developed; the organs which impart sympathetic impressibility and social inclinations ranking among the most influential of his dispositional characteristics, and those which supply grace, fervor, and sprightliness to the intellect being among the more prominent faculties of the side and front head. His Language was large and his temperament ardent; hence his ability to sway others, whether from the platform of the audience chamber or in the amicable discussion of the street or the drawing-room. His spirit was earnest, ambitious, and adventurous, and the strong Inhabitiveness which was strikingly exhibited in early youth ministered to the patriotic endeavors which have made his name famous.

On the evening of the 1st of July, General Thomas Francis Meagher, Secretary and Acting Governor of Montana, well known by his Irish Revolutionary fame, and as a gallant leader in our late war, was drowned by falling from the deck of a steamer into the waters of the Upper Missouri River. His life has been full of stirring events, interwoven with the histories of Ireland, of Great Britain, and of the United States. He was born in the city of Waterford, Ireland, on the 3d day of August, 1823, his parents being wealthy and respectable persons. In the year 1834 he was sent to the Jesuit College of Clongowes Wood, where, by his assiduous attention to his studies, he won the esteem of his tutors, while his wild, frolicsome nature endeared him equally to the large number of pupils in the college.

In 1841, his six years' course in Clongowes having expired, young Meagher went to Stonyhurst College, Lancashire, England, where his career was a very distinguished one. He was a close and attentive student of the English classics, and in 1842 was awarded the silver medal for English composition, to the defeat of over fifty English competitors. In the year 1843 he left college with high honors, and after traveling on the Continent for a few months returned to his home in Ireland. His first idea was to accept a commission in the British army, and it is possible that he would have done so had not his Irish spirit revolted against the idea of serving in the army of his country's traditional enemy.

He abandoned the idea of military life, and in 1844 removed to Dublin, with the intention of studying law, but feeling a greater interest in the political questions of the day. The agitation in Ireland continued to increase, and the policy of O'Connell not satisfying a large number of his followers, a secession took place in

THOMAS FRANCIS MEAGHER.

1846, and the "Young Ireland" party was formed, with Meagher as one of the leaders. He greatly aided in organizing the "Irish Confederation," and so great were his oratorical powers, that he was soon regarded by his party as their principal leader and the only man who could free Ireland from her bondage. When the French Revolution broke out, and Louis Philippe was driven from his throne, Meagher, with others, was sent as a delegate to congratulate the French Republican leaders upon their success; upon his return to Ireland he was arrested on a charge of sedition, and held to bail, and afterward tried for high treason at Clonmel in the October following, and after a vigorous and able defense found guilty. In response to the usual inquiry why sentence of death should not be pronounced against him, he made a brief but eloquent and expressive speech, justifying his course, and declaring himself ready to die for his country. Subsequently the sentence of death was altered to banishment for life to Van Dieman's Land. Here he remained until 1852, when, an opportunity for escape offering, he embarked for New York, where he arrived during the month of May of the same year. Upon reaching this city he was the recipient of an enthusiastic reception from his countrymen and the citizens in general.

For two years after reaching this country General Meagher followed the profession of a lecturer, meeting with marked success. Returning to New York in 1855, he engaged in the study of the law, and was subsequently admitted to the bar. In 1856 he became the editor of the *Irish News*, and in 1857 visited the States of Central America, spending some time in Nicaragua and Costa Rica.

On the outbreak of the rebellion in 1861, Meagher organized a company of Zouaves for the Union army, and with them joined the Sixty-ninth New York Volunteers, under Colonel Corcoran, and served during the first campaign in Virginia. At the first battle of Bull Run, fought July 21, 1861, he was acting major of his regiment, and had his horse shot under him. Upon the expiration of his three months' term of service he returned to New York, and in the latter part of 1861 organized the celebrated "Irish Brigade," and was assigned to it as permanent commander, with the rank of brigadier-general, his commission

bearing date of the 3d of February, 1862. At the head of his men he participated in the seven days' battles around Richmond, winning general praise for the heroism and skill with which he led the brigade to action. At the second battle of Manassas the brigade, then attached to Pope's army, fought with great desperation, and at Antietam, September 17, 1862, won a great reputation, and was most flatteringly noticed in the official report of General McClellan. The disastrous battle of Fredericksburg, fought December 18, 1862, only added to the reputation of General Meagher and his men. Charge after charge was headed by him, up to the very crest of the enemy's breastworks, and the number of dead men with green colors in their hats told of the fearful slaughter of the brave Irishmen. In this engagement he received a bullet wound through the leg, which temporarily incapacitated him from active service. He had, however, sufficiently recovered in April to resume command, and at Chancellorsville, from May 2 to May 4, 1863, he led the remnant of the Irish Brigade into action for the last time. It was, indeed, the merest remnant of what had been the pride and flower of the army; and, finding that its numbers were reduced to considerably below the minimum strength of a regiment, on the 8th of May General Meagher tendered his resignation and temporarily retired from the service.

During the early part of 1864 he was re-commissioned brigadier-general of volunteers, and assigned to the command of the District of the Etowah, including portions of Tennessee and Georgia. His administration of the affairs of his district was signally successful, protecting as he did the lines of communication, while his command, the Provisional Division of the Army of the Tennessee, was completely isolated by the presence of Hood before Nashville. In January, 1865, he was relieved from duty in Tennessee, and ordered to report to General Sherman at Atlanta, but the close of the war prevented his performing any further important services to the Government.

In 1865 he was appointed Secretary of Montana Territory. In the month of September following, Governor Sidney Edgerton, being on the point of leaving the Territory for a few months, issued his proclamation appointing General Meagher Governor *pro tem*. The recent hostilities on the part of the Indians compelled him to take measures to protect the white settlers of Montana, and it was while engaged in this duty that he fell into the river (the Upper Missouri, it is supposed) from the deck of a steamboat, and was drowned.

Soon after his arrival in this country, the deceased married Miss Townshend, of New York. She is at present in Virginia City, Montana Territory, having joined her husband there about one year ago. Only one child blessed the married life of the General, and he, a boy of some twelve years old, is now in Ireland, under the care of his grandfather, who is still living in Waterford, the possessor of an ample fortune.

THE
PHRENOLOGICAL JOURNAL
AND LIFE ILLUSTRATED.

Is devoted to **The Science of Man**, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in choosing a Pursuit, and in judging of the dispositions of those around us, by all the known external Signs of Character.

Published monthly, \$3 a year in advance. Sample numbers, 30 cents. Clubs of ten or more, \$2 each. Supplied by Booksellers and Newsmen everywhere.

Address, SAMUEL R. WELLS, Editor,

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

R. B. CONNOLLY.

A CAPITAL specimen of the vital temperament. Observe how deep and full the chest is, and how large all the organs are which generate vitality! There is no indication of consumption here. The recuperative forces are immense. Neither condiments to tempt appetite, nor stimulants to aid digestion, are required in his case. He can eat his rations with a relish, and digest and assimilate what he eats. His stomach is capacious, and does its work to perfection. His heart is large, and the circulation throughout the system is equal and healthful. The lungs are large and the breathing perfect. In short, we do not know of a better vital temperament. Did he not love his physical ease too

From an Imperial Photograph by Bogardus.

well, or if he were forced to more vigorous bodily exertion, so that his superabundant vitality could be slightly reduced, his

chances for long life would be increased and more secure. Why, reader, accidents excepted, such a temperament and bod-

ily make-up *ought* to live hard on to a hundred years. Should he come short of this, it will be his fault, and in consequence of living too high and taking too little bodily exercise. Apoplexy is the disease to which he is most liable. Let him be warned in time.

Phrenologically, he should be known for his powers of observation, quickness of perception, and comprehensiveness. To his analytical mind the slightest circumstance reveals much which to common minds would be hidden. He is clearly his mother's son, inheriting her devotional tendencies and prophetic forecast. Veneration, Spirituality, and Benevolence are very large, evidently inherited from a most devotedly religious mother.

He should be a good judge of character; by heeding his first impressions he will not go far wrong in judging a stranger, but he is inclined to throw the mantle of charity around the apparent shortcomings of others, and treat them more leniently than his first judgment would prompt.

He doubtless has had religious training of a rather liberal nature, including mankind in his sympathies, good wishes, and prayers. He is far from inclined to treat sacred subjects with indifference, and he has a respectful regard for the feelings of others on religious matters, however absurd their opinions may appear to him.

He should be known for much versatility of talent; though trained perhaps in a particular calling, he nevertheless knows something of almost everything. He is not disposed to dwell unnecessarily long upon any one subject. The moment a thing is finished he drops it and takes up something else. He would be quick and accurate as an accountant, if accustomed to figures, and make a good appraiser. He has large Order, and is methodical. When young he was diffident, averse to personal criticism and publicity, usually conducting himself so as to secure the approval of those whose opinions he valued, and knowingly did nothing which tended to depreciate him in the esteem of his friends. Experience and contact with the world have since given him assurance and independence. He is not wanting in decision, but rather inclined to hold steadily to his convictions. Were

he a civil magistrate he would not condemn and punish without mercy; indeed, mercy would be one of the first considerations, the culprit getting the benefit of any extenuating circumstance. He would punish if necessary, but not in malice or revenge. He would be humanitarian, sympathizing with those who need sympathy, and willing to aid good enterprises. He is frank and open, having comparatively few secrets and little of the fox in his composition. He is not inclined to engage in controversy; would fight, if he must, in the defense of a principle or for his rights, and not for fun or for pay. He would acquire property sufficient to supply his wants and be content with that; he is not a money-getter for the love of it. He would take no especial pride in being counted a millionaire, but more pleasure in distributing his means liberally.

He is not an imitator, but would block out an original course for himself and pursue it. He could, however, readily conform to circumstances and adapt himself to whatever condition he might be placed in; he may go abroad and mix with strangers and yet retain his own identity; he is not likely to be swallowed up by others.

Socially, he has much love for all that belongs to the social circle; he would be an exceedingly unhappy man if compelled to live alone, apart from the loved ones of home. However absorbed he may become in matters requiring intellect, courage, energy, ambition, it is in the social realm that he feels happiest and most contented.

His Conscientiousness renders him inclined to do justly and to expect fair dealing from others. When he has committed an impropriety, and is made aware of it, he is reasonably penitent, but not the one to "cry over spilled milk." He looks forward rather than backward, but is not disposed to magnify prospects or hold out false hopes to others. On the whole, he has realized more in life than he anticipated or his friends predicted.

He is mirthful and jovial; appreciates jokes; is pretty quick at repartee, and decidedly fond of fun. He has a very large brain, well supported by a stout, healthy, vigorous body, and altogether he would be counted a well-made man. But with his love of variety, his moder-

ate self-esteem, and perhaps lack of economy—in time especially—and moderate ambition, he has been less aspiring than many others; but he will be looked to for counsel, for advice, and for favors, rather than looked up to as a high dignitary or one especially proud of place. He is adapted, indeed, to a democratic rather than to an aristocratic community. He counts one man as good as another while he takes care to conduct himself as well, and he does not place himself above others. More dignity and self-appreciation would perhaps have begotten for him more honor and appreciation from others. He is polite and affable, and will maintain himself creditably in any position he may aspire to, or in which he may be placed. He is of the O'Connell type and temperament, and would almost inevitably become a leading man, even among leaders.

BIOGRAPHY.

The Hon. Richard B. Connolly, Comptroller of the city of New York, is a native of the county of Cork, Ireland, a portion of that beautiful but unfortunate country which has given birth to some of the brightest intellects of the age. The Emmetts, Curran, O'Connell, Shearnes, Barry, the first American Commodore, and other Irish patriots, who bravely fought in our war for independence, were born in the county of Cork. His whole career, from boyhood up, has been very successful. He landed in New York some forty years ago, with only his talents to aid him in the busy conflict with the world. His early education was limited, but by earnest study and fidelity he accomplished much. His mercantile education began in the auction-house of John Haggerty & Son, where he filled an important station for some years. From that he entered the auction-house of Simeon Draper, Esq., as recorder, where he established for himself a high reputation as a trustworthy and accomplished accountant.

In 1845 Mr. Connolly was appointed to a responsible position in the New York Custom House, where he was assigned the charge of the statistical bureau. This was a position of responsibility, his quarterly accounts amounting to the sum of nearly thirty millions of dollars, and during his six years' charge there, it is said that the examining bureau at Washington never had occasion to report a single error in his accounts. In 1846 he was designated by the Collector of the Port, Cornelius W. Lawrence, in connection with two other skillful gentlemen, to make up a schedule for the revision of the tariff of 1842, and was summoned to Washington for that service, in aid of the Hon. Robert J. Walker, then Secretary of the Treasury. From thence he passed into the employment of the Bank of North America, in the city of

New York, as discount clerk, where he remained until 1852. In that year he was elected County Clerk, and by a careful attention to the details of that office, by his genial demeanor in his intercourse with the public, and especially by his gentlemanly address, he made many warm and steadfast friends; indeed, so popular did he become, that he was re-elected to the same position in 1855.

In 1859 he was elected to the Legislature of New York by a large majority, and took his seat in that body January, 1860. In 1861 he was re-elected, and by his untiring energy and industry in the interests of his constituents gained himself a front rank in the Senate. His efforts in the cause of the Union, while in that body, commanded the admiration of even his political opponents. When the storm of secession and disunion suddenly swept over the country, he took high ground in support of the Government and in defense of the union of the States; and while addressing the Senate on the subject, uttered the following sentiments:

"An emergency so vast, a ruin so terrible as that now pending over the land of my adoption and most grateful love, demands at the hands of every patriotic man, whether Republican or Democrat, the sacrifice of his personal asperities, prejudices, or mere theoretical opinions of a partisan nature, in order to save, reconstruct, and perpetuate that Union to which we are all indebted for the unexampled prosperity of this country in all its material relations, and the public recognition of our glorious though infant flag among the proudest nationalities of the earth. * * * * Four times have I been honored by the Democracy of the city and county of New York by being elected to responsible and honorable positions, and therefore four times at least have I sworn to support the constitution of the United States and the old flag. Sir, I shall support it now, and by the blessings of God I hope that flag will yet wave, not only over the sixteen Northern States, but the Middle States and all the seceding States, and that all may receive from it equal protection. Why, sir, when we look back to the history of this country, in the early days of the republic, there was no party then. *Let there be no party now.*"

His speech and efforts in behalf of the repeal of the church property law of 1855, which denied to the Catholics the right to manage the property which belonged to them the same as other denominations, secured for him the thanks and congratulations of many of the most eminent dignitaries of that church, among them was the late Archbishop Hughes.

In 1866 Mr. Connolly was elected Comptroller of the city and county of New York, the most responsible position in the gift of the people of the Empire City, and entered upon the duties of his office January 7th, 1867, his term being for four years. In his official capacity Mr. Connolly has the direct control of many millions of dollars, which the law has committed to his care as the head of the Department of Finance. The responsibility of this office

is very great, but Mr. Connolly's administration, if judged by the past, promises to be one of success. Doubtless his clear head and sound judgment will materially conduce to this result.

In appearance, Mr. Connolly is of middle height, plump habit, well formed, and graceful. His head is large and well rounded; his eyes large and blue; his hair light, and worn short; and his face full and somewhat florid in complexion. His forehead is broad and high; his countenance marked by an abundant store of good-humor and friendliness, while his shoulders are broad and strong, indicative of unusual physical power. His voice is low and mellow, but sometimes ringing out in clearest laughter. In society, he is the prince of "jolly good fellows;" while in business he is earnest and thoughtful. He acts promptly and decisively, speaking little. For his success he trusts in Providence, but he backs up that trust by real work, for he is an earnest believer that God helps those only who help themselves. In seasons of political disaster he is the same as in success, and his confidence in the future inspires all the rest with hope, for to him every cloud has a silver lining. His charity is proverbial, for he never forgets the poor and needy. But in all the different stages of his intercourse with the people, it matters not whether in the auction-house, the counting-room, the bank, in the office of the County Clerk, or in the Senate chamber, voting supplies of men and money to defend the honor of his adopted flag and of an unbroken Union, or pleading in eloquent terms in behalf of justice to the faith of his forefathers, he is still the same unassuming gentleman and inflexible patriot.

PHRENOLOGICAL THEORY OF MAN'S ORGANIZATION.

[CONCLUDED.]

CONSCIENTIOUSNESS AND ITS FUNCTIONS.

WE have referred to the sufferings of the monomaniac through the delusive instructions handed from the temple of science, which caused them to be treated so inhumanly by both the professional and non-professional; but all the physical suffering of all the monomaniacs would weigh but light as a feather when compared with the moral evils resulting from the confused and erroneous instructions given in relation to the organization of man's moral nature. We have not time to trace out more fully those evils and their causes, as it would run this article out to an inexcusable length. Perhaps we may at some more suitable time dwell upon them. At present we shall only touch upon Conscientiousness, as from the vague instructions given, innumerable and terrible evils have resulted; almost every imagination of man's heart, however wicked, has been conscientiously performed.

At the very threshold of our subject we meet with ample evidence of the confusion of thought among metaphysical expositors. We have Conscientiousness called "the great judge and arbiter of our conduct"—"the inhabitant of the breast"—"the knowledge or faculty by

which we judge of the goodness or wickedness of ourselves"—"reason"—"principle"—"internal or self-knowledge, or judgment of right or wrong"—"the moral sense"—"the voice of God within the soul"—"the inward monitor"—"a creature of education," etc.

Thousands of pages have been written upon the subject of Conscientiousness, yet the Saviour condensed more information in two lines than can be found in them all: "Blessed are they that hunger and thirst after righteousness, for they shall be filled." Phrenologically, Conscientiousness is in our moral nature what Alimentiveness is in our physical system—both are blind desires which impel to action. In the one case we are impelled to ask the question in reference to any given action, "Is it right?" but like the hungering and thirsting of the animal system, it is perfectly blind, and requires for its guidance the intellect. The spirit of man, and not a personified attribute of the spirit, must, through its intellectual faculties, decide from the data before it whether any given act is right or wrong. To illustrate, let us take the case of David: when he saw Bathsheba, his Amativeness called for gratification; that was its peculiar function, and so far as right or wrong was concerned, it had nothing to do whatever. His faculty of Conscientiousness prompted the question, Is it right or is it wrong? and there its functions terminated, and he had to settle that question by his intellectual faculties, which said to him, "The law is, thou shalt not commit adultery," and that question was then settled. Then the issue was made whether he should obey the law, or gratify himself regardless of the law, and his spirit, through its volitional attribute, having made the decision to gratify himself regardless of the law, he then set to work to accomplish his designs. Uriah was in the way; Destructiveness said "destroy," and by his intellectual faculties he planned to have Uriah slain in battle, to avoid the appearance of a more direct murder, and having accomplished his designs, the responsibility rested on him, and he stood a sinner before God.

Conscientiousness being guided by the intellect, the question next comes up, how is the intellect to be guided, without an infallible standard of right or wrong? The intellectual faculties would be liable to make erroneous conclusions. That infallible guide we can nowhere find, except in the infallible Word of God. That some standard of right is needed is virtually conceded by all expositors, for they endeavor to locate a standard somewhere, thus actually acknowledging that such a standard is needed. Some contend that we have an "inward monitor," which tells us with accuracy what is right or wrong; others, that "the greatest good to all" must be our standard; others, that the "nature and fitness of things" must be our guide; others, that the revealed will of God must be our infallible guide, etc., etc. Neither is the position occupied by some phrenologists correct. A distinguished writer maintains that if all the faculties are "equally developed and unperturbed, the individual will

take correct views of right and do accordingly;" but whether that individual has all his faculties "equally developed and unperturbed," and has arrived at a correct conclusion, can never be known with certainty. Let it be granted, for instance, that an individual has made a decision in regard to any given act, how are we to know with infallible certainty that all his faculties are "equally developed and unperturbed?" What proof can be given that his decision is infallible? Before we admit it, we must have proof on that point. What man has ever been found who could be said to have all his faculties equally developed and unperturbed, and could therefore say, "Ho, all men, listen to me, for my faculties are all equally developed and unperturbed, and my decisions therefore are infallible." The same writer maintains that right or wrong are constitutional, being based in the very nature and fitness of things, without reference to either command or prohibition of God, or the want of the one or the other. The nature and fitness of things being a remarkably uncertain guide, he endeavors to patch it up and make it straighter by affirming this proposition: "Why is right right? wherefore wrong wrong?" I answer, they are rendered so by their consequences, by their effects on the happiness and on the misery of ourselves and others. * * * Whatever is promotive of happiness is right, as well as that the opposite is true as to wrong. He says, further, "Benevolence was created both to pour the oil of consolation into the wounded heart, to avoid occasions of pain, and to beautify and bless mankind, and also to pour still greater blessings into the soul of the giver, for it is even more blessed to give than to receive." Old Cato found his friend Hortensius with a sadly wounded heart, that needed much the oil of consolation; he wanted Cato's wife, who was a remarkably fine-looking woman, and would make a first-rate cross to improve the Hortensian stock. Cato, with a large and magnanimous heart, brimful of benevolence, determined to gratify his own Adhesiveness and Benevolence by pouring the oil of consolation into the wounded heart of Hortensius, and made himself quite happy by loaning his wife to him for some years. Cato rendered himself happy by gratifying his friend by the loan of his wife, and Mrs. Cato rendered herself happy by being an obedient wife, and having received the necessary directions, packed up her trunks and handboxes and went home to live with Hortensius, and rendered him decidedly happy by living with him as his wife. So then all parties were made happy by this transfer; and as the promotion of happiness is the test of right or wrong, it certainly was a very worthy act in Cato to loan his wife, and the whole transaction, tested by "the nature and fitness of things," and that squared by the rule of "promoting happiness," was just exactly right, and before the transaction can be condemned, the standard "Thou shalt not commit adultery," must be applied. The standard above enunciated—"the nature and fitness of things"—and that improved by the

addition of the rule of promoting happiness, may be set down as a standard, but not an infallible standard. Again, it was in "the nature and fitness of things" exceedingly appropriate that when a man saw such a treasure of God likely to fall over, he should put forth his hand to save it, and yet for so doing Uzzah was struck dead by the Lord, for when he went by the standard, "the nature and fitness of things," he transgressed a positive law of God, which prohibited him from touching the ark. Furthermore, according to what we have already quoted, "the nature and fitness of things," improved by the rule of promoting happiness, it would be wrong for a Jew to kill an idolater. Saul was commanded by the Lord to smite the Amalekites, and to spare not one; but he spared Agag, and for thus sinning the kingdom was taken away from him, and Agag was finally hewed in pieces by Samuel. According to "the nature and fitness of things," it was improper for Samuel to hew Agag in pieces, yet no one who does not, like Theodore Parker, feel privileged to correct the mistakes of the Bible, would pretend to say that Samuel sinned in killing Agag, and that Saul did right to spare him.

It is evident, then, that this standard, "the nature and fitness of things," is anything but an infallible rule. It may do very well, and, in fact, is the only guide in the absence of Revelation, so that we are placed under the rule that should belong to the heathens. They can not have an infallible rule, for no man judging of "the nature and fitness of things" can give any proof that his faculties were all equally developed and unperturbed, and his decisions therefore infallible. Cicero decided that if a man with a vessel loaded with provisions, going into a port where famine prices prevailed, should pass a fleet with provisions and get into port one day in advance of the fleet, he should apprise the citizens that the fleet was coming, and that if they would only wait one day longer it would not be necessary to pay such enormous prices. But suppose that forty millions of his countrymen, whose Acquisitiveness was larger and Benevolence smaller, had claimed that they were under no obligation whatever to reveal the fact of the speedy arrival of the fleet, and could honestly take whatever price they could get, what proof could Cicero have given that his decision was any more correct than their own? When we apply the divine rule, that we should love our neighbors as ourselves, and do unto others as we would they should do unto us, we perceive at once that Cicero's decision was correct; but unless we have an infallible guide, such questions must remain in our own day as they were in days of old, uncertain, and open for discussion; the decision might be correct, or it might not.

That same Cicero who made such a righteous decision in regard to the conduct of the man going into port with provisions, also decided, from "the nature and fitness of things," that it was right to worship the gods, and if that is to be our only guide, Cicero's decision

was just as correct in the one case as in the other.

Furthermore, according to the writer above referred to, some infallible standard is needed, for he shows most clearly the working of the intellect in combination with other faculties, and according to that exposition we are so liable to have our intellectual faculties biased in their estimates of right or wrong by other faculties, that we should require the most indubitable proofs of infallibility before we submit implicitly to the decisions of any mortal. As his exposition will serve to explain most admirably many curious traits of character which are perfectly inexplicable by any of the metaphysical expositions, we shall copy a portion of it: "Men's opinions and practices as to right, duty, etc., will accord with their phrenological developments; that different phrenological developments cause men to think and feel differently on those subjects. To illustrate: Suppose Conscientiousness be alike in two persons, A. and B., and full in both, or five in a scale from one to seven. A. has large Benevolence and small Acquisitiveness and Veneration, while B. has small Benevolence and large Acquisitiveness and Veneration. As A. combines Conscientiousness with his large Benevolence, and makes him feel that he is in duty bound to do all the good he can, and that it is wrong to take a large price from a poor man because he can get it, while his small Acquisitiveness induces him to give more for an article than it is really worth, yet as his Veneration is small, his Conscientiousness does not require him to go to church. But the large Acquisitiveness and small Benevolence of B. warp his lesser organ of Conscientiousness, and allow him to extort from the poor man more money for a thing than it is really worth. His large Acquisitiveness throws dust in the eye of his smaller Conscientiousness, and hushes up its feeble remonstrances, while he grinds the face of the poor, takes advantage of their distress, and extorts money from them because they are in his power, though he is wringing out their very heart's blood. Still, this same Conscientiousness, though it allows Acquisitiveness to cheat and extort, also combines with Veneration and compels him to go to meeting next Sunday, to read his Bible, say his prayers, and go to the communion table; "to sand the sugar, water the gin, and then come in to prayers." The Conscientiousness of A. would torment him for extorting the money extorted by B., just as much as that of B. would torment him for not praying and going to church; while the Conscientiousness of B. would acquit him for extorting money from the poor man, or taking advantage of him in a bargain, as much as that of A. acquits him for not praying and attending church. The opinions of these two men as to what is right or wrong are directly opposite, each condemning what the other approves, and each approving what the other condemns, and both reading each other out of heaven—the one for the other's extortion, the other for the other's impiety. Now Phrenology condemns them both, and yet approves both. It saith

unto A., Thou art right in thy humanity (provided thou dost not injure thyself and those dependent on thee by giving too much), but wrong in thy impiety; give to the poor, but worship thy God. Phrenology then turns to B. and saith, Thy devotion is right, but thy extortion is wrong. Reduce thy Acquisitiveness, increase thy Benevolence, for it is wrong for thee thus to oppress and distress these poor sufferers. * * * A fashionable lady (and all fashionable women are ladies, of course, however ill-bred, for fashion hideth a multitude of sins), with more vanity than sense, but having large Veneration, full Conscientiousness, large Ideality, very large Approbativeness, a silly mother and a soft-soap preacher, feels it to be her imperious duty to go to church always, provided that she can go dressed in the very top of fashion, show a wasp-like waist, or a small bale of extra hair; but if she can not go thus fashionably, foolishly, and wickedly attired, she does not feel it her duty to go at all, because her dress is not decent; for it would be very wrong indeed for her to go to church without being decently (fashionably) dressed, lest her dress should attract attention; though if her extreme fashions should attract the gaze of all present, that would be all right (how very tender some people's consciences are, though, about certain matters!); but the Conscientiousness of another lady, who has large intellectual and moral organs, feels it to be her duty not to dress, and frowns upon our scrupulous fashionables."

Such traits of character have never been satisfactorily explained by any old metaphysician; the general supposition has been that B. was a most consummate hypocrite, and made religion a cloak to hide his deeds.

A vast number of curious cases, constantly occurring, are perfectly clear by the light of phrenological revelations; but just change the light, and metaphysicians say they are "anomalous," "freaks of nature," "perfectly inexplicable." Though the working of Conscientiousness with the various faculties is readily explainable by Phrenology, yet when we search for an infallible guide for Conscientiousness, Phrenology fails just as completely as old-school metaphysics in giving us such a guide. The "inward monitor" of the latter is not a worse guide than the estimate of "the nature and fitness of things," by the intellectual faculties of the former.

There is a vast advantage, however, in the phrenological system, absolutely immeasurable when the salvation of man is taken into consideration. Such a man as B., traveling by the light of metaphysical expositions, would never under any circumstances be able to see his way clearly, and would continue in his evil courses, while if traveling by the light of Phrenology, he would be apprised that his Acquisitiveness might really blind his estimate of right and wrong, and when trading would more closely scrutinize his own conduct, and probably become a very different sort of man. We have shown that neither metaphysics nor Phrenology can give us an infallible guide for Conscientiousness, and as we can find infallibility in the Word of God, we must necessarily rely upon that for infallibility. In the absence of Revelation, the rule—"the nature and fitness of things"—would serve to guide men, and would suit admirably for the heathen nations; but since we need a better rule than that for the heathens, we should turn to the infallible Word of God and go by the light of its revelations.

Why is it, then, if we have an infallible standard in Revelation, do we have such a great diversity of opinion as to what is right or wrong? Simply because under the rules laid down by the metaphysicians, so vague are they, that men go by their feelings, "inward monitor," "the moral sense," and all having "a sin that doth easily beset," their Conscientiousness is easily satisfied when some strong propensity puts in its plea for gratification, while they are making up their estimate of right, and that "inward monitor" and "inhabitant of the breast" thus hoodwinked, they obey even unto death. In the wide margin given, the "inward monitor" men readily, without any serious compunctions of Conscientiousness, receive, reject, twist, turn, change, and pervert that infallible standard in any manner to suit their wishes, and they will continue to do so as long as they have no better light than that given by the metaphysicians.

But when we view a man by the light of phrenological revelations, and learn how easy it is for Conscientiousness to be hoodwinked by the other faculties, and made to assent too readily to the estimates of right by the intellectual faculties, we have as a corollary from this, that we must be exceedingly careful in our study of the Divine Law, and in examining the propriety of our conduct by its precepts we must ever be on the alert lest we allow ourselves to be deceived by some other faculty putting in a plea that will satisfy us, and yet be far from meeting the requirements of the law.

As to undertaking to alter, amend, or reject any portion of that revelation which our Creator has so kindly bestowed on us, it would be inexcusable to harbor the thought for a moment. What would be the use of the Lord's giving us an infallible standard, if every man could reject, alter, amend, or pervert according to his own views of propriety? Whenever we reject or alter the exact declaration of Revelation, we in reality act as if we were superior in wisdom to the Creator, and for such presumptuous conduct there can be no excuse.

We should receive that guide which our kind heavenly Father has bestowed on us with all the ardent simplicity of a little child, "nothing doubting," and then in endeavoring to shape our course by it, we should remember when making our estimates of right and wrong, that our Conscientiousness is liable to be misled by many of our faculties, and we should ever be on the watch lest at any time we suffer our judgment to be improperly biased. And in coming to a decision on any given point, those who have the light of phrenological revelation

to guide them are infinitely more likely to be correct than those who estimate man's organization by "the lanterns dimly burning" of the metaphysicians; and in testing their conduct by the infallible standard the Creator has given us, each man can know exactly what faculties preponderate, and of course would know where he is most likely to err. For instance, A., knowing that his Acquisitiveness was too large, would guard with double care all his pecuniary transactions. B., knowing that the love of approbation was his weak point, would be exceedingly careful lest he should prefer the praises of men to the praises of God. C., knowing that his Combativeness was too large, would of course be able to guard himself with more care, and so on through the infinite combinations of faculties.

Hence, since the light of Phrenology will scatter the mystification now surrounding the subject of Conscientiousness, and also enable man to view himself as he is, to read God's Word with more pleasure and profit than he could through metaphysical fogs, and will remove many obstacles from his pathway to heaven, it well behooves all who love their souls to accept phrenological revelations, and to betake themselves to the study of the Word of God, with all the advantages which a more accurate knowledge of man's organization can give, and apply the rules laid down in that blessed book, without any alteration, rejection, or amendment whatever.

And now, friendly reader, if any of the mystification surrounding the subject of body, soul, and spirit has been removed, our object has been attained, and we conclude this department of our subject with the prayer of Paul flowing warm from our heart, "And the very God of peace sanctify you wholly; and I pray God your whole spirit, and soul, and body be preserved blameless unto the coming of our Lord Jesus Christ."

ACTIVITIES OF NATURE.—The human soul, like the material universe around us, is instinct with activities; and those activities are all obedient to an innate law impressed upon them by the Creator. Our own consciousness attests that in our own souls there is a spontaneity of action—action uncaused by any precedent volition of ours. There are laws necessitating and determining the association of ideas which we never formed and can never annul. There are out-darting impulses which aim and strike so quickly that we see them only by retrospection. There are rending and upheaving passions which ever and anon explode from some volcanic stratum in our own nature, deeper down than we had ever known before; and sometimes torrents of feeling and emotion as resistless and as fathomless as ocean tides. More or less, in all sane men, these activities are directly or indirectly under the control of the will; in the insane we see their centrifugal force and madness when they have revolted from the will and cast off its dominion.

For soul is form, and doth the body make.—*Spenser.*

STUDIES IN PHYSIOGNOMY—No. 2.

"The heart has no passion within it
That is not engraved on the head."—*Literary Gazette.*

ACKNOWLEDGE ONCE that an emotion gives variety and tone in a great or small degree to the expression of the face, and, reader, you assent to the fundamental principle of the science of Physiognomy. As in nature we find that the continued dropping of water wears the flinty rock, and as this is but one illustration of the law of Force "which rules the world," so those powerful emotions which with electric power and rapidity sway the mind, find expression in the sympathetic nervous structure of the face; and those which are oft repeated from an increasing habitude of the mind so impress their lineal characteristics in the plastic tissue of the countenance, that the man may be read by others. There are indications which show the man of laborious pursuits. The blacksmith's arm, and the sailor's hand, the seamstress' fingers indubitably denote their vocations. This topic, which we would at present merely allude to, is capable of elaboration to the extent of showing that the multitudinous employments and callings of mankind, from the clergyman down to the common laborer with the shovel and hod, have each special physiognomical peculiarities.

Among those people who infest society, and are especially grievous to the sensitive and "nervous," none are more conspicuous than the petulant murmurer and the impudent sauce-box. The former invents occasions, if he do not meet with them, for expressing discontent and bitter complaints. He takes keen delight in grumbling over good fortune as well as ill, depreciating the former and exaggerating the latter. If a friend sends him a present of fruit, he returns by the bearer the peevish answer, "Were you afraid your vines and trees would suffer did you send me an invitation to come and pick for myself?" He quarrels with heaven, not because it rains, but because the rain comes too early or too late. If he finds a purse on the road he exclaims, "Only coppers. Ah! it is not my luck to find greenbacks." When, on an emergency, his friends assist him, proffering ample means and endeavoring to encourage him with pleasant words, saying, "Cheer up! we'll see you safely through this difficulty," he will very likely reply, "How can I be cheerful, when all this money must be repaid; and that ever after I must owe you a debt of gratitude?" and as for uttering a word of thanks for their accommodation, he does not think of it. Such a man is an enigma in society. No one knows how to take him, and that uncertainty renders his room more desirable than his company. He can not be of service in any community; for he acts the drag on the wheels of all progress. Every innovation, how-

THE MURMURER.

ever profitable, meets with a sniveling repulse from him. "Can you not let well enough alone?" he will say when any measure of social improvement is proposed. Whereas but a few minutes before he had been inveighing against the badness of the times and complaining that no one besides himself was anxious for a reform. Persons of this character should be left to themselves and their own counsels. Forced solitude will prove their best tutor.

The saucy and impudent are altogether different in kind and quality. Society finds in such persons food for amusement as well for anger. Sauciness assumes a great variety of forms in different characters, but we have endeavored to illustrate it in such a manner that it may at once be recognized. The lines of the features in our example are more incidental to the class of face than generally expressive of the disposition. The following are among the usual accompaniments of this disposition: black or dark eyes which seem to sparkle with the sharpness of the owner; a nose inclined to turn up, or of the snub order, appearing as though it had taken the upward direction by choice and was indebted to this mental quality of sauciness for its expressive formation; all the features seem to be inclined to elevation; the lips curl upward, and the mouth opening wide makes a chattering exhibition of teeth. The verbal expression of the whole is—"Who cares for you?" A writer on Physiognomy says, "This complete and finished expression of an accomplished face and tongue which, from the reputation it has acquired for wit and smartness among a certain class, is re-

garded by them as an ornament of the mind, and may be resolved into nothing more or less than the natural aptness of a bad temper in its most aggressive form. When this quality is marked in the composition of a person, it not only qualifies the whole of it, but would seem to be the principal ingredient; it lies upon the surface of all that is superficial, is the very essence of all that is non-essential, and is the only article which flavors the natural insipidity; it is the counterfeit of wit, the substitute for sense; and, while it assumes these sterling qualities, it is only in possession of those brazen ones which pass for them all.

"We have too frequently to deplore the full-grown consequences of the early unchecked tendencies of those young shoots which have been allowed to take their natural course, and instead of being trained up like wild and disorderly plants, have, on the contrary, been nursed and nourished more and more in the direction of their tendencies and habits by those whose duty it was to watch over and weed them out. It must have been painfully observed that pert young children have even been commended for saying many a *smart* thing under the domestic roof that would have made them *smart* in other connections, but which has only enabled their fond parents to supply their friends with so many specimens of their eloquent fooleries; and that, too, in the hearing of these little ready-reckoners who are sure to commit them to memory, if not to paper, till they get such a collection of Rolands and Olivers, as to add to their natural stock of

THE SAUCEBOX.

impudence, and make them what is called 'a match for anybody.' * * * When such shall make their appearance in ordinary life, they appear with more than ordinary advan-

tages, are sent into the world with the finest recommendations; and with as many mistakes about their characters as were never made about those of a magpie or a monkey, they come boldly out in the hearing of such remarks as these, 'fine spirited youth, this!' 'fine sharp boy, that!' (language that might flatter a pickpocket), and are considered to be those intrinsic geniuses which parents expect to get off without premiums, and such as are specially fitted for offices of trust; in fact, they are what is called 'anybody's money,' and those who trust them will generally find them so; their employers are not long in discovering their real uses in collecting bad debts and delivering saucy messages, all which they perform with a fidelity that would do honor to the most righteous cause; while their activity in getting in and out of place makes them remarkable for seeing more of the world in one calendar month than the most steady and experienced would in the whole of their lives. Whenever servants are endowed with this *gift*, it elevates them above the state of life in which Providence or (as they would have it) *ignorance* has placed them, and enables them, even in the kitchen, to exercise an arbitrary power over the household. This disposition is to be met with in all the *perfection of imperfection* in stable-yards, at coach-stands, markets, and in stores where young lady clerks preside over the counters."

The following is an illustration which may be here aptly introduced. A gentleman while making some morning purchases stepped into one of our city markets. He stopped before a flower-stand, and pointing to a plant said to the buxom dame in attendance, "Ma'am, will you inform me what they call this pretty flower?" "Nothing that you want," said the woman, "or else you'd know the name of it." With no reply he proceeded farther, and stopping before another stand of a like character asked of the attendant, "Pray, is not this pretty flower a geranium?" "Why, yes; what did you take it for—an oak tree?" Verily, thought he, I am fallen into a nest of brambles; but going farther, he stopped before a third stall, the superintendent of which we may suppose to have been the pert subject of our illustration, who with jaunty cap and ribbons stood ready to dispose of her goods and smart speeches. He politely inquired the way out of the market, and was quickly answered, "Why, the same way you came into it, I guess." The gentleman turned on his heel, and as he walked away an approving chorus of laughter from the surrounding market people, who admired the girl's *esprit*, greeted his ears.

As trade in small wares is conducted, it would appear, from the number of audacious and saucy clerks, that a heavy premium was offered for a good stock of sauciness in a candidate for a clerkship.

This unpleasant dispositional effect is the product of a perverted rather than an unhappy organization. Those who exhibit it usually possess a fine cranial development, but were

spoiled in early youth by the indulgence and indiscreet training of their parents. Among the prominent organs which tend to excite sauciness are Approbativeness, Self-Esteem, Combativeness, and Mirthfulness. Vanity and self-sufficiency, stimulated by a bold effrontery and a malicious humor, are the essential elements of the characteristic."

When we meet with young children who are regarded as "cunning" and "smart," because urged on by the loud approvals of doting mammas, they pertly answer the civil questions of adults, and often unabashed impose themselves and their "little speeches" on the notice of their elders, we deprecate their probable future. Such, unless a new and wiser course of culture be adopted, become the impudent nuisances of society, the plagues of the quiet and unassuming.

VOICES—WHAT THEY INDICATE.—There are light, quick, surface voices that involuntarily seem to utter the slang, "I won't do to tie to." The man's words may assure you of his strength of purpose and reliability, yet his tone contradicts his speech.

Then there are low, deep, strong voices, where the words seem ground out, as if the man owed humanity a grudge, and meant to pay it some day. That man's opponents may well tremble, and his friends may trust his strength of purpose and ability to act.

There is the coarse, boisterous, dictatorial tone, invariably adopted by vulgar persons, who have not sufficient cultivation to understand their own insignificance.

There is the incredulous tone, that is full of a covert sneer or a secret "You-can't-dupe-me-sir" intonation.

Then there is the whining, beseeching voice that says "sycophant" as plainly as if it uttered the word. It cajoles and flatters you; its words say "I love you—I admire you; you are everything you should be."

Then there is the tender, musical, compassionate voice, that sometimes goes with sharp features (as they indicate merely intensity of feeling) and sometimes with blunt features, but always with genuine benevolence.

If you are full of affection and pretense, your voice proclaims it.

If you are full of honesty, strength, and purpose, your voice proclaims it.

If you are cold, and calm, and firm, and consistent, or fickle, and foolish, and deceptions, your voice will be equally truth-telling.—*Agnes Leonard.*

A TENNESSEE Dutchman having caught his son in wrong-doing, determined to administer a dose of hickory. So he trimmed a switch and went to look for the youngster, who incontinently took to his heels. After chasing the boy around for a while, the old man thought to persuade him to stop and take the licking. So he halted and hailed the wary fugitive: "Shon," said he, "Shon, stop! I'm not so mad as vat I vash!"

FAMOUS HISTORICAL PERSONAGES.

No. 1.—ELIZABETH, QUEEN OF ENGLAND.

BY E. W. TULLIDGE.

[CONCLUDED.]

OUR heroine remained at Whitehall three weeks, while the privy council was debating her fate. Charles V. of Spain hated her for her mother's sake, and the murderous policy of the brother of Catharine of Arragon was openly avowed; and Renaud, the Spanish ambassador, went so far as to intimate that Don Philip would not venture his person in England till Elizabeth and Courtenay were executed; but Mary would not shed her sister's blood, yet consented to send her to the Tower.

When they were about to remove her to the Tower, Elizabeth prayed so earnestly to see her sister, or to write to her, that the Earl of Sussex was touched with compassion, and undertook to deliver her letter to the queen. Elizabeth then wrote a powerful letter, pleading her own cause with pathos and the bold truthfulness of despair. She took good care not to bring her epistle to a conclusion until the tide had ebbed so far as to render it impossible to shoot the bridge with a barge that turn, so that she could not be removed that night. But the Tower was the place of doom; and Mary rated soundly the generous Sussex, and the rest of the council, for losing the tide.

Soon after nine o'clock next morning, Sussex and the Lord Treasurer came to inform Elizabeth that she must away with them to the Tower. She replied, "The Lord's will be done. I am content, seeing that it is the queen's pleasure." But as she was conducted through the garden to the barge, she turned her eyes toward every window in the lingering hope, it was thought, that some one would espouse her cause, and then she passionately exclaimed, "I marvel what the nobles mean, by suffering me, a princess, to be led into captivity; the Lord knoweth wherefor, for myself I do not."

On her way to the Tower, the barge was nearly wrecked; but none of the anxious spectators suspected the quality of the pale girl, whose escape from a watery grave they had just witnessed.

Elizabeth objected to being landed at the Traitor's Gate; "neither well could she, unless she should step into the water over her shoe," she said. But she was told that she must not choose, and as it was raining, a cloak was offered to her. "She dashed it from her with a good dash," and as she set foot on the stairs, exclaimed, "Here lands as true a subject, being prisoner, as ever landed at these stairs. Before thee, O God, I speak it, having no other friend but thee alone."

Instead of passing through the gates, she seated herself on a damp stone, reluctant to the last to enter a prison which had been so fatal to her race. The Lieutenant of the Tower said to her, "Madam, you had better come out of the rain; you sit unwholesomely." "Better sit here," she replied, "than in a worse place; for God knoweth, not I, whither you will

bring me." When the doors were fastened upon her in the Tower with locks and bolts, she was sorely dismayed; but called for her book, and gathered the sorrowful remnant of her servants around her, begging them to unite with her in prayer for Divine protection and succor.

Bishop Gardiner, the chancellor, and nine others of the privy council, soon after came and passed her through a rigorous examination. After submitting to it for a long time, she said, "You sift me narrowly, but you can do no more than God hath appointed, unto whom I pray to forgive you all." Whereupon the Earl of Arundel kneeling down declared, "Her Grace said truth, and that himself was sorry to see her troubled about such vain matters." This startled all present, for Arundel had been foremost in urging Mary to bring her to execution. His admiration at the noble conduct of Elizabeth wrought in him such a reaction, that, henceforth, he not only labored as hard to preserve her as before to destroy her, but offered his heir to her for husband, which being declined, he tendered her his own hand, and became one of the most persevering of her wooers.

The attachment which existed between the captive princess and her faithful adherents in the Tower would form a beautiful chapter of romance. Sir John Harrington, the younger, says, "that his parents had not any comfort to beguile their afflictions, but the sweet words and sweeter deeds of their mistress and fellow-prisoner, the Princess Elizabeth." Yet, though she could thus comfort those faithful ones in affliction with her, she told the French ambassador, in after years, that "having no hope of escaping, she desired to make her sister one request, which was, that she might have her head cut off with a sword as in France, and not with an axe, after the present fashion adopted in England, and therefore desired that an executioner might be sent for out of France, if it were so determined."

Elizabeth's comforters in the Tower were the little children of the officers and servants, of whom Agnes Strickland relates some pretty episodes. All through her life our heroine was very fond of children. In the Tower, one little boy, about four years old, was accustomed to bring her flowers, and in his pretty prattle she took great pleasure; Mary's ministers suspecting that this child passed communications from Courtenay and Elizabeth, examined him threateningly, but could get nothing from the child, and his parents were forbidden to let him have access to the captive princess. The next day the garden was locked against him, but he peeped through the keyhole, and called to her as she was walking in the garden, "Mistress, I can bring you no more flowers." Another time a little girl, finding some small keys, brought them to her, and innocently told her that "she had brought her the keys now; so she need not always stay there, but might unlock the gates and go abroad."

Her protectors were now Arundel, Pembroke, Sussex, her uncle Admiral Howard, Paget, and

Petre; thus Providence divided the Catholic council of her, sister to preserve Elizabeth, while Gardiner headed the party bent on her destruction. Midst these agitations, Mary was taken with a sudden illness, and Gardiner sent a privy council warrant to the Lieutenant of the Tower for the royal prisoner's immediate execution. He knew Elizabeth's temper, and feared her vengeance in case of the death of Mary. But the Lieutenant, observing that the signature of the queen was not affixed to the warrant, and being sorely grieved for the charge it contained, refused to execute it until he had direct communication from the queen herself. This preserved Elizabeth's life, and when Mary found out the plot, she sent Sir Henry Bedingfeld, with a hundred of her guard, to take command of the Tower, and soon decided to send her to Woodstock under the charge of Bedingfeld and Lord Williams of Tame, on whom she could rely.

When Elizabeth saw Sir Henry enter the inner court with his hundred men-at-arms, to remove her to Woodstock, supposing it to be the prelude of execution, she demanded, in terror, "if the Lady Jane's scaffold were removed." The Lieutenant tried to calm her, but she, not knowing what kind of man Bedingfeld was, asked "whether he were a person who made conscience of murder, if such an order were intrusted to him."

From the Tower she was conducted to the palace, where she had an interview with the queen, who offered her pardon and liberty if she would accept the hand of the Prince of Piedmont; but she firmly refused to contract marriage with any foreign prince, alleging her preference of a single life. This incensed the queen against her again, and that evening all her servants were removed from her. She requested the prayers of her departing servants with mournful earnestness, for added she to them, "This night I think I must die." Evidently she, in this night of despair, lost her wonted extraordinary trust in God, which she had a little while before so nobly maintained, even in the face of the all-powerful Bishop Gardiner and the rest of the nine commissioners, to the admiration of Arundel; but now she saw before her a similar fate to that of her grandmother's brothers, murdered by Tyrrel, at the order of Richard III.

Next morning, in crossing the river at Richmond toward Woodstock, she found her disbanded servants on the banks of the Thames, there to take a last look of her. "Go to them," said she, "and tell them from me, *Tanquam ovis*, like a sheep to the slaughter; for so am I led."

Her confinement at Woodstock was not less rigorous than at the Tower; but in this Sir Henry Bedingfeld designed, perhaps, to be her best friend, in preserving her from her unscrupulous enemies; for the strength of the guard around was her protection.

But the lofty spirit of Elizabeth was saddened, and she expressed a wish to change fortunes with the merry milkmaid in Woodstock Park. While in this frame of mind, she

composed the following pathetic lines, written on a shutter with a piece of charcoal:

"Oh, Fortune! how thy restless wavering state
Hath fraught with cares my troubled heart,
Witness this present prison, whither fate
Could bear me, and the joys I quit.
Thou caus'dst the guilty to be loosed
From bands, wherein are innocents inclosed,
Causing the guiltless to be strait reserved,
And freeing those that death hath well deserved;
But by her envy can be nothing wrought,
So God send to my foes all they have brought.
Quoth Elizabeth, prisoner."

The imprisonment and anxieties of the princess brought her into a state of severe illness, and Mary sent her physicians to her, who reported favorably of the loyal feelings of the royal maiden, which had a favorable effect on Mary's mind. Elizabeth frequently confessed; and at the pressing instances of her kinsman, Cardinal Pole, who feared her death, she professed herself a Roman Catholic; but Mary, doubting her sincerity, caused her to be questioned touching her belief in transubstantiation. She replied in the following extempore lines:

"Christ was the word that spake it,
He took the bread and brake it;
And what his word did make it,
That I believe, and take it."

Neither Catholics nor Protestants could impugn the orthodoxy of Elizabeth's ingenious explanation of her belief.

Elizabeth was restored to royal favor; and at court she found, henceforth, a protector in Philip of Spain, who, it is said, even while his wife Mary lived, became too ardent a suitor to the princess; for the queen bore him no offspring, and the precarious state of her health rendered it very desirable, in Philip's eyes, to secure the princess as his future wife; and, hence, immediately after the death of Mary, he sought the hand of her sister.

But Elizabeth had several removals of residence in the interval of her restoration to royal favor and the death of the queen. And at one time, either disgusted with her visit to court, or again apprehensive, contemplated taking refuge in France, for Henry II. in his treacherous designs to destroy the presumptive heiress to the throne of England, to pave the way for his daughter-in-law, Mary Stuart, had never ceased to urge Elizabeth to take refuge in France; but, at this juncture, the unscrupulous Noailles had been superseded in office by his brother the Bishop of Acqs, who scrupled to become a party in the iniquitous scheme. When the Countess of Sussex came secretly to him in disguise, to ask his assistance in conveying the princess to France, he advised her better, and when the countess returned to him, he plainly told her "that if ever Elizabeth hoped to ascend the throne of England, she must never leave the realm." He afterward declared that Elizabeth was indebted to him for her crown. Her fate would have been that of Mary Stuart.

The princess was at her house at Hatfield, when the privy council of the late queen came to announce the death of her sister. She was proclaimed to the Parliament of England by Lord Chancellor Heath, Archbishop of York.

on the 17th day of November, 1558, and afterward at the palace by the Lords and Commons; and to the city by the Duke of Norfolk, Earl Marshal of England; and on the 19th the proclamation was made before the gates of Hatfield House; and then the mighty Elizabeth, for the first time, was addressed by the splendid title of queen, and heard proclaimed that Providence had given the scepter of England to her hands. Though well prepared for the event, she at first appeared amazed and overpowered at what she heard, and then, drawing a deep respiration, she sank upon her knees and exclaimed in Latin, "It is the Lord's doing, and marvelous in our eyes. I have chosen God for my helper." These sentences are the mottoes on her coin, as they were also on those of Mary. Though the application on this occasion has been considered as ready tact, they show reliance on God notwithstanding; nor should it be forgotten that in her direst need she always besought the Divine protection, and manifested a sublime trust in its shield. It was this quality in her that awed and frustrated Gardiner and the rest of the commissioners, and won not only the admiration, but the love of Arundel, the stout pillar of her Catholic sister's throne. The religious character and almost fanatic majesty of an Elizabeth, or a Cromwell, with his semi-prophetic war-cry, "The sword of the Lord and of Gideon," might not be so easily comprehended, but there is a grand consistency in them—a splendid harmony made not sweeter, but more sonorous by the very discords of their lives.

In the self-same day and hour that announced to her that she was queen of England, she entered upon that splendid management of the affairs of her realm, which she continued over her long reign of forty-five years, creating the great men of her day, molding Protestant empire in England, grappling with the complications in Europe, and giving a lasting balance to the world. She immediately held a privy council at Hatfield House, at which Sir Thomas Parry, Cave, Rogers, and Cecil were sworn in as members. Her address to Cecil on this occasion is noble:

"I give you this charge, that you shall be of my privy council, and content yourself to take pains for me and my realm. This judgment I have of you—that you will not be corrupted by any gift, and that you will be faithful to the state; and that without respect to my private will, you will give me counsel which you think best; and if you shall know anything necessary to be declared to me of secrecy, you shall show it to myself only, and assure yourself I will not fail to keep taciturnity therein: and, therefore, herewith I charge you."

She left no doubt on the minds of her ministers as to the one she had chosen to guide the helm of state; and on this very day Cecil was made her principal secretary. Thus commenced, between that great statesman and his greater queen, their long relation, only broken by the death of that famous minister.

Directly after this she left Hatfield House,

attended by her privy council, to take possession of the royal fortress of the Tower; and her entry into London was as a jubilee to the people. Robert Dudley, as her master of horse (afterward Earl of Leicester, her great favorite), rode by her side. On the road to Highgate a procession of bishops met her, and, kneeling to her, paid her homage. She allowed graciously each to take her hand and kiss it, till she came to the "bloody Bishop Bonner," who essayed to kiss her hand, but she withdrew it and turned from him with abhorrence.

Conducted by the great officers of state, and the Lord Mayor and city authorities, she proceeded to Charter House, where she remained five days, sitting every day in council, and then she took up her residence in the Tower, where she continued to hold councils daily.

On entering the Tower, where she had been a prisoner, she made the following striking address to those around her:

"I am raised from being a prisoner to be the princess of this realm. That dejection was a work of His good justice, but this advancement is a work of His great mercy. As they were to yield me patience for the one, so I must bear myself to God thankful, and for the other to all men merciful."

Ever mindful of her obligations to the Divine Protector, ever certain to make her manifesto thereof, she then went to her former prison cell; and, falling upon her knees, offered up aloud a powerful prayer, in which she compared herself to Daniel delivered by God from the lions' den.

Elizabeth proceeded very cautiously in her work, and in three months very gently brought forth the stupendous revolution of the times. She wisely sought to find who of the late Catholic queen's council would unite in carrying on her government with the Protestant remnants of her brother's administration, and further, in her great policy, strengthened her power in the House of Lords by creating new peers. And now was coming up her mighty struggle with Rome and the bishops of her realm.

She instructed the minister of her sister in Rome to assure Pope Paul of her protection alike of all the religious denominations in her realm. But this was too much the era of innovation and heresy for his Holiness, who replied, "that he was unable to comprehend the hereditary right of one not born in wedlock," and he gave her crown to Mary Stuart, the "legitimate descent of Henry VII." Is it wonderful that Mary Queen of Scots met her fate at last? for this is not one hundredth part of the deep goadings which Elizabeth received over her unfortunate cousin Mary. But Pope Paul was not strong enough to break down the mighty sovereign who had risen in England, and who was destined to destroy forever the dominance of Rome and Spain. She recalled her minister from Rome, and then grappled with the bishops of her realm. They refused to crown her, but in vain. They refused to ordain any bishops of the new faith to officiate at the coronation; but that would have amount-

ed to but little, for the royal Bess would have ordained bishops herself (or something very like it), to have given to her head its crown and its anointing, ere she would have lost the day. One of the prelates, at last, reluctantly consented to officiate at her coronation, namely, Dr. Oglethorpe, Bishop of Carlisle, and he died in a few months after of a broken heart for having crowned her. Probably he consented to preserve Elizabeth from doing what, in less than three months from Mary's death, she accomplished, namely: The creation of the Primate archbishop of Canterbury, which at once virtually overthrew the Catholic Church and established the Reformed Church in her kingdom. She caused the famous test oath of Henry VIII. (of the supremacy of England above that of Rome) to be put to all the members of her council and to the Parliament, and thirteen bishops were ejected from Parliament for not taking that oath, and their sees and miters were given to the most eminent Reformers. Dr. Parker, friend of Anna Boleyn, was created Archbishop of Canterbury.

But to return to the queen's coronation; and here comes a very curious historical fact. At Woodstock, Elizabeth, through her servants, the Parrys, had become acquainted with Dr. Dee, afterward famous throughout Europe as an alchemist and astrologer. Blanche Parry, her confidential maid, was the favorite pupil of this Dee, and herself an adept in astrology. This man all through her life had a wonderful influence over Elizabeth, for he had cast the nativity of her sister Mary, and predicted her early death; and he had also cast our heroine's nativity, and of course had predicted for her a glorious reign. She now sent her favorite (Dudley) to consult her astrologer as to the day most propitious for her coronation; and the astrologer, the Queen, and her privy council agreed that Sunday, the 15th of January, 1559, was the day of fate. Thus we find the curious fact, that an astrologer ruled Elizabeth and her privy council, and chose the day for the coronation of England's mightiest sovereign. This is but one of those striking instances that these children of missions and destinies are inspired with their splendid superstitions.

Agnes Strickland, noticing the fact that Leicester in the very first week after her ascension became master of horse and favorite, supposes that there was previous to this some hidden passages in their lives which do not appear on the surface of history; and suggests the probability of some love episode between them while they were both fellow-prisoners in the Tower, he being there as participator in the conspiracy of Northumberland, his father. But Agnes Strickland also informs us in her book, that Leicester was born on the very same day, in the very same hour, with Elizabeth, in the same circle, playmates in childhood and in their youth, and now he was the one whom she sent to consult the astrologer touching her coronation. Her figure of nativity was almost identically his own; and though astrology

might not be worth the weight of a feather, it is more than probable that Elizabeth, who was such a believer in it, in her superstition connected all these circumstances in her mind now that she had come to the throne, and hence drew Leicester, the handsomest man of the age, so near to herself. But this very superstition—the very influence of Dr. Dee, whose interest it was to predict for her a glorious reign, and the triumph over all her enemies, might doubtless have made her feel herself more invincible in measuring arms with the Pope—with all—even to the mighty Philip of Spain.

Her charge to her judges, soon after her ascension to the throne, is truly worthy of reproduction here.

"Have a care over my people. You have the care of my people: do you that which I ought to do. They are *my* people. Every one oppresseth and spoileth them without mercy. They can not revenge their quarrel, nor help themselves. See unto them! See unto them! for they are my charge. I charge you, even as God hath charged me. I care not for myself—my life is not dear unto me. My care is for my people. I pray God whoever succeedeth me be careful as I am."

Would that every sovereign thus did plead for the people. The royal *Bess* was terrible to the great, to her lords (even her favorites), to her parliament, to foreign princes, to her rivals, but woe be to those who touched her kingdom or her humble subjects. She was a lamb to children—a mother to her people—a heroine to her nation; hence she was so long, in spite of her faults, the idol of England.

At the very first sitting of her parliament, the Speaker of the House brought up a petition urging her marriage. She replied in a long oration, which she concluded by taking off her coronation ring and showing it to the Commons, telling them that—

"When she received that ring, she had solemnly bound herself in marriage to the realm; and that it would be quite sufficient for the memorial of her name and for her glory if, when she died, an inscription were engraved on a marble tomb, saying, 'Here lieth Elizabeth, which reigned a virgin, and died a virgin.'"

On the day of her grand "recognition, procession" through London, the whole city is described by eye-witnesses as resembling one vast stage of semi-dramatic performance, between this most popular queen and her loving subjects. The very-humblest played their spontaneous parts with her, and to these she was the most gracious and refulgent with smiles. To those who wished her well, she replied with such as, "God save you all!" and that "she thanked them with all her heart." Then, as all through her life, she was evidently prouder in being the *idol of the people* than the flattered mistress of the great. The crowning part of the pageantry of the day was the presentation to her by the city of a Bible, which was handed to her by a little girl representing Truth. She "received it in both hands, kissed

it, clasped it to her bosom, and thanked the city for this present esteemed above all others, and promised to read it diligently." As she passed through Temple Bar, she said as farewell to the populace, "Be ye assured I will stand your good queen;" whereupon the acclamations of the people in reply exceeded the thunder of the ordnance at that moment shot off from the Tower.

Upon her coming to the throne, Elizabeth was careful to redress all causes of dissatisfaction among the operative classes, whom she regarded as the bone and sinew of the realm, and punished severely any who oppressed her people.

In the year 1560, the Queen kept her "Maunday" after the old fashion, in her great hall in the court at Westminster, by washing the feet of twenty poor women, and then gave gowns to every woman, and one of them had the royal robe in which she officiated; and then she drank to every woman in a white new cup, and afterward gave her the cup. The same afternoon, in St. James' Park, she gave a public alms of small silver coins to upward of 2,000 poor men, women, and children. No wonder that down to our own times she was to the masses of England the "Good Queen Bess." It is only the unsparing critics of an age of book-making who have taken a delight in destroying this charm of national reverence by showing up most the errors in the long life of this great but imperfect woman; and Ristori has made her to the public as hideous as Charles Kean makes his Louis the Eleventh. Indeed, Paolo Giacometti, in his play of Elizabeth Queen of England, seems to have copied much from the conception of the character of Louis; and Ristori makes the part immense in that quality. But there is no comparison between the two characters. There is infinitely more likeness between Elizabeth and Cromwell; both of whom were grand fanatics over their missions. Here is the proper conception of Elizabeth of England—Elizabeth as the imperial soul of the grandest age the world has ever seen. Let her be a sun with an eclipse. Leave not out the marriages of her long life, which with the best is not without imperfections, and remember her beautiful heroism, patience, and religious trust in her girlhood, and forget not that in her grand assumption of a mission, of a semi-religious character, she overturned the hideous Past, created an era, left to the future a world fairly started in another of its grand revolutions of upheaving civilizations, nor forget how faithful for seventy years she lived to this end.

Sir Robert Nauton describes her thus: "She was of person tall, of hair and complexion fair, and therewithal well favored, but high of nose; of limb and feature neat," etc. But Ristori represented her with as vulgar a mop of red hair as any painter would desire to give to some "good-for-nothing Nan," with a vocation of the fish-basket. Now, upon the authority of physiology, it can be affirmed that Elizabeth, with her splendid physical and intellectual organization, with that "high nose" of majesty,

could not have possessed that vulgar blazing red mop. Doubtless the truth is, that she had fine tresses of deep golden hair; and seeing that in her youth, in all her pageantries, the populace was ever impressed with her Juno-like majesty, we might reasonably conclude that she was beautiful, even to her "fair hair." Mary Stuart was the Venus of the age, but no woman could have better sustained the character of Juno than Elizabeth.

There is one woman in America that could have played, if not a more terrible Elizabeth, yet a more legitimate Elizabeth, and that is Julia Dean Hayne, queen of the American stage. It is doubtful if a Catholic Ristori would or could play the great Protestant queen, and give her all the splendid inspiration of her mission, for she must love her to fully delineate her; for Elizabeth loved herself and her great part in the drama of her age, with a passion at once weak and grand.

Touching the blackest page of Elizabeth's reign, the execution of Mary Stuart, we must, without justifying her, consider her provocations, her fierce temptations, the plotting of her ministers to that end, and her long struggles to resist her worst promptings, and how against it all, for eighteen years, she really shielded her fair rival from the stroke of the ax, which at last she only allowed to fall at the repeated clamor of the Parliament of England.

We must remember, too, that Henry II. of France, even when she was yet princess, endeavored to trap her into France to destroy her, to pave the way for his daughter-in-law, Mary Stuart; that when she mounted the throne, Paul the Pope declared her illegitimate and gave her crown to Mary of Scots; that by the counsel of Henry II. of France, Mary of Scots and her husband assumed the arms and style of king and queen of England; that by testament when nigh unto death she transmitted not only the kingdom of Scotland, but her right to the English throne (in the case of her having no issue), to the heirs of France; that she supported the standing proclamation that Elizabeth was bastard; that the nobles of England and the people of the north raised civil war in the land to put her on Elizabeth's throne; that the great and only Duke in England, Norfolk, kinsman of Anna Boleyn, was seduced by his love for the beautiful Mary to relinquish his loyalty to his queen and country; that he and Mary invited the terrible Duke of Alba to aid them with foreign troops; and that at last, after all the years over which extend these events, covered with the machinations of Catholic Europe for her, and plots and rebellions in England, Mary was executed through her implication in the Babington conspiracy.

The mighty Elizabeth died at the age of seventy, having won all the issues of her times, with some dark blots; but she left the many glorious pages of her matchless reign for the scrutinizing eye of succeeding generations.

In our next we will introduce Mary Stuart, who is usually considered as complementary to Elizabeth, and we will attempt to explain her part in the problem of the age.

REV. NEWMAN HALL, LL.D.

REV. NEWMAN HALL, LL.D.**PHRENOLOGICAL CHARACTER.**

THIS is the head of a racy, popular, and practical character. Observe the large perceptive faculties. Such an organization takes impressions on the wing. He would learn quite as much by seeing as by reading or by study. What descriptive powers! and how persevering! Observe also the dome to this edifice. See what a skylight he may have, and how natural and easy for him to open his mind to the reception of impressions from above! How easy to come under religious influences, and to live a godly life! There is little or nothing of the sensual in this face, a little more of the passional, very much of the mental and the spiritual. His temptations would be accordingly fewer than those of men more grossly organized. One with such a brain ought to be not only self-regulating, holding all the propensities in strict subjection to the moral sense, but should be an example for others less favorably constituted. This we believe to be the fact in regard to this gentleman. He is something like our American learned blacksmith, Elihu Burritt, and much given to books and to learning. It costs but little effort for one thus organized to acquire knowledge or to communicate it. He is adapted to authorship, to literature, and should excel as a descriptive writer. There is less love for the abstract or the strictly philosophical than for the practical, the scientific, and the definite. Following the bent of his own inclinations he would inevitably become what he is, a practical reformer and philanthropist.

BIOGRAPHY.

Rev. Newman Hall, a distinguished English clergyman and temperance reformer, was born in 1815, and educated at Totteridge, Hertfordshire, England. His father was the proprietor and publisher of the *Maidstone Journal*, and young Newman spent the greater part of his youth, to the age of sixteen, partly engaged in study and partly in assisting his father; becoming well versed in all the departments of a newspaper; from setting up type and correcting proofs to reporting speeches and writing leading articles. At the age of sixteen he became

the subject of deep religious impressions; and much of his time was then spent in teaching in Sunday-schools, in the distribution of tracts, in addressing hop-pickers in the field, and in other good work. In 1837 he became, by the advice of his friends, a student in Highbury College, and in 1841 he took his B.A. degree in the London University, preaching in various parts of the country in the interim. In May, 1842, he was invited to take charge of Albion Chapel, Hull. In 1854 he removed to London and became pastor of Surrey Chapel, Blackfriars Road—well-known in religious circles as being the place where Rowland Hill planted himself—where he drew together large and admiring congregations.

Mr. Hall is an earnest promoter of educational, philanthropic, and religious measures. In the winter of 1860 he instituted a series of weekly lectures to workmen in his chapel, which were attended with great success, being assisted by Lord Shaftesbury, Mr. Layard, and other distinguished *litterateurs*. The general attendance at these lectures was over 2,000, of whom 1,000 were artisans; and many of these were prevailed upon to give up entirely their habit of spending evenings at public-houses; others were induced to go to church on Sundays; and the prejudice against "parsons" and churches was greatly broken down.

Mr. Hall has published "Scriptural Claims of Teetotalism;" "It is I;" "Divine Socialism;" "The Forum and the Vatican;" "Come to Jesus," and several other valuable works. He has not confined himself to his pastoral duties alone, however. He has worked ardently in many ways for the amelioration of humanity, and especially has been, and is, one of the most popular advocates of the temperance cause in England.

REV. THOMAS BINNEY.**PHRENOLOGICAL CHARACTER.**

THIS is the portrait of an eminent character, as it must appear to the eye of every observer a very remarkable head and face. In size, the brain is considerably above the average, measuring nearly twenty-four inches in circumference, and long and high in proportion. Indeed, it is magnificent. Compare that countenance with the likeness of an ordinary person, and mark the difference. It speaks the power it is. With a body of the best material and proportion, with a brain so large, of good quality, and so active, and a mind so highly cultivated, what else could we expect than a character something above the average? There is a stateliness and a dignity which are impressive, and with integrity and decision, which hold steadfastly to the truth, with kindness as broad as humanity, he would be moved by the most philanthropic spirit. With so fine an intellect, with so much originality, he must necessarily step out of the old beaten path and strike out a new course. How could it be expected that such a man would run in a rut,

REV. THOMAS BINNEY.

or follow in the wake of lesser lights! There is a reach to this mind which comprehends the globe and what is on it. There is something akin to the original discoverer in this, as he must inevitably be much of a philosopher. This head was made to lead rather than to follow. What power of eloquence is indicated here! Imagine, for a moment, that countenance lighted up by the moral sentiments and emotions thoroughly awakened! How thrilling! how animating! how invigorating! how inspiring he would be! Some men can move a small audience; others can move a large audience; still others may move the people of a town, a county, or a city; while a few there are who can move a nation; and still fewer who can move the world. Put this gentleman in right relations with mankind, and he would be felt in its extremities. Mirth, hope, joyousness, anxiety, will, affection, and all the human qualities, are manifested in this face.

BIOGRAPHY.

Rev. Thomas Binney—one of the most distinguished preachers of the Independent denomination in England, and well known as the author of several religious works, one of which, entitled "How to Make the Best of Both Worlds," has become very popular—is a native of Newcastle-on-Tyne, and was born about the year 1798 or 1799. After receiving his education at what is now called New College, St. John's Wood, London, he settled at Newport, Isle of Wight, as minister of St. James' Church, where he officiated till 1839, when he accepted the pastorate of King's Weigh House Chapel, Little Eastcheap, London, which soon proved far too small for the congregation that he attracted. In 1834, a handsome and commodious New King's Weigh House Chapel was erected on Fish Street Hill, London, where he has ministered with great success for upward of thirty years.

In the address delivered by Mr. Binney at the inauguration of the new chapel in 1834, there appeared a single sentence, which, separated from its surrounding conditional statements, appeared as derogatory to the influence of the Established Church. This brought him into unenviable notoriety from the replies it called forth from newspapers, reviews, and the clergy, and even the Bishop

of London. The agitation continued for two years, when the tables were turned, somewhat to the discomfort of his assailants, by the appearance of an exposition of the execrated words, in a pamphlet by John Search, entitled "What, and Who Says It?" in which Mr. Binney's principles were clearly defined. But the malignant attacks he then received are generally understood to have injured his health, to recruit which he commenced to travel.

In 1845 he paid a short visit to America and the Canadas, where he achieved considerable popularity as a preacher. In 1857 he set out on a tour through Australia, where he preached and lectured to large audiences during two years, after which he returned to England and resumed his duties as pastor of the Weigh House Chapel. During his stay in Australia, Mr. Binney published a work on the "Bishop of Adelaide's Idea of the Church of the Future," which was afterward published in London, under the title of "Lights and Shadows of Church Life in Australia."

Mr. Binney has published several occasional pieces and sermons. In 1826 he published the "Life of Rev. Stephen Morrell." "What, and Who Says It?" was supposed to be from his pen. He is the author of "An Argument on the Levitical Law Touching the Marriage of a Deceased Wife's Sister."

Mr. Binney was the first to introduce chanting into the service of the Independent congregations, and published "The Service of Song in the House of the Lord." His most popular works are a volume of discourses on the eleventh chapter of Hebrews, entitled "The Practical Power of Faith," and "How to make the Best of Both Worlds!" of the latter of which 30,000 copies were sold in less than twelve months.

As a preacher, Mr. Binney holds a perfect command over his audience, their smiles and their tears; his teachings are eminently characterized by thought, tenderness, manliness, and frequently by humor; he has great descriptive power, which is always of a simple and natural character. He is of tall and commanding presence, and possesses a voice capable of a very deep and impressive tenderness. He has a manly heartiness and acuteness of thought and wit, which have led one critic to liken him to Latimer and South.

USE the best language in your common conversation at home, and you will soon acquire the habit of using it on all occasions.

It is only those who have done nothing who fancy that they can do everything.

THE Lord wills not only the salvation of His people, but also their present comfort.

AFFECTIONATE.—A Connecticut newspaper states that the third wife of a poor man living at Plainfield, in that State, has worked in a factory till she has saved \$129, which she expended in the erection of two neat headstones, in the cemetery, to the memory of his two dead wives.

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one fate
Their hearts, their fortunes, and their beings blend.—*Thomson.*

MY BOYHOOD'S HOME.

BY SAMUEL CAMERON.

[Lines suggested on visiting, for the first time in fifteen years, scenes in my earlier life.]

"Oh! Memory, thou fond deceiver,
Still importunate and vain,
To former joys, recurring ever,
And turning all the past to pain."

HAIL! scenes of my boyhood, more dear to my heart

Than ever ye were in your beauty before,
To my bosom these moments new pulses impart,
And more than the bliss of that boyhood restore.

For then, as the sunbeams in purple and gold,
O'er the green leafy woodland went down in the west,
Young Fancy would oft her creations unfold,
And teach me that earth was the home of the blest.

And there, through the play of the shadowy leaves,
The light would those small, fairy avenues fill,
And mournfully sweet, through the calm summer eves,
Came the lone mellow voice of the sad whip-po-will.

'TWAS THE HOME OF MY FATHER—and there, in those hours.

His children would gambol, with hearts full of glee,
While our Mother, with smiles, like the sunlight on flowers,
Would gaze on our pastime, as happy as we.

But Father and Mother and Brothers are gone,
Yet their spirits, in holiness, linger there still;
The sunset still shines through the grove as it shone,

And wakes the same song of the sad whip-po-will.

The lattice where oft my dear Mother has stood,
I think even now I should see her there still,
To gaze on the sunlight that plays through the wood,

And hear the good-night of the sad whip-po-will.

But I wake from my dream, and the pleasures are o'er,

And silent the home of the wanderer's heart;
Who, who but the lonely can duly deplore
The fate that hath forced a fond household to part!

For never was home, in the dreamiest hours,
More blest with enjoyment of heavenly bliss,
Or gladdened with hearts more united than ours,

That 'mid scenes fair as light, made an Eden of this.

And whither, ye playmates, oh, whither have ye,
Like wind-stricken leaves of the forest, been cast?

Do ye rest in the home of the spirit made free,
Or bask in life's sunshine, or droop in the blast?

All gone, and forever! the waves which have rolled,
As bright as the hopes that in innocence burn,

Shall sparkle again in the summer's light gold,
But those joys of my boyhood will never return.

Farewell to the friends of my boyhood's gay pleasures,

When youth, like the lamp of Aladdin, was power;

The world hath no wealth to compare with your treasures,

Gone—gone and forever, as odor from flowers.

Through a world full of beauty the minstrel may roam,

Where nature and art their attractions combine,

But never again can he meet with that home,
As it then, with its love and enjoyment, was mine.

Oh! oft o'er the scenes of life's earlier day,
How fondly shall memory, lingering, dwell!
Bright visions of youth, ye have faded away;
Loved home of my boyhood, forever farewell!

FOR GENTLEMEN TO READ!

HOW THEY MIGHT IMPROVE.

BY MRS. GEORGE WASHINGTON WYLLIS.

MY DEAR SIR—If you disapprove of plain opinions, plainly spoken out—yet no doubt you do—nobody is particularly partial to taking bitter medicine—you had better not read this article. Put it down—lay it away—ignore it utterly. Nine tenths of you, representatively speaking, go and smoke your inevitable cigar—the other tenth get on the back balcony with your heels several inches higher than your heads, and fondly imagine you are "resting." Nobody compels you to look into the mirror of your own faults and follies.

But if you *do* read it, remember that it is point-blank addressed to *you*—not to Mr. Jones, or Mr. Robinson, or any other Mr. It is a little cap exactly fitted to *your* pate, and there is no use handing it to your neighbor to try on.

Not that we would follow the example of the extremists and give in our ballot for abolishing mankind altogether! Dear me! what should we do without 'em when there is a heavy stove to be taken down, or a colossal bureau moved from one room to another, or a lot of baggage to be checked from Maine to California, with howling hackmen, over-eager travelers, and over-loaded express-wagons blocking up the way? What should we do for an arm to hold by in the crowd of opera-vestibule,

church, or concert hall, or a broad pair of shoulders to divide life's burden with us? What would become of us without somebody to scold at, and berate, and find fault with generally, and groan over, and—love? Why, we should have to take one another, and everybody knows how monotonous that would be! No, no—man is a patent article that can't very well be dispensed with; but it by no means follows that the patent can not be improved upon.

You see, sir, you are not the *only* person created. To be sure, we catch a glimpse of you in the Garden of Eden, a little in advance of anybody else, but the woman was not far behind. If she hadn't fortunately made her appearance, you might have been trotting about the Garden yet, forlornly eying the apple-trees, without a soul to sew buttons on your shirt, or put on the kettle for tea, and nobody to talk to but the serpent! The woman has equal rights with your serene highness, and if you don't respect them, then it is high time that you stopped short and asked yourself where this sort of thing is going to lead to.

What right have you to come home in the middle of the night, with your eyebrows in the middle of your forehead, and the corners of your mouth drawn down crosser than King Herod, and readier to "snap" than a bunch of powder-crackers just fired off? Yes, what right? "You are tired to death!" Well, are you the only person in the world that is "tired to death?" Has not your wife been working too, as long, and ten times as unremittingly, as you? What a nice little domestic duet there would be if your wife chanted the same song as yourself—wouldn't there?

For pity's sake, man, dismiss those ugly wrinkles—lay aside that half-alive expression. Come into the house like a sunbeam, not like a ghost from the church-yard vault. Brighten up! look on the sunny side of life. If the body is wearied, all the more reason that the mind should rise up buoyant and elastic! If it was only yourself concerned, there would be no objection to your creeping, Diogenes-like, into the shadow of your tub of trouble, and sitting there, groaning and moaning, until you were tired of it. But you have no right to drag down your wife's spirits and cast a cloud upon the life of your little ones.

"You never thought of that!" No, because you never stopped to "think" at all.

What right have you to walk the public thoroughfares, insolently puffing your tobacco vapors into the face of every woman that passes by? You would not dare to enter the parlors of any lady friend—save perhaps the one who is tied to you for life, and thereby can't remonstrate—with a cigar between your lips. What indemnity is furnished you by the free air and the blue dome of heaven overhead? Have you specially chartered the public promenade? Does stale tobacco smoke smell any sweeter when it creeps under a lady's veil or bonnet-ribbons than when it insinuates itself into the curtains and carpets of her boudoir?

What right have you to stand on hotel steps

and stare sweet innocent girls out of countenance?

What right have you to go to races, base-ball matches, conventions, and other wild beast shows, spending the money and time that belong to your family, and silencing your wife's timid questions with "It's no place for a woman?" Is it a place for a *man*? That's what we should like to know!

What right have you to conceal your business affairs from your wife, carefully keeping her in the dark as to the relative proportion of outgo and income, and, finally, when failure and ruin come, to blame her for not being more "economical?" The mariner never lived who could steer a ship at night with neither compass nor rudder. Your wife is in no way responsible for your commercial disasters.

What right have you, young man, to walk straight from gambling den and drinking saloon into the parlors of pure girls and lily-souled women, and expect a welcome there? Can you touch pitch and not be defiled? Have you no respect for the atmosphere of their noble womanhood?

What right have you to squander your money on champagne breakfasts, fast horses, yacht-racing, and billiards, and then declare, incidentally, "you are sorry little Mary interprets your attentions so seriously—it costs so much to live that you really can't afford to marry?"

What right have you to swear at the altar to "love and cherish" some helpless creature, and then leave her alone and solitary through long days and longer evenings, because "it is so stupid to be tied down at home the whole time?"

What right have you to frown down every possible innovation and improvement that can in any way elevate or better the down-trodden race of your domestic slave, woman?

What right have you to crowd her from store-counters and type-setting-machine tending, and the few other bread-winners open to her?

What right have you to pay her half wages and quarter salaries for work that she does well and promptly, merely because she is a woman?

What right have you to roll up your righteous eyes and mutter "a fast woman," when you see one of them going boldly ahead and conquering Fate instead of allowing Fate to conquer her?

And what right have you to say, "A poor shiftless creature, with no enterprise at all—nothing better could have been expected from her!" when another of them, too weak and spiritless to contend against the in-coming tide of calamity, folds her poor hands and succumbs resistlessly to her doom?

Don't tell us that these are "extrême cases." They are *not* extreme cases. They are cases that look you blankly in the face morning, noon, and night, whenever you open your eyes upon the workings of the great outside world. Ask yourself honestly and conscientiously to how many of these counts you can

plead "Not guilty." Ask yourself if there are no improvements to be made—no wiser methods of solving the old, troublesome riddles. You can be capable of great sacrifices, or history is very much at fault. Why don't you make life beautiful with small sacrifices?

Well, perhaps there is no use in wasting printer's ink and paper. If the daily, hourly contemplation of a woman's patience, and industry, and self-abnegation don't produce the wished-for effect, nothing ever will; and we suppose you, each and all of you, have some domestic appendage or other, wife, sister, mother, or daughter, who plays the part of admiring Queen of Sheba to your sublime Solomon! It is the "old, old story," gotten up in modern type and gilded bindings, only one can't help, once in a century or so, expressing one's plain, honest, and candid opinion.

TRUE, AND UNTRUE MARRIAGES; OR, NOTES BY THE WAY.

NOTE III. On this old familiar log by the wayside, and under this tree where I have often sat, and, undisturbed by the roar and rush of society, thought of human life—of its expectations and disappointments and gains and losses, I find myself again with my notebook and pencil in my pocket, and I take them out, to note down the fact that though the world is said to be growing wiser all the time, the men and women in it continue to marry and to be given in marriage without one sober thought of what they are doing, and with only a slight acquaintance with themselves and with each other.

A man, for instance, has an all-consuming fancy for a beautiful blonde who has crossed his path. He hears, from reliable sources, that "she is a petted, spoiled child;" that "she is very selfish;" that "she thinks of no one but herself;" but his *fancy* is unconquerable. He must have her, and he does have her, and lives to wish that the devil might have her. A man of another style has a *fancy* for a woman of another style, not a blonde, but a brunette. Her soft, rich, dark eyes (and she knows how to look at him) send the blood flying to his brain, and he is sure that if he has to spend his life without her it will be in a lunatic asylum. He marries her, and the first ten years he spends with her seem like eternity, they are so long. The *fancy* of a man has often wasted and desolated his life, for *fancy* is not *love*. It looks very much like it, but it is quite another thing, and what supports it is very different from that which supports love. Lily cheeks and blue eyes, rosy cheeks and black eyes are its support, and when they fade and grow dim, as they do full soon, *fancy* has nothing left to live upon. But love, that asks for good and wholesome fare, such as the mind and heart of a true man or true woman can give, finds an unfailing supply, and grows stronger every year.

Let every man and woman, desirous of a true marriage, look well to it that *fancy* is not the guide, but *love*.

Note IV. A week ago, I wrote the above. What a world of change, and what unexpected things do happen in it! My friend H. C., who, I supposed was doomed to celibacy, or rather, had chosen it as more desirable than a union for life with any one, is now on the verge of matrimony and about to launch away. I must not fail to make a full and faithful note of the fact that he can not really tell whether he is in the body or out of the body, so transported is he with delight in view of what is before him. Indeed, he seems as overjoyed as some are when a sick or aged relative goes up on high to receive his heavenly inheritance, leaving his earthly riches below, to be divided among them. He has offered himself to a fair daughter of Eve, by the name of Angelica, and has—*not* been refused, for Angelica is one of those sincere persons who never say no when they mean yes, and never put off saying yes when they can just as well as not say it on the spot. I know her well, and quite sure am I that my friend H. C., although he is "marrying in haste," will not have to "repent at leisure." She is a true woman, nobly planned. The world has not destroyed her freshness and simplicity, or in any way marred her character, and she will not only mend, most cheerfully, the holes in her husband's stockings, but the wounds in his heart, if any should ever be made by cruel hands. A woman so true, so loving, so unselfish in her *father's* house, can not be less so in her *husband's* house, and H. C. is a most fortunate man in drawing such a prize in the most dangerous of all lotteries.

What would Angelica say, if she could look over my shoulder and see what I have written in my note-book? She would, with her usual modesty and humility, say: "What a foolish man! Why, I am not an angel, if my name is Angelica." And then she would snatch the pencil from my hand and draw it several times over these lines, adding, as another precaution: "Be careful, sir, that you don't drop your note-book, for some people, you know, can read even what has been scratched out. I *only* live to make those under the same roof with me happy, and I'm sure that isn't much, so what's the use of such glowing passages about me!"

Angelica is quite unconscious of the fact that H. C. will find her far above all silver and gold, for all she thinks of doing it "*only*" to make him happy. She don't seem to understand that that alone is a blessed, divine work, and allies her to the angels.

Note V. Ten years ago, I opened my note-book to give H. C. and Angelica a place in it, and now I open it again to note down the fact that my most familiar friend L. M. has taken his sword out of its scabbard, and will not soon put it back again. And who is the foe? One of his best friends, and a very unselfish friend of all the race of man, Phrenology! L. M. has been reading two or three numbers of a phrenological journal, and has suddenly found out that Phrenology is the greatest of all disorganizers; that it strikes at the very foundations of society, even at marriage.

"How so?" I asked, as we sat together, talking of this great disorganizer.

"How so?" replied L. M. "Well, I will tell you. It makes trouble between those who are contemplating a union with each other. It tells a man that the shape of the head, the prominence or depression of certain organs, decide infallibly what the character is, and the anxious lover, not wishing to leap before he has looked, says to the phrenologist: 'There's a certain young lady coming into your office to-morrow, with a friend. She has no idea of having her head examined, but you can put your hand on her cranium, playfully, and then let me know just what she is.'"

"Go on with your case," I replied, unable to suppress a smile.

"Well, a few days later, said anxious lover meets the man who professes to be perfect master of the great humbug and mischief-maker, Phrenology, and asks—with some diffidence, of course—'Well, what about Miss A.'s head?'"

"Not wishing to encourage or discourage any prospective marriage, which he can not *know* will be for the best, the phrenologist answers very discreetly, giving a very exact account of the developments. Anxious lover goes away—ponders on what he has heard—says within himself: 'She'll never do—too much firmness—she'll never yield to me; too little hope—she'll always be discouraged, and I shall have to spend more time in encouraging and cheering her up than I can spare; too much caution—she'll be afraid to do anything, and I shall always have to be urging her forward. She's secretive, too—that's bad, very bad in a woman; I mustn't let my heart get engaged in that direction. Now, what do you think of all that?'"

"I must go a little farther back," I answered, "and tell you that your premises are wrong. Phrenology does not, as you suppose it does, *tell a man that the shape of the head, the prominence or depression of certain organs, decide infallibly what the character is.* It may be that the man whose head is so shaped that he might very easily become a scamp, is one of the noble ones of the world, who 'resist unto blood, striving against sin.' Phrenology recognizes soul-struggles, inward warfares with evil inclinations, heroic moral conquerors, victors over themselves, with badly-shaped heads."

"If your daughter were in love with a man who had a bad head, would you not wish to have her make her way out of love as fast as possible?" asked L. M. with a look of triumph, as if he had caught me in a net from which I could not easily make my escape.

"Yes," I replied; "if his life proved that his bad head ruled him; but if it proved that he was daily fighting a good fight, and bid fair to come off more than a conqueror, I should say that my daughter had better marry him and help him run the race set before him. One of the highest and best uses of marriage is that it helps men and women to grow better, and, if I mistake not, Phrenology, for this very reason, if for no other, sets a high value upon marriage, and encourages it.

"As to the *anxious lover* whom you instance, he is too easily frightened, and fails to understand the power of love. If the young lady whom he is afraid to marry has that love for him that many waters can not quench nor floods drown, her firmness will make her firm in her allegiance to him, and will save her from disagreeable obstinacy. If she has too little hope and too much caution, he will find noble work to do. As to her secretiveness, it will surely help her to keep what he confides to her, and he can, in time, make her as frank as is desirable, if he takes the right way to do it. The idea of mutual help is too much lost sight of in marriage. Men and women, too often led by fancy rather than by love, marry without any idea of the self-sacrifice that is involved in being a helper. And certain it is that Phrenology, if consulted, would let men and maidens, on the verge of matrimony, know that they will have something to do for each other, and also that the opportunities for mutual benefit and mutual improvement that marriage affords prove it to be of God.

"Differently shaped heads need not make trouble between man and wife, and will not, if love reigns."

Here L. M. seemed to waver a little, and I thought he was inclined to put his sword back into the scabbard.

Note VI. H. C. and Angelica have become one; the knot has been tied, and, as they think, never to be untied, either in this world or the other.

It would hardly be correct to call them *enthusiastic* lovers, for they are *earnest* lovers, *serious* lovers, *sensible* lovers, *unselfish* lovers, and a life full of joy and all good lies before them. They have married with the idea of giving as well as of receiving—they pour kindnesses upon each other. Angelica is nothing less than divine in her unselfishness, and father and mother and brothers and sisters say "*she was always so.*" She did not marry with the idea uppermost in her mind of *bettering her condition*—of being *waited on*, and *petted*, and having a *splendid time* generally. She married with the principle of love strong within her. There is nothing she is not willing to do, or dare, or suffer to make H. C. happy, and so she has within herself abiding joy. When young men and maidens cease to be triflers in marriage; when they treat the subject with all the seriousness it deserves, and no longer make child's play of it; when they get higher ideas of themselves and of life, and learn that the source of all happiness between the married, as well as the unmarried, is strong, holy, unselfish love, *true* marriages in the world will be greatly multiplied, and joy and happiness will rapidly increase.

PASSIONATE reproofs are like medicines given scalding hot; the patient can not take them. If we wish to do good to those we rebuke, we should labor for meekness of wisdom, and use soft words for hard arguments.—*Dodd.*

FASHIONABLE HATS.

WE present for the consideration of our readers some specimens of the most fashionable hats worn by ladies during this season. Of course it is not our purpose to recommend the adoption of any style, but simply to show them up, and leave the rest to the discretion of the reader. Simplicity and neatness in dress should be the aim of every member of society, whether she moves in select circles or is classed among "the lower twenty." Some study style merely, some contrast, but few, we are sorry to say, have a sufficient regard for propriety.

THE HENRIETTA.

This hat is made of white pamilla braid trimmed with flutings of blue velvet and an

FIG. 1.—THE HENRIETTA.

elegant marabout feather; this is the most elegant dress hat of the season for either ladies or misses.

THE SARATOGA.

This hat is made of pearl-colored braid trimmed with velvet of the same shade, with

FIG. 2.—THE SARATOGA.

streamers at the back fastened with a pearl ornament—a very elegant promenade hat for ladies.

THE IDAHO.

This hat is of a light pearl shade, with a metallic coating over the braid which renders

FIG. 3.—THE IDAHO.

it perfectly water-proof, and it will not fade by sun or air; it is trimmed with a fluting of brown velvet round the crown, with long streamers falling over the hair.

THE ELITE.

Hat of fine Dunstable braid, low crown, rolled brim, trimmed with velvet facing and a bow

FIG. 4.—THE ELITE.

at the side, fastened with a straw and crystal ornament—a very stylish hat for a small boy.

THE CINDERELLA.

This hat is made of fine tulip braid, with rolled brim and round crown; the brim is faced with velvet, and an eagle's feather with an ele-

FIG. 5.—THE CINDERELLA.

gant marabout pompon is set in one side—a very becoming hat for small girls or boys.

The above illustrations were furnished us by J. R. Terry, of 409 Broadway and 19 Union Square, who is one of the most enterprising hatters in our city.

A USEFUL FASHION—PAST AND PRESENT.

While looking over a dusty collection of old engravings, portraits, and other odds and ends, we happened on the print of which the accompanying engraving is a copy. Struck by the resemblance of the lady's toilet, in most respects, to the prevailing fashions of the present time, we determined to reproduce it. The volume from which the portrait had been formerly detached, on account of a marked phrenological feature, bears the date 1839, and the lady represented is spoken of as having died some years before—at least five—therefore the fashion of to-day is a revival of that of forty-five or fifty years ago. The elevated *chignon* with the back hair brushed tightly up, the front rolls or *frisures*, the pendulous ear-rings, and the low-necked dress are now conspicuous in the composition of a belle on the promenade or in the drawing-room. Moral considerations aside, let us give the brief history of this lady of the old *beau monde*, as we found it in the old book already alluded to.

Mlle. N., a young Parisienne, was so tenderly attached to a lady of her own age, that neither marriage nor the solicitations of her mother could induce her to leave her. Her friend died at a time when such an event was least expected, but Mlle. N. did not immediately exhibit any marked signs of grief, so that her friends deemed her resigned to the loss of her companion. A day or two elapsed after the burial when she was found in her chamber quite dead, having committed suicide. A letter, addressed to her parents, disclosed the state of her mind previous to the fatal act, the substance of which was that she could not survive the loss of her friend. In scanning the conformation of the back-head of Miss N., it must be at once seen how very large the region of the social sentiments appears. Mark the great distance from the ear backward. It is an extraordinary instance, and the above account furnishes the surprising fact in connection with so great a development.

Thus has a fashion of wearing the hair contributed indubitable evidence in support of a phrenological claim, the organ of Friendship being rendered as strikingly prominent in her portrait as that disposition was notorious in her life and death. "Tis an ill wind that blows nobody good." Verily a good end is subserved sometimes by an apparently foolish caprice.

[Hereafter, it is our intention to give occasional "cuts," illustrating the fashions as they are—if not always as they should be—for the benefit of our large circle of lady readers.—ED. A. P. J.]

TOGGERY.

WHAT is the use of togger? Why not dress with a view to comfort, convenience, and good taste? The savage of Africa and the savage of our own Western wilds seem to delight in togger. So do the Turks and Chinese. Indeed, it appears to be a common weakness of savage and civilized to love togger. Little girls rig out their dolls and themselves with useless togger. Great military generals and commodores pile on the togger; so the "brave redskins" decorate themselves with wampum, paint, and togger after a successful scalping excursion.

When the Englishman goes out for a summer holiday or to the "races," he loads and hampers himself with togger, not to mention baskets and boxes of provender, ale, porter, beer, champagne, or whisky, enough, one would think, to last during a voyage around the Kingdom. But we need not go abroad to look for travelers' togger. Go to our watering-places. Look at the ladies' trunks, big enough to hold "a heap" of dry goods—and at the ladies themselves! Look at their little heads, with those awful excrescences, loaded down with togger. What can they have within their little craniums when so much is piled on outside? If one gives her whole mind to externals, what becomes of the internal? But, enough. The foolishness—not to say vanity and wickedness—of these things must be apparent to all unperturbed minds. Good taste—even artistic excellence—requires no such nonsense; what is there in the way of dress more becoming a gentleman than a suit—coat, vest, and pantaloons—all off the same piece, be it blue, black, or gray? So, for a lady. We shall never forget the impression made on our admiring mind by a young lady dressed in this manner! The material was not expensive; frock, cape, and bonnet were made of the same material. She wore her hair short—à la Princess of Denmark—and had no extra ribbons, rings, or togger of any kind, and she was PRETTY. That realized to our mind the saying, "beauty unadorned is adorned the most."

Those horses, and that carriage, with just enough harness for use—and just enough material for strength and comfort, are far more tasteful than if covered with gold tassels, spangles, and other togger. Of all people in the world, we should ignore useless togger. Let savages, heathen, and foolish royalty shine in vain "pomp and ceremony" if they will; but let sensible Americans study simplicity, utility, comfort, and convenience.

SPEND your time in nothing which you know must be repented of. Spend it in nothing, be it work or recreation, in which you might not pray for the blessing of God. Spend it in nothing which you could not review with a quiet conscience on your dying bed. *Good advice.* [Should we not spend our money with the same care? Have we a moral right to use money in games of chance or in mere luxuries?]

On Psychology.

The soul, the mother of deep fears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless inner sight;
Lovely, but solemn it arose,
Unfolding what no more might close.—Mrs. Hemans.

BEAUTIFUL.

BY FRANCES L. KEELER.

A MAIDEN in the sweet spring time
Sat listening to an evening chime;
Her hair was like the rippling sea,
Her eyes were like the stars, and she
Was beautiful.

And when the summer's silver sheen
Clothed all the earth with loveliest green,
She wandered o'er the fragrant lea,
Exclaiming in her ecstasy—

How beautiful!

In autumn time, one golden day,
She gave her trusting heart away;
Then as she strolled beside a stream
With him who won, she dreamed a dream
Most beautiful.

When winter with its fleeting hours
Froze out the life of all the flowers,
The maiden found she loved in vain,
And dream of hers would ne'er again
Be beautiful.

Alas, when next the spring time came
And proved his false heart still the same,
Her snowy robes were laid aside,
For now she ne'er would be a bride
All beautiful.

And when again the summer breeze
Swept o'er the blue, mysterious seas,
Her waiting spirit heard a call
From realms of ceaseless rest, where all
Is beautiful.

Her waxen lips we left apart,
And sweetly o'er her broken heart
We clasped her hands, as if in prayer,
And twined pale blossoms in her hair
So beautiful.

A fading mound 'neath autumn's sun
Tells that her sad, brief race is run;
The daisies withering in the frost
Reproach the one for whom she lost
Earth's beautiful.

But from on high her starry eyes
Look downward through the dusky skies,
And unto God her pure lips pray—
Let him enjoy with me some day
Heaven's beautiful.

DEVELOPMENT OF THE ESTHETIC NATURE.

—:o:—

WE condense from an article by Prof. James Waters, in the *Pennsylvania School Journal*, the following:

A mind to be truly educated must be highly developed in all its intellectual, moral, and esthetic nature. A well-balanced mind is possessed of these powers in about equal proportions. A model mind is this well-balanced mind, stored with knowledge, trained to think, governed by principles, and skillful in recognizing the beauties of nature and art, and equally as skillful in detecting their deformities. While great attention is given to the cultivation of the intellectual and moral natures, but little regard is shown to the importance of developing the esthetic. If its maintenance and development depended entirely upon special training, it

might long since have been nearly obliterated. Like some flowers, which develop into fragrant beauty though left to care for themselves while we are busy training and nourishing our favorites, it springs up despite neglect, flourishing from the culture given to other qualities, and to our astonishment and delight blooms with beauty and fragrance. And in some instances, after lying dormant, or at least unobserved for many years, it crops out through and above the other faculties, healthy and beautiful, just as

"When Autumn comes forth on his mission of death,
To revel in Summer's bright realm,
To scatter the leaves with his pitiless breath,
And the pride of the forest o'erwhelm;
Then the mistletoe green in its beauty is seen
Clinging true to its desolate elm."

If there be a liberal natural endowment of this faculty, and the other faculties are cultivated to its neglect, it is not followed by disastrous results, as would be the case if the other faculties were neglected. Indeed, it sometimes appears to grow spontaneously if neglected. It is the first faculty discovered in the dawning intellect, as for instance, the infant recognition of beauty in the flame of a candle, and harmony in the soothing tones of the lullaby. When memory turns over her historic pages she revels among the beautiful pictures, the majestic scenery, and the sweet, unwritten songs of childhood. When imagination roams over her vast domains, she precedes, plucking the fairest fruits and sweetest flowers, and taking them into her chamber, "bodies forth the form of things unknown," and guides the poet's pen while he "gives to airy nothings a local habitation and a name." She summons all the organs of sense and all the sensations and emotions of the soul into her service. She delights in the shady woodlands, the towering precipice, the awful chasms, the mountain gorges, the expansive prairies, the winding rivers, the golden sunset, the darkening storm-cloud, the thundering cataract, the boundless ocean, the illimitable heavens. And not less does she enjoy the elegantly little. The tiniest machine, the delicate wing of the butterfly, the meshes of the spider's web, the coral rocks, the microscopic legions inhabiting a drop of water—upon whatever the eye turns she exercises her prerogative, and thereby may be developed.

Into her spiritual chamber flow musical harmonies inaudible to grosser ears. She hears sweet music in the sighing of a reed, in the gushing of a rill, a plaintive story in the passing breeze, a majestic strain in the roar of the ocean; and in earth's echoes she catches the diapason of the spheres. All the powers of the soul and body are laid under tribute to add to her treasures.

We may affirm that God takes care of the esthetic nature of children when the intellect and morals are properly developed. Wheresoever a thorough discipline of the reasoning powers is instituted; wheresoever memory is stored with information which can be called up at will; wheresoever the imagination has been trained to form delicate, complicated, or

grand conceptions; wheresoever abstraction has been led over the realms of nature, science, and art, and taught to classify, if the perceptive faculties are in a healthy state, there we need take no thought how to begin the development of the taste, for already it is largely developed. A few illustrations will suffice to show the truthfulness of this position. A savage, for instance, stands upon the brow of a precipice, from which he looks down into immeasurable depths, and commands a view of vast prairies, broad woodlands, winding rivers, and lofty mountains. He is conscious of no emotion of special pleasure, but moves with stupid insensibility amid the sublimest scenery. Now place the cultivated man on the same spot. Instantly he experiences indescribable pleasure. His soul swells with an ecstasy of motion which no language can express. The same contrast is observable in the same individual at different periods of life. Objects which childhood could not appreciate are sources of delight to manhood. The cultivation of the reasoning powers enables the mind to trace the noble significance of things. It is thus led through and beyond the material into the ideal world, through the finite into the infinite, "through nature up to nature's God," introduced into a new kingdom, in which old things become invested with new interest, and gross things become radiant with beauties invisible to the vulgar eye. To enjoy, we must understand. To understand, we must reason, think, study, exercise all the powers that can throw light upon or receive impressions from the subject. Nothing is more apparent than the difference between the cultivated and the uncultivated in regard to their appreciation of sublime actions, motives, characters, sentiments, especially if we embrace in the term cultivated only those whose morals and intellects are equally developed. However, the emotion of taste in the contemplation of a moral action or sentiment is wholly independent of the moral emotion, and is experienced as fully, to all appearances, in the mind of the atheist as in the heart of the most devout man of God. In reviewing the lives of eminent poets, how poignant the reflection that many of them have given us no assurance that they have followed as well as found the better way to that realm where exist beauty and sublimity which mortal eye hath not seen nor imagination pictured!

But while the cultivated atheist may enjoy as largely the emotions of beauty and sublimity as the Christian, there is one field of observation from which he excludes himself. The Christian's faith and hope open to the soul the sublimest field of view, the loftiest themes, and the most magnificent expressions of creative energy and infinite love. What can so elevate the whole man, and so refine his whole nature, as the honest, hearty reception of revealed truth—truth too grand for human conception, and attracting the admiration of angels?

Thus far we have considered taste in its development through the cultivation of the other faculties. We now pass to the consideration

of its development where it exists in a marked degree, by means of special training.

To this end, in the first place, should be studied models combining the beautiful with the sublime in the highest possible perfection. The appreciation of beauty is much more common than the appreciation of sublimity, because it does not require so much study. The common herd, in view of a magnificent painting, say, "Those are pretty men and handsome women," and pass on, while a better developed taste gazes for hours, studying its import, enlarging its own capacity, and drinking in its magnificence. It recognizes the grandeur and sublimity of those bright faces and pretty forms. The same is true in regard to sculpture, poetry, and natural scenery. They must be studied to be enjoyed. The esthetic nature must be disciplined to follow where genius cuts her way. Indeed, it requires a master mind to follow at once, with sure footing, where a great artist leads. Common minds must study hard, attentively, persistently, or the higher esthetics is a sealed book forever. Few men are able at once to recognize the delicate sentiment in Moore's oft-quoted lines:

"The heart, like a tendril accustomed to cling,
Let it grow where it will, can not flourish alone,
But will turn to the nearest, loveliest thing
It can twine itself round, and make closer its own."

Or the exquisite beauty of Goldsmith's comparison:

"As some tall cliff that lifts its awful form,
Swells from the vale and midway leaves the storm;
Though round its breast the rolling clouds are spread,
Eternal sunshine settles on its head."

If in these sportive exercises the intentions of genius are slowly revealed, how much more difficult to discover the full import of her master-pieces, to keep pace with her when "in her lofty flights she leaps from mountain peak to mountain peak, flies on the lightning's wing, and bathes in the dazzling light of the spirit-world!"

Secondly. This faculty must be frequently exercised, not only upon the productions of others, but upon the productions of its possessors. He that would see clearly, must use his eyes daily. He that would think well, must think much. He that would strengthen his muscles, must exercise them regularly. So he that would improve his taste, must exercise it frequently. And upon no production can he exercise it so advantageously as his own, because his own he understands more thoroughly, and in it should, and generally does, take more interest. Good taste is an acquisition to be found only by the laborious student. "There is no excellence without labor." Cowper is said to have spent on an average half an hour to each line of poetry. All artists, in whatever department they labor, make repeated sallies, endure a thousand disappointments, and correct as many blunders, before they can claim the victory. Exercise then, hopefully, patiently, constantly exercise the power within you. Nature presents you her infinite variety of landscape; earth unlocks her hidden treasures; the forests resound with delightful strains; the heavens array themselves in the gorgeous rai-

ment of gold and purple garments, and at night her sable robes are flecked with ten thousand gems.

The world of letters is teeming with books, the world of art is rich with paintings, sculpture, architecture, music, and all are yours—yours to study—yours to enjoy—yours to perpetuate—yours to improve. Heed their summons, love the beautiful and sublime, follow where they lead, contemplate the great and the good, detest the evil, and a rich good taste will be the result.

MEMORY.

FAIR and gentle was Memory at the first. As a blissful dreamer, she wanders among the groves of Eden to cull from its garden treasures the earliest buddings of hope—the earliest flowers of experience. Oh, how rich and sweet were the garlands then twined by her angel-fingers! Not yet was the rose guarded by its thorny panoply, for, from the rude approach of contaminated fingers, it needed no protection. Well pleased was Memory then with her gentle duties. She viewed with delight the fresh green footstool of Omnipotence, and feeling that "it was good," she determined to gild the Past, as it rolled from the bosom of the Present, with the fadeless picturings of her own golden pencil. Delighted with the triumphs of her skill, she kissed Creation's last best gifts, as side by side they slept on an emerald bank, in the shade of the tree of knowledge; and after that, ever-present to their mental eyes, were the picturings of Memory, and even what oblivion had already commenced to gather to itself, seemed touched by the wand of the Undying.

Time fled. The odors of the garden lost their pristine sweetness, and the song-birds gave forth melancholy tones. All angels, save him with the flaming sword—the guardian of the tree of life—had forsaken humanity's first home; and they of the earth, earthy, who had slept on the emerald bank, were also gone.

Away, away, over hill and over dale, where the birds sang—where the serpents hissed—where the brambles grew—where the lions roared—where the earth gave forth its fruits—and where the ripples of the rivulet laughed in the bright sunbeam—away, away wandered the wanderers. They had plucked the fruit from the tree of knowledge, and good and evil, strangely mixed and mingled, ever after gave taste to the waters which they drank from the golden goblet of existence.

When the fair angel, Memory, saw this, she regretted what she had done. She had given to the wandering children of Humanity the fatal gift of retrospection; and now, when they looked back on the pictures of the Past, they would find them dotted with accusations and sources of regret. Behind them, the handwriting of condemnation might be discerned; and before, were the dark chill waters of the sea of death. And Memory sighed within herself, and if she could, she would have recalled the terrible gift which she had imparted with a kiss.

By-and-by Memory became more reconciled to the duty she had imposed on herself, and the gift she had bestowed; for she found more of delight in penciling the good which was done by the children of the earth, than of sorrow in giving record to the evil. Besides, she collected in her vast store-houses beautiful and innocent creations—gems of thought—to be arranged by the artists of Taste and Fancy in the museums of the soul. From these gems so much of delight was originated, that in their contemplation the dark dottings of error's record were often entirely overlooked. Seeing this, Memory was gladdened, and, till now, has continued the most faithful of the angels of the earth. By her agency the sphere of man's mental sojournings is extended throughout all Past time, instead of being limited to the fleeting and transitory Present. The dream which so much delighted the philosopher she recalls, and the more than dream which gave raptures to the lover. In tottering age she renews the innocence of childhood, till all the wrinkles on the brow of care are chased away, and the heaven of fancy glitters with the "golden fires" of the ideal.

To those who are covered with the leprosy of crime, the picturings of Memory are indeed terrible. They serve as mirrors, in which deformity is bodied forth in the full expression of mute though denunciatory compunction. Hideous is the aspect which they give to vice, while virtue they decorate with the garments of beauty.

Reader, be the duties which Memory performs for thee a well-spring of delight, as unending as the Eternal.—*New Orleans Delta.*

IMPRESSIONS.

In a work on "The Champagne Country," Mr. Robert Tomes, United States consular agent at Rheims, describes his impressions of what he saw, as follows:

"The great cathedral was proof against that severest test of sublimity—familiarity. For eighteen months I saw it almost every hour of the day, and hardly less often in the night. Waked at early dawn by the sonorous chimes of its bells, my eyes, as I lay abed, first opened upon the massive structure. Though dimly visible in the gray twilight, I was fully conscious of its majestic presence. It seemed to reveal itself to my consciousness by some spiritual force, while still dark and indistinct to my obscured vision. There was a feeling akin to that of which every one is conscious on the approach of a storm, when there is not only visible the thunder-cloud to herald its coming, but a vague influence which mysteriously indicates its nearness to all, even to the blind.

"Those who have studied architecture say that the cathedral at Rheims is remarkable above all other structures for its unity. They declare that it must have arisen out of the conception of some single mind of genius. One in his enthusiasm, calls it 'petrified music.' This harmony of parts and proportions in so large a structure is indeed marvelous, and is

undoubtedly one of the essential causes of its effect as a work of art. * * *

"It is a religious poem carved out by the sculptor," says Baron Taylor; 'it is an animated book which relates in action the legends of saints, episodes from the Old and New Testaments, and subjects taken from the history of Rheims.'

[We take it that Mr. Tomes has large Veneration, Spirituality, Sublimity, and Ideality. He would take off his hat when passing a church, while another, less developed in these organs, would regard such a structure with indifference, or as Christians regard the pyramids of Egypt. It was a sense of the sacred in the architect which awakened the same sense in Mr. Tomes.—Ed.]

On Physiologv.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cutler.*

My people are destroyed for lack of knowledge.—*James iv. 4.*

CAUSE OF ILL HEALTH.

It is quite certain that man is the most daring violator of natural law to be found in the animal kingdom. He is not only absolutely reckless, but persistent and obstinate in his course of transgressing; indeed, he is original and ingenious in his methods of attack upon himself. God has made man upright, but he has sought out many inventions to make himself crooked, so that an army of men find constant and lucrative employment in patching and mending the bodies of their fellow-creatures. Here is a regiment of men with forceps to pull out teeth that should last a lifetime—for they were not designed to ache, but were given to man to eat with. There a host of men are using pills, powders, plasters, and every variety of panacea to cure the ills of the unfortunate. Do we have any reason to believe that the brute creation, when allowed to control itself and follow instinct, suffers as we do? Do they bleat and bellow with the toothache? Do they suffer from colds? Are they afflicted with chronic diseases? Can powders and plasters be of service to them? Why do we yield so easily to fatigue, and fall a prey to disease so readily? Can it be true that weakness of body indicates strength of soul—that a narrow chest insures a broad heart—that a sickly constitution is favorable to a saintly life—that physical infirmity is a proof of spiritual power? It is ridiculous nonsense to suppose such things. We are to love God with all our heart, soul, and strength; and the more heart, soul, and strength we have, the more we can love God. The fact is, we have allowed the animal to get the better of the angel of our nature. We eat too much, and too fast. We drink too much of that which is not *aqua pura*. We chew, and smoke, and snuff tobacco. We go to bed late, and get up late. We do not get sufficient sleep, and we allow the anxieties of life to drive us to disease.

OVERTAXED BRAINS.

HUMAN life is in many respects worth more than it was a hundred years ago. An English journal says: We no longer, as a rule, eat and drink to excess, as our ancestors did; we do not invite apoplexy by covering our heads with a cap of dead hair [except the barristers and judges in the English courts]; and swathing our throats in folds of unnecessary linen; our sanitary arrangements are a hundred-fold better, and our town-dwellers see much more of the country, and taste much more of the country air. Yet it is certain that nervous disorders are greatly on the increase, and is to be feared that the excitement of modern life is introducing new maladies while removing old. A physician of the early or middle Georgian era said that a large proportion of the deaths of Englishmen was due to repletion. The proportion under that head is now very much less; but what we have gained in one direction we have lost in another. Among the intellectual and mercantile classes of the present day, the greatest danger to life is from nervous exhaustion. We make too serious and too incessant demands on the most delicate part of our structure, and the whole fabric gives way under paralysis, or heart complaint, or softening of the brain, or imbecility, or insanity. Disease of the heart is constantly sweeping off our men of intellect and the vast size of our modern lunatic asylums, together with the frequent necessity of adding to their number, is a melancholy proof of the overwrought state of a large part of the population.

The lamentable suicide of Admiral Fitzroy recently brings us face to face with the depressing fact that modern civilization is a brilliant, but a relentless despot, to whom, in some shape or other, our foremost men are called upon to render up their lives. The evidence given at the inquest brings out the pitiable story with only too great clearness. At sixty years of age, while still preserving the external appearance of a man ten years younger, he who had saved so many lives from the perils of the deep, was brought to that pass of profound mental wretchedness and depression that self-inflicted death seemed the only haven of relief from the sheer misery of being. It is, perhaps, not unworthy of note, that Admiral Fitzroy was a near relative of the famous Lord Castlereagh, who committed suicide in a very similar manner. It may be that there is a tendency to this form of insanity in the family, since it is well known that such a predisposition may lurk in the blood, and reveal itself from time to time in repeated acts of self-murder. But it is more probable that, in Admiral Fitzroy's case, the origin of the suicidal madness is to be traced to brain-disturbance resulting from overwork. The Prime Minister gave way under the toil and responsibility of guiding such a country as England through one of the most difficult crises of her history—a task rendered the more difficult by the unpopularity of his acts among the masses of the people. The scientific man has been worn-out

by the weight of continual cares resulting from his post as meteorological officer of the Board of Trade. Both succumbed to demands which they had probably not the physical strength to answer beyond a certain point. In the case of Admiral Fitzroy, we see laid out before us on the inquest all the steps by which the melancholy result was reached. He had been a handsome man, with a fine, vigorous presence, a genial manner, and an amiable disposition. With the accumulating pressure of his work—which, it should be recollected, involved calculations of the utmost nicety, whereon the safety of many lives depended—he became depressed in spirits, peculiar in manner, reduced in person. He acquired that terrible inability to sleep which is one of the most dreadful of those means by which nature avenges the abuse of the mental power; and he was forced to take opium at night—at one time to an extent which threatened serious consequences. [A very foolish resort. A Turkish bath, a low diet, and recreation would have done him good, whereas the opium only did harm, aggravating the difficulty.] The right side of the heart became weak in its action; the brain showed symptoms of paralysis; his medical attendant dreaded the advent of insanity, and warned him that he must refrain from mental work; his servants noticed that he gave strange and inappropriate answers to questions; his friends remarked that he could not make up his mind on any subject, which he admitted to be the case; he had noises in the ears, and twitchings of the hands. His intimate friend, Captain Maury, told him that he “wanted dynamic force,” meaning nervous power. In other words, the subtle organization of nerves and brain was worn out, or, perhaps we should rather say, plunged into a state of abnormal and terrible excitement, in which the perceptions became confused, and nothing remained clear but the pain and hopelessness of life. Then the desperate hand was raised against its own existence, and we read the termination of the story in the verdict of “Temporary Insanity.” And much the same story must, doubtless, be told of the other suicide of the week, Mr. Prescott, the banker.

That men of intellect are peculiarly liable to mental disease might be safely supposed, without any direct evidence, from the very nature of intellect and the work it has to perform. Genius, whether it exhibits itself in literature, art, or science, is the result of a peculiar fineness and sensitiveness of the nervous system, without which great men would be nothing more than ordinary men, and having which they are often martyrs as well as conquerors. The possession of this delicate and subtle framework enables them to perceive what others would pass over; but it also lays them open to shocks and jars of which the more robust would not be conscious. Too often in the end, if not in the beginning, genius, as a witty French author once said, “is a disease of the nerves.” The brain becomes unnaturally sharpened, and eats into itself. The whole

physique suffers from the undue strain on its most exquisite part. The ethereal spirit that sits within this mesh of nerves and arteries and fibers suffers with the suffering of that marvelous mechanism on which it is dependent for its earthly existence. The same week in which we hear of Admiral Fitzroy's suicide brings us news of General Kmety expiring, prematurely old, at fifty. Swift dying in moody mania—Sir Isaac Newton with intellect temporarily shattered, Johnson oppressed by thick-coming fancies; Cowper overcome by them; Sir Walter Scott, excited to such a pitch of mental activity that he “could not leave off thinking,” and moved about among familiar scenes with a sense of ghostly unreality; Southey struck down from his height of literary fame into mere imbecility; Buckland smitten in his strength; Lyman Blanchard, Haydon, and Hugh Miller perishing by their own hands, these are only a few instances of that fate which so often overtakes men of unusual powers. And to these must be added several cases occurring of late years, in which, without the mind being at all affected, our prominent statesmen, such as Lord Herbert and Sir George Cornwall Lewis, have died prematurely from exhaustion. The fact is that much is expected from those to whom much has been given. They become committed to work which can not be divided, and they fall as much in the service of their country as though they had perished on the field of battle or the sinking deck.

[In the foregoing article, nothing is said of the unphysiological habits of the madmen and the suicides. It is not even hinted that they totally ignored the laws of life and health, which every sensible man ought to observe. Nothing is said as to how much wine, beer, and other liquors they drank, nor how many other excesses they indulged in. But it is left to be inferred that the gentlemen died martyrs to “overtaxed brains.” Now we demur here. This is a one-sided way of stating the case, and we venture the assertion, that where one has died from over-brain work, ten died from overeating, overdrinking, and a want of attention to the bodily conditions. Vigorous out-of-door exercise; plain and simple food without stimulants; regular sleep; a daily wash or hand-bath, and attention to the moral and spiritual necessities by daily devotions, would have fortified and saved them.]

DIPHTHERIA.

BY DR. R. T. TRALL.

[At the suggestion of a valued friend, we republish the following, for the benefit of those who ought to read it.—ED. A. P. J.]

So far as Hygienic medication has been tried in this disease, its incomparable superiority over all the drug systems has been fully sustained. Of several cases subjected to the water-treatment, to the exclusion of all drugs, which have come under the cognizance of Hydro-

pathic physicians, all have recovered. This result seems to confirm the opinion I have often had occasion to express, viz., that there is scarcely any form of acute febrile or inflammatory disease known to physicians which is not curable, provided the efforts of nature are judiciously aided by water, air, temperature, and general regimen, and not interfered with by the administration of poisonous drugs.

Among the drug remedies which are most frequently prescribed by Allopathic physicians are calomel, chlorate of potash, chlorate of lime or soda, common salt, sesqui-chloride of iron, sulphate of zinc, antimony, caustic applications of nitrate of silver, with various tonics and stimulants, as quinine, wine, porter, beef-tea, etc.

The proper and the only rational plan of medication consists in local and general bathing, regulated precisely and at all times by the local distress and superficial temperature of the patient, and a due regard to pure air and proper ventilation. The patient is not inclined to take, and does not require food of any kind until the severity of the local inflammation and the violence of the fever has naturally abated. The practice of continually stuffing the patient on stimulating slop-food, or on food of any kind, because he is weak and prostrated, is a most pernicious one, and is enough of itself to cause a fatal termination in many cases. In these low diatheses and malignant forms of disease all the powers of the constitution are struggling with all their energies to throw out the morbid matter. If they succeed, the patient will recover; but if this effort is unsuccessful, the patient must die. He has no ability, until this struggle is decided, to digest food; and to cram his stomach with it, or to irritate the digestive organs with tonics and stimulants, is merely adding fuel to the fire; it is adding another to the great burden the vital powers are obliged to sustain, and thus lessening the chances for nature to effect a cure.

Cold wet cloths, well covered with dry ones, should be applied to the throat, as in cases of quinsy and croup; frequent sips of cool water may be taken, sufficiently to allay the painful sensations of thirst; the bowels should be freed by copious enemas of tepid water; the feet, if inclined to be cold, must be kept warm and comfortable by warm flannels or bottles of hot water; when the head is hot, painful, or the brain inclined to delirium, a cold cloth should be applied to the forehead and crown of the head, and the whole surface should be sponged with tepid or moderately cold water so often as the surface becomes very warm. When the whole surface is very dry and hot, the wet sheet pack is the most appropriate. In the latter stage of the disease, when the heat on the surface inclines to be irregular and the extremities to become cold, the warm bath, if practicable, is the best appliance. Under this management the patient will, in most cases, be fairly convalescent within one week from the attack. Occasionally, however, the disease will continue to nearly or quite the end of the second week.—*W. C. J., April, 1860.*

PAPA'S DARLING.

BY EBEN REXFORD.

White face in frame of yellow gold,
Blue eyes, divinely clear;
Mine own to love, and keep, and hold,
Through many a coming year.

Come nestle in these arms of mine,
Come kiss me on my cheek;
With arch lips, red as royal wine,
Your pure, child-language speak.

And this is mine, is all my own,
To guard from earthly sin,
This pure child-angel from the throne
Where life's best joys begin.

Oh! little mystery of mine,
I look into your eyes,
And see within their depths divine
The lights of Paradise.

I see, adown the coming years,
The path that you must tread,
Closed in by prayers and hopes and fears,
By God's good angels led.

God bless you, little child of mine,
And guide you, after life,
To where the lights of Heaven shine
Above the world's wild strife.

TWO OF OUR SANITARY HEROINES.
MRS. HOGE AND MRS. HUSBAND.

IF the teachings of the past afford any standard by which we can judge of the effects of the great war through which this country has recently passed, we may expect during this and the following decade the utmost vigor and activity of mind on the part of the American nation. And the topic upon which there will be the greatest amount of vigorous thinking, fine writing, and eloquent discourse will be the mutual relations of the different classes of society. The great battles were fought over this question. The grand issue which we may consider as settled by the war, and by the legislation which has followed it, is that *race* and *color* are no basis upon which to found legal distinctions between persons in this country. The question which is destined to agitate the American mind more than any other of a social and political character is this: whether, in the nature of things, any essential legal difference should exist between individuals on account of sex.

Probably no one circumstance has been more influential in raising this question to prominence than that wonderful display of patriotism, fortitude, self-sacrifice, Christian charity, and brilliant executive talents which was made by the women of the United States during our terrific civil conflict. Up to the year 1861 there had been a few shining instances, a few golden deeds which gleamed from the dark and stormy headlands of history like watch-fires o'er the deep. The Greek Antigone had braved the anger of a tyrant and a cruel death to secure for the body of her slaughtered brother a hallowed burial. Alcestis had furnished heathen philosophy with its finest instance of vicarious suffering by undergoing death in the stead of her husband. And later history has not been entirely wanting in

PORTRAIT OF MRS. HOGE.

cases where the severities of war have been mitigated by the gentleness, the love, and the sacrifice of the wife, the sister, the mother, or the daughter of a warrior.

The last war in which England engaged afforded the finest illustration that had occurred up to that time of the ability of woman to render organized, systematic, and most effective support to armies in the field. But the Crimean War with its Florence Nightingale is dwarfed into insignificance both by the magnitude of our armaments and the host of noble-hearted women who unostentatiously, and without expecting or desiring celebrity, walked in the footsteps of Florence Nightingale as far as she went, many of them surpassing her in the sacrifices they made and the good they accomplished.

We have selected the two characters at the head of this article, not from partiality, or because they are more deserving of general mention than a score of others, but because in their mental developments, their social characteristics, and the work they did for the soldier, each represents a large class, and female sanitary laborers are found to divide themselves naturally into one or the other of these classes. One may be called the woman of philanthropic impulse; the other, the woman of patriotic principle.

Mrs. Hoge is perhaps as widely known throughout the country, and particularly in the great Northwest, as any lady in the United States. Her home is Chicago, Ill. She went there twenty years ago, when that city had about one eighth the number of inhabitants it has now. The business of her husband and her own social connections and sympathies, which are naturally of the widest range, expanded with the marvelous growth of that city and the splendid region of which it is the commercial emporium. But her life was, for the most part, domestic and comparatively secluded until the breaking out of the war. Her first act was to give both her sons

promptly and freely to the service. For the year following, that is, during 1861 and a part of 1862, she remained at home knitting and sewing for the soldiers and pursuing the usual routine of her domestic life. It was not then apparent that extraordinary demands of a sanitary character would be made upon the mothers and daughters of those who had taken the field. But in the summer of 1862 the country, or at least all thinking and far-sighted patriots of both sexes, and it may be added in both sections of the country, were convinced that the nation had entered upon a long and determined struggle, a conflict in which the endurance of great armies would be tested by the most strenuous military exertions, resulting in an incalculable amount of suffering. To become alive to a fact like this was, with such a character as Mrs. Hoge, to feel herself summoned to a new and arduous field of labor.

She realized that the women of America could never discharge their duty in the trying hour if all remained quietly by their firesides. The hearts of her countrywomen, she knew, were sufficiently devoted, but there was needed organization and systematic labor conducted on one plan and acting upon one principle. And without hesitation, or pausing to inquire whether there might not be others better fitted than herself to engage in labors so arduous and services so beneficent, she entered straightway upon a line of activity in which she did not weary, from which she did not retire until in the summer of 1865 the echo of the last cannon boom died away over the weary land.

Her circumstances placed her above the necessity of strict economy. Both her sons were in the field; one at the head of a company, the other at the head of a brigade, and she knew no reason why the magnificent natural endowments that God had given her should not be as promptly and as thoroughly devoted to patriotic labor as the valor of the soldier, the talent of the general, or the wisdom of the statesman. Beginning in her own city, she moved in circles that grew constantly wider and wider, until the lines of her activity embraced all the loyal States, and she was constantly moving from metropolis to metropolis on her self-imposed and self-sustained mission. Devoid of any personal vanity, and without any desire to agitate the question of the relative power and value of the sexes, she addressed herself directly in the most sensible way, and by the most practical methods, to accomplish her objects. If a Soldier's Aid Society was in existence, she first called upon its officers and requested the organization to come together for the purpose of meeting her. If none had been formed, she called upon the more prominent and noble-hearted ladies of the town or city, and proposed to assist them in the work of starting one. Her fame generally preceded her; her elevated personal character and the consummate dignity of her

manner were such as to insure her a most favorable reception and large audiences of ladies. To these she frequently read a simple but elegantly written narrative of what she had herself seen in the army hospitals. These touching incidents of patriotism, courage, devotion, fidelity to the memory of the loved at home, and heroic patience under the hardships and agonies of soldier life, were admirably calculated to touch the sympathetic bosoms of her auditors. When their hearts had thus become enlisted in the work, it was easy to direct the enthusiasm which her words had kindled. She explained to them in an informal and business-like way the precise wants of the soldier in the field, what to make for him and what not to make for him, what to send and how to send it; and if any were inclined to offer their services as army nurses, she explained the requirements of the office they proposed to assume, and gave practical directions respecting the avenues by which they could in the best manner and under the most favorable auspices reach the soldier and labor for him. Tours of this kind were varied by visits to the armies in the field, where she labored with great earnestness and assiduity in whatsoever her hand found to do for the soldier, and after a few weeks of what would have been to most persons exhausting activity, she hurried back with a fresh store of touching narratives, and a heart more aflame with the glow of patriotic devotion, to make new appeals to the army of home laborers.

In the summer of 1863 she planned, organized, set on foot, and carried through the great Chicago Fair. Mrs. Livermore was her constant coadjutor, and she found able assistants among the gentlemen; but it is generally conceded in Chicago and throughout the country that the colossal magnitude of that fair, and its splendid results, reaching the net sum of eighty thousand dollars, were due to the strong brain, the large heart, and the splendid executive ability of Mrs. Hoge.

There is something as admirable and as impressive in this unexpected display of first-class ability on the part of a woman somewhat advanced in life as there is in the spectacle of a Cincinnati being called from the plow-handles to wield the sword of imperial authority, or the first of American soldiers who, in 1860, was a quiet leather dealer and tanner in a remote city of the country, and four years after stood before the world the greatest captain of the age. For a woman to start up thus from the parlor, the sitting-room, and the cradle of her children, where the principal part of her life had been spent, and properly spent, into such a career of beneficence, gives us the same surprise and delight as though some master performer should seat himself by a parlor organ which for years had aided a family in their daily devotions, bringing cheer to the weary, or gladdening the heart of childhood,

PORTRAIT OF MRS. HUSBAND.

and discovering stops that were unseen before, should draw from it a whole tide of choral symphonies in volume sufficient to fill the arches of St. Peter's.

Turn we now to the other face and the other character. We have called Mrs. Husband a woman of philanthropic impulse, not because she is at all lacking in patriotic sentiment or strong conviction, but because such a temperament and organization as this is a collection of fine impulses rather than a structure of admirable principles. The practical difference between the charities of these ladies is, that while one looks upon men in masses and operates on a fixed system, the other individualizes and regards humanity in the concrete. It is impossible to say which of these ladies did the most good; in this respect they may be called a noble pair of sisters. Each of them left homes of comfort and elegance and wide circles of friends, and Mrs. Husband, like Mrs. Hoge, put forward her sons first, and willingly saw them enter the service. Neither of them seemed to belong to their families or to their friends while the war lasted, but to be wholly given over, *devoted*, in the legitimate and emphatic sense of that word, to the welfare of the soldier. Only He who notes the falling of the sparrow, and has numbered the hairs of our head, who keeps a record of all the good Samaritans and all the Dorcas on earth, who notes the brightening of the weary eye at the approach of the Sisters of Charity, and sees the slow, dropping tear wiped from the cheek that begins to blanch with the oncoming frost of death, only He can tell the amount of good which these women, and the class they represent, accomplished. Mrs. Husband is a person of the strongest womanly sympathies. She is broader in her range of attractions than Mrs. Hoge. If in any of the great hospitals in which her life was passed while the war lasted she observed a patient unusually reticent, or some homesick boy who lay silently pining away for the yearning at his heart as he

thought of his far-off cottage home, she was certain to pay special attention to every such case. Her ministrations never had the cold formality and the rigid conformity-to system that was seen in the labors of others of less genial composition. The soldiers in the wards that she visited looked upon her with the same confidence and affection with which they were drawn toward a popular commander in the field. They were her personal friends, for the last one of them she had words of special sympathy and special kindness. The few moments, two or three times a day, during which she could stand beside the narrow cots or smooth the fever-tossed pillow, were looked forward to by thousands of sufferers as the one bright and mellow feature of their grim, hospital life. She took a genuine delight in distributing, article by article, the large amount of sanitary and hospital stores which the generosity of her home friends placed at her disposal. One glance at such a head and face as this is sufficient to show that she esteems the delight of doing good and of conferring happiness superior to all other human joys. A person in whom Benevolence, Human Nature, Suavity, and Mirthfulness are thus developed, takes a supreme satisfaction in soothing pain, supplying want, alleviating misery, cheering the down-hearted, bringing a merry smile upon lips that are wasted with suffering, and lighting up a gleam of hope and mirthfulness in "eyes that had forgotten to shine." For a person so richly endowed as she is with the gifts and graces of social existence, *to live is to give*. The exercise of charity in such a person is supreme joy. Probably no woman in the United States did more than she to sustain spirits that had been crushed under the iron wheel of war and to rescue those that were about to suffer injustice under the sentence of a drum-head court-martial. During the last year of the war her exertions to save life in this way were unremitting, and as successful as they were unwearied.

She did almost as much good in camp from the gift of mirthfulness, which she possesses in so large a degree, as by the exercise of more solid qualities; the war-worn and hospital-weary soldier is often more benefited by a good hearty laugh than by all the physic in the drug shops.

It is worth while to notice and to admire the splendid physical development in each of these women so remarkable for the good they accomplished. They have bodies with which to practically carry out the impulses of their souls. Philanthropy with them is not sentiment, but work—not a dream, but a mission. Mrs. Hoge has that admirable calmness and balance of faculties that enables her always to work at the best advantage and with the least fatigue and exhaustion. The nervous excitement that would well-nigh exhaust most ladies she hardly feels. There is no limit to the work such a woman can do, and yet keep well and cheerful.

The same is true of Mrs. Husband, to even a

greater degree. She is a blonde, with fair hair and sunny laughing blue eyes. The fund of vitality in her seems absolutely inexhaustible, and the flow of spirits perennial. Both can trace their lineage from men of noble blood and fame. The grandfather of Mrs. Husband was the great financier of the Revolutionary War, and the friend of Washington, Robert Morris. But neither of them attach the least importance to descent, except so far as it is sustained by noble acts on their part. And who does not feel that the war record they have made for themselves, the eyes they closed in death, the mangled frames they composed for the soldier's sleep, the hospitals they visited and cheered by their presence, the songs they sang, the prayers they breathed, and the words they uttered during those four years of a nation's agony, are proofs of truer nobility than all the stars and garters, quarterings and legends, upon which European families pride themselves?

Religious Department.

"The man is thought a knave or fool,
Or bigot plotting crime,
Who, for the advancement of his kind,
Is wiser than his time.
For him the hemlock shall distill;
For him the ax be bared;
For him the gibbet shall be built;
For him the stake prepared;
Him shall the scorn and wrath of men
Pursue with deadly aim:
And malice, envy, spite, and lies
Shall deprecate his name.
But truth shall conquer at the last,
For round and round we run,
And ever the right comes uppermost,
And ever is justice done."

A BIRTH-DAY EVE'S MEDITATIONS.

BY JOHN PIERPONT, D.D.

[It will be remembered that the author of this poem died last year at an advanced age. He was manly, dignified, and full of joy and hope to the last. It was a real pleasure to be near one so noble, so healthy in mind, and so good. Read these beautiful verses, and *resolves* to profit by them.—ED. A. P. J.]

DAY, with its labors, has withdrawn,
The stars look down from heaven,
And whisper "Of thy life are gone
Full seventy years and seven!"

While those bright worlds, by angels trod,
Thus whispering round me roll,
Let me commune with thee, my God!
Commune with thee, my soul!

Yet, how can I behold thy face,
Or to thy mansion climb,
Whose presence doth fill up all space,
Whose life fill up all time!

So true is it, Almighty Love,
All-present and all-seeing,
That 'tis in Thee "we live and move,
In Thee we have our being."

Then, since thou canst not change thy place,
Nor change thy time to be,
What are the boundless fields of space,
Or what are years to Thee?

But unto me, revolving years
Bring change, bring feebler breath,
Bring age, and though they bring no fears,
Bring slower steps, pain,—death.

This "earthly house" thy wisdom planned,
And leased me for a term,
"The house I live in"—seems to stand
On its foundation firm.

I hardly see that it is old;
But younger eyes find proof
Of its long standing, who behold
The gray moss on its roof.

Through fiery trials hath the clay,
That built this mansion up,
Passed, and its tenant, in his day,
Drunk many a bitter cup.

Yet oftener hath the cup been filled
With water to the brim,
Water, that crystal ice hath chilled,
That hath been given to him.

Thy hand, my God, this mortal frame,
Hath reared from shapeless dust,
Thine arm upheld, and on the same
I lean in humble trust.

Spirit, thou know'st this house, ere long
To kindred dust must fall;
Hast thou, while in it, grown more strong,
More ready for the call

To meet thy Judge, amid "the cloud
Of witnesses," who've run
Their heavenward race, and joined the crowd,
Who wreaths and crowns have won?

Spirit, my spirit, hath each stage,
That brought thee up from youth,
To thy now venerable age,
Seen thee in search of Truth?

Hast thou, in search of Truth, been true?
True to thyself and her?
And been, with many or with few,
Her *honest* worshiper?

E'en truths, wherein the Past hath stood,
Would'st thou inherit blind?
They're good, but there's a better good—
The power more truths to find.

And hast thou "occupied" that power,
And made one talent five?
If so, then peaceful be this hour!
Thou'st saved thyself alive.

Hast thou borne patiently thy cross,
The frown, the lip's proud curl,
The hate of foes, of friends the loss,
While seeking for that pearl?

And when the jewel met thine eye,
Hast seized and held it fast,
At many an earthly sacrifice?
God knoweth that thou hast!

Hast thou e'er given the world a page,
A line that thou would'st blot,
As adverse to an upward age?
God knoweth thou hast not!

Blinded am I, O God, as now
In thought I backward look?
Open my eyes, and show me how
'Tis written in *Thy Book*.

When I have given my voice, my pen,
To unbolt the iron door,
That closed upon my fellow-men,
Who were in debt and poor;

Or striven to stem the tide of wrong,
To break the bondman's chain,
To uphold the weak against the strong,
Have I done this for gain?

Warning against the deadly draught,
The demonizing bowl,
Have I the same in secret quaffed,
Thus damning thee, my soul?

When, serving near the Master's cross,
My words with thought I've penned,
Has hope of gain, or fear of loss,
Made me my doctrine bend?

When, for my flock, "things old or new,"
I've laid before thy throne,
Have I not always taught, as true,
The truest I have known?

Giver of life and all my powers,
To thee my soul I lift,
And in these lone and thoughtful hours,
I thank thee for the gift.

That life,—hath it, those powers,—have they
To self alone been turned,
Or prodigally thrown away,
Or on foul altars burned?

Altars, to gods more base than brutes,
"Gods passionate, unjust,
Whose most exalted attributes
Were rage, revenge, and lust!"

I say not, mean not, that I've been
Kept free from many a stain
Of open and of secret sin,—
But *have I lived in vain?*

Day, with its toil and care withdrawn,
Night's shadows o'er me thrown,
Another of my years is gone,
And here I sit, alone.

No, not alone, for with me sit
My judges—God and I,
And the large record we have writ,
Is lying open by.

Ye spirits, who on earth have dwelt,
But now no longer dwell,
With whom, in earth's affairs, I've dealt,
Come ye, from heaven or hell!

And tell these judges, if ye dare,
Your wrongs;—come each, come all!
Tell us the what, the when, the where;
Here I await your call!

In greener fields I might have fed
The sheep that were my care,
By stiller waters might have led,
But *not in healthier air*.

On high and windy hills, I found
The pastures of my flock,
Springs of clear water gushing round,
Our shade the *Almighty Rock*.

From summer's heat, from winter's blasts,
There sought I our retreat;
Beneath the shadow that it casts,
Shall we hereafter meet.

And as I hope, ere long, to swell
The song of seraphim,
And as that song the truth will tell,
My judgment is with Him.

Spirit, thy race is nearly run;
Say, hast thou run it well?
Thy work on earth is almost done;
How done, no man can tell.

Spirit, toll on! thy house, that stands
Seventy years old and seven,
Will fall; but one, "not made with hands,"
Awaiteth thee in heaven.

A BEAUTIFUL EXTRACT.

"I am the resurrection and the life; he that believeth in me, though he were dead, yet shall he live."—JOHN xi. 25.

"MARVELOUS disclosure! that this mortal frame, decomposed and resolved into its original dust, shall yet start from its ashes, remodeled and reconstructed—'a glorified body'! Not like 'the earthly tabernacle' (a mere shifting and movable tent, as the Word denotes), but incorruptible, immortal! The beauteous transformation of the insect from its chrysalis state—the buried seed springing up from its tiny grave to the full-eared corn or gorgeous flower—these are Nature's mute utterances as to the possibility of this great truth which required the unfoldings of 'a more sure word of

prophecy.' But the Gospel has fully revealed what reason in her loftiest imaginings could not have dreamt of. Jesus 'hath brought life and immortality to light.' He, the Bright and Morning Star, hath 'turned the shadow of death into the morning.' He gives in his own resurrection the earnest of that of his people; He is the first-fruits of the immortal harvest yet to be gathered into the garner of heaven. Precious truth! this word of Jesus spans like a celestial rainbow the entrance to the dark valley. Death is robbed of its sting. In the case of every child of God, the grave holds in custody precious, because redeemed, dust. Talk of it not as being committed to a dishonored tomb! it is locked up, rather, in the casket of God until the day 'when he maketh up his jewels,' when it will be fashioned in deathless beauty like unto the glorified body of the Redeemer. Angels meanwhile are commissioned to keep watch over it, till the trump of the archangel shall proclaim the great 'Easter' of creation: they are the reapers waiting for the world's great 'Harvest Home,' when Jesus Himself shall come again; not as he once did, humiliated and in sorrow, but rejoicing in the thought of bringing back all his sheaves with him."*

AN ECLIPSE OF FAITH.

[THE following pathetic, moving, and to those who struggle amid the depths of grief and misfortune, most encouraging sketch, we take from the columns of the *Examiner and Chronicle*. We notice in the same paper a copious extract from our own columns, with the usual acknowledgment.]

"It was a bitter cold night, in the middle of a winter, when pioneers peopled the now flourishing towns and cities of Illinois, and the snow and sleet swept in fearful blasts over a small log house, that stood by itself on the edge of a broad sweep of prairie. It was somewhat protected by the dark background of forest trees, that rendered its appearance yet more desolate and gloomy, and the howl of the prairie-wolf mingled with the shrill cries of the wind, that ran through the whole gamut of weird forest music, and ended in a diapason of solemn grandeur, chilling the ear of the lonely watcher in the log cabin like the knell of death.

"Such indeed it might be, for her lonely child lay before her raving in the delirium of fever, or dozing in that dull stupor which is so often the prelude to death. Mrs. Miner was a Christian, but she had never felt her faith so sorely tried as now; alone with her apparently dying child, without necessary medicine, and almost without food, the last tallow candle glimmering in its socket, it seemed to her that God must have forgotten her, or was making her punishment greater than she could bear. It had been hard enough, when less than a year before, her husband, young and strong, had been smitten with fever at one noon, and died at the next, leaving her alone and dependent; she had suf-

fered and endured everything for the sake of her child, but now he lay insensible to her cares, and the faith that had held her up so long gave way. She shut up the Bible she had only opened—not read—and walked up and down the small dim room, now listening to the wild roaring of the wind, now pausing to catch the incoherent prattle of her sick boy. She had never felt so utterly alone. She forgot there was room for her Saviour, even within those small limits. She forgot that angels tarried there, unseen and celestial, but ever-present company. The light went out suddenly, and left her in actual as well as spiritual darkness, and she drew near the bed, and clasped the hot hand of her child, and kissed his burning temples, and tried to feel indifferent—hardened to what might happen. O, Margaret Miner! how closely the tempter had you in his power, even while God was raising deliverance for you.

"Harry wanted a drink, and his mother, fearful of the gloom, found some dry pine knots laid up under the roof, and made a bright fire of them; they blazed up with a wonderful cheerful readiness, that streamed far out on the waste of snow and darkness, and scared the prowling wolves back to the forest.

"They did more; amid the cold and gloom and driving sleet of that night, a pale, delicate man was wearily struggling, his path lost, his limbs enfeebled with the cold, his heart discouraged with the hours of hardship he had endured. It was so hard to lie down and die almost within reach of human aid—to be covered up in snow wreaths, or devoured by wolves, and his friends at home never to know when, or how, he had perished! He thought of his cheerful, pleasant fireside, his good, gentle wife, and his two precious babes. Why, they would be praying for him just then. It was the hour of their evening devotions. And what then? Was not God a hearer and answerer of prayer? And at any rate was he not in God's hands?—his agent to do his work? He dismissed his fears, and struggled on with a prayer in his heart, and just then, as if for an answer, a broad red light flashed out far ahead of him, and illumined the darkness with its smile. The weary man renewed his almost exhausted energies, grasped the heavy satchel he carried with all his remaining strength, and in a short time stood before a log house, from whence the light issued. He cast one glance through the uncurtained window, and waiting not to knock ceremoniously, entered and closed the door behind him. Margaret Miner was not startled by his abrupt entrance; she was too glad of the presence of a human being in her loneliness; besides, she knew from his appearance he was an itinerant, and as such a welcome visitor. But when she scanned his face, she gave a great cry, and threw herself sobbing into his outstretched arms. 'O, Harry! brother Harry!' she cried, 'has God indeed been so good?—and I never expected to see you again!'

"Let us thank him," said her brother reverently, and his lips moved in silent prayer, and the widow's heart joined in the petition.

"You have a very sick child," her brother said, when he leaned over the boy and examined him; 'but fortunately I know something of the fever in this climate, and carry a stock of medicines with me. I see no fatal symptoms yet, and with God's help, Margaret, we will save him.'

"And they did; in less than two weeks Harry Miner was able to sit up and talk to his mother and uncle, and by the time the spring had come, and his aunt and cousins had joined them, he was well and hearty, and could play with the best of them. Margaret Miner never again lost faith in God, nor forgot that her necessity had been another's opportunity, and both had been blessed. Where that light shone on that stormy night, the itinerant brother built a church, and years after preached to a small, but earnest congregation, and his labors were blessed. He has gone to his reward, but to-day, on the same spot, stands a splendid modern edifice, and a goodly show of worshipers meet there on the Sabbath to hear their beloved pastor, who grew up among them, and is yet a young man. He is earnest, and unaffected, his whole soul is in the work he has to do; he spares no pet sin—defers not to fashion or wealth, bows only before the shrine of Deity, and lives as one should who feels the shortness of time and the solemn responsibility of life. He looks over his people with a fond appreciative affection, but there is a depth of tenderness in his reverent gaze for the loved, old-fashioned figure that sits at the head of the minister's pew. 'My mother!' he says reverently to himself, and he knows that she has had much to do in making him what he is. But never in his life has he stood in such dark places, or felt the eternal presence so entirely withdrawn, as she did on that night which dawned to such a perfect morn."

VISUAL SPEECH.—An English paper says: "A gentleman of Edinburgh, Melville Bell, after twenty years' study has prepared a means of writing *sounds* so as to be universally legible, i. e., of expressing sounds to the eye with the same precision as the mouth conveys them to the ear. This method has been tested by a professor of modern languages, in Paris, and of Persian in Edinburgh. The *British Standard* says the Paris professor tested the applicability of this system of phonetic symbols to represent the peculiar sounds of the French, Italian, Spanish, and Portuguese languages. The writing was deciphered with vernacular correctness by readers who were not present when the words were written. The Persian professor selected some of the most difficult words in Hindu, Urdu, and Persian—consisting of gutturals, dentals, and labials—words which require long practice by students of the Oriental languages, and by bearing them uttered by natives of the East. After Mr. Bell had symbolized these selected words on paper, he called in his two sons, who had been in a separate room, and asked them to read out the words. They were words, the Professor was sure, the youth could never have heard. But, to the astonishment of the Professor, the young men sounded them out most accurately, and just as one hears from natives of India.

* From the "Words of Jesus," by Rev. Dr. McDuff. Price, in neatly bound pocket form, 50 cents.

NEW YORK, SEPTEMBER, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Foa*.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

OUR RELIGION.

ONE of Webster's definitions of the term "religion" is as follows: "Any system of faith and worship. In this sense, religion comprehends the belief and worship of pagans and Mohammedans as well as of Christians; any religion consisting in the belief of a superior power or powers governing the world, and in the worship of such power or powers. Thus we speak of the *religion* of the Turks, of the Hindoos, of the Indians, etc., as well as of the Christian *religion*. We speak of *false religion* as well as of *true religion*."

Phrenology recognizes certain organs or faculties which dispose man to be religious. They are these—Veneration or devotion, reverence, Hope, Spirituality or faith or belief, Benevolence or brotherly kindness, sympathy, charity; Conscientiousness or justice, truth, integrity. These are called the moral sentiments, as distinguished from the animal propensities and the intellectual faculties. We find persons with one or the other of these faculties or groups of faculties, large or small. One may possess a fair intellect, and be a moral or religious imbecile. One may be *just*, but unkind; or devotional, but dishonest; very doubting, wanting in faith, and yet most meek and humble. Again, we sometimes find all these faculties in happy concord—a full measure of justice, mercy, meekness, and trust, making up the complete trinity of Faith, Hope, and Charity.

Reader, what is *your* religion? Are you a Christian? Are you orthodox or are you heterodox? Are you a pagan, a Mohammedan, a Jew? or are you a deist, an atheist, or an infidel? If a professed Christian, of what sort are you? or to what order do you belong? Does your religion make you better? Does it buoy you up in times of trial and adversity? Can you sweetly and submissively resign yourself to the will of God, and say and feel, *Thy will be done*? Does it reconcile you to life with all its cares and troubles? and to death, with its endless future? Does it bring that "peace of mind which passeth all understanding?" If you can give an affirmative answer, your faith will abide, and you will grow in grace to the end.

Among mankind there are upward of a thousand different religions, or, we should say, modes of worship; and there are more than three hundred different creeds among those who call themselves Christians. We enumerate a few of them.

The Roman Catholics are by far the

most numerous single body. This order may be found in all lands, and its believers among all nations.

The Episcopalians are said to be the oldest, and claim to be in the direct succession from Christ and the Apostles. Then we have the Reformed—formerly the Dutch—Church; the Presbyterian—Old School and New School; the Congregationalists; Baptists—Free-will and Close Communion; the Methodist Episcopal Church—Protestant, Primitive, and Wesleyan; Unitarians; Universalists; Friends or Quakers—Orthodox and Hicksites; Disciples of Christ; Campbellites; Primitive Christians; United Brethren; Moravians; Sabbatarians; Perfectionists; Non-Resistants; Shakers; Latter-Day Saints or Mormons; Spiritualists, and so forth to the end of the chapter.

Whence this endless diversity? Is it because God so wills it? Does He interpose and rule that we should be thus divided in opinion and sentiment? or are our religious differences the result of education, place of birth, and surrounding influences? or has organization something to do with it? Is mercy—benevolence—a leading attribute in the God of the Universalists? and would He, therefore, without regard to state or condition, have *all* mankind saved? Are Marvelousness and love of mystery large in the Roman Catholic? and is the same organ small in the Jew, and other unbelievers in redemption? Is Conscientiousness and Destructiveness—justice and severity—large in the predestination Puritan? and does *his* God "delight to punish the wicked?" Are Swendenborgians more spiritually-minded than others? and do their organizations correspond with their characters? Is Shaker celibacy the result of sexual indifference, subordination, or incompetency? or is it purely spiritual? As to its being right or wrong, and as to its being in accordance with, or in violation of, the laws of nature, all sensible men and women will judge for themselves. If the celibacy of the Shakers be right, what of the polygamy of the ancients, and of the Latter-Day Saints who marry more wives than the law allows? In what does their saintship consist? Is it in polygamy? "in multiplying and replenishing the earth" at a more rapid rate than is otherways provided for? This is a part of *their* religion!

The religion of the heathen and of barbarous tribes is of a low, often cruel and disgusting, character. Human sacrifices, self-torture, and the worship of wooden images and the like, seem most profane and horrible to a Christian. Go to China, the "flowery kingdom" of the Celestials, or to Japan, or to Africa, and observe the sincere devotion of the people "who blindly bow down to wood and stone." Then go to Turkey, to Egypt, and Arabia, and see the Mohammedans devoutly practice the rites of their sensuous faith. Then go to the Fijean Islands, among the cannibals, and even there, the man-eaters are profoundly religious. But the Christian says, "What mockery! what wickedness!" Not so fast. These creatures are simple, unenlightened, and unregenerated human beings. They did not make themselves, nor their circumstances. Instead of condemning them, let us rather congratulate ourselves that *our* lot is cast in a Christian land, with Gospel light upon our path, and, having a better way, let us try to impart it to all the dark and benighted nations and races of man. Every Christian should be a missionary to the extent of his ability. All may not go abroad to teach and to preach, but all may contribute of their means for the enlightenment and Christianizing of the world.

Between Protestant and Catholic; High Church and Low Church; New School and Old School; and the hundred-and-one minor differences among Christians, we would interpose SCIENCE. Let a knowledge of PHRENOLOGY everywhere prevail, and sectarian animosity would at once subside. Why? Because when it is seen that you and I are what we are by virtue of education and temperament; that we differ in organization and in character; that in *you* the devotional principle predominates, and in me that of Hope or Faith; in *you* may be seen the most *rigid* integrity, and in another, unlimited kindness; and in all at least *some* of the virtues, while in none can they *all* be found. We repeat: mankind are organized to be religious. God created man so to be. But his religious beliefs and his modes of worship are clearly matters of education and personal choice. To one mind or pair of eyes, all things have a bright, hopeful aspect. To another, everything is tinged with "blue."

To still another, with very large Cautiousness and very small Hope, all things are dark and dismal. To one, God is all love, and the Saviour "altogether lovely." To another, He is a Being of revenge, awfully to be feared! To another, He is a Being of majesty and great power! What grander or more sublime conception was ever expressed than that embodied in these words: "IN THE BEGINNING GOD CREATED THE HEAVENS AND THE EARTH!" Who can fully realize this? The God of the savage is a God of battle and of blood. He gives victory and revenge to the conqueror! All these, and a thousand other seeming mysteries, are revealed and explained by our science. Hence we claim that a knowledge of PHRENOLOGY would liberalize our theology and Christianize humanity.

"Growth in grace" is exactly what it purports to be. It is the privilege and the duty of all. We may place ourselves under religious influences which will lead to this, or we may remain without the pale, and reject the blessing. "A change of heart," or the new birth, is a change of purpose. "Praying without ceasing" is a constant desire that the will of God may be done on earth as it is in heaven, and that the happiness of man may thereby be secured.

The teachings of Christ are in all things in perfect accordance with man's nature and organization. There is no incompatibility between science and revelation when rightly interpreted. "Phrenology is the guide of philosophy and the handmaid of Christianity." We accept all His teachings to the fullest, and rely entirely on Him, and the reason he has given us, for guidance in this world, and for happiness and heaven in eternity.

GRADATION OF INTELLECT.

It would be positively absurd, in this age of phrenological science, to pretend that one brain is as susceptible of development as another. In plainer words, that any one man may be trained to equal another who is admitted to be a person of very superior mental capacity. Humanity is graduated in that respect, so that some are born with a capacity for attaining immense superiority over the masses of mankind in certain directions, as, for instance, in art, science, literature, mechanism, or the ability to acquire property.

Naturalists are familiar with the laws of animal organization, and descant both learnedly and confidently on the perplexing subject of

instinct. But no one has very satisfactorily explained to ordinary comprehension where instinct terminates and reason commences. That is precisely the ground requiring cultivation, and if any person skilled in cerebral investigations would clear up the mystery by demonstrating precisely what kind of a brain is necessary for either, by pointing out anatomically the difference in structure, great service would be rendered where it is really needed.

In outward form, the gorilla bears a strong resemblance to an inferior type-specimen of man. There are precisely the same number of bones in the skeleton, but a little differently arranged. For example, there are five vertebrae in the neck, but there are more in the dorsal column and less in the loins, yet the sum total is just twenty-four. A gorilla has thirteen ribs on each side; occasionally, men have that number. The arm bones are the same in form as in man, but longer, prodigiously large and strong; so of the foot; but the leg bones, however, are quite short. The great toe stands off almost at a right angle, and is used with almost as much facility as a thumb. Much as these monsters resemble man in their outward appearance, it is very certain they are really ferocious beasts. The brain is small, but in almost every other respect they look like ourselves. A traveler who has shot about twenty, according to his own representations, felt, on firing at the first one, as we imagine we should in firing at a powerful giant, who would kill us if we failed to kill him.

There is another curious distinction between gorillas and men, clearly showing that the one is not a degenerate relation of the other. Man is omnivorous beyond all question. If he were not, then a large portion of the globe now in the occupancy of human beings would never have borne his footsteps, because in it there is little or no vegetation suitable for sustaining life, and if there is a scanty supply, it is only to be had after long periods of cold, snow, and ice. Natives and explorers in arctic regions subsist exclusively on a flesh diet. There is nothing else to be had. But in consequence of an original endowment in his physical organization which enables him to live on a mixed diet, if necessity demands it, on animal or vegetable alternately, he is virtually the lord of the earth, roaming with impunity from the equator to the polar seas, and thus enabled through his organic structure to enlarge the domain of useful knowledge.

How strangely ridiculous, then, it is for dietetic reformers to attempt to revolutionize society, and arrest the progress of civilization, by turning us from beefsteaks and roast turkeys, to raw acorns, turnips, and fruits—which could not be had in the land of the Esquimaux, or in other sections of the globe which can only be visited while seals are caught, or white bears approach near enough to be brought down by a rifle ball.

On the other hand, gorillas are distinctly vegetarian. Their stomachs have been often examined with minute care, with a view to

determine the character of their food. Berries, plantains, bananas, pine-apples, and sugar-cane are almost exclusively their daily aliment. When these fail, no process avails in keeping them alive. They will not eat bread or cooked food of any kind, and they have in every instance died, while the attempt to feed them on something different from their accustomed food was going on. We are therefore in possession of a complete vegetarian, nearer man in outward resemblance and anatomical structure than any other being on the globe, and he is a brute; a creature without speech, judgment, reflection, or progress, acting, under all circumstances, from the impulses of instinct.

The foregoing propositions prepare the way for some prelections on a curious fact, that there is a deep and broad gulf between man and the four-handed animals—there is an osseous and muscular gradation, but no cerebral. The monkey can climb, run, chatter, crack nuts with a stone, and imitate all our motions; but the brain is defective, or rather inferior, because it can not be educated. So of the gorilla—it can not be taught. But without wasting words respecting their volitions, their appetites, propensities, or characteristic habits, it is certain they are restricted to certain localities where their appropriate food is to be had in quantities proportioned to the demand of the consumers. If they are removed by artifice or superior force, they invariably languish and die in a little time.

We arrive, finally, at the sensible conclusion, that we are something quite distinct and far above all other animal forms. Our power and superiority are exclusively in the brain, which immensely towers above the races that outwardly resemble us in form and mere muscular action. Where the one begins—which is susceptible of moral training, or the other leaves off—so that it can not receive an intellectual impulse, no anatomist has been able to discover nor physiologist to indicate. But there must be just such a point in both, and whoever first detects it and demonstrates the fact, will secure an illustrious niche in the temple of fame.

It is admitted there is an evident gradation of intellect among men. The law is so universal, that any attempt to controvert it would show that the bold individual who should endeavor to argue himself into a contrary belief, could have no correct views of mental science. It is not so with any of the animals, since there is no cerebral difference in any of their families or race; each individual in every age of their existence is endowed with just as much knowledge as another, and no more. No advance in them, based on experience, was ever exhibited, or ever will be.

Dogs, monkeys, birds, and even reptiles, by a long series of repetitions, perform certain acts under the eye of a master, from a sense of fear, as punishment follows a failure. Left to themselves, such doings as constitute a wonder when they are on public exhibition, are never repeated, even though conducting immeasurably to their comfort; and simply because their brains have not the parts or portions in

them which receive, retain, and reproduce new impressions.

Vocalization, which in itself is an amazing power, yet scarcely ever thought of because it is a universal attribute of man, whether savage, barbarian, or civilized, can not be acquired either by the chimpanzee or gorilla. By the minutest scrutiny, under the dissecting knife, no difference can be detected in the mechanism of the larynx or vocal box. Put that organ of the finest singer of the opera side by side with the larynx of a lady who could never sing a note of music, and no anatomist in Christendom can point out any difference. Now place them with the larynxes of the quadrupeds, and it might very much perplex a practiced dissector to distinguish those of the brute from those of the gifted cantatrice. So of the tongue. But it is easier to examine into the length, width, thickness, etc., of that organ, than to measure the muscular threads of the cartilages of the glottis, whence voice is produced, to be modulated into tone or articulate language. Hence it is obvious that the capacity for the production of language lies in the brain, and not in the air tube in which the vocal chords vibrate. Consequently, speech, which will be an expression of intelligence, never has and never can be acquired by any animal. They can not speak, because they have actually nothing to say. A parrot imitates the human voice, but it is simply imitation, without any kind of meaning or attribute of soul.

The great and marvelous difference between men and all animals which most nearly approach him in their exterior organization, lies in the absolute structure of the brain. An idiot's head contains a cerebral mass superior to the most sagacious animal's, because it possesses parts which may by careful cultivation be raised in the scale of intellect, and in harmony with the vocal apparatus will manifest development and progress, however feeble it may be, altogether superior to the brute creation under the most favorable system of instruction. The first has material elements essential for the manifestation of mind, while the latter is limited to a prescribed domain of instinct, beyond which it can never pass.

Recognizing these fundamental doctrines, the opponents of Phrenology simply show intellectual blindness in their hostility to a science which is abundantly demonstrated in every movement and phase of individuals, wherever found. To Phrenology is due the honor of having discovered that men are alike physically, but unmistakably different in brain-power and capacity.

By original and special endowment, there is a man for everything and for every age. Progress in art, science, and government is the proof of the truth of this declaration, and consequently the onward march of mind already takes hold of heaven.

Moral attainments are illimitable; intellectual development boundless. Beasts, birds, fish, reptiles, and insects, acting under limited impulses which insure their perpetuity as distinct races, can not pass the boundaries which

separate them from humanity. Mortality and immortality meet face to face. Having fulfilled the object of their creation, the first die, and their death, according to the opinions of theologians and the theories of mental philosophers, is, *de facto*, annihilation; but man lives for ever.

What destiny the soul! As everlasting
As God, who called the universe into being.
When all material things are lost in the wreck of worlds,
Man's immortality will neither be modified or changed.

ADOPTING CHILDREN.

No less than thirty promising boys, from five to ten years of age, are awaiting, in one Boston institution, the call of benevolent persons disposed to adopt them. Probably just as many are exercising the same laudable patience in the Home in this city. Here is a notable chance for people, to whom nature has been unkind in the matter of offspring, to supply themselves with little substitutes for natural heirs. There are thousands of people, with affectionate hearts and full purses, who are vainly yearning day after day and pining night after night for "some one to love"—for some one to absorb their tender solicitude, use their cash, and carry the family name down to posterity. Why do they hesitate to adopt a little stranger, bestow on him their care and caresses, and thus increase their own happiness? They are just as likely, in this lottery of love, to draw a prize as a blank; and even with a boy inheriting evil principles, Fowler & Wells will assure us that much can be done by proper mental culture. The poet says:

"The education forms the common mind;
Just as the twig is bent the tree's inclined,"

though the twig is occasionally bent with diurnal energy and regularity over some boys without inclining them to become obedient. They, however, are extreme cases—cases so rare, also, that they should not prejudice the judgment of those who, denied in marriage the boon of children, may profess to be pleased with their lot, but, in their heart of hearts, mourn unceasingly for the prattle of a little tongue that would call them "pa" and "ma" in its tenderness, and would bestow on them a world of sincere affection. We advise them to spite nature as she has spited them, by adopting a child that strikes them as calculated to win a place in their homes and bosoms. Here is an opportunity; let them avail themselves of it.—*New York Times and Messenger*.

[We may state, in this connection, that we have received many commissions to select children, not only for adoption by the childless but also for those desiring apprentices to learn particular trades, arts, or other callings, children supposed to be best suited to these pursuits. and, so far as we know, our selections in every instance have proved satisfactory. We quite agree with the *Times and Messenger*, that this is an excellent means by which to do good.]

Is it not better for elderly people whose own children are grown up, married, and removed, and for unmarried maiden ladies, to adopt one or two little ones, than to be left alone in old age, or to cultivate poodle-dogs? One way to lay up treasures in heaven is to do good in this world.]

ENGLAND'S PAUPERS; OR, BEAUTIES OF A MONARCHY.

We give, below, the number of absolute paupers, lunatics, and vagrants in England; also, the indoor and outdoor paupers in Ireland, which we copy from a leading English journal, the *London Globe*.

"The returns presented to Parliament, on the motion of Viscount Embury, M.P., disclose a lamentable increase this year in pauperism, as compared with 1866. On the last day of the first week in February last there were in England and Wales 998,494 paupers in receipt of relief, being an increase of 97,012 over the corresponding week of the preceding year, of whom 50,650 were in London in the second week of February. 982,273, or an increase of 80,117, of whom 41,364 were in London; third week, 971,425, or an increase of 68,031, 36,450 being in London; fourth week, 965,404, or an increase of 60,611, of whom 33,845 were in London. In the last week the number was composed of 818,919 outdoor and 146,485 indoor poor.

"The above figures are exclusive of criminals, lunatic paupers in asylums, and vagrants.

"There are, at present, 14,836 parishes, inclusive of the Scilly Islands, in England and Wales, maintaining their own poor; but the above returns refer only to 14,695 of that number; 191 parishes, incorporated under Gilbert's act, still under the provisions of the 43d Elizabeth, making no return of the number of paupers which they relieve.

"From the return called for by Sir H. Barron, it appears that the gross amount expended for the relief of the poor in Ireland, in the year ending 29th September, 1866, was £728,207 [or \$3,641,035], as compared with £611,891 [or \$3,059,455] in the preceding year. There were in receipt of relief on the last Saturday in January, 1867, 77,422 paupers; in 1866, 68,708; in 1865, 74,287. The 77,422 for this year includes 11,207 adult able-bodied paupers, and 903 widows in receipt of outdoor relief.

"In 1866 the amount of poor rate lodged was £749,757 [or \$3,748,785], all other receipts amounting to £8,007 [or \$40,035]."

But the most cheerless and almost hopeless view is the fact, that not one in a hundred of these paupers can ever rise above their present totally helpless condition. Human beings, with human hearts and human minds, they *must* go down to pauper graves, unwept, unmourned, and uncared for. Nor is this all. Their children, and children's children, will follow them. Why? Because a few monopolize the lands, the lakes, the rivers, and all the shores of the sea. The poor in the Old Country have a hard struggle for life, to say nothing of liberty, education, luxury, and the like, common to Americans.

MODEL SPEECHES.—We are glad to observe with what avidity the Temperance people are putting into circulation those admirable "ten minutes speeches" of the Congressional Temperance Society. It will not be long before each of these eloquent speeches will be repeated all over the land, and millions of hearts shall gladden with joyful hope of a "good time coming," when our nation shall be represented and our laws administered by temperate men. Then scatter the documents, convince the ignorant, persuade the halting, by ringing the truth constantly in their ears. And may God add his blessing.

A FIRST-CLASS TEACHER. WHAT HE IS WORTH.

[We copy a portion of an excellent address, by the Rev. Dr. Moore, Jr., from the proceedings of a recent meeting in Brooklyn, in aid of the erection of a new building for the Adelphi Academy, now under the direction of Messrs. Lockwood & Ellingwood. Dr. Moore appreciates a good teacher, whom he thus describes:]

"Having spent some of the best years of my life as an instructor, I think I may without egotism claim some knowledge of what a first-class teacher is worth. I think I know something about the difficulties of a teacher's profession. I know something of the delicacy of the material on which he has to work, and of the wonderful results which he is expected to produce. A rare combination of qualities it requires to be a good teacher. I believe it requires a rarer combination of excellences for a first-class instructor than for any other profession on earth, the ministry of the Gospel not excepted. And when you find a man who has a genuine sympathy with children—especially with boys; who has the ability to enter into their feelings, into their hopes and fears and aspirations, into their boyish pride and boyish sensitiveness, and into all the elements that go to make up a boy's life; who has the power to arouse the dormant energies in boys and awaken their minds to healthful activity; who has the power rightly to direct these energies, when awakened; who has the ability to subject boys to a thorough intellectual discipline, while at the same time he is calling out all the finer qualities of the mind and heart, and cultivating their social affections, and inspiring them with noble aims and generous sentiments; who has the ability to lead out and symmetrically develop the powers of boys and make their student-life a delight, so that from day to day they shall go to their tasks with spring and alacrity and bounding joy as to the choicest recreation; when you find a man so endowed that he is able to so develop the minds of boys as to make them beautiful and gentlemanly in their deportment, the elements being so mixed that when they come to manhood all shall rise up and say they are *men*—when you find such a man, you will find one who is not only worth his weight in gold, but who is worth it ten times over—you will find a first-class teacher. And that community down in the midst of which is dropped such a teacher as that, in the providence of God, ought to get on their knees and thank the Great Giver for such a treasure. (Applause.) Such a teacher lays any community under everlasting obligation.

"I speak as a practical teacher. I repeat again, that I know the difficulties which environ a teacher's work; I know how difficult and delicate that work is; and when you know the worth of a finely developed boy—when you know how his development is going to tell upon the value and wealth and blessedness of his life on earth and perhaps in eternity, you can in some measure appreciate the worth of

such a teacher. Much as a community may appreciate, and well as they may pay him for his labor, they will forever remain his debtors.

"Now, my dear friends, such a teacher I believe we have in the Principal of the Adelphi Academy (applause); and, for aught I know, in the entire corps of teachers in that institution. I have never been in the school, I have never had the pleasure of taking Mr. Lockwood by the hand before to-night; but, applying that Scripture rule of judging the tree by its fruits, I have said what I have. A large number of my boys (I call them mine, and they are mine; for I own all that come to my church and Sunday-school) have been trained in this school for years; and, judging by the progress which they have made in their studies, judging by the thoroughness with which they understand what they are taught, judging by their beautiful deportment, by the honorable sentiments and lofty aims with which they are inspired, by the bounding delight with which they go to their daily tasks, and by the enthusiasm they possess in their school, I have no hesitation in making the statements which I have in regard to the excellence of the Adelphi Academy of Brooklyn."

[It only remains for us to add, that the gentlemen having this institution in charge are every way competent to do their work in the best possible manner. They thoroughly understand the nature of the being to be educated, and will see to it that the whole nature, body and mind, is thoroughly trained. One of the proprietors may be said to have graduated, years ago, from our own establishment, and will apply in this school the knowledge therein obtained. In conclusion, we may congratulate parents who may be so fortunate as to obtain for their children an entrance into the Adelphi Academy.]

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—Spurzheim.

THE RACES OF MAN.

ARE THEY OF ONE, OR OF SEVERAL ORIGINS?

A LONDON correspondent of the *New York Tribune* furnishes that paper with the following statement:

The great series of lectures of the year—the greatest perhaps ever delivered in London on that subject—have been those on ethnology, with which Prof. Huxley has just closed the season. They were twelve in number. So impressed were his hearers, among whom were several eminent men and ladies—Miss Cobbe and Lady Lyell being very regular listeners—with the immense number of novel facts adduced, that the Professor has been earnestly petitioned on the subject of their publication. It will, however, I have reason to fear, be five or six years before he will be able, amid his pressing duties at Jermyn Street Museum, the Royal College of Surgeons, and the Royal Institution (in all of which he is now a leading

Professor), to prepare them for publication. It is impossible for me, in the space of a letter, to furnish even an outline of the wonderful statements which were illustrated by ethnographic maps, skulls, and portraits of persons of all races, in both ancient and modern times. I must content myself with presenting a few of the principles which make his method of inquiry and the general results at which he arrived. In deciding upon relationship and affinities between races, Professor Huxley considers first, complexion; and he finds four great classes of complexions, which I must suggest here by the words white, yellow, red, and black, though neither of these colors is completely represented in any race or any man. He then relies upon the shape of the head, which he finds divisible more or less into long, short, round, and prominent or otherwise in the lower face. He then relies on texture of the hair. Next he considers the language as analyzed by comparative philology; then the similarity of customs, of beliefs, of habits, etc. Beginning with the Australians he finds but one tribe related to them, and that is a small tribe in the south of India. He finds that there existed in the neighborhood of the Caspian and Aral seas, in ancient times, the one at the north, the other at the south, a light and blue-eyed, and a dark and black-eyed people. The dark people are found adhering to the coast, and may be traced from Persia all around by Italy to their great western center, the Basque region of Spain; thence they skirt France, Wales, Ireland, and are the immediate ancestors of the swarthy Britons, Welsh, and "Milesians" of Ireland of this day. From the Aral Sea to Saint Malo in the west of France there is such a level country that one may drive a wagon all the way without upsetting it. That was the path by which the migration of the fair race took place, and when they arrived here they mixed with the Basques, and to that intermixture Prof. Huxley attributes the varieties of Europe. He strongly opposes the idea that differences of climate could ever have produced the modifications of races, and insists that the mixture of races accounts for all. He traces no resemblance between the Africans and any other race, and finds that there is a geographical reason for believing that the Northern or cis-Sahara part of Africa was a part of Europe, and ultra-Sahara Africa was an island. The Egyptians passed over from Italy and Spain, the physical connection between these and Africa being almost traceable now at low tide. From the Egyptians came the Syrians, Arabians, Armenians, etc. The Chinese, Tartars, etc., skirt northward into Scandinavia. But beyond them there are tribes that resemble the Indians of the extreme north of America. These are very different from the aborigines of South America. The Professor finds that each great kingdom or race had its several and original civilization. There was an Egyptian, a Chinese, a Greek, a Mexican, a Peruvian civilization, and neither of these can be regarded as having been produced by the other, though our later centers of civilization

may be traced to one or the other of these. The details he gave concerning these civilizations were extremely interesting. He quoted from very ancient Chinese writings (of date several thousand years before Christ) the golden rule, and found that with them originated the idea that government existed for the benefit of the people governed, instead of the governors. (Some one present observed after the lecture that he thought it would be advisable to get the Chinese to send missionaries to Europe.) When considering the ancient Egyptian civilization, the Professor read us an Egyptian novel, deciphered from monuments which existed long before the days of the Pentateuch, which was clearly the original of the story of Joseph and Potiphar's wife, and has a good deal of the style of the Arabian Nights in it. With reference to the grand question of ethnology, whether all races migrated from a single center, or, as Agassiz thinks, were originally formed in the lands where they are found, Professor Huxley finds in the Darwinian theory a point where those who assert one and those who assert many centers for the human family may unite. He thinks that in entirely pre-historic times the geographical structure of the earth was very different from what it is now, and that there were links and paths between the islands and continents, which exist no longer. Over the whole earth was distributed some very low primitive stock of the human type, and in the progress of ages these were separated the one from the other by vast geologic and geographic changes. Then, by gradual selection, the weaker and uglier of this stock in each place passed away before the stronger, until they were improved, and gradually culminated in their various civilizations. Thus each, in its present form, was created in its own island or continent.

While Professor Huxley was in his closing lecture giving these views, I could not help being struck by the foresight of our own old Ben. Franklin, who, in a letter concerning the Indian relics of the Western States, suggested that once upon a time the world may have been wrecked like a vast ship, and that the islands, continents, etc., were the pieces of it to which people clung, being thus divided up into tribes and races, from which were developed the various peoples found scattered through the world. The letter to which I refer will be found in Duyckinck's *Cyclopedia of American Literature*, and as a quaint (and now, it seems, important) speculation will well repay perusal. I have no idea that Mr. Huxley ever heard that the idea had been suggested by Franklin, and indeed it was an inevitable deduction from his own facts. This makes it all the more striking that Franklin should have anticipated what must now be regarded as the deliberately adopted theory of the most accomplished ethnologist in Europe, and one who has gained the confidence of the scientific world everywhere by his faithful pursuit of truth, his profound humility in adhering to it when found, and his severe critical scholarship, which is able to separate from any and

every ore the grains of simple fact it may contain.

[Theologians and scientific men must settle the question of the origin of the race or races, age of the world, etc., as best they can. Nobody now living knows it all. We and our successors must "live and learn."]

NAMES OF DAYS—THEIR ORIGIN.

THE idols which our Saxon ancestors worshiped, and from which the days of the week derive their names, were various, and the principal object of their adoration.

The Idol of the Sun.—The idol which represented the glorious luminary of the day, was the chief object of their worship. It is described like the bust of a man, set upon a pillar, holding with outstretched arms a burning wheel before his breast. The first day of the week was especially dedicated to its adoration, which they termed the *Sun's Deag*; hence is derived the word Sunday.

The Idol of the Moon.—The next was the idol of the moon, which they worshiped on the second day of the week, called by them *Moon's Deag*—and since by us, Monday. The form of the idol is intended to represent a woman, habited in a short coat and hood, and two long ears.

The Idol of Tuisco.—Tuisco was at first deified as the father and ruler of the Teutonic race, but in the course of time he was worshiped as the son of earth. From this came the Saxon words *Tuisco Deag*, which we call Tuesday. He is represented standing on a pedestal, as an old venerable sage, clothed in the skin of an animal, and holding a scepter in the right hand.

The Idol of Woden, or Odin.—Woden, or Odin, was one of the supreme divinities of the Northern nations. This hero is supposed to have emigrated from the East, but from what country or at what time is not known. His exploits form the greater part of the mythological creed of the northern nations, and his achievements were magnificent beyond all credibility. The name of the fourth day in the week, called by the Saxons *Woden's Deag*, and by us Wednesday, is derived from this personage. Woden is represented in a bold and martial attitude, clad in armor, with a broadsword uplifted in his right hand.

The Idol Thor.—Thor was the eldest and bravest of the sons of Woden and Friga, and was, after his parents, considered the greatest god among the Saxons and Danes. To him the fifth day of the week, called by them *Thor's Deag*, and by us Thursday, was consecrated. Thor is represented as sitting on a throne, with a crown of gold on his head, adorned with a circle in front, wherein were twelve bright burnished gold stars, and with a regal scepter in his right hand.

The Idol of Friga, or Frega.—Friga, or Frega, was the wife of Woden, or Odin, and next to him, the most revered divinity among the heathen Saxons, Danes, and other northern nations. In the most ancient times Friga, or

Frega, was the same with the goddess Hortha, or Farth. To her the sixth day of the week was consecrated, which by the Saxons was written *Friag's Deag*, corresponding with our Friday. Friga is represented with a drawn sword in her right hand and a bow in her left.

The Idol Seater.—The idol Seater is represented on a pedestal, whereon is placed a perch, on the sharp, prickled back of which he stood. His head was uncovered, and his visage lean. In his left hand was a pail of water wherein were flowers and fruit; and his dress consisted of a long coat, girded with linen. The appellation given to the day of his celebration is still retained. The Saxons named it *Seater's Deag*, which we call Saturday. Thus the days of our week are derived from heathen ideas and heathen worship.

A NOVELIST'S BENEVOLENCE.—The following incident shows the difference between practical beneficence and maudlin sentimentalism.

Eugene Sue used to visit, almost daily, one of the most fashionable ladies of Paris, Madame de —, and hold forth in her richly-furnished boudoir on the condition of the poor.

"Do you ever relieve their distress?" asked Madame de —, at the close of one of these harangues.

"To a trifling extent," answered Sue; "but though my gifts are always small, they are always cheerfully bestowed. I give one fourth of my income in alms."

That afternoon, as he left the Cafe de Paris, where he had been eating a costly dinner, an apparently old woman, clad in rags, prayed for charity.

"Go away!" was the stern reply.

"But I am starving—give me a single copper to purchase bread with."

"I will give you in charge of a police officer, if you thus annoy me."

"You will?" said the beggar; "and yet, Monsieur Eugene Sue, you are the man who writes about the misery of the poor—you are the workingman's champion—you are—"

"Who are you?" exclaimed Sue.

"Madame de —," was the reply, and the disguised lady left the novelist to his reflections.

THE NEW KINGDOM, OR DOMINION, OVER THE BORDER.—Some of the Canadian journals are beginning to grumble at the costliness of the machinery of their new Dominion. The Confederation has thirteen new ministers to commence with, and two new and complete ministries must be formed for Upper and Lower Canada. Each of the ministers is to get \$8,000 a year. The *Montreal Herald* says: "That is pretty well to begin with, in the way of the blessings with which this new state of political existence is to overwhelm us."

Lord Monk gets \$50,000 a year—in gold—for governing the people of the new kingdom. We are to publish a portrait and description of this new lord in an early number of this JOURNAL. There are few Americans, comparatively speaking, who ever saw a "live English lord." Price only 30 cents.

CENTRAL PARK AND THE BOULEVARD ILLUSTRATED.

By permission, we take from *Demorest's Magazine* the following interesting description, with illustrations, of our great Central Park, and the prospectively beautiful Boulevard. All our American cities and villages are vying with each other to render them the most attractive, beautiful, and healthful. Let the good work go on.

THE CENTRAL PARK AND THE NEW BOULEVARD.

It is a most gratifying fact that New York city is growing in beauty, and in all those characteristics which mark the growth and refinement of the age, as rapidly as it is achieving the highest commercial importance.

The transformation which the Central Park has effected in the upper part of the island will be perfected by the completion of the new Boulevard, which is already commenced, and by the magnificent residences which will spring up as if by magic along the lines on both sides, exhibiting for the first time in the metropolis the wealth and taste of the community.

Heretofore the character of the architecture displayed in the finest houses has not done full credit to our genius or taste. The long, narrow streets have afforded no opportunity for anything beyond the uniform brown stone structures; and the wealth which should have made the exterior imposing, has been lavished on costly toys and perishable knickknackery for the inside.

With the splendid improvements projected in the new Boulevard and upon the upper part of the island, a new order of things will be created. Stately mansions and tasteful villas, with handsome grounds and terraced gardens, will make that once unsightly region bloom and blossom as the rose.

THE BOULEVARD AS IT IS.

At present there is hardly a desirable spot of ground for immediate building on the line of the Boulevard below One Hundredth Street. High rocks, ridges, and low miry ground, covered with shanties, and their attendant nuisances, occupy the space upon this line of the Grand Boulevard.

The new Boulevard, which gives so much additional importance to the Park, and to the upper part of the island, and which, when completed, will furnish one of the most magnificent drives in the world, is properly the continuation of Broadway. To perfect this grand thoroughfare, the street should be widened from Union Square, where it becomes narrow, to Fifty-ninth Street and Central Park, where the new Boulevard is to commence.

From this point—that is to say, from the corner of Fifty-ninth Street and Eighth Avenue—it is to be one hundred and fifty feet in width, running nearly parallel with the old Bloomingdale Road, and midway between the Park and the river, until it reaches Eleventh Avenue at the junction of One Hundred and Sixth Street, which, being originally one of the wide streets, and offering the readiest mode of access to the highest ground in the Park, will form a grand avenue from the Park to the Boulevard. It has, therefore, been determined to widen this street to the full one hundred and fifty feet, making it a part of the Grand Boulevard, and embellishing it by a handsome entrance into the Central Park. From One Hundred and Sixth Street the Boulevard continues on the line of the Eleventh Avenue up into Westchester County, forming a continuous drive of eighteen miles.

Another immense advantage to the upper part of the island is the elevated railroad, the charter for which has been obtained, and which is to traverse Broadway, and also through Greenwich Street and Ninth Avenue, to the Park, over the sidewalk, thence taking the road through Ninth Avenue to the upper part of the island, the design being to continue it all the way perhaps as far as Yonkers. This road must be completed, according to the terms of its charter, in five years, and can not charge more than ten cents to any part of New York Island.

As an illustration of the Boulevard as it is, we have

selected the highest ground and the most inviting and most unexceptionable spot on the island. A photograph of this ground, from which our picture was drawn, was taken from the highest point of observation on the Great Hill in the Central Park, looking west, on a line with One Hundred and Sixth Street, and forms a part of Summit Hill.

THE BOULEVARD AS IT WILL BE.

It is difficult to realize the future of the upper part of New York Island in view of what has been done, and what it may reasonably be expected will therefore be accomplished. Instead of narrow, narrow streets, rocky ridges, and crossways, occupied by wretched shanties, with here and there a house of respectable appearance, we shall have broad, magnificent avenues and shaded side streets leading from one point of attraction to another.

Taste will develop itself in the most beautiful forms of architecture, and in the decoration and embellishment of sites which already afford the finest advantages for the achievement of grand and picturesque effects.

The plan of the Boulevard which seems to find most favor, and which, in our opinion, is altogether best adapted to the amount of space and the end to be attained, is to divide it into two drives, one up and one down, of thirty feet in width each. Court-yards in front of residences, to be laid out in nearly uniform style, according to the plan of the Park Commissioners, will occupy fifteen feet on either side; that is to say, thirty feet of the whole space; sidewalks ten feet each. A wide road fifteen feet, and five feet for trees, takes in the whole width allowed, which is one hundred and fifty feet.

This plan would divide the Boulevard into distinct avenues, separated by four rows of trees, and afford space for lines of carriages going and returning, double in number those of a single continuous drive; besides producing, in their changing motions, highly picturesque effects.

The commencement of the Boulevard at Fifty-ninth Street forms a grand circular entrance, so to speak, as well as a semicircular outlet for the different lines of vehicles. The spacious avenue extending from this point to the upper part of the island, lined with costly dwellings, with the picturesque Mansard roofs, traversed by rows of stately trees, and adorned with the fountains and flowers of the court-yards in front of the private residences, will form the most charming and complete drive in the world.

The project of terracing the high ground lying between the Boulevard and the river above One Hundredth Street is a conception almost equal to that of the Central Park itself. It will obviate the necessity for streets, and transform that whole region into a fairyland.

A very important question is the selection of a suitable point of exit and entrance to the upper part of the Park, by a street which runs continuously through from the Park to the Boulevard. There is no desirable way of leaving the Park at its upper portion, and a cross-street, adapted to the purpose of a grand inlet and outlet, and forming a connection between the Park and the Boulevard, is therefore a necessity.

These conditions are met by One Hundred and Sixth Street, already one hundred feet wide, and which, situated upon very high ground, possesses a remarkably pleasant grade, rising gently to Summit Hill, midway between the Park and the Boulevard. It has therefore been determined to widen this street to the width of the Boulevard, and distinguish it also by one of the grand entrances to the Park, which, together with the *bi-jou* park formed at the other end by the junction of One Hundred and Sixth Street with an angle of the Boulevard, will constitute it a magnificent drive and outlet, and render it one of the most choice and desirable locations for elegant residences or fine public or private edifices; particularly as it is also to be ornamented uniformly with the Boulevard, as seen in the engraving.

What the Central Park has been to New York already can not be computed on any standard of money value; but what it is destined to be did not for a long time enter into the minds even of its projectors.

A very few years will see the surrounding neighborhoods, especially upon the west side, transferred into beautiful sites and dwelling-places for our wealthiest

citizens. The limited available property is now being bought by millionaires and gentlemen of means.

Business is rapidly driving all New York still farther and farther "up-town." Fourteenth Street and Union Square are already given over to trade, Fifth Avenue to hotels and club-houses; and we venture the prediction that in five years there will not be a building lot fronting the north or west side of the Park to be bought, except at a price which would now be considered fabulous.

This change will come as the growth of a single night, when once the public begin to realize the Boulevard, not as it is, but as it will be.

IMPROVEMENTS IN THE PARK.

The Central Park has already accomplished an incalculable amount of good for New York city. It affords to the crowded population a charming place of resort for healthful summer and winter recreation. It educates the public taste by appealing to its higher faculties, its love of the beautiful in nature, in form, and color. Its wise restrictions inculcate order and control; its provisions for enjoyment supply to thousands the most pleasurable influences of their lives.

The admirable manner in which all the original plans have been and are being carried out by the Park Commissioners, has won the entire confidence and approval of the whole community. What has not been done, has only been reserved until plans were matured—not forgotten or neglected. The aim all the way through has been to provide the greatest amount of good for the largest number.

One of the important works now under consideration is the establishment of zoological gardens. The question of public convenience, of economy in their management, and perfection in the various details, renders the undertaking a very formidable one, and warrants the delay in attempting it.

Among the works in progress is a rustic structure, roofed in, smoothly floored, and divided up into compartments, provided with rustic benches, tables, and the like, where children or parties can retire out of the rain, form groups and play games, or amuse themselves as they choose, without interfering with each other. A dairy will be in the vicinity of this building, where milk, bread, crackers, and other light and simple refreshments can be obtained. The location is east of the playground and south of the Mall, and though somewhat isolated, so as not to interfere with the general design, is easily approached from the Fifth, Sixth, Seventh, and Eighth Avenue entrances at Fifty-ninth Street.

Along the walks, and at several points on the Bridge Road, rustic arbors of cedar have been erected, which will soon be covered with the foliage of climbing plants, and afford not only pleasant objects and incidents to the visitor, but places of rest and shelter.

One rustic bridge over the brook has also been completed, and many additional rustic seats in such sheltered and shady spots as are most likely to be attractive have been furnished during the past year; so that the accommodations almost keep pace with the increasing and ever-recurring beauty.

MUSIC.

The music of the Park is a distinct feature, and, together with the freedom of the playground on that day to children, has made Saturday afternoon a holiday in the metropolis, enjoyed and anticipated by thousands. In addition to this, the music itself, which is of the highest order, refines and cultivates the taste, revives pleasant memories and associations, and provides without cost an entertainment superior to many of great pretension.

TREES.

One of the greatest wants which has ever been felt in connection with the Park, almost the only one, indeed, was a lack of shade; but this is now being very rapidly obviated. In some parts of the Park already the trees are so thick and well-grown as to form shaded avenues and most beautiful groves, and the danger shortly seems to be that the foliage will become too dense rather than not thick enough.

BIRDS.

In some curious respects the Central Park has been a providence to the city, and one of these is in the domes-

THE BOULEVARD AS IT IS.

THE BOULEVARD AS IT WILL BE IN 1872.

Viewed from the highest ground in the Central Park, looking toward Summit Hill through One Hundred and Sixth Street.

tication of birds. Of course the barbarism of shooting or of destroying their eggs is not allowed there; and from the English sparrows and other birds which have been set free, whole colonies have been propagated, which not only make the air in the region of the Park vocal with melody, but have migrated to different parts of the metropolis, and delivered it from the disgusting annoyance of "measuring" worms, which formerly proved a fearful pest during two of the otherwise most delightful months in the year.

SKATING.

For skating also, and for an immense incentive to skill and invention in the design and manufacture of skates, we are indebted to the enthusiasm excited by the facilities and accommodations provided in the Park.

On "skating" days the number of visitors exceeds that of any other, unless it may be a musical Saturday. And this immense amount of patronage has certainly stimulated the inauguration of the numerous private enterprises which now make New York during the winter so rich in skating "rinks," "ponds," and the like.

The salutary effect of an institution like the Park upon the masses is seen in their behavior. According to the report of the commissioners, only one person out of every seventy-five thousand visitors has been subjected to discipline; and in most of these cases it was for fast driving. Such a state of things shows a general and hearty recognition of the uses of the Park, as well as of the wisdom which has dictated its regulations.

The amount of labor required to keep so vast an area in the splendid condition in which it is kept may be approximately estimated from the curious fact that the carriage-ways alone wear away an inch and a half of surface during the year. Yet, strange to say—and yet not strange, for development is the best economist—the whole cost of the Park is not more than one in ten times the accrued value of the adjoining land.

We learn that the Park Commissioners have other splendid improvements of the high bluffs and ridges on the west side of the island, already projected; but they are not sufficiently developed to justify our giving the details for the present.

NICKNAMES.—The difficulty of discovering a person in the colliery districts of England without being in possession of his nickname, is well shown in the following incident as related by a respectable English attorney: During his clerkship he was sent to serve some legal process on a man whose name and address were given to him with legal accuracy. He traversed the village to which he had been directed, from end to end, without success; and after spending many hours in the search, was about to abandon it in despair, when a young woman, who had witnessed his labors, kindly undertook to make inquiries for him, and began to hail her friends for that purpose. "Oi say, Bullyed, does thee know a man named Adam Green?" The bull-head was shaken in sign of ignorance. "Loy-a-bed, does thee?" Lie-a-bed's opportunities of making acquaintances had been rather limited, and she could not solve the difficulty. Stumpy (a man with a wooden leg), Cowskin, Spindlehanks, Cork-eye, and Pigtail were severally invoked, but in vain; and the querist fell into a *brown study*, in which she remained for some time. At length, however, her eyes suddenly brightened, and slapping one of her companions on the shoulder, she exclaimed triumphantly, "Dash my wig! whoy, he means my feyther!" and then, turning to the gentlemen, she added, "you should ha' ax'd for *Ould Blackbird!*"

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

BIBLE TEACHINGS IN NATURE. By the Rev. Hugh Macmillan, author of "First Forms of Vegetation." New York: D. Appleton & Co. Large 12mo, pp. xx., 344. Price, \$2.

The opening of the first chapter of this volume—which is devoted to a consideration of the lessons imparted by the starry hosts which people space—is in harmony with the grandeur of the subject. We extract a sentence or two: "It is impossible for those who have never visited the glowing East to form an adequate idea of the exceeding beauty of an Oriental night. The sky—which bends enamored over clusters of graceful palm-trees fringing some slow-moving stream, or groves of dark motionless cypresses rising up like Gothic spires from the midst of white flat-roofed villages—is of the deepest, darkest purple, unstained by the faintest film of vapor, undimmed by a single fleecy cloud. It is the very image of purity and peace, idealizing the dull earth with its beauty, elevating sense into the sphere of soul, and suggesting thoughts and yearnings too tender and ethereal to be invested with human language."

The writer exhibits throughout his book a purity of taste and sentiment which gratifies the elevated and refined reader. He draws striking lessons and Scripture truth from the common objects of earth; illustrating his pages with appropriate quotations from Holy Writ. Celestial phenomena and terrestrial objects—grass, trees, corn, leaves, fresh and faded—the sea, the round world—are pictured forth with special reference to the providence manifested through them. The book is worth reading carefully.

GUIDE TO THE ROYAL ARCH CHAPTER; a Complete Monitor for Royal Arch Masonry, with full instructions in the Degrees of Mark Master, Past Master, Most Excellent Master, and Royal Arch, according to the text of the Manual of the Chapter. By John Sheville, P. G. H. P. of New Jersey, and James L. Gould, G. H. P. of Connecticut. Together with an Historical Introduction, Explanatory Notes, and Critical Emendations, etc. New York: Masonic Publishing and Manufacturing Co. 12mo. Cloth, gilt. Price, \$1 50.

The publication of Masonic books has become so much a part of the book trade that we are not surprised by the large number of volumes which are annually issued in that interest. The volume before us is a very creditable specimen of book-making, and in its general composition appears to an unmasonic reader remarkably free from the tone of mysticism and grand antiquity which might be expected in a volume relating to the higher degrees of Masonry. Its directness of statement is its chief feature in our estimation. The ceremonies detailed are of an exceedingly impressive character, totally unlike the bald and ridiculous descriptions one reads in Richardson. The book will doubtless find ready sale among aspiring members of the ancient order, and

may be read with advantage by those who can not claim such connection.

ORVILLE COLLEGE. By Mrs. Henry Wood, author of "East Lynne," "St. Martin's Eve," etc., etc. Printed from the author's MSS. and advanced Proof Sheets. Philadelphia: T. B. Peterson & Brothers. Paper. Price, 50 cents.

Mrs. Wood stands in a position, with reference to novel-writing, unsurpassed by any other English lady. This new work fully sustains the reputation gained for her by "East Lynne" and "The Channings." Always lively and disposed to multiply the characters which grace her works, she introduces so much variety into a plot that the interest of the reader is steadily sustained from beginning to end. Orville College is said to be one of her best books.

OUTLINES OF A NEW THEORY OF DISEASE, Applied to Hydropathy, showing that Water is the only true remedy. With observations on the Errors Committed in the Practice of Hydropathy; Notes on the Cure of Cholera by Cold Water, etc. By the late H. Francke, Director of the Hydropathic Institution at Alexanderstad, Bavaria. New York: John Wiley & Son. 12mo. Cloth. Price, \$2.

HYDROPATHY.—A Boston paper has the following: Although comparatively little is said now about the water-cure, it is fully recognized as a natural fact, and resorted to more than many are aware of. The régime maintained in a scientifically conducted hydropathic establishment is of itself curative; and it is singularly adapted to the temperament of our people and the circumstances of this country, where overwork and artificial excitement so wear upon and pervert the nervous system. The quiet, regular exercise, good air, simple diet, and judicious ablutions of a rightly-conducted water-cure renew, invigorate, calm, and purify brain, heart, blood, and nerves in a manner and to an extent undreamed of by the inexperienced. Bulwer in England, and Calvert in America, have eloquently explained the philosophy of the water-cure. Since the death of the German hydropathist of Brattleborough, Vt., we have greatly needed a thoroughly bred and scientifically experienced practitioner in this sphere. The want is likely to be supplied by an accomplished German physician, the son of an eminent officer in the Prussian service—Dr. R. Kuczkowski, who is now in New York, and about to open a water-cure on the European plan—at some eligible place in the vicinity. Meantime he has edited and republished, through John Wiley & Son, the able and interesting "Outlines of a New Theory of Disease, applied to Hydropathy," by the late celebrated Dr. Francke. This work points out the former errors of the system, explains its principles, and illustrates its basis in nature and its practical results. We commend it to all rational seekers after health, to medical inquirers of candor, and to the general reader, as a sensible, learned, and seasonable work.

It seems to us a little strange that this Boston man omits to name, among the chief disseminators of water-cure in America, Drs. Trall, Shew, Kitteridge, Bedortha, and others, whose names have been so intimately identified with this great interest. We welcome Dr. Kuczkowski, and trust he may find Americans ready to avail themselves of his services, whenever they have occasion for a physician who gives no medicines.

THE MODERN CARPENTER AND BUILDER. New and Original Methods for every Cut in Carpentry, Joinery, and Hand-Railing. By Robert Riddell. Just issued. Price, post-paid, \$5 75.

This is an admirable work for the young carpenter. It is instructive and suggestive.

A ROMANCE OF THE REPUBLIC. By L. Maria Child. Boston: Ticknor & Fields. 12mo. Cloth. Price, \$2.

This talented author never wrote a book which was not readable. Under this new title she gives us a picture of Southern life as it was before the stirring notes of the bugle summoned to the war of principles the two great sections of our country. Though slavery no longer exists on American soil, and the traffic in human property has been done away, there is a grace and a charm in this volume which render it exceedingly acceptable to general readers. The subject of slavery is interwoven with much skill in the narrative, so that the whole has much the character of a romance, and the reader seems to be dwelling on the pages of a fascinating novel rather than considering verities of a period very recent. The descriptive ability of Mrs. Child is exhibited in her beautiful and inimitable portraiture of Southern scenery, and her delineations of domestic life.

DOMBEY AND SON. By Charles Dickens, with Original Illustrations, by S. Eytinge, Jr. Boston: Ticknor & Fields. Diamond Edition. Price, \$1 50.

Dombey and Son—the enterprising, the worldly business firm, has become proverbial, and the Diamond Edition bids fair to become proverbial also, for neatness of binding, clearness of typography, and cheapness. The Diamond editions of the poets and novelists must be welcome to those whose bookcases are small. These little volumes pack closely, and illustrate well the *multum in parvo* of current literature.

LIBER LIBRORUM: Its Structure, Limitation, and Purpose. A Friendly Communication to a Reluctant Skeptic. New York: Charles Scribner & Co. Cloth.

This volume, as its title indicates, treats of the Bible. The position taken by the author is orthodox, or in accordance with the views entertained by the majority of the reformed Christian Church. In his preface he makes certain positive statements which leave no room for doubt as to his religious sentiments. He "firmly believes and earnestly defends the Historic Reality and the Supernatural Origin of the Mosaic and Christian systems. He also accepts the Incarnation, the Resurrection, and the Redemptive work of Christ, and the other important truths which these involve. * * He insists, also, upon the supreme authority of the Scriptures in respect to all questions of religious faith, and on their permanent and indispensable superiority above all other books, as composed by men divinely aided and inspired." The author thinks the time has arrived, and that rationalism and free thought have sufficiently extended their dominion over the civilized world to render it necessary to discuss the subject of the inspiration of the Bible, and maintain it by

all possible means; and while he enters upon the discussion with much spirit and earnestness, he is much actuated by a broad and liberal charity. The tone of the book and the method of treatment well adapt it to the consideration of those skeptically inclined. —

THE POSTHUMOUS PAPERS OF THE PICKWICK CLUB. By Charles Dickens. With eight full-page illustrations. 12mo., pp. 497, cloth. Price \$1 50. Boston: Ticknor & Fields.

This is the first of a new edition of the author's works, and the whole will be comprised in thirteen or fourteen volumes, published at the rate of one or more volumes monthly, until the set is completed. The size is handsome, compact, well-shaped, like Messrs. Ticknor & Fields' Household Edition of the Waverly Novels, and is to be known as the "CHARLES DICKENS" Edition.

The gentlemanly publishers, in their Diamond, Household, and other editions, are doing this author far too much honor. Mr. Dickens is simply a novelist—a story-teller; nothing more. Just as all the world run after Artemus Ward and Christy's Minstrels to be amused, so all the world must read the racy, comic stories of this most prolific babler. His personal capital or stock in trade consists of a very fertile imagination, immense perceptive faculties, and the most copious language. As a descriptive writer he has few equals. Socially, he is "free and easy," if not promiscuous. His appetite is perfectly national, if not perfectly natural—and he "goes in" for all the sensuous luxuries, including stimulants. In pecuniary matters he is sadly deficient, being foolishly prodigal, if not absolutely wasteful. He is weak in philosophy, poor in science, and in morals he is a miserable cripple. If his Conscientiousness be not small, it is dormant or perverted. So is the sense of devotion. It is not an exaggeration to class him with moral imbeciles. His sense of honor is obtuse, his memory for favors received is poor—and, altogether, it is one of the most warped characters one will meet in half a lifetime: the affections out of gear and run mad; the intellect given over to a "rampant" imagination, and the moral sense completely subordinated to appetite and sensuous gratification and indulgence. Instead of ripening into a beautiful old age, full of honor, affection, wisdom, devotion, and integrity, he is simply repeating his early productions and living over again the life he has led. We do not predict anything good of him in his old age. If he does not come to want, it will be because of the mistaken kindness of his foolish admirers. Such is the real character of one of the most popular authors of the nineteenth century.

THE REBEL CHIEF, a Tale of Guerrilla Life. By Gustave Aimard, Author of "The Prairie Flower," "The Trail Hunter," etc., etc. Complete. Philadelphia: T. B. Peterson & Brothers. 8vo. Paper. Price, 75 cents.

This is a stirring, nay, an exciting story. Border life is depicted with strong effect. The Spanish and Mexican features of the work render it very attractive to the lover of the weird and romantic.

THE PHYSIOLOGY AND PATHOLOGY OF THE MIND. By Henry Maudsley, M.D., London, Physician to the West London Hospital, Honorary Member of the Medico-Psychological Society of Paris, formerly Resident Physician of the Manchester Royal Lunatic Hospital. New York: D. Appleton & Company. 8vo. Cloth, pp. xiv., 442, Price, \$4 50.

The aim of the writer of the new edition to treatises on mental phenomena is to treat of the mind rather from a physiological than from a metaphysical point of view. His experience in the practical study of insanity had shown that the theoretical principles and prescriptions of metaphysical philosophy "had no bearing whatever on, no discoverable relation to, the facts that daily came under observation, and, on the other hand, that writers on mental diseases treated their subject as if it belonged to a science entirely distinct from that which was concerned with the sound mind." Such, we would here say, has ever been and ever will be the case, until the grand old phrenological principle, "*Sana mens in corpore sano*," is universally received and acted upon. The subject is treated in an able manner, and possesses, because of its physiological basis, a definiteness far exceeding that discerned in the ponderous volumes of metaphysicians who have not so positive a foundation to rest their elaborate theories upon.

Throughout the work, especially in those chapters treating of the brain and nervous system, we meet with statements so like those to be met with in the philosophical treatises and essays on Phrenology, that we can hardly think Dr. Maudsley to be unacquainted with the writings of Combe, Elliotson, Mackintosh, and others. He makes the following statements, which show him to be a semi-phrenologist. "It is extremely probable, again, that different convolutions of the brain do subserve different functions in our mental life; but the precise mapping out of the cerebral surface, and the classification of the mental faculties which the phrenologists have rashly made, will not bear scientific examination. That the broad and prominent forehead indicates great intellectual power was believed in Greece, and is commonly accepted as true now; the examination of the brains of animals and idiots, and the comparison of the brain of the lowest savage with the brain of the civilized European, certainly tend to strengthen the belief. Narrow and pointed hemispheres assuredly do mark an approach to the character of the monkey's brain. There is some reason to believe, also, that the upper part of the brain and the posterior lobes have more to do with feeling than with the understanding. Huschke has found these parts to be proportionately more developed in women than in men, etc." There seems to be something like indirect contradiction in these statements. After saying that the phrenologists have "rashly" mapped out the surface, he makes allusions to special parts of the brain as indicating certain mental characteristics, which parts of the brain correspond with the *rash* mapping out of the phrenologists. Dr. Gall was upward of twenty years in as-

certaining the function and location of the first organ he discovered, and the utmost care in examination, irrespective of the passage of time, was exercised in ascertaining the nature of other faculties by him and his disciples. If any doubt or uncertainty existed with reference to an organ or faculty, no steps were taken "rashly" to locate it until its nature had been completely determined. If Dr. Maudsley would carefully and deliberately investigate this subject, calling in the aid of phreno-magnetism, if need be, he will have abundant reason to award the verdict of *discretion* instead of *rashness* to the founders of Phrenology.

THE OLD CURIOSITY SHOP; and Reprinted Pieces. By Charles Dickens. With Original Illustrations, by S. Eytinge, Jr. Boston: Ticknor & Fields. Diamond Edition. \$1 50.

In none of Dickens' works do we find that author's wonderful versatility more elaborately evinced than in this production. Every chapter abounds in diversity. The characters themselves are gnarled and eccentric, yet marked and distinctly preserved. Little Nell has become notorious. The illustrations are grotesque enough to correspond with their word portraits. The collection of miscellaneous pieces bound with the book renders it doubly desirable.

LITTLE DORRITT. By Charles Dickens. With thirty-eight Original Illustrations, from designs by H. K. Browne. Philadelphia: T. B. Peterson & Brothers. Price, \$1 25 in Cloth; or, \$1 in green paper cover, sewed.

The above enterprising house have now published of this Green Cloth Edition six volumes, viz., *Little Dorritt*, *Bleak House*, *A Tale of Two Cities*, *Great Expectations*, *Our Mutual Friend*, and *David Copperfield*. All the other volumes of Charles Dickens' works will appear monthly, uniform with the above, until the whole series is complete. The admirers of Dickens have here an excellent opportunity of securing a copiously illustrated set of that author's novels.

A CHURCH DIRECTORY for New York City. Published by the New York City Mission, Bible House.

This is a convenient little volume, furnishing the general statistics of the many religious denominations in New York city, with the names of the different Church organizations and congregations, the minister in charge, location of edifices, addresses of clergymen. Price 50 cents.

NATHANIEL; OR, THE ISRAELITE INDEED. Devoted to the illustration and defense of the Hebrew Christianity, which is founded on Moses and the Prophets, and the Apostles, and to the true interests of the Jewish nation generally. Terms, \$1 a year, or 15 cents a number. Edited and published by G. R. Lederer, No. 12 St. George's Place, New York.

"Hebrew Christianity." The editor is an educated Jew, or Hebrew, converted to Christianity, and now seeks to win over others of his people to the views which he entertains. Read "Nathaniel," and judge ye.

TEETOTALISM AS A RULE OF DUTY UNKNOWN TO THE BIBLE, AND CONDEMNED BY CHRISTIAN ETHICS. By D. R. Thomason, with a Commendatory Letter by Howard Crosby, D.D. New York: Richardson & Co. 75 cts.

This little book has been evidently written with much care. The chief feature of it is the argument brought to bear against Ritchie's "Scripture Testimony Against Intoxicating Wine," which is neatly and charitably analyzed. The author does not wish to be understood as an advocate of wine-bibbing; on the contrary, he takes a firm stand in opposition to the use of ardent spirits. He claims to be an earnest advocate of truth, and would have the truth known wherever any mistakes or misinterpretations have eclipsed or modified it.

WOOL-GATHERING. By Gail Hamilton. 1 vol. 12mo, pp. 335. Price, \$2. Boston: Ticknor & Fields.

A quaint title of a very racy book by this high-pressure female writer. Gail has been out West. She traveled precisely as other folks do, by railway, steamboat, and stage. She "saw sights;" women with crying babies, band-boxes, and bundles; selfish men and women who occupied more than one seat, etc. She pushed on West to Minnesota, and gives vivid pictures of real incidents, which make her book something of a traveler's guide. After going over ground quite familiar to all who have been to St. Paul and St. Anthony, she went down the Mississippi, and up into Tennessee, and across the country *via* Washington home to Boston, and *this* is what she calls "Wool-Gathering." Gail will pardon us for quoting the last three lines of her book. She says: "And yet, O reader, gentle but just, if you should whisper that there is great cry and little wool—alas! I can not gainsay you."

PARTS 120 and 121 of CHAMBERS' ENCYCLOPEDIA, a Dictionary of Universal Knowledge for the People, have been received from Messrs. J. B. Lippincott & Co., of Philadelphia. They are in keeping with preceding numbers, and even more elaborately illustrated. Several articles of great value to the *litterateur* appear in them. Such subjects as Vital Statistics, Warming and Ventilation, Waterloo, and Water-power are voluminously treated.

New Books.

[Among the late issues of the press not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting:]

MODERN INQUIRIES: Classical, Professional, and Miscellaneous. By Jacob Bigelow, M.D. \$2 50.

MARRIAGE IN THE UNITED STATES. By A. Carlier. Translated from the French by B. J. Jeffries. Third Edition. \$1 50.

THE BASE BALL PLAYER'S BOOK OF REFERENCE. Containing Rules of the Game for 1867, etc. By Henry Chadwick. 30 cents.

HOW TO MAKE MONEY, AND HOW TO KEEP IT. By T. A. Davies. \$1 50.

SELF-EDUCATION; or, the Means and Art of Moral Progress, translated from the French of M. le Baron Degerando. By Elizabeth P. Peabody. Third Edition with additions. 8vo. Cloth. \$1 75.

GRAMMAR OF THE FRENCH LANGUAGE. By M. Schele de Vere. 12mo. \$2 25.

THE ROMANCE OF THE AGE; or, the Discovery of Gold in California. By Edward E. Dunbar. \$1 40.

FASHION AND FOLLY. By Aunt Hattie. Illustrated. \$1 40.

LECTURE ON THE NATURE OF SPIRIT, and of Man as a Spiritual Being. By Chauncey Giles. 12mo. \$1 40.

OLD ENGLAND, its Scenery, Art, and People. By James M. Hoppin, Professor in Yale College. \$2 25.

KEY-NOTES OF AMERICAN LIBERTY; comprising the most important Speeches, Proclamations, and Acts of Congress, from the Foundation of the Government to the Present Time. With a History of the Flag, by a distinguished Historian. Illustrated. \$2.

LLOYD'S BATTLE HISTORY OF THE GREAT REBELLION; Complete from the Capture of Fort Sumter, April 14, 1861, to the Capture of Jefferson Davis, May 10, 1865; embracing General Howard's Tribute to the Volunteer, 268 Battle Descriptions, 39 Biographical Sketches, 49 Portraits of Generals, 17 Maps of Battle Fields, 13 Battle Pictures, and a General Review of the War for the Union. 8vo, bound, pp. 712. \$5 75.

THE MODERN CARPENTER AND BUILDER; New and Original Methods for every Cut in Carpentry, Joinery, and Hand-Railing. By Robert Riddell. Illustrated. 4to. \$5 75.

THE INVISIBLES: an Explanation of Phenomena, commonly called Spiritual. \$2.

SERPENTS IN THE DOVE'S NEST. By Rev. John Todd, D.D. I. Fashionable Murder. II. The Cloud with the Dark Lining. 25 cents.

AMERICAN POMOLOGY. Apples. By Dr. John A. Warder. With 200 Illustrations. \$3 25.

HOME OF WASHINGTON IN MOUNT VERNON, and its Associations. By J. A. Wineberger. Illustrated. 31 cents.

AMERICAN EQUAL RIGHTS ASSOCIATION. Proceedings, First Anniversary, New York, May 9 and 10, 1867. Report by H. M. Parkhurst. 25 cents.

BEADLE'S DIME HANDBOOK OF RIDING AND DRIVING. Paper, 12 cents.

PASTOR'S REGISTER FOR PRIVATE USE. Arranged by Rev. W. T. Beatty. Second Edition. Cloth, \$3 75.

CHAMBERS' ENCYCLOPEDIA. Vol. 9. Imp. 8vo, pp. 827. Cloth, \$5.

NATURE AND LIFE: Sermons by Robert Collyer. Cloth, \$1 75.

A WOMAN'S SECRET. By Mrs. Caroline F. Corbin. Cloth, \$2.

RURAL STUDIES, with Hints for Country Places. By D. G. Mitchell. 12mo. Cloth. \$2.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "Best Thoughts" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—TO CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE SLIPS.

SPECIAL NOTICE.—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETIOLOGY, and ANTHROPOLOGY, or the general SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

WILL IT DO ME ANY GOOD?

—A grandfather, with a bevy of grandchildren, writes to inquire at what age children should have their characters delineated, with a view to deciding on a calling in life; and asks if it will do him any good—now that he is seventy-six—to have his head examined?

Ans. The proper age for examining children is from two years upward, to ascertain—not while in infancy, what calling they may choose—but how to govern them wisely. It often happens that young parents are puzzled to know just how to manage the little folks. One is so belligerent, another is timid, one is reckless, another sensitive, one craves all he sees and is "so selfish," and so on; now, Phrenology would suggest the way each should be managed, and thus improve the child and lessen the care of mother and nurse. When lads have attained the age of twelve or fifteen, it can readily be foretold what they can do best—whether agricultural, mechanical, mercantile, professional, literary, or artistic work. The only object to be gained in writing out the character of an aged person is for the information of others interested in him or her. It would be exceedingly gratifying to each of us, no doubt, to know exactly what were the developments and characteristics of our ancestors, near and remote. We value even an indifferent likeness of them; but how much more should we value a mental photograph—a life-like description—as a careful analysis of their real characters! Elderly people may bequeath to their posterity such a bequest at a very small cost to themselves, and it would be carefully treasured by all who loved them.

CURIOSITY.—What faculty or combination of faculties produce inquisitive curiosity, so disagreeable in some people?

Ans. The fundamental organ of curiosity, or the desire to see and know things, is Individuality. This organ, associated with Eventuality, is especially active in young children, who often are very annoying on account of their numerous questions. In grown persons, who exhibit a disposition to pry into everything whether they are concerned or not, Individuality is very active and unrestrained by those faculties which impart reserve and gentility to the

character. A person with Individuality large, with Secretiveness, Agreeableness, and the reasoning organs relatively small, with large Combativeness, Language, and a quick excitable temperament, will be apt to annoy his friends and the society he moves in by his questions and prying remarks.

PROVIDENTIAL INTERPOSITION.—Does Providence interpose in human affairs to the suspension of nature's laws?

Ans. This question has been much discussed, *pro* and *con.*, by religious men; those affirming it, citing the case of Joshua's commanding the sun to stand still, and the various miracles recorded in the Bible; those denying it, venturing a theory of second causes, the operation of which is not understood by man. We are of opinion that mankind, like the great universe of matter, is governed by principles of law and order, specially adapted to his being and condition. Our experience leads us to such a conclusion. We never knew an instance of a man's infringing upon a law of his nature without experiencing a penalty. Science works wonderful things—things which sometimes puzzle if they do not set at fault entirely the organs of sense, yet science works in all its known processes in a certain, immutable manner. Occurrences which are denominated in a general way "accidents," because apparently out of the accustomed routine, when investigated, lose altogether a fortuitous character. So with those occurrences termed providential, we think that in most cases their causes can be determined.

FLATTERY.—What faculties render one liable to flattery?

Ans. Approbativeness gives the desire for appreciation and the good opinion of associates and the public. When Self-Esteem, Firmness, and the moral and intellectual organs are also large, the person will not be vain or easily flattered. It is when Approbativeness is active and the regulating organs not well developed that the person will yield unduly to flattery, and become vain. Children and youth are more easily deceived by flattery—which is nothing less than falsehood—than adults. But, unfortunately, there are many adults who are only children in mind. They are undeveloped, and may ever remain so.

WHO IS MRS. GEORGE WASHINGTON WYLLIS? "A lass she was, but a lass she is no more!" She has been and gone and given her charming self away to a man! Yes, she is now a married woman! For years she was supposed, from her *non de plume*, to be a madam, when she was only a miss. She is now Mrs. COMFORTABLE—and lives in the country. We shall still claim her as one of our corps of co-workers, and shall retain the original familiar name, first used in our good old LIFE ILLUSTRATED.

DIET FOR THE BILIOUS.—To what diet should one of a bilious temperament confine himself?

Ans. Those having a predominance of what is called the bilious or motive temperament, are more liable to a torpid liver than those having the sanguine or vital temperament are. The former have a dark complexion and thick blood—the latter abound in warm thin blood, and have a florid complexion, light hair, sometimes red; blue eyes, a bounding pulse, and an ardent nature. There are certain kinds of food that especially tend to make persons of dark complexion bilious, and other kinds that relieve that tendency. A

person of bilious habit should avoid articles of an oily, greasy nature, and also any considerable amount of saccharine matter. How many persons do we see every spring, who have lived on fat pork, poultry, sausages, mince pies, and buckwheat cakes, their sponge-like substance saturated with butter and sirup, looking bilious, and feeling worse than they look! The white of their eyes being of a saffron color, and their skin being yellow or yellow brown, with a dirty, leathery look, their faces full of pimples, and their entire system dull, sluggish, tired, and miserable. They attribute their bad feelings to the opening spring, when they should charge them to the engorgement during the entire winter. It will be noticed that these bilious persons are almost crazy in the spring for greens, salads, pickles, etc., because they can eat vinegar with them, the vinegar having a tendency to rouse the liver and other organs to throw off the surplus bilious matter. The better way is, in the main, to avoid much fatty matter and sugar, and, instead, eat lean beef, mutton, etc., keeping clear of pastry and condiments, and eating tart fruits as a part of every breakfast and dinner. In this way the liver will be kept active and the bilious difficulties will disappear.

A COLLEGE COURSE.—Would you advise a young man of twenty-one years to enter upon a college course?

Ans. Yes, if circumstances favor, and he has the health, means, and natural ability to turn a liberal education to good account when acquired. A classical course is to be desired. The next best thing is to learn a trade, or to be fitted for business.

PROFESSIONAL CLASS.—At what age may persons become members of your professional class—and how long do the sessions continue?

Ans. The question of age has not before been broached in this connection. Any one is old enough who has the requisite intelligence and culture; and no one is too old who has not lost the power of thought and memory. We should not reject one who was fourteen years of age, provided the conditions above were met, nor reject one under eighty, whose qualifications had not been worn out by time. The term will not cover more than six weeks.

WILD CHILDREN.—Permit me to inquire of you concerning the "so-called" Australian Wild Children, now being exhibited in the West. These two children, a male and female, are said to be natives of Australia, and were caught by a party of English gold hunters. Nothing is known of them save the account given by those who exhibit them. They are said to have been examined by Mr. Fowler, and he said he knew nothing of their race—that the history of man did not favor him with any knowledge of them. I make this inquiry of you in order to ascertain the truth of this statement concerning the "so-called wonders." Their actions indicate a low degree of civilization and refinement. Their foreheads retreated very rapidly, and, consequently, were supposed by some to be idiotic.

Ans. We reply—for the third or fourth time in this JOURNAL—that these two "wonders" are simply idiotic Indians. The story of the showman who owns and exhibits them, deserves as much credit as his other statements. We think it a shame that these, and other similar specimens—the negro idiot called "What Is It?" for example—should be seen in public. The authorities ought to abate the nuisance and punish the vagabond exhibitors.

OUR RELIGIOUS VIEWS.—It strikes us that we have from time to time

published in plain terms our sentiments on the great subject of religion. In the recent installments of "The Phrenological Theory" will be found a comprehensive statement, specially designed, it is true, to demonstrate the harmony of Phrenology with Scripture, but which embodies substantially our religious views; and in this number we publish a leading article on the subject, which we think sufficiently explicit to satisfy any reader. "With malice toward none, with charity for all" denominations, we seek to pure a course of Christian conduct which shall secure to our spirits peace in this world and salvation in that to come.

GREAT HEADS.—I believe it is stated in one of your works "that all really great men have great heads." If this be true, upon what ground do you account for the great weight of Byron's brain, of whom, his biographer states that his head was so remarkably small that not one man in ten could wear his hat?

Ans. In the first place, Byron did not have a small brain. It was large at the base, and his perceptive organs, his Allmentiveness, Destructiveness, and Amativeness were very large. His keen perception, acute delineations, his dissipation, his fierce anger and inveterate hatred, and his social sensuality all combine to prove that the basilar organs of his head were predominant in activity and power. Of that portion of the head in which these organs were located, the hat gave no account.

The region of Cautiousness was not well developed, making the upper side head above the ears and a little backward of them narrow and wedge-shaped or pyramidal, and his Casualty was not prominent. By taking off the front corners and the back corners of the head, just where the hat covers, a comparatively small hat is required. That Cautiousness was small in Byron, his reckless life fully attests. If the brain of Byron was heavier than that of the average of men, it could not have been small as a whole, and if it was heavier in proportion to its size, it still does not war with the doctrines of Phrenology, since we recognize density, fineness of quality, as one of the cardinal conditions. Indeed, in marking charts, the first condition is "Quality"; second, the different temperaments; third, the peculiar balance of temperament; fourth, *Size*; fifth, the particular organs and their relative size; sixth, the combination of organs.

Byron's brain, we repeat, was not small. It was large at the base and tapered off like a sugar-loaf, but his brain was dense and vigorous. His passions were fierce, but his moral and religious developments were relatively defective. His head and his character corresponded.

LEARNING FRENCH.—B., you will find the following text-books of service to you in studying the French language: Ahn's French Method, \$1 10; Ollendorff's New Method of Learning French, \$2; DeFivas' Elementary French Reader, \$1 10; Chouquet's French Conversations and Dialogues, \$1 10; Surenne's French and English Pronouncing Dictionary, \$1 75. Surenne's French Manual and Travelers' Companion, \$1 40. Any of these will be sent by mail, postage prepaid by us, on receipt of price.

IN GERMAN.—The A. P. J. is not published in any other than our own language. LOOK OUT FOR SWINDLERS. Bad men sell bad books. "The Marriage Guides," "Hints to Husbands and Wives," and a Philadelphia concern advertise "A Great Book," with our names as agents. We know nothing of it. "Prof. Weeks," as he calls himself, is somewhere in New Jersey, "still at large." How he has managed so long to escape the Innatic asylum we do not know. Such a heterogeneous jumble as he publishes would be amusing if it were not ridiculous. CLEAR UN CUT POSTAGE STAMPS may be remitted in payment for books, journals, etc., in place of currency.

Publisher's Department.

HANDSOME PREMIUMS.—WHO WILL HAVE THEM?—"The laborer is worthy of his hire"—pay—and we are now enabled to offer something substantial and attractive. Ladies will "jump at the chance" of getting a husband; no, not a husband, but a splendid Steinway Rosewood Piano, a beautiful Parlor Organ, a charming Melodeon, or an excellent first-prize Wheeler & Wilson Family Sewing Machine. Our offer is this:

For 350 new subscribers, at \$3 each, we will give a Steinway Rosewood Piano, worth \$650.

For 100 subscribers, at \$3 each, we will give a Horace Waters 5 Octave Parlor Organ, worth \$170.

For 60 subscribers, at \$3 each, a Horace Waters 5 Octave Melodeon, worth \$100.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

Now, this strikes us as something well worth working for. Every family ought to have one or more of the above. Reader, do you know a poor widow with children, who is trying her best to earn an honest living, to clothe and educate her children? Think how much easier she could do it with one of these excellent machines! Then why not start a subscription paper and induce a few "well-to-do" neighbors to put down their names, each for the trifling sum of \$3, and thus get the JOURNAL a year, and in a few hours put the "Family Treasure" in the poor woman's house. What thankful hearts! what gratitude to God for the real help, and that, too, without inflicting on her the feeling of a beggar! Ladies, you can do this; what man could refuse an appeal for such an object? And here, *Let me head the list.* I hereby offer to give \$3 each toward making up any number of lists, for charity sewing machines, to be given to widows, or other poor women, according to the terms above specified, *i. e.*, I will be one of twenty-five to present sewing machines to one thousand women of the class named. Who will begin the work? The field is open to all charitably disposed men and women. Show your JOURNALS, get your subscriptions, and the machine shall be forthcoming by return express. Here is a chance to "do good and get paid for it." Address, S. R. WELLS, 389 Broadway, New York.

THE BELVIDERE SEMINARY FOR YOUNG LADIES is situated in Belvidere, N. J. It is conducted by three sisters, the Misses Bush, with several assistants. Besides all the ordinary branches taught in similar institutions, much attention is given to physical education. They say, "It is earnestly hoped that parents and guardians will feel, as we do, the paramount importance of such physical culture, and will encourage their daughters or wards in taking a regular course in this department, as without it there is always less vigor of mind and less progress in study."

We notice with satisfaction that our "New Physionomy" is used in the Belvidere Seminary as one of the reading books, and is classed with the standard works for this purpose. Of course, we wish well to the Misses Bush and their institution.

For circulars, stating terms and other particulars, address the principals, at Belvidere, Warren County, N. J.

ONE of our assistants, Mr. John P. Jackson, having made an advantageous arrangement involving a year's residence in Germany, sailed on the 20th of July last for Europe. He took passage on one of the Anchor Line of steamers for Glasgow, the agents, Messrs. Francis McDonald & Co., furnishing him a first-class ticket at a greatly reduced price. We would say that the accommodations furnished to and the treatment of passengers by the officers in charge of this ocean line are unsurpassed.

HAIR BALLS IN THE STOMACH.

—We acknowledge the receipt of a hair ball, said to have come from the stomach of a buffalo. It was forwarded to us by our friend Mr. JOHN FATKIN, of Frostburg, Md. The ball is perfectly round, an inch and a half in diameter, and looks, for all the world, like an iron grapeshot. It is very light, and when we cut into the iron-like surface, we find it composed of hair closely compacted or felted together. Such balls are frequently taken from the stomach of the common ox. They are supposed to be formed by the hairs collecting together, which the animal swallows after licking himself. The peristaltic action of the stomach, which can not digest it, tends to felt or ball the hairs into a spherical mass.

THE THUNDERBOLT.—We continue to fill orders for this new and best of the breech-loading rifles. As a sporting gun, and as a means of defense on the borders and on the plains, it is believed to have no superior; while its moderate price—\$28—places it within the reach of all. We supply agents by the case at wholesale rates. Send stamp for circular. Address this office.

FOR ONE YEAR OR FOR FIVE!—We are now receiving single subscriptions for the A. P. JOURNAL, extending from one to five years from date. If a person wishes to avail himself of club rates, and is so situated that he can not join a club, he may do the next best thing, which is to remit \$12 for five years; or, \$24 for eleven years. We prefer P. O. orders, bank checks or drafts payable to our order. Single subscriptions for one year, \$3. Large accessions are constantly being made to our subscription books, and the prospects for another year were never brighter.

MR. J. W. STOKES, Washington, D. C., will please accept our thanks for valuable public documents relating to the U. S. Agricultural Department.

WE are indebted to the politeness of Mr. J. T. Hoover, of Washington, for a map, showing our new possessions in Russian America, issued from the office of the U. S. Coast Survey. We repeat our suggestion, to name the new territory FRANKLAND, in honor of one of America's greatest philosophers. Who says Frankland?

DESIRABLE CLUBS.—The *Galaxy* is a well-known monthly magazine, published in this city at \$3 00 a year. Its articles are of a first-class literary character. We will club our JOURNAL with the *Galaxy* for \$4 50 per year, thus affording an ample supply of excellent mental pabulum in the way of a year's supply of the PHRENOLOGICAL JOURNAL and a year's supply of the *Galaxy*, from date of subscription. Here is an opportunity not to be neglected.

OUR SCHOOL-DAY VISITOR—advertised on our first page—at \$1 25 a year, will be clubbed with the A. P. J., and sent a year, from July or January, for \$3 25. It is a capital monthly for young people.

General Items.

LADY PHYSICIANS, ATTENTION!—With a view to forwarding their interests, and that of the public, it is suggested that all regular female graduates in this country forward their names—with testimonials for registration—to the Secretary of the New York Medical College for Women. The ladies intend to show their strength. They already number several hundred, and have a practice ranging from \$2,000 to \$20,000 a year, each. This is better than teaching school.

GRAND AMERICAN EXHIBITION.—The thirty-seventh annual exhibition of the AMERICAN INSTITUTE, of the city of New York, is announced to be held from the 12th day of September to the 26th day of October, 1867, in the armory on Fourteenth Street, near the Sixth Avenue. The American Institute is said to be more widely known than any other permanent organization in the world, by its efforts to foster art and direct public attention to important material improvements, and opens its doors for the reception of the results of American genius, skill, and handicraft, with a double purpose of presenting the collection in an attractive form for public inspection, and of making a comparative estimate of the utility and merit of the articles composing it.

All inventors, artists, manufacturers, proprietors of labor-saving machinery, and those engaged in agricultural and horticultural pursuits, are cordially invited to send their best specimens of work and ingenuity to compete for the numerous prizes to be awarded.

Letters relating to the exhibition should be addressed to "Prof. S. D. Tillman, Corresponding Secretary, American Institute, New York," who will send blanks and give any desired information to parties intending to become exhibitors; he will also receive and file all applications for space.

"THE ADVANCE" is the name of a new national religious newspaper, edited by Rev. Wm. W. Patton, D.D., and published at \$2 50 a year, by THE ADVANCE COMPANY, at 28 Lombard Block, Chicago, Illinois.

Full particulars of this new and important enterprise are given in another column. Knowing something of the editor, and of the business men who launch and man this new ship of Zion, we predict for the craft the very best success.

THE NEW YORK MEDICAL COLLEGE FOR WOMEN will begin their Fifth Annual Term, of twenty weeks, at the college in Twelfth Street, two doors east of Fourth Avenue, the first Monday in November. Address the Dean, Mrs. C. S. Lozier, M.D., 361 West Thirty-fourth Street, New York, or the Secretary, Mrs. C. F. Wells, care of Fowler and Wells, New York.

NEW MUSIC.—We have received from OLIVER DITSON & Co., New York and Boston, the following pieces of music: "Launch the Life Boat," "Moss-Grown Well," "Kiss Me when I'm Weary, Love," "Mugby Junction Galop," "Amazonian March," "Let Me Fold Thee Close, Mavourneen." All of which must be good, coming from the press of these best of music publishers. 30 cents each.

[We are happy to learn that Messrs. Ditson have recently opened an office on Broadway, New York. This will give them a still larger field in which to plant their excellent music.]

INGHAM UNIVERSITY is located in the quiet and beautiful village of Leroy, N. Y. It was established by the Misses Ingham, two noble and self-denying women, and it has steadily grown from feebleness to strength—from a small boarding-school for young ladies to a University, having a charter from the Legislature of the State, large and commodious buildings, extensive grounds, a choice geological cabinet, library, apparatus, picture gallery, and all the appliances of a first-class college. Its course of study embraces the languages, ancient and modern, mathematics, music, painting, history, intellectual and moral science, and is quite as extensive and thorough as that pursued in any of the universities of our land. It was our privilege to attend the recent annual examination, and we have never known any that showed more thoroughness, or that reflected greater credit both upon instructors and pupils. The annual exercises of the literary societies were of peculiar interest, consisting of recitations, and a dramatic and beautiful scene—"the Court of Liberty"—in which were represented, in costume and by speech, the different nations of the earth, and to these the Goddess of Liberty, presiding, gave a characteristic and appropriate response. The claims of all were considered, but at length America received, amid a profusion of flowers and applause, the wreath and the scepter, as standing in the foreground in the cause of Liberty. The Baccalaureate, by the Chancellor, REV. DR. BURCHARD, of New York, on "Beauty," was delivered before a very large and highly appreciative audience. The Annual Address was by the REV. DR. BELL, of Lyons, and was well received. The commencement exercises proper drew an immense audience from all the surrounding country, and the ladies of Ingham never appeared to greater advantage, and their pieces, as read, exhibited high culture and scholarship. The gymnastic performance between the morning and afternoon exercises was a beautiful feature. The music was fine, the day delightful, and all were pleased. The usual degrees were conferred upon members of the graduating class. S. D. A.

FILLING UP.—Our Class, in PRACTICAL PHRENOLOGY, for 1868, to commence in January, promises to be all we could hope for, in both numbers and intelligence. Circulars with full particulars will be sent on prepaid application. Address this office.

OBITUARY.—MRS. ELIZABETH RAYNES, wife of Capt. John Raynes, died on the 22d of last September, in San Francisco, Cal. Her age was fifty-three years. The *Pacific* said she was ill from 10 o'clock Friday evening till 3 o'clock Saturday morning, and her dying was so like a falling into sleep that those around her did not know it until some time after she had breathed her last; she died as "waves die along the shore." Capt. R. now resides in Portland, Oregon.

WE take the following from the Philadelphia *Ledger* of July 13th:

CAPEN.—Died, on the 12th inst., CARRIE A., wife of John L. Capen, and eldest daughter of Phineas Potter.

The relatives and friends are respectfully invited to attend the funeral, from the residence of her husband, 2,003 Poplar Street, on Monday, the 15th, at 10 o'clock.

[We condole with our friend on the loss of his most excellent Christian wife. She had long expected a release from a consumptive body, and was every way prepared for the change. Peace.]

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

THE ADELPHI ACADEMY,
Nos. 336, 338, & 340 ADELPHI STREET,
BROOKLYN, L. I.

GROWTH OF THE SCHOOL.

Number of pupils at the re-opening under the new regime (Sept., 1863), 11
Whole number of pupils for 1863-4, 23
Whole number of pupils for 1864-5, 61
Whole number of pupils for 1865-6, 156
Whole number of pupils for 1866-7, 312

This institution (hitherto for boys alone) has made itself a name for the careful systems of instruction and training which it has employed. The system of physical training known as the *Calisthenic drill*, which it has introduced and carried to a high degree of excellence, is one of its most popular features.

The success of this feature has been such as to warrant the belief that an effort to afford the same advantages to girls would be appreciated. As a test of the adaptability of the drill to girls, a private class has been conducted during the past year in this institution with entire success. Accordingly the proprietors of the Adelphi Academy have concluded to re-organize the school, and admit at the re-opening (on the 9th of next September), boys and girls together, of about five to twelve years of age, to the Preparatory Department, and to the enjoyment of all its benefits, removing the Academic Department, which will continue, as at present, to be exclusively for boys, to a new building now erecting for the purpose on Lafayette Avenue, corner Hall Street.

Scores of letters from parents whose sons have enjoyed the benefits of the drill during the last year bear unequivocal testimony to its value.

The intellectual training of the school is as carefully conducted as the physical. There are twelve grades, under fifteen to twenty teachers in constant attendance.

Pupils from a distance are accommodated with board in teachers' families.

Pupils crossing Fulton Ferry, from New York, can ride within a few steps of the school by the Fulton or the Greene Avenue cars. Those crossing the South Ferry should take the Atlantic Avenue cars.

For Circulars apply to
LOCKWOOD & ELLINWOOD.

MUNN & Co., No. 37 Park Row, New York, Publishers of the *SCIENTIFIC AMERICAN*, Solicitors of American and Foreign Patents.

Twenty-two years' experience in obtaining Patents.

Thirty Thousand Applications for Patents made at their agency.

Consultations and Advice to Inventors free.

Pamphlets Containing Laws of all Countries free.

A Handsome Bound Volume, Containing 150 Mechanical Engravings, and the U. S. Census by Counties, with Hints and Recipes for Mechanics, mailed on receipt of 25 cents.
July 31.

THE HYGIENIC HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

ALBANY LAW SCHOOL. The next Term of this School commences on the first Tuesday of September, 1867.

The Professors are HON. IRA HARRIS, LL.D., HON. AMASA J. PARKER, LL.D., AMOS DEAN, LL.D.

Circulars obtained by addressing

AMOS DEAN,
July 4t. Albany, N. Y.

THE MOVEMENT - CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 38th Street, N. Y. city. Aug., 1t.

MRS. E. DE LA VERGNE, M.D.,
335 ADELPHI STREET, BROOKLYN.

NEW NATIONAL RELIGIOUS PAPER.—A national religious newspaper, to be called "THE ADVANCE," will be published weekly, from the first of September onward, in the city of Chicago. It will represent Congregational principles and polity, but will be conducted in a spirit of courtesy and fraternity toward all Christians. The form will be what is popularly termed a double sheet of eight pages, of the size and style of the New York *Evangelist*. The pecuniary basis is an ample capital furnished by leading business men and others, to be expended in the establishment and improvement of the paper, which is intended to be second to none in the country, in its literary and religious character. The purpose of its projectors is indicated in the name: their aim being to ADVANCE the cause of evangelical religion, in its relations not only to doctrine, worship, and ecclesiastical polity, but also to philosophy, science, literature, politics, business, amusements, art, morals, philanthropy, and whatever else conduces to the glory of God and the good of man by its bearing upon Christian civilization. No expense has been spared in providing for its editorial management in all departments, while arrangements are in progress to secure the ablest contributors and correspondents at home and abroad. The city of Chicago has been selected as the place of publication, because of its metropolitan position in the section of the country especially demanding such a paper, and the fact that it is nearly the center of national population, and in a very few years will be the ecclesiastical center of the Congregational Churches. Issued at the interior commercial metropolis, "THE ADVANCE" will contain the latest market reports, and able discussions of financial subjects, such as will make it a necessity to business men in all parts of the country. The editor-in-chief will be Rev. Wm. W. Patton, D.D., who resigns the pastorate of the leading church of the denomination at the West for this purpose, and who has had many years' experience in editorial labor. The subscription price will be \$3 50 in advance. Advertising rates made known on application. Address THE ADVANCE COMPANY, P. O. Drawer 6,374, Chicago, Ill. 8.6t.

DWIGHT'S JOURNAL OF MUSIC. Each number containing sixteen pages, including FOUR PAGES OF MUSIC. Published fortnightly. Terms: Two Dollars Per Annum. Specimens sent free. JOHN S. DWIGHT, Editor. OLIVER DITSON & CO., Publishers, Boston. CHARLES H. DITSON & CO., 711 Broadway, New York.

WATERS' SQUARE AND UPRIGHT PIANOS, MELODEONS, AND CABINET ORGANS, the best manufactured, to Let, and rent allowed if purchased. Monthly payments received for the same. Second-hand Pianos at bargains, from \$60 to \$225. Old Pianos taken in exchange. Liberal discount to teachers and clergymen. Cash paid for second-hand pianos. Pianos tuned and repaired. New 7-octave Pianos for \$275 and upward. Warerooms, No. 481 Broadway, New York.

H. HORACE WATERS.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 35 cents a line, or \$35 a column.]

BURNHAM'S AMERICAN BUSINESS COLLEGE, SPRINGFIELD, MASS.—The *Popular Trade University of New England*, where the young and middle-aged of both sexes are properly educated for business. Recently removed to a MAGNIFICENT NEW COLLEGE BUILDING, erected at a cost of \$125,000. "Its great success is the legitimate result of thoroughness and intrinsic merit."—*Springfield (Mass.) Republican*.

BOOK-KEEPING, PENMANSHIP, Commercial Calculations, and Correspondence taught by the best masters. Banking Houses, Merchants' Emporium, and fifteen Business Offices practically operated. The departments of Mercantile Law, Physical Culture, and Telegraphy receive special attention. Students enter at any time; no particular degree of advancement required. Ladies and gentlemen prosecute their studies together, and enjoy equal advantages. Graduates have averaged over six months in completing the course of study, and, as a result, seven eighths of them have readily secured lucrative situations in business. Strict attention given to the moral and social welfare of students. Excellent board in pleasant families.

NOTE.—This institution relies for its patrons upon its intrinsic merits, as attested by hundreds of its graduates, who are now filling responsible positions in the great commercial cities of the United States. It affords every advantage found elsewhere, and many educational improvements never before introduced.

SPRINGFIELD is situated in the charming Connecticut River Valley, has 25,000 inhabitants, is a city of great business activity, and the most healthy and delightful place of residence in New England.

CIRCULARS, PAPERS, etc., containing full particulars relating to the course of study, expense of board and tuition, may be had gratis. Persons in pursuit of the most complete educational facilities should address LOUIS W. BURNHAM, President, Springfield, Mass. Aug. 2t

WANTED—AGENTS—\$75 to \$300 per month, everywhere, male and female, to introduce throughout the United States the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, blind, braid, and embroider in a most superior manner. Price only \$18. Fully warranted for five years. We will pay \$1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth can not be pulled apart without tearing it. We pay agents from \$75 to \$300 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. June, 4t.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y. 1t

AMERICAN ARTISAN AND PATENT RECORD.—New Series.

The *American Artisan*, now in the second year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COMBS & CO.,
Proprietors of the *American Artisan*,
No. 189 Broadway, New York

To BOOK BUYERS!!! To Sunday-Schools. Our stock of Sunday-school books includes all the latest and best books from all the publishers.

School District, Family, and General Libraries—many times these Libraries can be made up for half the price usually paid.

THEOLOGY

THE CHURCH UNION.—The largest and best Religious Family Newspaper in the world.

Owing to the unprecedented reception of this paper, it is now enlarged to twice its original size.

It is devoted to Liberty and Union in the whole Church of Christ, opposes Ritualism and Rationalism, and advocates Radical Doctrines in both Church and State.

It favors universal suffrage, and equal rights for every man and woman of every nationality.

It is the organ of no sect, but will endeavor to represent every branch of the Church, and every society organized for the purpose of converting the world to Christ.

It is Trinitarian in creed, but favors free discussion by all Religionists of every faith.

It will advocate a free communion table for all the Lord's people, and a free pulpit for all his ministers.

It will print a sermon from Rev. Henry Ward Beecher in every issue. This sermon, published at twelve o'clock every Monday, will be selected from one of the two sermons preached by Mr. Beecher the day before publication. It is not copyrighted, nor is it prepared for the press by Mr. Beecher.

Terms—\$2 50 yearly. \$1 to agents for every subscriber. Sold by American News Company at 5 cents, and by Publishers. Address, CHARLES ALBERTSON, Supt. Church Union, 103 Fulton Street, New York.

IMMENSE PRICES PAID FOR OLD BOOKS.
CHEAPEST BOOK STORE IN THE WORLD!
100,000 Old and New Books on Hand.
Catalogues free. Send a stamp.
LEGGAT BROTHERS, 113 Nassau Street, New York. J. 1y.

IMPORTANT TO OWNERS OF STOCK.—THE AMERICAN STOCK JOURNAL AND FARMERS' AND STOCK BREEDERS' ADVERTISER.

A first-class Monthly Journal devoted to Farming and Stock Breeding. Each number contains thirty-six large double-column pages, illustrated with numerous engravings. Only one dollar a year. Specimen copies free, for stamp.

HORSE AND CATTLE DOCTOR FREE.

The publishers of the AMERICAN STOCK JOURNAL have established a Veterinary Department in the columns of the Journal, which is placed under the charge of a distinguished Veterinary Professor, whose duty it is to receive questions as to the ailments or injuries of all kinds of stock, and to answer in print in connection with the question, how they should be treated for a cure. These prescriptions are given gratis, and thus every subscriber to the Journal has always at his command a Veterinary Surgeon free of charge. Every Farmer and Stock Breeder should subscribe for it. We will send from June until the 1st of January for 50 cents. Address N. P. BOYER & CO. S. Tex. Gum Tree, Chester Co., Pa.

THE LATEST INVENTION.

ANOTHER IMPROVEMENT.

BOOK-HOLDER, WRITING-DESK, INVADABLE TEA-TABLE AND LADIES' WORK-STAND, COMBINED, WITH LAMP-SUPPORTER AND INK-STAND ATTACHED. The new ultra of comfort, convenience, and utility. We are now satisfied that our invention can not be superseded, and confidently affirm that there is not now nor has been anything equal to it in the market. All who examine it bear testimony to this fact. Every family should have it. Every student should have one. Every invalid should have one. Every aged person should have one. Everybody should have one. Send for it immediately. Ask your stationer for it. Send stamp for illustrated circular. Get up a club of ten and we will send you one gratis. We want a good agent in every county. Money made canvassing for it. Terms liberal.

JOHN CONNACHER & CO., S. 11 206 Broadway, New York.

THE "HEALTH REFORMER," is the name of a monthly journal devoted to an exposition of the principles of Health Reform. It teaches that Nature is the true restorer of the sick, and that she can be aided in her work—not by poisonous drugs, but by a judicious use of water, pure air, exercise, rest, proper social influences, and all true hygienic agencies, which do not poison or deplete the system. Terms—\$1 per year, in advance. Address H. S. LAY, M.D., Battle Creek, Mich.

HEALTH REFORM INSTITUTE, Battle Creek, Mich.—Diseases of every kind are treated at this Institute without the use of drugs, or poisons of any kind. Send for Circular. Address H. S. LAY, M.D., Battle Creek, Mich. 2t

THE MASONIC HARMONY; A COLLECTION OF MUSIC, ORIGINAL AND SELECTED,

For the use of the MASONIC FRATERNITY.

CHOICE NEW CROP TEAS.

THE SHIP "GOLDEN STATE" has arrived from Japan with 22,000 half chests of the finest Japan Teas to the GREAT AMERICAN TEA COMPANY, Nos. 31 and 33 Vesey Street, New York.

These Teas by the ship "Golden State" were purchased direct from the Japanese factor, and in consequence of the magnitude of the transaction, were transferred at about half the usual commissions. This is the largest cargo ever imported from Japan by about seven thousand packages. By this operation the GREAT AMERICAN TEA COMPANY put these Teas into the hands of the consumers with but one very small profit—an achievement in commercial enterprise seldom if ever before attained. These Teas are acknowledged, both here and in Japan, as being the finest full cargo ever exported from that country.

Also the ship "George Shotton" has arrived from Foochow with 12,000 half chests of the finest Foochow Oolong Teas.

The cargo of the ship "George Shotton" is the second in size that has ever come to this port from Foochow (which is the finest Black Tea district in China). These are the finest first-picking contract Teas—rich, fresh, and full-flavored. This will enable us to supply our trade with uniform fine-flavored Teas for a long time to come. These Teas were contracted for before the picking. Contract Teas are always far superior to any others. A large proportion of contract Teas of first pickings go to the European markets. That is one of the principal reasons why the English people consume three pounds of Tea, on an average, to one in an equal number of population in the United States. Heretofore, the United States have been compelled, to a considerable extent, to put up with lower grades of Teas and later pickings. This unfortunate result for the consumers of this country has been brought about heretofore in consequence of the many and great profits of the "middlemen" in the Tea trade. But this has been in a great measure remedied by the establishment of the GREAT AMERICAN TEA COMPANY, and their system of furnishing Teas to the consumer direct from the Chinese and Japanese factors, thus saving them many intermediate profits.

The receiving of these two large cargoes by the GREAT AMERICAN TEA COMPANY for their own trade is acknowledged by the mercantile community as the largest transactions ever made in this country. They were deemed of so much importance, that the fact was telegraphed to all the principal commercial papers in the country by their correspondents here, and thus appeared as an important news item throughout the United States at the same time.

The importance of these transactions in this market is thus noticed by the oldest and most respectable commercial paper in this city—the *New York Shipping and Commercial List*—which says: "The trade have again been startled by the arrival of two large cargoes of Teas to the GREAT AMERICAN TEA COMPANY; the ship 'Golden State,' from Japan, with 22,000 half chests; and the ship 'George Shotton,' from Foochow, with 12,000 packages." And in another place it says: "The recent large operations of the GREAT AMERICAN TEA COMPANY have taken the Trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 12,331 packages Black, and 22,849 packages Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands."

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large Invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivaled for fineness and delicacy of flavor.

This is the season of the year when we receive new Teas, and, consequently, our customers will not fail to notice a marked improvement in freshness from this time forward.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small

additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well), can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey Street.

Parties sending Club or other orders for less than thirty dollars had better send post-office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the custom-house stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the List of Prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70 c., 80 c., 90 c., best \$1 per pound.
MIXED (Green and Black), 70 c., 80 c., 90 c., best \$1 per pound.

ENGLISH BREAKFAST (Black), 80 c., 90 c., \$1, \$1 10, best \$1 20 per pound.

IMPERIAL (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.

YOUNG HYSON (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.

UNCOLORED JAPAN, 90 c., \$1, \$1 10, best \$1 25 per pound.

GUNPOWDER (Green), \$1 25, best \$1 50 per pound.

COFFEES ROASTED AND GROUND DAILY.

Ground Coffee, 20 c., 25 c., 30 c., best 40 c. per pound. Hotels, Saloons, Boarding-House Keepers, and Families who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30 c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50 c. to \$1 per pound by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,

Nos. 31 and 33 Vesey Street,

Post-Office Box, No. 5,642, New York City.

The GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, New York City, Orange Judd, Editor.

Christian Advocate, New York City, Daniel Curry, D.D., Editor.

Christian Advocate, Cincinnati, Ohio, J. M. Reid, D.D., Editor.

Christian Advocate, Chicago, Ill., Thomas M. Eddy, D.D., Editor.

Evangelist, New York City, Dr. H. M. Field and J. G. Craighead, Editors.

Examiner and Chronicle, New York City, Edward Bright, Editor.

Christian Intelligencer, E. S. Porter, D.D., Editor.

Independent, New York City, William C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., D. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

CLUB ORDERS.

ST. CHARLES, WINONA CO., MINN., March 26, 1867.

To the Great American Tea Company,
Nos. 31 and 33 Vesey Street, New York.

I send you a fifth order for Tea. My neighbors think I have "learned the road," and insist on my doing the business for them. I will simply say that all kinds of Tea received from your company have given complete satisfaction. Your Teas are fresh—well flavored—strong. The Merchants can furnish for \$2 25 to \$2 50 per pound no better article than you give us at \$1 25; some say you are a humbug. Please humbug us again on this order.

Truly yours, in behalf of Tea drinkers,

SAMUEL S. BEMAN.

THE STEAMER SPIRIT OF THE AGE.

SPIRIT OF THE AGE.

THE time for "slow coaches" and slow steam-boats has passed. We will not be punished by a long, tedious, sea-sick voyage of two or three weeks, and in a rolling, pitching, tumbling tub, from New York to Liverpool, when we can step on board an elegant, swift, and steady steamer like the above, and make the passage from shore to shore in a week! Our experience favors large side-wheelers rather than the smaller rolling propellers. By the politeness of the *American Artisan*, we are enabled to present our readers with the above view of the great last fast steamer, planned by Mr. THOMAS SILVER, of New York.

Mr. Silver proposes vessels, of which the above is a representation, of 590 feet in length, 75 feet wide, 30 feet perpendicular, and tonnage 7,168, gross custom-house measurement for passengers and freight between America and Europe. They will be strengthened, both longitudinally and transversely, by diagonal bracing. The propelling power will consist of two paddle-wheels of ordinary construction, driven by two engines, with a center shaft arranged for disconnection, in order to run them separately when required. There will also be two propellers, driven on the same principle as to convenience; this will enable the maneuvering of the vessel in a small compass, or, in case of failure of the rudder at sea, to effect the steering. Mr. Silver calculates that either of the engines will have power to drive the vessels six or eight miles an hour, while the whole power is calculated to make twenty miles, or a passage over the Atlantic in about seven days. The carrying capacity will be 3,000 tons cargo, besides fuel, and 2,500 passengers. [When our steamers use petroleum instead of coal, as they may soon, there will be an immense

saving of space and weight.] The magnitude of the vessels will afford many accommodations unknown to smaller ones; the price for passage and cabin will be very low, and the supply of food to order, or *à la carte*, at prices as moderate as at restaurants in London, Paris, or New York. By this arrangement, passengers who choose to economize, need not pay for the extravagance of others. It is calculated that five or six weeks' excursion may be made by one of these steamers to Paris, London, etc., for a sum not exceeding the cost of a passage each way in one of the present first-class ships to Liverpool or Brest and back; in fact, a transatlantic trip may substitute a watering-place resort for thousands, and the annual stale Continental trips of Englishmen will be reversed to New York, Niagara, the Rocky Mountains, and the many attractions of the New World.

It is for no want of confidence in such a system of transatlantic communication that the project is not carried out in this country. It has gained great favor in England, and it is probable that it will be consummated under the auspices of some of the great railway companies there, to run between New York and some southwestern terminus—say, on the river Severn, Plymouth, or Falmouth—and possibly extend to Brest. Our Government seems perfectly content to have England continue the mistress of the seas, though it could be averted by a simple act of Congress permitting for a term of, say, ten years—until domestic matters become better regulated—any ships owned, or chiefly so, by American citizens to register and run under the United States flag, without reference to where they were built, when said ships are employed in foreign commerce. This need in no way affect ship-building for coast-wise service, which is about the only employ-

ment enjoyed by American vessels at present. The citizens of most other nations can buy ships of whom they choose, and register them under their own flag; and although without protection or the native skill in the various steam-boat adaptations so prominent in the United States, the English-built ships monopolize the ocean. [Where is Captain Ward of the Great Lakes? Will not he, with others, help to set our shipping to rights?]

CARVING CHARACTER.—Did you ever watch a sculptor slowly fashioning a human countenance? It is not molded at once. It is painfully and laboriously wrought. A thousand blows rough cast it. Ten thousand chisel points put in the fine touches and bring out the features and expression. It is a work of time; but at last the full likeness stands fixed and unchanging in the solid marble. So does a man carve out his own moral likeness. Every day he adds something to the work. A thousand acts of thought and will shape the features and the expressions of the soul. Habits of love, piety, and truth—habits of falsehood or passion, silently mold and fashion it, till at length it wears the likeness of God or the image of a demon.

THE
PHRENOLOGICAL JOURNAL
AND LIFE ILLUSTRATED.

Is devoted to *The Science of Man*, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in *Choosing a Pursuit*, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

The Journal.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

THOMAS NAST.

PHRENOLOGICAL CHARACTER.

THIS well-known artist has a well-formed head and finely cut features, all of which are full of meaning. The brain is large, being nearly twenty-three inches in circumference, and, fortunately, is well sustained by an admirable physiology. Hence he is able to work out the designs that his brain engenders. His nature is full of feeling and emotion, great warmth and ardor of imagination. He possesses the peculiarities of temperament which belonged to his mother—her sympathy, her affection, and her prophetic forecast. His intuition, when he is in right relations with himself and the world—when in a proper state of mind and body—enables him to receive impressions from

PORTRAIT OF THOMAS NAST.

From an Imperial Photograph by Bogardus.

sources which his intellect can not comprehend, and his psychological forecast enables him to foresee what is about to transpire.

Intellectually, he is a good observer, and has a good memory of all objects that impress his sight. Faces and places he remembers well; names, dates, and pass-

ing events are not so easily retained. Comparatively speaking, the perceptive intellect predominates over the reflective. He is a good judge of character, perceiving at once the motives of strangers. Mirthfulness is well shown in his broad, high forehead, and allied as it is with Destructiveness, its action is manifested quite often in sarcasm. He can imitate, but he is much more inclined to originality of idea. His Constructiveness is well developed, and he can easily block out a course for himself. He is never wanting for resources. Ideality and Sublimity are developed in a high degree. He lives much in the region of the sublime, though his wanderings in the realm of fancy are by his practical faculties generally applied to the circumstances of the present. Form is large, hence his artistic abilities. Color is moderate, though this deficiency is not so well marked in the portrait. (In Doré's head, it will be remembered, Color is also deficient—more so than in Nast's.)

Benevolence is larger than Veneration, and his religion partakes largely of the former quality, being evinced in sympathy, kindness, generosity, and willingness to serve others. Devotion, meekness, humility, and submission are less influential traits. When younger, his Self-Esteem was small, and he probably suffered from sensitiveness, diffidence, and even bashfulness; but travel and contact with the world has served in great part to remove this difficulty. His love of liberty, his sense of independence, and desire to have his own way, have always inclined him to be his own man and master, to trust to his own inherent resources, and to strike out an untrodden path for himself. Continuity is not large; he is fond of variety, and does not dwell unnecessarily long upon one subject. There must be an object to actuate and stimulate his energy, to make him keep the mind constantly employed. Agreeableness is another prominent characteristic, which, combined with his intuition and readiness in reading character, enables him to get along pleasantly everywhere.

The head is broad, both forward and backward of the ears, indicating force, resolution, and courage. Cautiousness is not large. He would venture farther than most men; but from the influence of Conscientiousness he would be inclined

to take care that it was in the right direction. He is well adapted to some active, energetic calling, one that requires strong force of character and moral courage. His tastes, however, lie in the direction of Art; and in that sphere, sculpture would be named by us first. But he can do one thing almost as well as another, if he turned his attention to it. As an artist, he has already gained an honorable position among his fellows, and a world-wide reputation. His success has not been achieved by any gift of genius, but rather by a steady determination to persevere. Energy and the will-power, when put into right relations to the artistic world, as in everything else, overcome all the difficulties in the way, and fail not to hew out a path to fame. Our propositions can not be better substantiated than by a perusal of his career as evidenced in the following

BIOGRAPHY.

MR. NAST was born September 27, 1840, at Landau, Bavaria, a place possessed of considerable historical interest. It is situated in the beautiful district of the Gueich, a slip of territory now belonging to the German Confederation, fifteen miles wide, from the Vosges Mountains on the west to the Rhine on the east, and about the same distance from the northern boundary of French Alsace on the south, to the northern face of this little square, where the river Gueich rolls by on its course toward the Rhine. On this river stands the fortress of Landau, one of the most striking specimens of the purely fortified town, as distinguished from a fortress proper, to be found. Since the fifteenth century it has been the scene of important events during nearly every great war. In the Thirty Years' War it was taken eight times—by the Swedes, Spaniards, Imperialists, and French. It was fortified by the famous French military engineer Vauban, in 1684, for the protection of the slip of Rhine country acquired by his ambitious sovereign, who, on its completion, ordered his proud motto—*Nec pluribus impar*—to be inscribed upon the gates. A century later, the bastions that Napoleon created became the outposts of Germany against the ambition of his successors. At the treaty of 1815, after the downfall of Napoleon, it was restored to the German Confederation, and intrusted to the custody of Bavaria, on whose territory it stands. Now it forms, naturally enough, a military eyesore to France, as it stands as a check upon her advance to the Rhine.

In this ancient city, with its quaintly picturesque houses, its fortifications, and its towers, lived the parents of young Nast. His father was a musician in a detachment of the Bavarian army stationed there, and his son often accompanied him upon his musical ex-

cursions in the *commanderie*, and to the pleasure *gardens* of the city. With the garrison young Nast became a favorite, and the commander noticing his fondness for military display, predicted that he would make a good soldier—a prophecy which has been proved true in the abstract; for the foresight and courage required in a warrior will be found in one who fights against ignorance and perverted democracy. In his expeditions to the pleasure *gardens* he began to exhibit a decided predilection for the profession in which he has since become noted. The walls were generally hung around with pictures of an historical or military character, and one entitled "Who Goes There?"—the celebrated picture of Napoleon and his sentry—made a deep impression upon the young artist's mind, and the same night, when he arrived home, he made a rough and somewhat crude sketch of it. After that incident his pencil was continually employed; every available piece of paper, and even the margins of newspapers, were fully illustrated by the youthful enthusiast. Making small waxen images was another employment in which he found delight. These, together with the usual sports of childhood, which were generally of a semi-military character, constituted the life of young Nast in the *fuderland*.

A few years after the birth of young Nast, his father, with other musicians, started from Landau with the intention of making a musical tour through France. But the breaking out of the Revolution while they were in one of the seaports, induced them to engage themselves on a French war vessel, from which they deserted to the "Ohio," an American cruiser, which, after a three years' cruise, returned to America. The father had written to his family to meet him in New York, and they—young Nast, his mother and sister—sailed from Havre in June, 1846, in the steerage of an emigrant vessel, and arrived in New York nearly three years before the "Ohio."

Shortly after his arrival young Nast was sent to school, where he made good progress in learning the English language. His taste for art, however, had not abated; and though he did not find many facilities for its development in the schools he attended, still he always stood at the head of his class as a draughtsman. His parents were not so well pleased with his tendency artward. In it they could discern no bright prospects. The father's musical life had not been so smooth as he had fondly hoped in his youthful dreams, and so the art fancies of his son were not looked upon with favor. "Why could he not be a watchmaker?" they said. Then he would be sure of earning from \$15 to \$20 a week—a splendid sum! But dollars did not float between the eyes of the young artist and his canvas as he pursued his studies. He now went to Kaufmann's academy, where he studied all day, going regularly for some months. Bryant's Gallery, then situated at the corner of Broadway and Thirteenth Street, consisting of old paintings brought by the proprietor from Europe, found young Nast a constant visitor. He obtained

permission to copy some of the pictures in oil; and one day, while busily employed, he was asked if he would take charge of the gallery, as the door-keeper had left, and copy pictures in the mean time. This he gladly accepted. The pay, however, was not much. He was to have all the money received from visitors, not exceeding six dollars per week, but the visitors and the six dollars were few.

Nast was now fourteen, and inspired with that spirit of independence characteristic of the American youth, who early think it is time to be "up and doing" something for a living, he applied to the proprietor of *Frank Leslie's Illustrated Paper* for employment as draughtsman. Several applications were unsuccessful, until one day he took a drawing with him as a specimen of his skill, and was immediately taken into employment at the rate of five dollars per week. After he had been there some time he was advanced to seven dollars and a half; but, unfortunately, the following week brought with it the panic, and a reduction of twenty-five per cent. from his salary. But he worked on, steadily as ever, for three years longer, improving with every day from the practice he obtained, studying in the antique and life-departments of the School of Design at night, and then spending hours in close study in his own room, leaving time only for a few hours of sleep. This constant drain upon his constitution, however, soon threatened to injure him, and he relaxed his studies a little.

Nast found that he could do better by working for other papers on his own account, and soon gained a good connection among the illustrated papers. The *New York Illustrated News* was then in its infancy, and Nast was one of its chief contributors. At the time of the Heenan and Sayers' fight in England, Nast, who had always a strong desire to visit Europe, proposed to the proprietors of that paper to go over there and furnish them with sketches of the proceedings, about which the greatest excitement then prevailed, and in return they were to pay for the sketches, and refund him all expenses incurred on their account. The trip was a fortunate one for Nast.

On arriving in London he soon became a general favorite with both parties, and obtained reliable information of all their movements, which other artists from New York, owing to a pompous style of address, failed to do. Nast made several sketches of the fight and of incidents connected with it, which caused a sensation at the time of their publication in New York. Among the fighting community Nast was known as the "Little Dragsman"—a name given to him as a mark of their esteem. After the fight he visited the Epsom and Derby races, and made acquaintances among the editors of the London illustrated press. Then the news arrived in London that Garibaldi had gone to Sicily to fight for the independence of Italy, and he made arrangements with Mr. William Thomas, the principal engraver of the *Illustrated London News*, to furnish sketches from the seat of the coming campaign. But a serious obstacle presented itself to the

young artist; for, on examining the contents of a never over-flowing purse, he found that he had but a few pounds left—not sufficient, even, to pay his expenses, while the money advanced by the *New York Illustrated News* was all spent. True, he had more to draw, but he would have a month to wait, while Garibaldi might by that time have finished his campaign. Nast made a virtue of necessity, and for the first time in his life determined to borrow. His admiring and well-to-do friends were visited, but the old Bible excuses were ever ready. The sum he wanted was £20 (\$100), and he had asked every one except Heenan, the fighter. At last he broached the subject to him. "Well, 'Little Dragsman,'" said he, "I have not got it now, but if you come to-night and meet me here, you shall have your twenty pounds." Night came; he was at the trysting-place in time; and Heenan, rough, good-natured, true to his promise and his principle and to his American spirit, advanced him the money, for which Nast gave him a note on his New York publishers, and a duplicate on his mother.

Nast started for Genoa May 27, 1860, where he expected to find Garibaldi's headquarters, passing through France, Switzerland, over Mount Cenis, and arrived at Genoa on the first day of June. There he found the greatest excitement. All day long troops of brave volunteers, upon whom bright glances shone from bright eyes, and for whom cries and cheers went up from the glad hearts of the populace, marched in. Colonel Peard, Garibaldi's Englishman, and De Rohan, an American officer in Garibaldi's army, were then in the city; and to these gentlemen, as well as to the Hon. Mr. Patterson, the United States consul, Nast was introduced. Three ships, under the American flag, and with assumed names—the "Washington," "Oregon," and "Franklin"—arrived in the harbor, and were filled with volunteers making the second expedition to southern Italy under General Medici. Col. Peard and Nast accompanied the expedition, which was under the command of De Rohan. When they had been out a few days, a vessel was discerned making for them, sailing under a tri-colored flag; and as at that time the Neapolitan and Sardinian flags were alike, considerable uneasiness was manifested as to its nationality. De Rohan ordered the Stars and Stripes to be hoisted, and not over-trustful of his own recruits, ordered the artist to hoist it and stand by it, adding the encouraging remark: "If you stir, I will knock your brains out." Fortunately it was a Sardinian vessel, sent out to escort the expedition to Castellamare, where the troops landed, and then marched, under the command of Col. Peard, to Palermo, arriving at that place the day after its bombardment and capture by Garibaldi. Nast was then formally introduced to the red-shirted hero of Italy, and accompanied him to Mallazzo. A part of Garibaldi's army was then advancing on Messina, and the General wished to send ammunition to the besiegers. Accordingly, he sent Col. Peard, his aid, and Nast, accompanied by ten riflemen,

with a boat-load of powder and ammunition to that point; and they arrived at their destination on the very morning of the evacuation. Had they been a few hours earlier they would inevitably have been taken prisoners. Then the army went over to Italy, and up through the whole of Calabria, Garibaldi, as usual, with them. Col. Peard, who greatly resembled his leader, was generally sent ahead of the main body of the army, as a sort of blind, and Nast accompanied him. The two were often taken for Garibaldi and his son, greatly to the disgust of the young artist, who was deluged with kisses by men and women alike.

Often they met with romantic adventures and singular escapes; at Salerno the National Guard turned out to do them honor. But to go through the details of that campaign would take too much of our space. Nast was at the sieges of Capua and Gaeta, and entered Naples with the Garibaldians, where the people yelled out for three days and nights a glorious reception. During this time he had executed sketches of the war for the *Illustrated London News*, the *New York Illustrated News*, and *Le Monde Illustré*, of Paris. When the campaign ended he turned his face toward Rome, traveling in the company of Lord Seymour, an English nobleman, through Italy, visiting the imperial city of Florence, through Switzerland, the greater portion of Germany, not forgetting his native Landau, where he found some of his relatives still living.

Nast then turned his steps homeward, and arrived in New York in February, 1861, with a lifetime of experience gained in one year of European travel. But his finances reduced to the small sum of one and a half dollars, and several debts, contracted by his mother on his behalf, unpaid, he went on the *Illustrated News* again, and then gradually worked himself into *Harper's*. Time after time his sketches were "not accepted;" but still he did not despair; he was not composed of material easily discouraged, and finally one picture was accepted. Others were sent in, until he became an almost weekly contributor. Some of his very best pictures, those which have called forth the warmest commendations from the press and the people, have been repeatedly declined by publishers. The "Emancipation Proclamation" was twice refused, and finally published only after the issue of Lincoln's Proclamation itself. This was one instance of the foresight of the artist.

On September 26, 1861, seven months after his return from Europe, Nast was married, and commenced the duties of life in earnest. His wedding tour left him with only five dollars; but with married life came prosperity smiling through the window. Then he commenced painting scenes in his Garibaldian campaigns.

But the opening of a far grander campaign engaged his attention; the breaking out of the Rebellion compelled him to abandon his reveries among Italian memories and to transfer his thoughts and energies to the events of our own struggle, and in the following year appeared the remarkable series of illustrations

which have gained their author his enviable reputation. The bloody scenes that were being enacted upon Southern battle-fields presented subjects enough for his pencil, and in the 1862 yearly volume of *Harper's Weekly* we find many of his illustrations of battle strife. The New Year's number of that paper for 1863 presented two elaborate cartoons of an entirely different stamp from any of his former productions: "Santa Claus in Camp," and "Christmas Eve, 1862," which became very popular, not only at the Northern firesides, but in the camps of the armies in the South. The latter presents two tableaux; in the one a soldier sits by his camp-fire, gazing fondly upon a cherished likeness of his wife and child; while in the other, apparently coincident, the wife at home kneels within her chamber, through the open window of which streams the beautiful moonlight, praying for the safety of her loved one. It is a beautiful picture, and full of deep feeling. January 24, 1863, appeared "The Emancipation of the Negroes, January, 1863—the Past and the Future," which gave him at once an extended reputation for allegorical representation.

This was followed by "Southern Chivalry—dedicated to Jeff. Davis;" "War Sketches;" "The Result of War;" "The Life of a Spy," in nine tableaux, which contains the story of the life of the spy better than volumes of description. First we have the likeness of the Spy—In the Enemy's Works—In Pursuit—Who Goes There?—Suspected—Sentenced to be Hung—Safe Return—Telling his Adventures, etc.; "Honor the Brave;" "Thanksgiving Day, November 26, 1863;" "The Prisons at Richmond;" "Christmas, 1863," interspersed with war sketches gleaned from rapid visits to the seats of war. In January, 1864, appeared "New Year's Day North and South," a beautiful yet startling contrast; "Central Park in Winter," in a series of nine tableaux, is well represented by—The Ball is Up—Getting Ready—Put your Skates on, Mister!—New York Skating Club—Warming up—Sleighting on the Mall—Refreshments—and Skating on the Lake are life-like—original in conception—especially the last, for the artist with a vein of humor has introduced many prominent men skating, among whom Bennett has just had the misfortune to be tripped up by Greeley; "First of April, 1864," is also another specimen of the artist's love of the humorous. "Our Heroines—Sanitary Commission—On the Battle Field—In the Hospital—At the Fair, and In the Parlor," present us with scenes of kindness and love from the part taken in the war by our devoted ladies of the North. "The Press in the Field" presents another of those scenes so familiar on the field of battle, and is represented in twelve tableaux—Our Artist—Taking Notes—Sketching—A Correspondent—Contraband News—In Action—Reliable Information—The Newspaper in Camp—After the Battle—Names of the Wounded—Newspaper at Home—The Sketch Book; "The Campaign in Virginia—On to Richmond!" and "Our Flag," repre-

sented in eleven tableaux, all striking scenes of war truthfully pictured. "Central Park in Summer," which appeared in August, 1864, presented in eleven views a busy scene on the Mall, and among the brilliant throng a number of distinguished personages are felicitously introduced. Among them are Bryant the poet and Raymond of the *Times* side by side; Edwin Booth the actor resting on the arm of Launt Thompson the sculptor; General McClellan seated on one of the benches, while a cluster of ragged urchins are gazing admiringly upon him; Lester Wallack, Forrest, and James Parton and his wife "Fanny Fern," and altogether the sketch is a most happy idea. This was followed by perhaps the most noted of the artist's productions, "Compromise with the South—dedicated to the Chicago Convention," which a short time before had been in session, and in a series of resolutions had virtually declared for peace at any price. All the papers in which the cartoon appeared were immediately bought up by the Unionists, and so effective was it that the Union National Committee purchased the plate and circulated them by the hundred thousand. The good it accomplished was incalculable. The country was then divided on the subject of "peace at any price," or "no compromise with the South," and Nast's sketch was one of those agencies which quickly brought a healthy reaction. Soldiers and citizens were equally enthusiastic on its reception.

The artist had shown in his "Compromise with the South" what the North had to expect from such an event; and again he puts his pencil on paper to inspire with fresh vigor the dispirited troops. This time it is "The Blessings of Victory," and like "Compromise with the South," it tells its own story—"Peace comes by victory, not by submission, nor by an immediate cessation of hostilities."

It represented the "triumph of the people over their enemies, and the dawn of universal peace; the prison doors are open and the captives made free; they close only upon traitors who have struck at the national heart, while the soldier and the sailor return home to the loved ones, who welcome them from the field of battle and honor, not of armistice and armed truce; the slave raises his head as a man; and wide waving plenty and ripening summer overspread the land."

In October, 1864, appeared "The Chicago Platform," another of those most overwhelming and convincing pictured speeches for the Union, representing as it did the exact meaning of the Chicago Resolutions, of which McClellan and Mr. Pendleton were the official representatives.

In April, 1865, "Sumter 1861 and 1865," representing "The Eve of War" and "The Dawn of Peace," which was then gradually approaching; but which was so suddenly dimmed by the death of the nation's honored President, "Lincoln." "The Mourners at the Coffin" is a simple yet expressive picture, and well suggests a nation's grief. "Praise God From Whom all Blessings Flow," in the tab-

leaux, represents two remarkable scenes in the world's history, which may seem a little irrelevant; one is "The Saviour's Entry into Jerusalem," and the other, "The Surrender of General Lee and his Army to Lieut.-General Grant."

In 1866 appeared his "President Lincoln entering Richmond," well known for its truthfulness. Then came the famous "Bal d'Opera," on the evening of April 5th, where Nast gained for himself the reputation as a caricaturist.

The pictures that he exhibited there proved to be the great attraction of the ball, and Nast became immensely popular. The affair had its origin in this way. Nast saw an advertisement of Max Maretzek's, the lessee of the New York Academy of Music, in which he stated he was going to give a masquerade ball. A brilliant thought entered the artist's head. He wrote to Max, telling him that he would like to draw caricatures of prominent persons for exhibition at the ball. Max liked the idea, and made an appointment to meet Nast. They met and compared notes. Max's idea was that Nast should make water-color sketches of prominent men, so that the costumer might go by the pattern; but finally he acquiesced in the artist's original idea. From that time Max did not interfere, but left all to Nast. Max asked what would be the price. This the artist said would be more than he could pay, nearly \$2,000; but he wished only to be reimbursed for his outlay in the cost of frames, colors, etc., the time to be given in. Nast went immediately to work on his task. The number to be painted was sixty, and the time fixed for their completion only thirty days. At the day appointed all were finished and ready for inspection. Some of the pictures measured three feet by four, others four by six; all painted in *tempera*. This gives but a faint idea of the magnitude of the task and the industry of the artist. Rehearsal was to take place in the Academy, the musicians took their positions, while the artist and Maretzek looked on in silence. The pictures were brought out. Exclamations from the orchestra, however, soon demoralized the rehearsal; cries of "Oh, there's Zucchi!" "Oh, isn't it good of Max!" "There's Mazzolini!" so filled the house, all was laughter and confusion; but it was the monitor of success. Max was delighted with the idea as he walked around the large hall, with his hands far down into his pockets, grinning. When the evening of their exhibition came round, the people gathered in convulsed crowds around the pictures, and they proved to be the great event of the season, and the name of Nast was on every tongue.

Maretzek presented the artist with a magnificent gold watch, valued at \$250. Shortly after, the caricatures were sold at auction, and this event created a sensation only second to their exhibition.

Among the other designs which Nast has given us, we mention "Treason Made Odious;" "Why He (Davis) can not Sleep;" "The Uprising of Italy"—a grand conception; "Catakill Mountains"—twenty-seven views; "Andrew

Johnson's Reconstruction, and How It Works;" "Which is the More Illegal—The Massacre, or the Convention at New Orleans?" "The Tearful Convention;" "Andy's Trip;" "King Andy—How He Would Look"—based on the words of Seward: "Will you have Andrew Johnson King or President?" "Santa Claus—His Works—Christmas, 1866;" "Prometheus Bound;" "Slavery is Dead;" "Ignus Fatuus;" "Southern Justice." These pictures are yet fresh in the public mind, and need no description of ours.

In color, though Mr. Nast has not gained that point of excellence to which he is entitled as a designer and caricaturist, some of his paintings, however, are considered excellent. These are: "The Domestic Blockade;" "Just Come from Drill;" "Picketed Zouaves;" "Attacking the Home Guard;" "Who Goes There?" "The Intelligent Contraband;" "The Reliable Gentleman;" "The Soldier's Halt;" "The Yankee Decoy;" "Faithful Unto Death;" "Neapolitan Scenes;" "Peace Again;" "General Sherman's March Through Georgia—His Advance Arriving at a Plantation"—which an English critic declared to be "one of the most remarkable historical paintings," etc., etc.

Critics have always given Mr. Nast's paintings a favorable reception. They have pronounced them to be the only *historical* pictures of the war yet issued. In Jarves' "Art Idea"—a work well known to artists and connoisseurs—we find the following opinion of the talents and capacity of Mr. Nast:

"The lofty character and vast issues of our civil war have thus far had but slight influences on our art. Rarely have our artists sought to give even the realistic scenes of strife. This may be in part owing to their inaptitude in treating the human figure, or the delineation of strong passions and heroic action.

"Judging from wood-cuts in *Harper's Weekly* of compositions relating to the various stages of the war, NAST is an artist of uncommon abilities. He has composed designs, or rather given hints of his ability to do so, of allegorical, symbolical, or illustrative character far more worthy to be transferred in paint to the wall spaces of our public buildings, than anything that has as yet been placed upon them. Although hastily got up for a temporary purpose, they evince originality of conception, freedom of manner, lofty appreciation of national ideas and action, and a large artistic instinct."

It is to be hoped that Mr. Nast will realize these anticipations. If he puts into his work the same energy and industry that he has shown in former study, he can not fail to become one of the best of our historical painters. This, we understand, is the desire of Mr. Nast. He has already shown his capability on the block—let him now transfer his thoughts to canvas.

He contributed several illustrations to "The Tribute Book—A Record of the Munificence, Self-Sacrifice, and Patriotism of the American People During the War." The short-lived Mrs. Grundy received her only ray of light from Nast. His title-page was declared to be one of the best things that appeared in it. He is a regular contributor to the *Phunny Phellow*, giving the cartoon and two full-page designs each month. Nast also illustrated Nasby's

book, "Swingin Round the Cerkle," by eight full designs.

Mr. Nast is a hard worker. His two-page "Harper" cartoons, while he is engaged upon them, absorbs his whole spirit and energy. Some of them have been furnished in the short space of twelve hours' time, while others have occupied three to four days. All are remarkable for their attention to detail and beautiful finish. There is nothing forced, hurried, or unnatural about them. "Leap Frog"—a droll idea of the origin of that game, which appeared in the *Riverside Magazine*, was by Nast; he also designs many title-pages, and illustrates numerous miscellaneous works.

Mr. Nast lives in Harlem, near the corner of 125th Street and Fifth Avenue; has an artistically furnished home, where he spends most of his time engaged in his studio. He has lately erected a new addition for that purpose, which is undoubtedly the best of its kind, in point of arrangement, on Manhattan Island. This he intends to fit up for the express purpose of painting his large panorama and oil paintings.

In appearance Mr. Nast is of medium height, well proportioned and symmetrically built. His eyes are dark and *bright*, indicative of quick mental perception; his head is well shaped; his face is *artistic* in expression, if we may use such a word, with black moustache and goatee; while his broad expansive forehead is overshadowed with a dark mass of straight black hair. Nor does his fine head and face belie his private character, for he is one of the most agreeable of men and companions. In conversation his remarks sparkle with wit and good-humor. Sometimes he appears to have a sleepy, dreamy expression; at others he is full of vivacity; and his face is, as a critic said of his picture, "fresh and graphic, warm, and glowing with life—that would light up an Esquimaux snow-hut with streaks of summery sunshine."

LINES TO A DISEMBOodied SPIRIT.

PRECIOUS soul, what is thy state?
Hast thou knocked at heaven's gate?
Did they sound thy name within
And tell thee thou wert freed from sin?
Or did they say, "He knows thee not,
His holiness thou'st never sought?"
Does remorse dwell in thy breast,
Or hast thou found a heavenly rest?

Does the Saviour love thee now,
And place a crown upon thy brow?
Or does He bid thee go away,
And from his face forever stay?
Dost thou walk the "streets of gold"
Where songs of praise shall ne'er grow old?
Or is thy portion endless night,
Bereft of God, heaven's lasting light?

When thou seest thy grave below,
Does pride e'er in thy bosom glow?
Do the laurel wreaths seem fair,
Placed on thy tomb by kindred care?
Wouldst thou thy position change,
Or dost thou now the "sweet fields" range?
If thou couldst thy life live o'er,
Oh! wouldst thou love the Saviour more?

E. L. KETCHUM.

THE AMERICAN PHYSIOGNOMY.

A RECENT traveler in this country—a Scotchman by birth and education—makes the following observations, in an English paper, on an interesting subject:

"Some say the Americans have no physiognomy—a great mistake, I think. To me their physiognomy seems most strangely marked, bearing deep impress of that intensity which is the essence of their being. The features even of the young are furrowed with lines of anxious thought and determined will. You read upon the nation's brow the extent of its enterprise and the intensity of its desires. Every American looks as if his eyes were glaring into the far West and the far future. Nay, his mental physiognomy is determined by the same earnestness of purpose. The American never plays, not even the American child. He cares nothing for those games and sports which are the delight of the Englishman. He is indifferent to the play of either mind or music. Labor is his element, and his only relaxation from hard work is fierce excitement. Neither does he laugh.

"The Americans, I imagine, are the most serious people in the world. There is no play even in their fancy. French wit is the sparkle of the diamond that dazzles a *salon*; the American imagination flashes its sheet-lightning over half a world. The same terrible earnestness is, I am persuaded, at the bottom of that ill-health which is so serious a curse to American life. No doubt other things contribute—climate, stimulants, sedentary occupations, etc.—but the deepest-rooted cause of American disease is the overworking of the brain and over-excitement of the nervous system, which are the necessary consequences of their intense activity. Hence nervous dyspepsia, with consumption, insanity, and all its brood of fell disorders in its train. In a word, the American works himself to death."

[It is true that the American visage is sharp—like his mind—but it is *not* true that he is without love for music, play, and sport. Hunting, fishing, yachting, etc., are pursued somewhat differently here. We do not mount forty red-coats on horses and, with a pack of twenty hounds, chase a poor tame fox through open fields, across plains and meadows—with no woods—till out of breath, and then get up a great powwow over the achievement of killing the poor scared thing. We hunt foxes in the forests, deep, dense, and extensive, on foot. Nor do we separate a tame buck or doe from a flock in a park, and then put on the dogs, while "gentlemen" hunters ride horses over farms, tramping down the corn and other crops. We hunt deer in a very different way; nor are we required to pay five dollars a day for the privilege of fishing in any of our great rivers or lakes, as we should be required to do in England. It is true that most Americans *work* for a living, instead of *living* it out of the poor. As to disease, we admit we are not exempt; nor are they of the Old Country. Nor have we more of the insane or idiotic than they. We do not show so much beer or beef in our faces as John Bull—but we can outlift him, outrun him, outreap him, outsail him, and, we "guess," outwit him. John is dull, Jonathan is sharp; John is slow, Jonathan is fast; John is adipose, Jonathan is muscle. In short, compare us as you may, with whom you please, and we gain more than we lose. We have told the truth about the races in our NEW PHYSIOGNOMY, where all, English, Scotch, Irish, and the rest, may see themselves as they are.]

On Psychology.

The soul, the mother of deep tears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless fancy's sight;
Lovely, but seldom it awakes,
Unfolding what no more might close.—*Mrs. Hemans.*

ANTHROPOLOGY. MAN MENTAL—MAN PHYSICAL.

BY J. A. NASH.

If I were to ask a child, who has read the PHRENOLOGICAL JOURNAL a year or two, what is Physiology? he would say, "It is the science of the human body, explaining its various parts, and teaching how to keep them all in health and in good running order."

If I should ask a reader, more advanced in years, and a riper student of man, what is Psychology? he *might* answer, and most certainly *would*, if a thorough scholar, "It is the science of the human soul—of the life-principle common to man and the lower animals, since brutes live as well as man—the principle of sensation, since brutes, like men, see, hear, taste, smell, and feel; and the principle in which reside the lower appetites and the passions, for the brutes not only live and possess the bodily senses, much as men do, but they have their appetites and passions, their likes and their dislikes, their loves and their hatreds toward each other, and often such strifes for the mastery as may be called brutal, whether perpetrated by brutes or men. Not that the body does these things; the body does nothing after the soul has left it; it is therefore the soul, whether of man or brute, that lives; that sees, hears, tastes, smells, and feels; that possesses appetites and passions."

If I ask a third person, still more advanced in the study of man, what is Pneumatology? he will tell me, "It is the science of spiritual natures, especially of man's spirit; that the Bible, from Genesis to Revelation, everywhere makes a wide distinction between soul and spirit, ascribing the former equally to men and the lower animals, the latter to man only of all terrestrial beings; and that common sense and sound philosophy harmonize perfectly with the divine teachings so far as yet applied to the subject." And perhaps he will add, "that the non-application of common sense and rational investigation to the subject is the reason for theology having confounded two words so distinct, the one, soul, expressing qualities common to man and all lower orders of being; the other, spirit, implying qualities common to man and to all higher orders of being—to angels and archangels, and to Him that sitteth on the throne."

If I ask a fourth, and am successful in the selection of one whose investigations have been patient, deep, prying into our inner life and being, what is Anthropology? I think he will tell me, "It is Physiology, Psychology, and Pneumatology, all combined and applied to the study of man in all his parts, his whole nature, corporeal, psychical, and spiritual, involving the momentous questions, What is

man? What are his prospects for a future life? and How should those prospects react upon and influence his present life?"

What is man? Contrast him with the brute, and we see that there is a difference. We see and know that this is not a mere superficial difference. It is not that one is more finely organized physically than the other; not that one has a nervous system superior to the other; not that man has a larger cerebral development than the brute. The distinction is innate, radical, proceeding from the interior life and being. Man is different from the mere animal, not because he has a superior organization. It is directly the reverse. He has a superior organization because he has a superior nature.

We must learn to distinguish between man and man's body. The body is not the man. It is no essential part of the man. Its office is temporary. While in this material world it is suited to man's circumstances and wants, but it is no essential part of the man himself. He is one thing, his body is another; it is the house he lives in. You may say he lives in the house on the hill, built by his father or by himself, or purchased by one or the other. Very well; that house may be well fitted to his local wants, and specially well to his family requirements; it may be a delightful home for him and them. Yet no man wishes to be always at home, however lovely and happy his home may be. Business and pleasure sometimes call him away. But in this world of mixed good and evil, honest men and rogues, some, his personal friends and others his personal enemies, he does not wish to be seen and read of all he meets, when he goes from his home. Hence, he needs, while here in these earthly conditions, another house, unlike his stationary house on the hill, or in the valley, as the case may be; one that is locomotive, that will accompany him wherever he goes, stay where he stays, and return with him to his home, when he returns. In the body, man has such a house; it goes wherever he tells it to go; nay, it does not wait to be told; it moves at the *will* and pleasure of the master within. It conceals him; it protects him from any villainous scrutiny that might be attempted. He can look out of those two windows just under his brows and see other men's locomotive houses as they can see his, but he can not see the men themselves unless they choose that he should, nor can they see him unless he is willing they should see him.

Reader, did you ever consider how perfectly any one can be ensconced in "this earthly house of the tabernacle?" How he can be alone in the mart of men? as unseen in crowded streets as in the desert? It is even so. If I were to ask, Have you ever seen an angel? you would probably say No. Were I to ask, Have you ever seen a human being? perhaps you would say, Yes, thousands. It is a mistake; you never saw a human being. You look on the tabernacle in which one lives, and you form an estimate what sort of man or woman lives in it; the man or woman you do

not see, never have, and never will, so long as in earthly conditions. You see certain expressions on the front of the tabernacle, indicating at one time sorrow and at another joy; now hope and then despair; various emotions of the indweller you see shadowed forth, but the indweller's self you do not see, and never can till the "outward man" is thrown off and the inward man is revealed; nor even then, unless you yourself be first endowed with other eyes than those of the bodies we now inhabit.

If we would know ourselves; if we would comprehend those great truths which philosophy teaches obscurely, but which a divine revelation teaches far more reliably, concerning our own future; if we would absorb the rays of immortality which come to us from science, and drink in the beams of light which revelation unavails to us on this subject; in short, if we would cherish those influences from a future life which shine on our pathway in this life, and be molded by them to a stronger faith and a purer virtue, we must divest ourselves of the old error, that the body is the man, or any essential part of him.

We must learn to think of the body as the house we individually live in; movable at the will of the occupant, but not the occupant; necessary to our present state of being, but not necessary to all states of being that are possible; as something which, for aught we now know, may be as cheerfully put off, when we pass from this to another state, as the extra garments of winter are left behind when we feel the genial warmth of spring and quaff its sweet odors; something from which we may depart as joyously at death, as we would here leave an old and dilapidated hovel for a new and commodious dwelling.

We must learn to think of the soul—the life, the bodily senses, the lower appetites and the passions, common to men and brutes—as not in itself inherently immortal, but as made immortal by its intimate conjunction with the divine spirit breathed into man by the Creator. No sane philosophy ascribes this to the brute. Revelation nowhere ascribes it to the inferior races on our globe, but it everywhere ascribes it to man. It ascribes it to him, when it tells us that "God made man in his own image;" when it declares "there is a spirit in man, and the inspiration of the Almighty giveth him understanding;" when it represents that "he who ruleth his own spirit"—in whom the spirit, that highest element in man's nature, dominates and controls all the lower elements—"is better than he that taketh a city;" and in a thousand other places, if earnestly studied and rightly understood, in their relation to this subject.

But man is not yet sufficiently studied by man. The *gnōthi seauton* (know thyself) is always ringing in our ears, but we do not heed it. Astronomers have soared higher in tracing the stars than man in tracing his upward destiny. Geologists have probed the earth more deeply, and with intenser earnestness, to discover its formations and transformations, than man has sounded the mysteries of his own nature to learn what he is and what he may become, by co-working with God in the way of humble faith and earnest seeking after self-knowledge for his own elevation.

Religious Department.

Know,
Without or star, or angel, for their guide,
Who worship God shall find him. Humble love,
And not proud reason, keeps the door of heaven;
Love finds admission where proud science fails.
—Young's Night Thoughts.

EXPRESSION.

* THE human soul is seeking ever for visible forms in which to place the invisible treasures of its inner sanctuary. A holy thought descends from the infinite mind of God into the mind of man, and brings with it a desire for expression.

Sacred and dear the thought may be, yet the soul that claims it is not satisfied until a body is found somewhat fitting its fair proportions in which it can be enshrined and sent forth a messenger to gain recognition from kindred souls. Varied are the forms with which these children of the mind and soul are robed.

The artist copies upon the canvas from the scroll within. High thought and heavenly beauty dwelling in the sculptor's soul, are carved in marble by his hand. The sweet emotions of the poet's heart he folds in words, and in their rhythmic glow he read something of the sorrow and the gladness of his life. With words the bold reformer's mighty thoughts are clothed, and bear with them a power to revolutionize the world. Historian, sage, and prophet tell in words to anxious waiting hearts the wonders of the past, the glories of the future.

Marvelous indeed is the power of words when in them lies the true expression of an earnest soul. But however perfect their arrangement, however musical their sound, unless in them vibrates and thrills this living soul, they are at most a beautiful body into which a spirit has never entered.

He who has little in his soul to express will readily furnish a way in which the world can read it all. Words are at his command and he uses them without stint, but they reach only the ear of him who listens, for they contain no power to bear them farther. Yet all he *felt* is in them, and he is satisfied.

It is he, within whose being there are depths of harmony and sympathy and love God's eye alone can fathom, thoughts and aspirations words can never measure, to whom it is most difficult to find avenues of expression, and who is most dissatisfied with all his attainments.

The real artist, perfect as his work may be, can paint upon the canvas only the shadow of his purest visions. The real sculptor is able to form the marble into only a skeleton of his highest conceptions. The real poet writes only the preface to the story of his inner life. But it is not the outward form of the artist's, the sculptor's, or the poet's thought that impresses the mind of him who beholds. It is the thought itself. The soul of the artist upon the canvas, the soul of the sculptor in the marble, the soul of the poet in his words—and

back of this, it is the soul unexpressed, that gives power to that expressed.

Who has not, in the hour of affliction, read more sympathy in the few broken words of one than in the smoothly flowing sentences of another? More love in silence, even, than in loud protestations.

All power is from within, and it sometimes happens that a great soul is enshrined in a small body, so, often, in feeble forms, are the mightiest thoughts expressed.

He who can use words most flippantly when addressing the Divine Being does not prove that he has most love and reverence for Him. For what soul, drawn by the chord of love near the great source of its being, filled and overflowing with gratitude, can easily find in weak human words the expression of its thankfulness, its yearnings, and its needs? The deepest, truest, holiest prayers are wordless ones, those prayers that, "unheard by the world, rise silent to God."

He who can talk most freely of his inner life has that life not very far from the surface. He who can give expression at all to his deepest, most sacred thought, who can say to any form, "Ye are the embodiment of my inmost soul," is certainly the possessor of a very small soul. "Thank God! bless God! all ye who suffer not more grief than ye can weep for! That is light grieving," said one, who "soared and sang as never woman soared and sang before;" and as her tears were but the expression of her lightest grief, so was her life's best song but the key-note to purer, holier harmonies within.

"A few can touch the magic string,
And noley fame is proud to win them;
Alas for those who never sing,
But die with all their music in them."

Blessed and fortunate are they who have the power to "touch the magic string" and pour forth the melody of their souls in strains for mortal ears; but God may count those not less fortunate who "can not put in words the grief they feel," nor mold in any form their souls' bright vision. Though they "never sing" in earthly strains, can they, dear poet, "die with *all* their music in them?" Is the spirit of the flower, its perfume, lost to him who gazes on the outward form? Can a sweet soul make music in itself, and be unheard? Does love need words to make itself felt? As God has a plainer way of speaking to the soul than through any outward form, so it may be that the pure thoughts and holy aspirations of one heart find readier access to other hearts when unfettered by any clinging robe. Sure it is that a loving soul will, in some way, make its love known; a beautiful soul, its beauty seen; a good soul, its goodness felt.

The sweetest song will ever be unsung, the holiest thought be ever unspoken; but He who fashions the human heart will never let a chord be touched in vain. HOPE ARLINGTON.

EVERY prayer put forth has its effects on the one who utters it, and so of every curse.

MAN'S SPIRITUAL NATURE.

BY ULYSSES HERTIG.

It is an indisputable fact that man, by the decree of his Creator, as manifested in his organization, is a spiritual and religious being. No question that engages our attention can be regarded as more definitely settled. Neither the rude ignorance and ungoverned passions of barbarity, nor the luxurious dissipation and mad perversions of a debauched civilization, have ever suppressed the manifestations of the religious elements of the human mind. Phrenologically speaking, the organs of his Spirituality, Veneration, and Hope grasp "the throne of the invisible" and drink the sweet music of the celestial spheres. As the social group of domestic propensities make man a social being, so does the spiritual group of sentiments make him a worshiping *intelligence*, a believer in "the divinity," an *heir of immortality*! An omnipotent, all-wise, and benevolent God has founded the laws of nature in harmony, and *has not* mocked humanity with inherent desires never to be gratified—aspirations never to be realized. The spiritual nature which lifts the willing soul above earthly things to commune with God and hope for an after-life of perennial joys, will surely waft that soul, in the hour of dissolution, to the full fruition of heaven.

It is therefore evidently a consideration of grave import, a question demanding earnest attention—what constitutes the legitimate exercise of the spiritual and religious nature. Certainly not a senseless idolatry; nor a revolting superstition of absurd ceremonies and bloody sacrifices; nor yet a persecuting intolerance of frightful inhumanity and unreasonable tenets!

All history, sacred and profane, bears witness to the gross perversions of the spiritual and religious elements of the human mind. What atrocities have not been perpetrated in the name, even, of Christianity, whose divine founder showed such forbearance, meekness, and humility! Reflect but for a moment on the suffering and bloodshed of those unhallowed crusades in which millions perished; on the horrible burnings at the stake which occurred, about three centuries ago, throughout Europe; on the demoniacal tortures of the Spanish Inquisition, which make the blood chill, despite the lapse of time! Aye, it is too true, that Spirituality may become as deeply perverted as Amativeness, Veneration as Combativeness, Hope as Acquisitiveness. Now faith, being the emanation of the spiritual nature, may be true or false, to the extent that this nature is legitimately or perversely exercised; and the folly of making faith *superior* to reason, or *independent* of reason, as a guide to the proper exercise of the spiritual nature, becomes apparent, since it is only by the use of the *intellect* that we discover the *vagaries of faith*. Besides, it is very doubtful whether, in *this era*, faith ever *assumes* to act independently of reason in a sane or concordant mind. I here use the word *faith* as the *formation* and embodiment of belief concerning God, His divine govern-

ment, "the after-life," and the duties growing out of this belief; and I mean, when speaking of the *independent action* of faith, its action through *inspiration* in furnishing the intellect with data, and forming belief independent of the data which intellect gathers from *other* sources. The Bible teaches us, if we accept its authenticity, that the prophets were inspired, and by this means foretold the future coming of Christ. Again, that the Apostles were inspired to record Christ's examples and teachings. The vast number of Christian churches, or branches of the Christian Church, rest on this basis. We have also Mohammedanism and Mormonism resting on the alleged inspiration of Mohammed and of Joseph Smith. Is God really contradicting himself or changing his purposes, as is true of earthly rulers? Amid the maze of the astounding number of faiths, it is certainly the province of *intellect* to discriminate truth from error. Faith *can not* reason; and when it acts upon a basis that is not furnished by enlightened reasoning, the most contradictory sects spring up as rapidly as Jonah's gourd.

Faith is *above* reason, as reason is *above* perception; but when the reasoning faculties are exercised independently of the percepts, how baseless and worthless is the imposing superstructure which they create! The animal kingdom is above the vegetable, but destroy the latter and what becomes of the former?

The spiritual nature of man instinctively seeks to worship God and grasp heavenly and immortal things; it says to intellect, You must not outrage my desires by atheistic speculations, but *reason to my wants*. Conscientiousness and Benevolence also say, We hold you to a course of investigation and reasoning that will not outrage justice and humanity; and under these restraints intellect *must* shape its judgments.

We have already stated that there are an astounding number of faiths, and we recur to the fact merely to glance at the earnestness of their respective devotees. Now it can not be doubted that there is great sincerity among Catholics, among Protestants, among Jews, among Swedenborgians, among Spiritualists, among Mormons, among Mohammedans, and the other hundreds of divisions and subdivisions of these. Many of these different creeds assert that God has approved, and does approve *their* religion. Nothing can be more fatal to human progress and human happiness than the prevailing tendency to decry intellectual research in religious matters, and bandy the epithets of unbelief and infidelity where there is an honest difference of opinion growing out of different intellectual views. "In the agitation of thought is the beginning of wisdom." The blind bigotry which frowns upon any deviation from its own accepted dogmas must be fought and crushed, extirpated root and branch, by the continued study of nature and revelation—always, too, in that spirit which can truly say:

"If I am right, Thy grace impart
Still in the right to stay;
If I am wrong, oh, teach my heart
To find the better way."

PORTRAIT OF MARY QUEEN OF SCOTS.

The Mohammedan bows to the shrine of Mecca, and the heaven he views is peopled with voluptuous houri, beckoning him to the bowers of pleasure and lustful embrace. To him the *Christian* is an infidel. Brigham Young, Heber C. Kimball, George R. Cannon, and the other Mormon leaders—men, too, of splendid intellectual and *spiritual* endowments—shout "gentile" to those who dispute their divine mission. Are our Methodist, Presbyterian, Baptist, Lutheran, Campbellite, or Disciple, and other friends of Christian denominations, quite as charitable in passing judgment upon each other and the rest of mankind as they should be?

To those who profess *Christ*, the meekness, humility, and forbearance He uniformly displayed should eminently radiate their lives.

Friends of religion, truth, and progress, be *charitable*, and *encourage* intellectual inquiry. Rest assured God will protect the *right*.

FAMOUS HISTORICAL PERSONAGES.

MARY QUEEN OF SCOTS.

ELIZABETH TUDOR lived in the glory of her great acts, still lives in the mighty issues of a world, but the beautiful romance of her name, which surrounded her youth, is buried in the tragedy of Mary Stuart.

Mary the beautiful!—the lady that still steals away hearts from Elizabeth by her woman-witchery and the touching romance of her life—a popular heroine in the very Scotland that outcast her, a sainted martyr in the eyes of the England that condemned her and held its jubilee at the tragic death of the Catholic claimant to its throne!

Mary Stuart in her relation to the royal family of England was the great-granddaughter of Henry VII., granddaughter of the eldest

sister of Henry VIII., and daughter of James V. of Scotland. On her mother's side, and related to France, she was, by James V., daughter of Mary de Guise, dowager Duchess of Longueville. She had more of her French mother's race in her than the strong consistent character of the Scottish people. Her mother was the eldest daughter of Claude de Lorraine, first Duc de Guise, who married Antoinette de Bourbon, the grandmother of whom Mary makes often mention in her letters. Charles Cardinal de Lorraine was her uncle. He was very handsome, and was said to be the paramour of Catherine de Medici. The line of Guise was a younger branch of the house of Lorraine, whose princes considered themselves the true representatives of Charlemagne, and the Capetian kings of France as beneath their quality. "The family of Lorraine in all its branches were remarkable for beauty, lofty stature, impetuous valor, and that degree of brilliant genius which is seldom attended with great worldly prosperity, and induces withal

no little turbulence."—[Agnes Strickland.] We see at a glance that it is from the Lorraines that Mary Stuart received her type of character and person. Their beauty, gallantries, and chivalrous spirit, she and her offspring, especially Charles II., partook largely of; and both the Stuarts and the Guises were almost equally ill-fated. In the civil wars of France, the family of Guise headed the ultra-Catholic faction, and were as troublesome to their kings as were the leaders of the Huguenots. In this, also, she unfortunately resembled them; for, aside from the relative good of the Catholic or Protestant spirit, nothing could be more ill-fated than for Mary to be an ultra-Catholic Guise, yet queen of a nation of stern Presbyterian Knoxes, alike among its nobles, clergy, and people, besides being a rival in beauty and family claims to the Juno of Protestant England whom her claims made bastard.

Mary Stuart was born December 5, 1542, and she succeeded her father to the throne of Scotland when but eight days old. James Hamilton, Earl of Arran, the nearest heir to the queen, was declared regent, and in July of the following year he concluded a treaty with Henry VIII., by which Mary was to be sent to England, at the age of ten, to be married to Prince Edward. She was crowned on the 16th of September, 1543, and in December the Scotch Parliament, through the management of Mary de Guise, declared the last treaty null, whereupon Henry, the following May, sent troops into Scotland, under the command of the Earl of Hertford, and a war was waged for two years, peace being proclaimed June, 1546. Henry VIII. died in January of the next year, and in 1548 Hertford, now Duke of Somerset, Lord Protector of England, published an address (February, 1548) to the people of Scotland to prove the advantage of the proposed marriage between Edward VI. and Mary, at

the same time sending Lord Grey de Wilton with an army, which took Haddington and left an English garrison there. The Scotch lords immediately assembled at Stirling, and decided upon offering the infant Mary in marriage to the Dauphin of France, and proposed that she should be educated at the court of Henry II., upon which the French sent troops under d'Esse, who at once opened the siege of Haddington, aided by 8,000 Scotch. In July, M. Dessoles, ambassador from France, obtained the ratification of marriage between the Dauphin and Mary, and in August the French fleet received on board the infant Queen of Scots and her mother to bear them to France. In the successful management of Mary de Guise in forming a match for her daughter with France, educating her at its court, and making her both French and Catholic, she had worked out an evil fate for her daughter. Had the lords of Scotland stood by their first treaty with Henry VIII., and married Mary to Edward the Protestant, her fate most likely had been different.

August 13 she disembarked at Brest, and was directly conducted to St. Germain en Laye and affianced to the Dauphin. She was then not six years of age.

April 4, 1558, during a dangerous fit of sickness, Mary Stuart assigned, at Fontainebleau, the kingdom of Scotland and all her rights to the throne of England to the King of France and his successors. This was outraging both England and Scotland, and as we have seen in our Life of Elizabeth, Henry II. of France had treacherously plotted to betray Elizabeth into France, during that princess' distress, in her sister's reign, to give her the fate that afterward befell his daughter-in-law, Mary, whose path to the English throne he was clearing. Perhaps Elizabeth copied him in this, for she forgot not such nor forgave, and a quarter of a century afterward she still urged in the sum of her wrongs against Mary Queen of Scots, that she had given *her* throne to France. Nor was this cause of bitterness sweetened to Elizabeth, when two years afterward she came to the throne of England, for Mary and her husband, the Dauphin, by the advice of Henry II. assumed the arms (publicly on their carriages) and titles of King and Queen of England.

Mary Stuart was married to the Dauphin April 24, the same month of her sickness, and the Dauphin was immediately styled King of Scotland. Next year Henry II. died, and her husband succeeded under the name of Francis II., and her cousin Elizabeth mounted the throne of England in the autumn of the same year. Both of these rival queens are now fairly launched on their sea of fate. Which shall win? What *could* win against the lioness of England, if it contended with her? or called her *bastard*, or claimed her throne?

Soon after the ascension of Elizabeth, a treaty was signed (July 5, 1560) at Edinburgh, in which the ambassadors of Francis and Mary acknowledged that the crowns of England and Ireland belonged to Elizabeth, and that Francis and Mary ought no longer to assume the titles of sovereigns of those countries. On December 5 of the same year Francis II. died, and was

succeeded by his brother, Charles IX., aged ten years, and the government of France devolved on Catherine de Medicis, and thus Mary Stuart is left a widow on her very birthday, aged sixteen. She quitted the court of France early in 1561, to pass the winter with her uncle, Cardinal de Lorraine. While with him the Earl of Bedford, Mewtas, and Throgmorton, English envoys, solicited earnestly Mary Stuart to ratify the treaty of Edinburgh (on Jan. 5, February 19, April 13, and June 23), but she always answered that she could not do it without the consent of her council; yet that council had already done it. Thus she continued to claim Elizabeth's rights—still, in effect, called her illegitimate.

M. d'Oysel asked permission for Mary to pass through England on her way to Scotland, but Elizabeth angrily refused, as well she might. On the 15th of August, Mary set sail with three of her uncles, and some Scotch and French noblemen, and disembarked at Leith, August 19, having eluded the vessels of Elizabeth, which, nevertheless, took one of her galleys; thus the Queen of England treated her as a rival sovereign in open warfare, and Mary ought ever to have considered that this was Elizabeth's inevitable position until, at least, she resigned her title superior to the daughter of Anne Boleyn as Queen of England. Nor must it be forgotten that Pope Paul indorsed Mary's claims against Elizabeth, as the bastard of Henry VIII., in favor of his Catholic protégée.

Mary appointed James Murray (her natural brother) and Maitland her prime ministers. Soon after her arrival in Scotland, an epistolary correspondence was opened between her and Elizabeth. In October the ministers of England again insisted on the treaty of Edinburgh, and forbade her to bear the arms and titles of England, but January 5, 1562, she still refused to ratify the treaty, and declared that it would be a renunciation of her birthright. But this was subterfuge, for she would still have been the next in succession to her cousin Elizabeth. Its amount was that she still persisted in her claims on the English throne, to the exclusion of Harry VIIIth's daughter—still was she the standing proclamation of Elizabeth's illegitimacy. The protest of a nation, against her bearing the title of its queen, was as naught to the ill-advised woman who also, in spite of the loud stern voice of her own Scotland against it, sought to impose upon it the fiercely hated church of the past. This was consistent enough in a Catholic daughter of the proud house of Lorraine, who felt more their own princely egotism, and the "right divine" of sovereigns, than respect for the popular voice of a nation. But the unfortunate Mary fell on fiercely earnest times, and John Knox, the son of the people, was more of a monarch, with "right divine" at his back, than was Mary Stuart.

Mary was thrown upon almost a republican age, and not long after her day her grandson Charles I. shared the fate then in reserve for his grandmother, Mary, because both warred against the earnest progressive character of

the age and the people. Elizabeth on the other hand led the times, was the people's queen, even more than the queen of the nobles, and she lived to the glory of her kingdom. Hence even the Puritans (for the age ran too fast even for the mighty Elizabeth) idolized her, in spite of her severity to them for their semi-republicanism, for she had overturned the Catholic power in her realm, battled against it everywhere, and never monarch lived more to the greatness of England and the best interest of the people. Elizabeth and the age ran together, but poor Mary Stuart ran against it, and against Scotland and England.

Mary soon felt this lack of fitness and harmony between herself and her surroundings in her native Scotland, and the Scotch people were sternly conscious that she had brought France and the Guises to them, while Knox and his earnest disciples felt that she had brought Rome and the past to plant again in their land. Nor could Mary understand that it was she, and not the nation, who must bend or break by right, as well as might; for Scotland, and not Mary, was the right. But we must not hold our ill-fated heroine accountable for her non-fitness to the surroundings, in her sentiments and character, nor for the evil shapings of her life. She is more to be pitied than blamed, even in her very faults, while in the long dark days of her adversity we see much to love and admire of that which is good and beautiful in woman.

In the month of May, 1562, after Mary Stuart had refused to ratify the treaty of Edinburgh, a meeting between the two queens was proposed, to take place at the end of August, which Mary eagerly accepted; but six weeks before the time fixed, Elizabeth made numerous excuses for declining the meeting. In August, 1563, her uncle, Cardinal Lorraine, proposed the Archduke Charles of Austria for Mary in marriage; and Feb., in 1564, Randolph, Elizabeth's ambassador, urged, in his Queen's name, Mary Stuart to give her hand to Dudley, afterward the famous Earl of Leicester, but the Queen of Scots replied that it was beneath her dignity to marry a mere subject. By the advice of her council she also refused the Duke of Anjou and all her other foreign suitors—the Archduke Charles of Austria, the Prince Condé, and the Dukes of Ferrara, Orleans, and Nemours.

James Beaton was the last Catholic archbishop of Glasgow, who fled from Scotland when his religion fell; but Mary ever considered him in his old character, and he was one of her chief correspondents and advisers throughout her life. Her letters to him were written "To the Archbishop of Glasgow, my Ambassador in France." What could be politically more discordant than for a sovereign of Scotland to have an archbishop of Glasgow that the nation had rejected, an ambassador in France—who was the ambassador of the Queen, but not of Scotland? In her epistle to him, about the time of her rejecting the match with Dudley, she writes to the archbishop of the "return of Melvin, whom I sent to the

queen my sister, with an apology for some letters which I have written to her, and which she considered rather rude; but she took the interpretation which she put upon them in good part, and has since sent to me Randolph, who is here at present, and has brought some very kind and polite letters, written by her own hand, containing fair words and some complaints that the queen [Catherine de Medicis] and her ambassador had assured her that I had published, in mockery, proposals which she had made me to marry Lord Robert."

It is Robert Dudley, afterward the Earl of Leicester, that is here referred to, and it is evident that Elizabeth at this time was not pleased at Mary's rejecting him; and whether she did or not make mockery of the proposal, it is certain that Leicester never forgave her, but became in her captivity one of her greatest enemies. Her letters, which were considered by Elizabeth as rather rude, which Melvin was sent to soften down by apology, were prior to her sending Randolph, who made the proposal of marriage with Dudley, and perhaps had reference to her persistent claims upon the English throne, which Elizabeth always interpreted as tantamount to calling her bastard; if so, we might imagine how much in "good part she took the interpretation which she put upon them."

April 14, 1564, the Countess of Lennox, daughter of Margaret, eldest sister of Henry VIII., solicited the hand of the Queen of Scots for her son, Lord Henry Darnley, who, after Mary Stuart, was next in succession to the throne of England, and an Englishman by birth. He arrived at the court of Scotland February, 1565. Mary was much pleased with her cousin Henry, and, April 18, she decided on marrying him, and announced it to Elizabeth, but the Queen of England sent Sir Nicholas Throgmorton to change her resolution, at the same time arrested the Countess of Lennox, and summoned her husband and son to return to England, upon pain of confiscation. In the next month Murray and the Dukes of Châtelherault (the former regent, James Hamilton) and Argyle, assured of Elizabeth's protection, formed a plot to prevent the marriage (Darnley being a Catholic), and to put Murray at the head of the government. The conspirators made the attempt to seize her July 3, near the church of Beith, on the road between Perth and Callander; but being informed thereof, she passed much earlier than expected, and escaped.

Having received the approbation of the King and Queen of France, Mary married Darnley in the chapel of Holyrood, July 29, and ordered that he be addressed by the title of king during her life. Tamworth was thereupon sent by Elizabeth to remonstrate upon this subject, but he was seized and confined in the Castle of Dunbar. In October, Mary, who had much of the heroine in her, at the head of 18,000 men drove the conspirators from Dumfries, and Murray fled to England and was received at the court of Elizabeth.

Early in her marriage days came the notorious Rizzio episode in her life, and the stern

lords of Scotland, under Ruthven, seized her favorite (pretended paramour) in her presence, and dragging him into her chamber, murdered him, Douglas striking him the first blow with Darnley's dagger, which he took from him for that purpose. Mary two days afterward gained her ascendancy over Darnley, and took refuge with him in the Castle of Dunbar, where she assembled 8,000 men, and the executioners of Rizzio fled to Berwick.

June 19, 1566, she was delivered of James VI., and October she was at the point of death, but recovered and sent an epistle to the council of England touching her rights and those of her son to the English throne, there having been a debate in the English Parliament urging Elizabeth to name her successor, which put that queen into a furious passion, and Mary's reference to the matter did not allay it.

James was baptized December 16, and the Earl of Bedford attended the ceremony on the part of England, but Darnley absented himself from the ceremony, because Elizabeth had forbidden her ambassador to give him the title of king. Murray, Huntly, Argyle, and Bothwell, previous to this, had tried to prevail on Mary to divorce Darnley, from whom she had become estranged, but she would not consent; and then these nobles decided on the death of Darnley, and Balfour wrote an engagement to that effect which he signed, together with Bothwell, Argyle, and Huntly.

January 4, 1567, Darnley being taken ill of the small-pox at Glasgow, the queen joined him, and an apparent reconciliation took place, and she brought him back to Edinburgh and lodged him in a house outside the walls of the city, called Kirk-of-Field, and the conspirators filled the cellars of the house with gunpowder. February 9, Mary left Darnley at eleven o'clock at night, to attend a ball which she had given on the marriage of two of her favorite French servants, and retired a little after twelve o'clock to her chamber at Holyrood; at two in the morning the house of Kirk-of-Field was destroyed by gunpowder, and the body of Darnley was found in the garden with that of his favorite page. Mary, in a letter to her archbishop and ambassador in France, declared her belief that the same fate was designed for her, as she had been lodging with Darnley until that night, and piously expressed her opinion that her going out to the ball was something more than chance—a divine interposition of Providence to save her—and this she stood to in after-years. It is to be hoped that Mary was not so disingenuous as this would seem to make her, for it was Bothwell who was the chief in the murder of Darnley, and she herself was Bothwell's prize. At least afterward she knew all this, and that Murray her brother was also concerned in that tragedy. The circumstance of her leaving her sick husband that night, and retiring to her chamber at Holyrood, while the conspirators were executing their dark deed, is the chief presumptive evidence, taken with relative facts, that has been urged against Mary as touching her implication in her husband's murder; and to the day of his

death, Lennox (Darnley's father) sternly persisted in holding Mary in the account.

The Queen of Scots convoked a Parliament, to bring to trial the supposed murderers, and Lennox formally accused Bothwell, but intimidated by the strength of Bothwell's partisans, Lennox proposed an adjournment of the trial, and did not go to Edinburgh. The lords of Scotland in the murderer's interest heeded not Lennox's request, but in a court of justice, with the Duke of Argyle presiding, declared Bothwell innocent. Thereupon the Scotch nobles, April 19, signed a memorial in behalf of Bothwell, praying the queen to marry him. Two days later Mary went to Stirling to see her son, and on her way back, April 24, she was seized by Bothwell and carried to Dunbar Castle, of which place a short time before she had given him command. After being detained there ten days, Mary returned with Bothwell to Edinburgh, who early in May obtained a divorce from his wife, Jane Gordon, and on the 12th of May he accompanied Mary Stuart to Tollbooth where, in the presence of the lords of the sessions, she pardoned him for the violence which he had recently done her. The following is the

Promise of Marriage given by Mary to Bothwell.

We, Mary, by the grace of God, Queen of Scots, Dowager of France, etc., promise faithfully and sincerely, and without constraint James Hepbron, Earl Bodwill (Bothwell) never to have any other spouse and husband but him, and to take him for such whenever he shall require, in spite of the opposition of relation, friend, or any others; and as God has taken my late husband Henry Stewart, called Darnley, and in consequence I am free, not being under authority of either father or mother; I therefore protest that, he having the same liberty, I shall be ready to perform the ceremony requisite for marriage, which I promise him before God, whom I call to witness, and the subjoined signature by my hand written this * * * [no date.] MARY R.

—["Letters of Mary Stuart," edited by Agnes Strickland.]

On the 14th of May the queen ratified in writing the act of the Scotch nobles in favor of her marriage with Bothwell, and on the next day she was married to him at Holyrood House. Du Croc, the French ambassador, loudly protested against this infamous marriage, and in his dispatch told his sovereign that "if it had not been for the express commands your majesty laid on me, I had departed hence eight days before the marriage took place. If I have spoken in a very high tone, it is that all this realm must be aware, that I will neither mix myself up with these nuptials, nor will recognize him as the husband of the queen."

Over and above the infamy connected with this marriage to the man publicly branded as the murderer of her husband, where now is the strength of Mary's claims upon the throne of her cousin Elizabeth. Is the divorce of Bothwell and her marriage to the branded and actual murderer of her husband more God-

blessed and legal than the divorced Henry's marriage with the fair and virtuous Anne Boleyn, the mother of Elizabeth? Poor Mary Queen of Scots never was consistent except in her religion and in the unabated pretensions of her royal claims and prerogatives to the very last, which well became the proud daughter of the Guises.

The Lords of the Privy Council issued a proclamation against Bothwell, who met his adversaries, but being forsaken by his friends betook himself to flight. Mary also forsook him to his fate, and surrendered herself, whereupon she was led through the streets of Edinburgh, with the populace carrying banners before her, painted with the murder of her husband, Darnley. Bothwell escaped to the northern seas, became a pirate, was taken by two Danish cruisers, and held prisoner for life, while Mary was taken prisoner to the Castle of Lochleven, and forced to resign the throne in favor of her son. Here she was delivered of a daughter, who was carried to France, and afterward became a nun at Notre Dame de Soissons.

In March, George Douglas made an ineffectual attempt to deliver Mary from the Castle of Lochleven; but in the following May she succeeded, through the aid of young William Douglas, a youth of sixteen, in making her escape, and was conducted by Beaton and George Douglas, who had concealed themselves near the castle, to the residence of Lord Seaton. Thence to Hamilton Castle she directly proceeded, where she revoked her abdication, and the royalists flocked around her. May 12, she fought a fatal battle at Langside. On the 16th she crossed the Solway Firth in a fishing-boat, and landed at Workington, on the coast of Cumberland, and the next day she wrote to her cousin Elizabeth, asking protection and succor. On the 18th, Captain Lowther, lieutenant of the frontiers, conducted her, with all the honors due to her rank, to Carlisle. The Queen sent her trusty kinsman, Sir Francis Knollis, vice chamberlain, and Lord Scrope, commander of the frontiers, with letters of condolence, and Lady Scrope, sister of the Duke of Norfolk, was appointed to attend the royal fugitive. But the loving welcome which she received from the people of Carlisle and the chivalric aristocracy of the borders filled Elizabeth and her ministers with apprehension, and Mary was removed to Bolton Castle, the seat of Lord Scrope. In August she submitted to have her cause tried before the Commissioners appointed, who were, on the part of Elizabeth, the Duke of Norfolk, the Earl of Sussex, and Sir Ralph Sadler; on Mary's side, the Bishop of Ross, the Lords of Livingston, Boyd, and Kerries; and of the Confederate Lords of Scotland, Murray, Morton, Lindsay, Maitland, and the Bishop of Orkney. Norfolk was the president; but he fell deeply in love with Mary, and proposed to marry her. This only tended to complicate her cause, and ultimately brought her ill-fated lover to the block. The project was revealed to Elizabeth, who caused Mary to be immediately transferred

from the keeping of Lord Scrope, his wife being Norfolk's sister, to the fortress of Tutbury, under the jailership of the Earl and Countess of Shrewsbury. On the return of Norfolk from the Scotch Conference, he received from his Queen a very ungracious reception, but the lover of the fascinating Mary Stuart by his answers lulled the suspicions of his cousin Elizabeth.

The Queen of England was on terms approaching open hostility with Spain. She had opened her arms as protectress of the fugitives of the Reformation whom the cruelties of the terrible Alva in the Low Countries had compelled to abandon their homes. It was a perilous year for Protestantism, and Elizabeth was in great fear of a Catholic coalition throughout Europe in behalf of Mary. Ireland was in revolt, the northern counties of England progressing to the same, and the Protestant cause had received great blows in the retreat of the Prince of Orange, and the victory of the Duke of Anjou at Jarnac. Thus all conspired to give the weight of a great religious issue pending on the fate of Mary Stuart. On the one side it was the Queen of Scots and Catholic Europe; on the other, Elizabeth and England, with Scotland and the Confederate Scotch Lords. Elizabeth was universally condemned for treating her kinswoman as prisoner, who had sought her realm for protection; but there is much that should be remembered therewith. She had come, without permission, suddenly to the England whose throne she persistently claimed, to the outrage of Elizabeth, her ministers, and the mass of the realm. She was an escaped prisoner of Scotland, and Scotland had made Elizabeth arbitrator of the cause of England and Scotland, and she had fallen on times when two nations weighed more in the balance than one sovereign. We can not, in a republican age, say that a nation has no right to bring its Charles or its Mary to an account; nor must it be forgotten that Knox and the Confederate Lords of Scotland were the stern prosecutors of Mary, and that with this consent of Scotland, the ministers of the realm, and Protestant England in general, deemed that the nation had a right to sit in judgment upon the ill-fated princess who laid such claims upon it as the rightful heiress of Henry VII. But after all that can be said on either side, it must resolve itself into a question of right—not right. It was now on the side of Protestantism, Scotland and England, and against a Catholic princess and the Popish Church. That is the simple form of the question as it stood in those days; and yet, as far as the unfortunate woman is concerned, all our sympathies run with Mary Stuart.

The most beautiful and perhaps the purest part of Mary's life as a woman is its romantic passage of love with Norfolk. Her love letters to him are very tender and genial, and the tragic end of their love is as romantic as it should be, for "true love never does run smooth." The correspondence between the lovers had been broken off by an interdict from

Elizabeth; and Norfolk records "that when the court was at Guildford, he came unawares into the Queen's privy chamber, and found her majesty sitting on the threshold of the door, listening with one ear to a little child, who was singing and playing on a lute, and with the other to Leicester, who was kneeling by her side." He drew back, but she bade him come in. In the course of his visit, he says, "she commanded me to sit down, most unworthy, at her highness' board, where at the end of dinner her majesty gave me a nip, saying that she would wish me to take good heed to my pillow," referring at once to his love match with Mary, and the block if he persisted.

About this time came Leicester's farce of sickness, when he sent for Elizabeth, and with sighs and tears confessed how deeply he had wronged her, in being privy of a design to marry her great foe, Mary of Scots, to Norfolk; and under pretense of easing his conscience, he put her into the possession of the whole circumstances of the plot, which was to restore Mary to her kingdom as the wife of Norfolk. Thus early was Elizabeth played upon systematically by her ministers, to the destruction of her cousin and the ruin of her own bright name. Elizabeth was much offended with Norfolk, but he was her cousin by her mother's side, of sacred blood to the daughter of Anne Boleyn, and she gave her cousin advice to renounce Mary, which he promised to do; but at this juncture Spain, through its ambassador, sought to effect the liberation of Mary, and "Bess" sharply replied "that she would advise the Queen of Scots to bear her condition with less impatience, or she might chance to find some of those on whom she relied shorter by the head!"

Norfolk was arrested, being involved with Mary of Scots, which precipitated the rising in the North, under the Earls of Northumberland and Westmoreland, in which many of the most ancient noble families of England suffered by execution and banishment, besides those who perished in battle against the victorious Sussex, and of the rebels of the lower classes who were executed. Thus did the detention of Mary bring civil war into the land.

Norfolk was forgiven, but he in the sequel resumed his interdicted correspondence with Mary, and the luckless lovers became involved in the Ridolfi plot, to liberate Mary and restore her and marry her to Norfolk. They called to their aid the Duke of Alva, who promised to assist them with ten thousand men in the spring. This amounted to a war upon England at home and abroad, though the Duke protested against evil designs upon the person of his Queen. Norfolk was again arrested, and the letters of Mary to the Duke of Alva deciphered. In January, 1572, the first peer of England, and the only man in the realm at the time bearing rank of duke, was condemned, and executed on the 2d of June. Four times Elizabeth revoked the warrant against her cousin Norfolk; but now Elizabeth's own maternal blood had been shed in the cause of Mary Stuart. The same Parliament which

urged the execution of Norfolk, seeing the reluctance of the English Queen in consenting to the death of the Duke, passed a bill for inflicting the punishment of death on Mary for her share in the plot, and another bill making it a capital offense for any one to assert the right of Mary to the succession of the English throne; but Elizabeth refused her assent. We must now skip a period of fifteen or sixteen years, during which had come the long imprisonment of our heroine, with all its "hope deferred."

At this crisis, when the ascendancy of the house of Guise, in France, and the culminating hostility of Spain, made Mary more than ever an object of alarm to the ministers of England, came along the famous Babington conspiracy to assassinate Elizabeth and set Catholic Mary on her throne. The Queen of Scots renewed with Babington a correspondence which she had commenced at the recommendation of her friend, her Archbishop of Glasgow; and "it was proposed that there should be an invasion of England by Spanish troops, while a simultaneous insurrection of the Catholics was to open the gates of Mary's prison, and prepare the way to the throne to which she had so long aspired. To redeem her liberty, however, she suggested in reply that her rescue should be attempted, either by setting fire to the stables or surprising her when riding in the fields; to this was also added a passage, which she afterward disclaimed, promising ample recompense to the seven conspirators engaged in the assassination of Elizabeth." "At length a messenger, who was charged with the important news, arrived at Chartley, just as Mary was mounting her horse for exercise; and no sooner had she left the house than her secretaries were arrested, her cabinets broken open, and all her letters and papers conveyed to Elizabeth. On her return, perceiving that not only her papers but even her money had been removed, she exclaimed with indignation, 'They can not take from me my English blood nor my Catholic religion.'"—[Life of Mary, by Miss Benger.] This "English blood" of hers, united with her "Catholic religion," had been beheading her from the time she gave the kingdom of Scotland and England to the King of France and his successors, and especially from the time of Elizabeth's ascension, when she assumed the title of Queen of England.

The English ministers transmitted copies of her intercepted letters, accompanied by the depositions of the conspirators, to the court of France, where, though the misfortunes of Mary were commiserated, her imprudent connection with plots and fruitless conspiracies, since her arrival in England, and especially her implication in this Babington plot, were greatly censured by the enemies of the Guises and ridiculed by the queen-mother, Catharine de Medicis. In Scotland the news excited strong emotion, and the French minister at the Scotch court, alarmed for the fate of Mary, attempted to arouse James to take vigorous measures to save his mother. The young King of Scotland had just concluded a treaty

with Elizabeth, and he replied to the urgings of the French minister on behalf of Mary, "that as she had brewed she must drink," and he at once, with much warmth, dispatched a messenger to London to testify his abhorrence of the wicked conspiracy. He did not, however, think her life was in danger, and for anything else, he said, "he cared not how strictly she was kept a prisoner," adding that she had not only sought to dethrone him, but that she had also menaced him with disinheritance.

Elizabeth's commissioners, Lord Treasurer Burleigh, and forty peers and privy councillors, came to examine the Queen of Scots, who had been removed to Fotheringay, where, on the 12th of October, the commissioners presented to her the mandate for her trial. She protested against Elizabeth's prerogative to arraign, as a criminal, a princess who was, like herself, an absolute sovereign.

But the Queen of Scots was soon induced to accept her trial before the commissioners. To the letters which were produced, which she had written to the Spanish ambassador, Mendoza, respecting the invasion of England, she answered: "This is nothing to the matter, neither does it prove that I consented to hurt or kill the queen." Among other things, Burleigh charged, "that she had projected to send her son into Spain and to assign to the Spanish king the rights she claimed to the English succession." She answered "that she had no realm that she could give away, but yet it was lawful to give away her own things at pleasure." This to the last was Mary's fatal error. Because in her veins ran the blood of Henry VII.—no better in our sight than the blood of the honest gentleman—she possessed in herself the right to give away a kingdom to whom it pleased her.

On being shown the contents of her letter to Lord Paget and the Spanish ambassador, Mendoza, she said: "These things touch not the queen; and if strangers seek to deliver me, it is not to be imputed to me as crime."

On trial, next day, she still protested against the right of the commissioners to sit as a tribunal over her; and, says Udal, "with the usual tenacity of royalty, lamented that she should be so basely used as to have her honor called in question before pettifoggers and lawyers, who drew every circumstance into consequence by their quiddities and tricks, since anointed and consecrated princes were not subject to the same laws as private men." During her trial she "religiously affirmed that, though she wished well to the Catholic cause, she would not have it prosper by the blood of vengeance—that she would rather play the part of Esther than Judith." The Queen of Scots deserves our unreserved trust in this. She did wish well to the Catholic cause; she did desire the liberty which had been so treacherously taken from her; she was high-spirited enough, even when a captive, to battle with Elizabeth for her rights; but she was too much of a woman to desire the blood of vengeance, and infinitely more disposed, in her

heart and character, to play the part of Esther than Judith.

But the ministers of England, especially her great enemies, Burleigh, Leicester, and Walsingham, had at length entrapped our heroine into the meshes of their cruel state craft. For nineteen years they had plotted to bring about the tragic issue now before them. Elizabeth had alone preserved her cousin. Indeed, in her most wrathful moments, and in her answers to France, she laid great stress ever upon the fact that she had thus preserved her, and invariably charged her with ingratitude; and this was more the genuine view of the Queen of England than a wanton pretense. Sixteen years before, when it condemned Norfolk, Parliament had fain given his royal lady to the next stroke of the headsman's ax. But in spite of all her bitterness and stern treatment toward Mary, Elizabeth hesitated more to take the life of her rival than she would to have taken the heads of a host of popes or Philips of Spain could she have laid her hands upon them.

At the end of her trial, when pressed again with having instigated the design of an invasion of England, the Queen of Scots denied the fact, but added, with a menacing tone, "that since she was now convinced she had no hope from England, she was resolved not to reject foreign aid," and again demanded to be heard in a full Parliament or before the queen and council. "At length she arose, and withdrew with a cheerful countenance and a majesty that seemed to challenge respect." The court immediately adjourned to the Star Chamber and pronounced sentence against her, and an act of attainder followed, but it was declared that this should not be to the prejudice of her son, the King of Scotland.

Elizabeth delayed between three and four months after the trial before she signed the warrant for the execution, and Mary improved in health and her cheerfulness of spirits, relying perhaps still on her cousin's relenting heart and kindred blood to save her against the merciless policy of the ministers of the realm.

How much Elizabeth was tortured on one side by her own heart and conscience pleading for Mary, and played upon by her influential counselors on the other, who were ever biding their time to accomplish their end, can be seen in Leicester's letter to Walsingham, upon the receipt of Mary's last letter to her cousin: "There is a letter from the Scottish queen that hath wrought tears, but trust shall do no further harm herein; albeit the delay is too dangerous." Upon this Agnes Strickland observes:

"Who can read this remark without perceiving the fact that in this instance, as well as in the tragedy of her maternal kinsman the Duke of Norfolk, Elizabeth's relings were overruled, and her female heart steeled against the natural impulses of mercy, by the ruthless men who influenced her resolves."

On the 7th of February, 1586, in the afternoon, just as Mary had withdrawn to her inner apartment, she was informed that the Earls of

Kent and Shrewsbury were waiting to see her. At this she cast the regal mantle over her shoulders and hastened to receive them. On being informed that she was to die on the morrow, at ten in the morning, she replied, "The message is welcome; yet I did not think that the queen, my sister, would have consented to my death." Kent offered her the assistance of the Dean of Peterborough, but she declined his priestly services, whereupon the earl bluntly confessed, "Your life is the death of our religion, as your death shall be its life." Here is a volume in this, strongly illustrating that Mary was more a martyr in the cause of her religion, than a victim of any crime of hers. And whatever might have been the errors of her youth, her last hours brought her out in the beautiful character and spirit of a martyred saint. She undoubtedly felt very much the holy enthusiasm of dying in a religious cause. She spent a portion of her last night in devotions, after writing with her own hand her last testament and will. She then retired to rest, and after a sound sleep arose refreshed, and called for her attendants to attire her for the last dread ceremony of her unhappy life. To the lamenting Melvin, her steward, she said that he ought to rejoice, and not to mourn that her release was nigh. "Bear from me," she charged him, "this message to Scotland: that I die a true woman to my religion, and like a true woman of Scotland and France. But God forgive them that have thirsted for my blood as the hart doth for the water brooks. O God! thou art truth; thou knowest the inner chamber of my thoughts, and that I was ever willing that Scotland and England should be united together. Commend me to my son, and tell him I have done nothing prejudicial to the state or kingdom of Scotland."—[Udal.] She also charged Melvin to tell the King of Scotland "that she begged him to honor the Queen of England as his mother, and never to forfeit her friendship." This dying charge to her son is very much like a last testimonial of trust in Elizabeth, and coupled with her statement, "Yet I did not think that the queen, my sister, would have consented to my death," it would seem that Mary acquitted her cousin, and laid the cause of her death at the doors of her great enemies around the throne. Elizabeth ever protested, both before and after the execution, that she did not design her "sister's" death, and seeing that Mary herself to the last believed it, perhaps her protestation was genuine. Why did Leicester urge to Walsingham, Mary's relentless foe, that "delay is too dangerous?" Why was Leicester, because of his great influence with the queen, sent for while in Holland by his competers, to bring their plot of years to its tragic issue? It was because they too believed that, in and of herself, Elizabeth did not design the death of Mary; that it could only be wrought out by all their united influence, and by the subtlest management and the most unscrupulous means. They worked Elizabeth up at last to a perfect frenzy of fear of assassination; they caused rumors to be spread through-

out England that the Spanish fleet had already arrived at Milford Haven; that the Scots had broken into England; that the Duke of Guise was landed in Sussex with a strong army; that the northern parts were up in rebellion, and that a new conspiracy was on foot to kill her and set the city of London on fire. This was after Mary's trial, and while Elizabeth was hesitating to sign the warrant.

That Mary was executed without Elizabeth's knowledge is most certain. She had signed the warrant, but contrary to her commands her ministers undertook to deliver it, agreeing even, according to Davison's own testimony, to act upon their own responsibility, each bearing his own share. Davison was sent to the Tower and fined ten thousand pounds, a much larger sum than now, and even Burleigh dared not come into the presence of his queen. In a letter to the King of Scotland touching his mother's execution, in the second paragraph she wrote:

"I beseech you, that as God and many men know how innocent I am in this case, so you will believe me, that if I had bid aught I would have abided by it. I am not so base-minded that the fear of any living creature or prince should make me afraid to do that were just, or when done to deny the same. I am not of so base a lineage nor carry so vile a mind. I will never dissemble my actions, but cause them to show even as I meant them. Thus assuring yourself of me, that as I know this was deserved, yet if I had meant it, I would never lay it on other's shoulders; no more will I damnify myself that thought it not."

This letter has been considered deep dissimulation. But was Elizabeth afraid of "any living creature or prince?" Did she not stand against nations when they came in her way, provoke them to wrath, defy the Pope, overthrow the old church, as in a day, and did she not two years later, with her martial enthusiasm, at the head of her armies, illustrate the most glorious chapter of heroism in a nation's history. The maiden queen and the invincible arms of Spain about to meet in a very epic warfare to fight for the issue of a world! Her soul, breathed upon her army, made her heroes giants, and her men heroes! Did she not justify her letter, and show herself not afraid of any living creature. She boldly avowed to James that his mother's sentence was "deserved." It is the execution, which she never intended, that she lays upon the shoulders of her ministers, and when it is remembered that four times was the warrant of Norfolk revoked by her, it may be that we ought not to give more weight to the mere signing of it than she did herself. The French ambassador reported to his master her statement to France "that Davison had taken her by surprise, but that he was now where he would have to answer for it, * * * for the queen says that when she signed it she told him not to deliver it without first speaking to her." In justifying himself to his king concerning a charge made to the effect that he had been the soul of a conspiracy of Mary against

Elizabeth, he humbly beseeched his master to believe that it "is pure calumny, invented by those who have had the audacity to put the Queen of Scotland to death, without the consent of the queen their mistress, as time will show." This ambassador was a notorious friend of the Guises, Mary's family.

A weighty circumstance in favor of Elizabeth, and against her ministers, is the fact that when Henry Talbot arrived on the morning of the 9th of February, a day after the execution, not one of her council would venture to declare it to her, and it was actually concealed from her the whole of that day. The tidings were broken to her by the ringing of bells, and the jubilee of the city over the dark event. Camden tells us that when the matter was revealed to her "she heard it with indignation, her countenance altered, her speech faltered and failed her; and through excessive sorrow she stood in a manner that astonished, insomuch that she gave herself over to passionate grief, and putting herself into mourning habit and shedding abundance of tears. Her council she rebuked sharply, and commanded out of her sight."

All this might be hypocrisy, or suddenly awakened remorse when brought face to face with her deed. But the letters of lamentation of her ministers one to the other show that even they took the wrath of the lioness as no play. Might it not be that Elizabeth was as much betrayed—as much a victim as poor Mary Stuart? The great are more easily *managed* than lesser characters, and led into their fatal acts. They are stronger in their passions, stronger in their temptations, stronger in the warfare of the mighty elements of good and evil, twin-born in mighty souls.

Let us not forget Essex here—not now the captive princess whom she hated, but the young hero whom she loved! Nor is it too much to believe that these executions of Mary and Essex shortened her own life ten years. The truth is that Elizabeth was fearfully *managed* by her ministers, through her strong passions and character, and Norfolk, Mary Stuart, and Essex were the victims, but herself the greatest victim of them all.

THE DEW-DROP.

THERE lies a pearly drop of dew
Within a flower's tiny cup.
And glistening while it greets the view,
The sun comes down to drink it up.

From yonder cool and crystal spring,
That gleams so brightly from the rock
Which wooes the wild bird on the wing,
And proves the haunt of all the flock,

From thence it rose, perhaps in mist,
And slowly drifting to the skies,
The sad and somber clouds it kissed,
Then fell to earth, and here it lies.

The blue flower of the flax took up
The little drop, and now it shines,
Refreshed with this one little sup
Of nature's pure, renewing wines.

MARY S. L.

TO A SUNBEAM.

BY AURELIA.

[THE following is the first attempt of an estimable young lady, and is the *promise* of something which may place her name high among the famous. We make the prediction, and leave it to time to prove or disprove it.]

Sunbeam small,
On the wall,
May I catch you if you fall?
I will go
On tip-toe;
Do not fear me so.
Are you made of golden light?
Tell me where to find your sight.
Have you eyes
In the skies
Where you always rise?

See it glide,
Far and wide,
Darting now from side to side!
Here and there,
Everywhere,
Glancing through the air.
Now 'tis short, now 'tis long,
Like the meter of my song,
In and out,
Round about,
Without care or doubt.

Sunbeam gay,
Come this way;
Gently with you I will play.
When you dart,
I will start,
Now let us be smart.
Then the weary sunbeam said,
"I shall light upon your head,
In your hair,
Flaxen fair,
Will I rest me there."

Gentle sleep,
Calm and deep,
Holy vigils round it keep.
Let it rest,
Sweetly blest,
And may none molest.
Does the sunbeam ever dream
Of the bright and sparkling stream
Where it played,
As it strayed,
Kissing unafraid?

ALFRED L. SEWELL.

THIS gentleman possesses a marked predominance of the mental temperament. All there is of him is of good quality. He is in earnest; he is intense. Those organs which prompt a man to achievement, to the taking of responsibilities, and incline him to highly appreciate position, reputation, usefulness, and success, are largely developed. He has a clear, acute, and vigorous constructive intellect, complemented by superior ability to devise, plan, and project; he has that subtlety of mind which looks into subjects and penetrates to their origin. Vagueness and equivocation are far from likely to deceive or mislead him; his keen perception of incongruity and inconsistency, and his intuitive recognition

PORTRAIT OF ALFRED L. SEWELL.

of falsity, would render fruitless any attempt to seriously impose upon him. He has excellent business talent, shrewdness to avoid embarrassment, economy in expenditure, and decision in meeting obligations. The organs of the crown and top-head indicate a reformatory and progressive spirit—a desire to benefit others by philanthropic efforts.

He is strongly social; quick to form an acquaintance and slow to relinquish a friendship. He loves children, finds much enjoyment in their society, and is well calculated to interest and guide them as a parent or teacher. He would be earnest in the prosecution of any enterprise in which he became really interested. He is ambitious, considers prosperity and success the necessary resultants of energy and industry, and believes in "winning his way." With good educational advantages he would take a leading position in literary life, because his substantial common sense and clear intellect, combined with his spirit and warmth, would secure a hold upon the minds and hearts of others. His physical structure is hardly sufficient to sustain his active and versatile mind, and ere he has overstepped the limit of endurance, he should study the laws of life and health—the relations existing between body and mind—and seek to make himself robust in health, ample in vitality, and thus secure that soundness of physical organization which will be a hostage for long life and a guaranty of success in whatever he attempts.

BIOGRAPHY.

ALFRED L. SEWELL, editor of the *Little Corporal*, Chicago, is a native of Ohio. He was for twelve years actively engaged in business

pursuits in Chicago, being the managing partner of a large printing establishment in that city, to which he still devotes a portion of his time. Mr. Sewell's wide reputation, however, has not been gained by the mere fact of making dollars and cents; but it has been by a widespread benevolence, a determination to contribute *his* share toward the relief of the thousands of poor orphans and sick soldiers left in the trail of our late war upon the care of a grateful country. This he has done, indirectly, through "Old Abe," the veteran Eagle, by whose influence he gained around him quite an army of the children of the United States, called the "Children's Army of the American Eagle," who helped him in his good work. With such an army at his command, he accomplished an amount of good that seems incredible. He gained the affection of all his army. He could not bear the thought of parting with them when their work was ended, and so he started a monthly periodical entitled the *Little Corporal*, as a means of still working with the children whom he loved, for their moral benefit. Nothing can better illustrate our sketch of Mr. Sewell than the story of how the *Little Corporal* was begun, through the influence of this "Children's Army of the American Eagle."

In March, 1865, while the great Sanitary Fair, for the benefit of the sick soldiers' fund, was being held in Chicago, Mr. Sewell was asked to help—to find out his own way, and to work as he liked. "Old Abe," the veteran Eagle, whose likeness we presented to our readers in a recent number of the *PHRENOLOGICAL JOURNAL*, had just returned from the war, and was being "lionized" wherever he went. The thought struck Mr. Sewell that "Old Abe" might be of immense advantage to the Fair, in a pecuniary point of view, by the sale of his picture, together with his full history. The facts connected with his life were gathered and published by Mr. Sewell in June, 1865.

The inception of the idea was soon followed by the successful organization of the "Army of the American Eagle," and commissions in the "Army" were offered to all who should sell a quantity of album pictures of "Old Abe."

The child who sent one dollar received a commission as Corporal; two dollars, a commission as Sergeant; four dollars, as Second Lieutenant; six dollars, as First Lieutenant; ten dollars, as Captain; thirty dollars, as Major; fifty dollars, as Lieut.-Colonel; one hundred dollars, as Colonel; two hundred dollars, as Brig.-General; four hundred dollars, as Major-General. Medals were also given to the most successful workers.

With a little energetic advertising, Mr. Sewell's receipts from this source amounted to two hundred dollars a day. Finding the enterprise so successful, he applied to the executive committee of the Fair to give legal sanction to his labors, as up to this time he had been working on his own account, and had paid over the proceeds as he received them. Soon the receipts amounted to over five hundred dollars a day, and at the close of the Fair the net profits

which were all paid over to the treasurer of the Fair, were *sixteen thousand three hundred and eight dollars and ninety-three cents*; which was more than was paid by any other department, and was nearly one tenth of the entire profits of the Fair, all achieved through the boys and girls of America.

When the great Fair was closed, Mr. Sewell had an army numbering nearly fifteen thousand of boys and girls. To part with them for ever was far from his wish, and he thought that through the medium of the *Little Corporal* he might still correspond with his children. So the new paper was started, and at the end of the first year its subscription list was thirty-five thousand, and has now nearly doubled that amount; a success seldom won in so short a time—a success which has been won purely from an inherent love for children, and by a desire to improve their minds, and to minister to their pleasures and joys.

Our Social Relations.

Oh, happy they—the happiest of their kind—
When gentle stars unite, and in one fate
Their hearts, their fortunes, and their beings blend.—*Thomson.*

MARRIED, OR SINGLE?

BY CRAYON BLANC.

HONESTLY, girls, who among you has the moral courage to be an old maid?

There are different grades and degrees of valor in this world. Arria plunged a dagger in her heart, but then she was "Mrs. Pætus," as all the world knows. Joan of Arc was a brave girl, but she was years on this side of old-maidhood. If Helen Macgregor hadn't been married to Robt. Roy she never would have been a heroine; and where would Gertrude Von Der Wart have been if she hadn't been possessed of a husband, and that husband hadn't got into trouble with the police authorities of his native country?

In the first place, there is nobody magnanimous enough to believe an old maid ever had a chance to be anything else, and it is rather hard to be set apart from one's kind as a being destined never to love or be loved! There—we know perfectly well what you are going to say—you needn't take the trouble to put it into words. Of course your big brothers will "love you" at the rate of so many new shirts, and so much glove-mending per annum; and your married sisters will be devoted to you as long as you wash their babies' faces and darn their husband's socks, and get them new receipts for waffles and sponge-cake; but what does that sort of thing amount to? Would not it be cheaper to be the slave of one man than the humble dependent of a swarm of greedy relatives? At all events, a body can't help wanting to "see the folly of it."

Perhaps that is one way of accounting for the matrimonial mania that seems to have taken possession of the world in general—for the number of "round husbands" married to "square wives," and *vice versa*—and for the

fatally significant number of wedding rings that have lately been thrown into the market! *Perhaps*, we say, and perhaps there are other solutions of the enigma.

Suppose, now, some good fairy would be obliging enough to give us a real insight into the hearts and motives of our fellow-creatures, what would the result be? What would be the real reason that too many women marry?

Number One has married for a home. She got tired of working in a factory, or teaching school, or making dresses, and she thought married life was nothing on earth but moonlight walks, buggy-rides, new bonnets, and nothing to do! Well, she has got her home; whether or no she is tired of the accompanying incumbrances this deponent saith not, inasmuch as this deponent doth not positively know.

Number Two married because she had seven younger sisters, and a papa with a narrow income. She "consulted the interests of her family." Perhaps she would better have consulted her own interest by taking in light washing, or going out by the day to clean.

Number Three married because *Mrs.* sounded so much better than *Miss*. She was twenty-nine years and eleven months old, and another month would have transmuted her into a regular old maid. Think how awful that would have been!

Number Four married because she wanted somebody to pay her bills. Her husband married for precisely the same reason, so they are both of them repenting at leisure.

Number Five married because Fanny White had a nice new husband, and *she* wasn't going to be left behind! Pity if she couldn't get married as well as other folks!

Number Six married because she was poor, and wanted riches. Poor child! she never counted on all the other things that were inseparable from those coveted riches!

Number Seven married because she thought she should like to travel! But *Mr.* Number Seven changed his mind afterward, and all the traveling she has done has been between the well and the back-kitchen door!

Number Eight married out of spite, because her first love had taken unto himself a second love! This little piece of retaliation might have done her good at the time, but in the long run, Number Eight found it did not pay.

Number Nine married because she had read novels and "wanted sympathy." Sympathy is a fine thing, but it cools down at a rapid rate if the domestic kettle is not kept boiling, and the domestic turkey is underdone. Novels and housekeeping don't run well together in harness, to use a sporting phrase, and Number Nine's supply of sympathy didn't hold out very long!

Number Ten married because she loved her husband with all her heart and with all her soul! And she loves him still, and will probably always continue to love him, and is the happiest wife in the world—so she says!

One in ten! That is not a large proportion. One in ten married from the only right motive

—one only in ten, really, sincerely happy! Nine out of ten politely miserable—smilingly wretched! Blessed are the old maids who don't expect happiness and husbands, for they shall not be disappointed! And anything but blessed are the wives who have married to escape their fair share of life's hardship, or from baser motives still! Let them sit up late, waiting for husbands until the "wee sma' hours" chime—let them sew on buttons without stint, and strings without "thank-ye's." Let them be grumbled at perpetually, and let their weekly housekeeping money be but a niggardly dole! If any one says it does not serve them right, let his case be settled at once by a committee of old maids! Supposing him to be a single man, the committee will soon take him to church and correct that little mistake in his existence—and supposing him to be a married man, it is his wife's business to rescue him from the judging and avenging cabal!

But more than blessed are the wives who love and reverence their husbands, and the husbands who cherish their wives as God meant they should be cherished, truly, tenderly and unselfishly! There are some women whose sweet natures were never meant to waste away in single blessedness—women pure as pearls, sweet as roses. Young men, select such for your wives. And there are men made in the image of their Maker—noble loving, and good. Girls, if you can win such husbands, you will be the fortunate ones in the doubtful Tens! It is an uncertain business, but there is nothing like *trying*, young people!

HOW TO ENTERTAIN OUR FRIENDS.

AMONG the many conventionalisms that now-a-days clog the wheels of that ponderous vehicle, society, and cause them to go creaking over the hard thoroughfares of life like unoiled market carts, are the rules of etiquette regulating fashionable calling and visiting. Friends who really esteem each other, and would be only too happy to spend an evening together once a week, for mutual pleasure and social converse, are found marking time and remembering with care who made the last call, while they count the days till it shall be conventional to call again. Whose fault is this? Do you want your neighbor to wait till you have returned her last call ere she comes again? Do you care whether she comes in her every-day dress (all ladies should be neat, and trim at home as well as abroad), and brings her work, and sits with you sociably an hour or two? or do you exact that she shall come in her newest styles, with her best bonnet, parasol, fan, and gloves? If you do not exact this formality from her, why persist in imposing it on her? Why not live out practically what you profess to admire? Her heart is, perhaps, as true as yours. Do not go "dressed up" next time, to wait in a dim parlor, with closed blinds, while she goes through the same process of "dressing up" before she can venture into your presence.

She perhaps will be compelled to leave some occupation which she is hurried about, to undergo all this inconvenience because she desires to see you, and consequently will not ask you to excuse her.

How silly, how cumbersome are all these ceremonies! and yet, every day of my life, I hear of ladies who have been acquaintances for years going through with them all, when a little good sense and conscientious carrying out of the rule each professes to strive to follow, "doing unto others as they would have others do unto them," would dispose of the whole difficulty.

The caller would come in her daily attire, and her friend receive her in the same way, each continuing, as far as possible, the regular order of her work; or, if not busy, each accepting the other with the freedom of true friendship.

In cities and thickly populated neighborhoods this calling becomes a real oppression, and many people, unable to keep up with its requirements, are dropped out of society, and are scarcely known as living, breathing members of the great body. To those who can not relinquish the pleasure of the social circle, who find no friends whom they are willing to lose, and whose mode of life increases the number daily, it often becomes a very serious affair, and consumes so much time as to leave them little for anything else. "I have so much company!" is the exclamation of nearly every agreeable and well-to-do wife and housekeeper in the country.

"I was just ready to set about house-cleaning, or washing bed-clothes, or had everything prepared to can my fruit, when who should come but neighbor Smith and his wife and two girls. I was very glad to see them. Mrs. Smith is so agreeable, and Mr. Smith is a perfect encyclopedia. But then coming in at such a time spoiled the whole visit!"

Now, is there not some way to avoid all or a part of this annoyance? Suppose each lady agrees upon a reception-day once a week, or once in two weeks, as she can afford, and upon that day receives her friends, not to feast them with good dinners and exquisite teas, but to chat with them, to pour out upon them the thoughts she has been gathering up, as she walked with steady steps through the intervening days of duty in the housewife's department, and to receive from them their experiences during the same time.

Our social relations should be based on something less animal than eating and drinking. If women could be released from the labors of cooking, table-setting, dressing, and the irksomeness of waiting on a large company, many a social evening could be spent by congenial minds, with both pleasure and profit.

"But," you exclaim, "it is not always convenient to receive friends or to go abroad upon a particular day."

It is not always convenient to have Sunday come, yet who would live without it, even if there were no duty attached to it? It is the

central point of the week, the time for which most well-regulated families square up the household arrangements, put a new polish on the spoons, let in new light, clear out the cupboards, dispose of all mold, dust, and cobwebs. They wake up Sabbath morning with all the wheels well cleaned and oiled, so that they will run smoothly and quietly through the day, and the body, released from its toiling and moilings, gives strength to the upward-soaring pinions of the truly religious spirit of him who seeks God from the innermost of his being as the source of life and strength.

So would it be with these regular periods for social intercourse. They would originate hope and energy, induce order, and throw a kind of halo over the various arrangements of the week, make the heart beat lighter, call the mind away from the mere detail of business, and, more than all, compel us to arrange our thoughts for conversation, for the entertainment of those we expect to meet. The strife in a neighborhood would come to be, not who can get up the most luxurious and expensive suppers, but who can send his guests away feeling happiest and with the most new ideas to reflect upon. Dissimilar minds would be brought together, and, perhaps to the astonishment of all parties, they would find the gulf between them not so wide, and that idle gossip had given poor pictures of each to the other quite unjust to the originals.

In this social communion, by all means let young and old visit together. It is a fact past dispute, that young people do vitalize and keep warm and fresh the life-currents of the old, while the old harmonize and cool down the over-heated emotions and hasty impulses of the young. The manners of all would be improved; the jolly man brought in contact with the sober; the nervous and excitable with the phlegmatic; the man or woman who has the "blues," with their enthusiastic neighbors who see sunbeams and rainbows all the year round, and are quite sure that as the sun always shines, there is no need of being in a hurry to make hay.

But above all other advantages would we place that arising from the association of men and women in common conversation. Visiting and calling are done mainly by the ladies, and men, particularly business men, grow into a positive dislike to doing either. Calling comes at unseasonable hours, and visiting consists of a fashionable middle-of-the-night party, with a supper at eleven. No wonder men hate both when they see in the prospective turmoil at home oppressive bills to be met.

Set apart one day in the week or month—bend all things to it—just a little (for it will take but little bending), and men will come to love it as they do their clubs or lodges. Aye, more, for no men are to be found who do not like the companionship of ladies, particularly if they have wives at home who have maintained in them a true respect and love for the sex. Men would become more refined, gentle, and amiable for this constant communion; women more strong, noble, and earnest to act their

part well in these private theatricals of neighborhood life, and the family reception evening, or the "reunion," would soon become to them one of the brightest days in the calendar.

Don't be afraid your neighbors will call you "proud," because, like the President of the United States, or the school board, or the bank directors, you have your special days and hours for disposing of this one of the most important duties of life. Is not the whole detail of home duty as sacred to you and yours as the work of the President? Aye, it is more so—more full of deep and thrilling interest. In the proper consideration and fulfillment of every part is the all of life to you, and every interference is attended with loss.

Men never infringe upon each other's business hours, at least far more seldom than women do. Why should not women bring their duties and pleasures into the same orderly and harmonious arrangement? Who will try it?

F. D. G.

WHINING WOMEN.

If there be anything in the wide world that will wear on the patience of a man and render him indifferent to his domestic fireside and the society of the wife he has promised to cherish, it is a whining woman. To hear day after day—in the morning when he sits down at the breakfast-table, and in the evening when returned from his wearisome day's labor—piteous complaints like these uttered in dolorous accents: "Oh, I have such a headache!" or "my back aches so I can scarcely stand," would require a virtue superior to that found in any being "made a little lower than the angels" to withstand them without flinching from the course of strict rectitude.

The institution of marriage has in view the improvement of the earthly condition of those who respect it. No person, man or woman, ever contemplated marriage without expecting to better himself or herself. A man who in a freak of fancy for a pair of "melting" black eyes or a pretty face, hastily allies himself for life with a sickly wife, is certainly much to blame if he exhibit a coolness of manner toward her. He should have been more discreet in his choice. Rosy cheeks and dancing health are very attractive to the unmarried, and after marriage constitute one of the strongest links that bind a husband's love. When a year or two of that close intimacy only found in wedded life has dispelled all the romance that either party entertained on the threshold, and one realizes that the other is an invalid, how much of bitterness is added to his or her cup of married existence, be other things ever so abundant and luxurious in their palatial abode. It may be laid down as a maxim, that in no earthly condition is health so necessary as in the married relation. Young man, if you would be happy in your home; if you would avoid a companion with a disposition to "whine," and thus render you permanently uncomfortable, see to it that your wife is a healthy

buxom lassie to whom headaches and back-aches are marvels of other folks' pretensions.

Miss Muloch, in speaking of the influence of woman in society, uses the following language:

"Oh! if 'gloomy' women did but know what comfort there is in a cheerful spirit! How the heart leaps to meet a sunshiny face, a merry tongue, an even temper, and a heart which, either naturally, or, what is better, from conscientious principle, has learned to take all things on the bright side, believing that the Giver of life being all-perfect love, the best offering we can make to him is to enjoy to the full what he sends of good, and what he allows of evil—like a child who, when once it believes in its father, believes in all his doings with it, whether it understands them or not."

That husband who has a perpetual "sunshine" in his home in the shape of a cheerful wife should be one of the happiest of men, and if he is not, Providence has been too kind to him.

UXORIUS.

MRS. BLUE.

The *New Yorker* says: Mrs. Blue is an unhappy woman. Life to her is a barren desert, containing nothing but sands of unhappiness. Out of little troubles she forms mountains of evils; and every moment of happiness is considered a forerunner of some great calamity. I have seen her go into hysterics over a bleeding nose, and cry for hours over a cut finger or the sting of a wasp, fearing it would produce the lockjaw. Her friends have ceased to visit her, leaving her to brood over troubles alone and undisturbed. Poor Mrs. Blue! I pity her, but her husband more.

Now there are a great many Mrs. Blues in this land of ours, who go through life a dissatisfied, miserable, and despised crowd. And in their eager grasp after the thistles of life, they never observe or think of the beautiful flowers of happiness that grow beneath the thistles' shade. The sweet smile of innocent childhood and the approving words of old age are unknown to them. They "have set their lives upon a cast," and think they "must stand the hazard of the die." The cast is the suppression of all that is good and noble in their nature, and the die is a life of misery and un-mourned death.

[Large Cautiousness, small Hope, large Combativeness, small Self-Esteem, and large Approbativeness; with strong tea, coffee, or other stimulants, with pickles, little sleep, and with no faith, what else but "blue" can one expect?]

WHEN, from sedentary habits, the muscles become emaciated and the digestive system disordered, the best method for restoring the patient to health and full weight is for him to be charged with electricity, applied through the handle of a spade, a hoe, an ax, or some similar instrument. Apply it daily, and for some hours at a time. Try it.

DISCONTENT.

BY S. E. DONMALL.

[Here is a pretty thing for the encouragement of young folks who have so much to do, and who lack resolution, application, and courage to go through with all the little duties and difficulties incident to a life of usefulness and "self-help." Mothers should read it to their children.—Ed. A. P. J.]

"My back will break!" the table sighed,
"I'm growing weak and old;
And yet what loads of earthenware
I daily have to hold!"

"Just think of me!" cried table-cloth,
"So fine, so white, and fair;
Sure, everything is placed on me
I have the brunt to bear!"

"Oh! no you don't," cried dinner-plate;
"See how I'm loaded down!
I know I shall be cracked some day,
And thrown upon the town!"

"Your lot is not so hard as mine,"
Said meat-dish, with a groan;
"Whole turkeys are imposed on me,
While I can't eat a bone!"

"Look here, at us!" said knife and fork;
"We've reason to complain,
From day to day we're scoured and rubbed
For ev'ry trifling stain!"

"Ah! only think of us poor cups!
We're scalded every meal;
Though fed with milk and sugar sweet,
Think you we can not feel?"

"Come stand with me upon the range,"
The kettle then steamed out;
"See how you'd like the climate here!
Who wonders that I spout!"

"Ah me! I've only three legs left,"
The arm-chair trembling spake;
"What splendid wood for kindling fire!
The cook declares I'll make."

"And oh! it is a prospect dire
To look ahead, and know
That in a range with fiercest fire
Some day perchance I'll go!"

"Here comes Miss Jane; ah! would that we,
Like her, were free from care;
Or would that we were anything
But what we really are!"

"But, goodness me! what means the child?
She's crying, sure as fate!

'I wish I'd ne'er been born,' she says,
'Or been a dinner-plate!

"I have to read, and write, and sew,
And work the live-long day;
I never have a moment's time,
Like other girls, to play.

"And there's mamma, my dear mamma,
As sick as she can be;

Oh! dear, oh! dear, if she should die,
What would become of me?"

"'Tis half-past twelve!" the clock rings out;
"Take my advice, good friend—
Yea, one and all, your murmurs cease,
The thing you can not mend;

"Far more than half our troubles here
Are borrowed, that is plain;
In vain regrets waste not an hour—
Time lost ne'er comes again.

"Whate'er your lot, then, be resigned,
And bear it patiently;
Drive discontent from out your hearts,
If you would happy be."

THE PEOPLING OF OTHER WORLDS.

A LITTLE wriggling mite, looking off from the rim of a daisy upon a field dotted with millions of those meadow flowers, if it had a mind equal to its physical being, might say and believe that, of all these white-bellied globes, his own yellow orb alone was inhabited; that mites like itself could not live on these surrounding planets; that they were all empty houses, and its own little world was the only one of the myriads whitening the boundless space, which the Creator had selected and honored as the abode of intelligent beings. Thousands of good men, with minds of large grasp and reach, may look from off the earth into the world-studded expanse above; they may count the stars in the nearest heaven, and measure and weigh them with the reeds and scales of science, and yet say and believe, with the mite-minded animalcule peering over the daisy's rim, that all the millions of those constellated orbs are empty houses, built for no intelligent peopling—for no purpose except to besprinkle the tapestry of this small planet of ours with drops of light, to please our eyes for a few hours by night. So great are man's "here and now," so tall the stature of his being to himself; so wide a space he and his dwelling fill in creation, that as to the mite on the daisy, all outside is to him the mere garniture or setting of his abode. Thus, doubtless, ninety-nine out of a hundred of intelligent and Christian men do hold this one planet of our occupancy, not only as regards all the other members of our own sun's family circle of orbs, but all the myriads of worlds which revolve around the other suns that dot the common heavens of the material universe. But one in a hundred surely may believe, on the clearest analogies reason can construct or educe, that as nature abhors a vacuum, so Nature's God permits no waste in the realm of His creations; that the millions of lesser lights above are not the chips scattered about in building the earth for man, nor the scaffolding from which it was erected; that they are not empty houses, nor built for beasts and birds alone, nor for bodiless spirits, but for spirits wearing flesh and blood like ourselves, with a human nature as finely adapted to the faculties and sensibilities of the intellectual soul as Adam's physical being was to his mind in the holiest days of his innocence. To those thinking differently from this, one might fancy that it would be like inbreathing the death-damp of a universe of desolation to admit the thought that the Almighty Creator had no sentient worshipers in all the millions of these outlying worlds; that of them all, this one on which we dwell is the solitary island of human existence—of beings with a living, thinking mind; and that here alone are heard the voice of prayer and praise, and all the other voices of faith, hope, and love.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—Orbanis.

My people are destroyed for lack of knowledge.—Hosea iv. 6.

PHYSIOLOGY OF THE BRAIN.

THE following interesting facts we glean from the *Circular*. They are stated by G. E. C. with a pleasing conciseness.

Modern physiologists have determined the existence and locality of eight distinct nervous centers or ganglia in the brain. Beginning with the largest, they are, 1st, the *cerebrum*; 2d, *cerebellum*; 3d, *olfactory bulbs*; 4th, *corpora striata*; 5th, *optic thalami*; 6th, *corpora quadrigemina*; 7th, *ganglion of the tuber anulare*; 8th, *ganglion of the medulla oblongata*.

The usual mode of determining the functions of these several ganglia are, 1st, to observe the effect of disease or injury, and 2d, to remove the part on a living animal, and to notice the result. The last is the most satisfactory of the two methods, and is the one usually adopted by professors of physiology, in their lectures before the class.

During the course of lectures at Bellevue College last winter, on the nervous system, the lecturer performed numerous experiments upon live pigeons, for the purpose of showing the effects produced by the removal of portions of the brain. As the brain itself is entirely without sensation, the operation causes but little pain to the animal, and by closing up the wound immediately, the rapid coagulation of blood almost instantly checks the violent hemorrhage. He first removed the cerebrum or large brain. After closing the wound and sponging off the blood, the pigeon was placed upon its feet on the middle of the table. It immediately assumed the attitude and appearance of profound sleep, from which it could be aroused only by the most violent means. Its toes being pinched by forceps, it would simply try to pull the foot away, without making the slightest effort to escape by flying or even walking. A pistol was fired close to its ear; it gave a slight start, opened its eyes, and again relapsed into apparent unconsciousness. All power of connecting cause and effect seemed to be gone. The animal received impressions as well as ever, the spinal cord and other ganglia being intact. But the intelligence, the memory—the controlling power over all—is entirely gone. The animal undoubtedly suffers the pangs of hunger and thirst, but makes not the least effort to relieve them, and can only be kept alive by forcing the food down its throat. By this and other experiments, it is proved conclusively that the cerebrum is the seat of the intellect.

The next experiment is to remove the cerebellum or little brain. This is by far the more delicate of the two, as the bleeding is more profuse, and from its situation over the medulla oblongata, there is danger that the latter will be touched, causing instant death. By great

care, however, the greater part of the ganglion can be removed. The effect is immediate and somewhat startling, at least it must be to the pigeon. If it attempts to walk, a sprawling tumble is all that it can do. An effort at flying results in rolling from side to side, and finally in falling over backward to the floor. It is with the greatest difficulty that the bird can keep on its feet, the constant tendency being to fall backward. The pigeon is perfectly conscious of what is going on around it, and makes every effort to escape, but is as helpless as though deprived of both legs and wings. The animal is suffering from the loss of the power to co-ordinate its muscular movements. It receives impressions, and endeavors to respond to them, but has no control over the action of the muscles, and so tumbles about as if intoxicated. In fact, its movements are precisely like those made when under the influence of alcohol, as can be easily shown by feeding a pigeon on bread dipped in whisky.

The next function to be demonstrated is that presided over by the corpora quadrigemina, or optic lobes. They are situated near the center of the base of the brain, and are reached by an opening at the side of the head. The two lobes on the *right* side are first removed, the wound closed, and the pigeon is allowed to walk about on the table or floor, a string being attached to one leg to prevent his flying. We now try to find out what effect, if any, has been produced on the functions of sight. Carefully bringing the hand near its *right* eye, the bird instantly starts away and tries to escape. The right eye, then, or the one on the same side of the head we operated upon, is apparently as sound as ever. The hand is next brought round to the *left* eye and no notice is taken by the pigeon of its presence. This experiment is repeated in a way to clearly demonstrate the total loss of sight in the left eye.

In this experiment we prove two things. First, that the function of sight is presided over, or controlled, by the optic lobes; and second, that the nerve fibers from each lobe cross, or decussate, to the opposite side of the head in their distribution. This last fact is also demonstrated in other ways. A wound on one side of the head will produce paralysis on the opposite side of the body. Excitation of the nerves of motion on one side of the spinal cord will produce muscular movements on the other.

The ganglion of the tuber anulare is next selected for examination. This nervous center is placed deep in the medulla oblongata, and is reached from below. Its removal causes a total loss of voluntary motion or *will* power. Remove all the brain but the tuber anulare and medulla oblongata, and the animal still breathes and makes voluntary movements. But break up the tuber anulare and all voluntary motion instantly ceases.

Experiments on the olfactory bulbs have been made, but are not quite so conclusive as those already given, chiefly from the difficulty of determining loss of smell in lower animals.

Injury to the corpora striata has been found to produce paralysis of the external muscles of respiration.

The optic thalami are connected with and assist the optic lobes, or corpora quadrigemini.

The last ganglion is that of the medulla oblongata. In one sense, this may be said to be the most important nerve center in the brain. Everything else may be broken up, and the animal still breathes. But touch this small spot with your probe, and respiration instantly stops, causing death in a very few seconds, by apnea. By using artificial respiration, the action of the heart and blood-vessels can be prolonged. Still, the animal is considered dead to all intents and purposes, even though the functions of organic life continue active after respiration has ceased.

BOOTS AND BEAUTY.

HOW TO DRESS THE FEET.

WHETHER it be one of the fruits of a certain "fastness," quite observable in many other suggestions of feminine attire, or from the ripened judgment of a natural vanity, may not be pronounced upon, but the truth may be uttered boldly—that no lady can be beautiful with cold or too tightly dressed feet. Cold feet wither the roses of the cheeks, give a gaunt, hollow, spiritless expression to the eyes, and a pinched, leaden hue to the skin that will peer out plainly beneath the cosmetic mask. A woman must be comfortable to look happy, and she must look happy to merit indorsement as a beauty.

This granted, it behooves every "beauty" to consider her boots, whether or not they have heretofore been chosen as a reliable accessory to her prized assemblage of charms. First as to their fit; the shoe should be made for the foot, not the foot made to accommodate itself to the fixed proportions of a "store" shoes. Some few feet may be of the "ready-made" class; a far larger number possess an individuality of form that exacts its own peculiar last and measure. Be sure you have a reliable, honest knight of St. Crispin who takes a pride in the creation of his art and, it may be, exalts it in his own estimation beyond its apparent claims to respect. A shoemaker should take the same sort of personal interest in every pair of shoes that goes out from his shop, that an artist feels when the finished achievements of his brain and brush issue from the seclusion of his studio. In the shape of a boot lies the secret of success; a large shoe, if well shaped, offers a more alluring charm than an ill-proportioned one, even if it boasts Cinderella-like diminutiveness. Added to this, a shoe that fits—by which I mean, one modeled after the foot, not into which the foot may be stored—can be worn with comfort, even if meriting the epithet of "tight." It will be found that too loose a shoe, especially to a thin foot, is decidedly more replete with discomfort and even injury than one fitting snugly. It allows constant friction, and is prolific of bunions and hard corns, be-

sides soon becoming shabby and treading out of shape.

Having secured one self alike from slovenliness or compression in the fit, the material should be chosen for the season's need. A lasting gaiter is unfit for promenade wear, except perhaps in the languor of the dog-days, when one saunters rather than walks. Kid, even then, will be found lighter, cooler, and a better protection to the feet from the heat and roughness of the *trottoir*. For winter wear, the serviceable Balmoral stands the prime favorite. It may be made of patent leather, united to kid, or beaver cloth, of calfskin, of morocco, or dressed kid, or of a union of two kinds of materials. A pair lined with flannel, and well covering the ankles, should be held an indispensable item among a lady's shoe collection. They need not be clumsy, and if they should prove so, their comfort is a complete compensation. The Balmoral has but one drawback: the time taken in their lacing. This, to busy people, who like to take unpremeditated constitutional exercise, and not consume an hour in preparations for out-of-doors, is very formidable. The Congress boot has convenience to recommend it; but they are apt to bind the delicate instep, reminding one of the pedal tortures of our sisters of the Celestial Empire, and so hinder free circulation as sometimes to work lasting injury. Button boots are tasteful and easily secured to the feet by means of the "button-hook." A little practice will render one dexterous in what seems at first a difficult operation—that of using the hook.

All buckles, rosettes, or other decorations for street boots are so evidently out of place and vulgar, that a warning need hardly be given against them. Finally, glory in *thick* boots; let the soles be water-proof and substantial, the linings be warm, the materials of the best, and the workmanship that of the masters of their trade. Regard your boots as one of your best aids to beauty, and beauty's bosom friend, health. Remember that of all costly things a cheap boot costs dearest.—*Shoe & L. Reporter.*

QUACKS, THEIR ACCOMPLICES, AND THEIR VICTIMS.

[THE *Temperance Platform*, of Des Moines, Iowa, publishes the following statement, which ought to *shame* those religious newspapers into decency that advertise quack medicines:]

"During many years' experience in the newspaper business, we have tried to avoid any complicity in the crime of defrauding the sick and the poor by the sale of quack medicines. Dr. Roback once sent us a proposition to advertise his 'Scandinavian Remedies.' Having occasion, soon afterward, to pass through Cincinnati, we visited the 'Doctor's' headquarters, and soon became satisfied that *his* was a business unfit to be advertised in any respectable journal. The establishment was an extensive one, and its main business was the manufacture and sale of brandy, intoxicating 'stomach bitters,' and other kinds of strong drink. The

proprietor was a depraved-looking, wheezy, asthmatic, alcohol-pickled old Swede, who knew about as much of medical science as a mule knows of metaphysics. We have since learned something of his history. Fifteen years ago he came to Philadelphia, and set up as a fortune-teller, advertising himself as 'late astrologer to the King of Sweden.' He was such an impudent and notorious swindler that the city authorities broke up his establishment, and he fled to New York. In the latter city it is supposed that such rascalities may be practiced with impunity; but Roback was a rather strong dose even for the Gothamites. He surrounded himself with serpents, skulls, skeletons, mysterious charts, etc., and wore a scarlet robe, embroidered with signs of the zodiac, and a conical cap with the insignia of the Egyptian magi. The police drove him from the city, and he fled to Cincinnati. There he again set up as an astrologer, but in a very mild and quiet way, and soon gave up fortune-telling for the equally dishonest but more profitable business of making patent medicines. In this he branched out largely, doing business under several other names besides his own. Under his own name he sold his pills, stomach bitters, and brandy; and under assumed names he vended nostrums for 'private' diseases. He spent immense sums in advertising, and in a few years accumulated a fortune of three hundred thousand dollars. A short time ago he died; but his extensive business is carried on by other parties, and his humbugs live after him. The board fences, barn doors, and all other available places for sticking posters throughout the country, are covered over with the flaming bills of this besotted old quack; nearly all the drug stores advertise his nostrums and sell them extensively, and nearly all the newspapers are prostituted to the infamous work of puffing them editorially. The money made by druggists in the sale of these abominable medicines, and that made by publishers in advertising them, as well as the vast sum realized by the manufacturer, is filched from the pockets of the poor and the sick, who are too ignorant to detect the rascality thus practiced upon them.

"Now, we may be very obtuse, but for the life of us we can not see any difference morally between quacks and their accomplices. The man who knows the villainous character of patent-medicine-makers and their nostrums, and continues to aid in this nefarious business, is a partner in guilt with Roback and his tribe. Druggists and newspaper publishers are generally too intelligent to be deceived by the lies of medicine-manufacturers, and when they assist in circulating such lies, thus deceiving the unfortunate, and robbing them not only of money, but of health also, they should be held responsible for their complicity in the crime. For it should be regarded as a crime to sell to ignorant sick men and women a medicine that is not only worthless but positively injurious. If a decent regard for the health and life of their fellow-men will not deter druggists from so infamous a traffic, the power of law should

be brought to bear upon them. The patent medicine swindle has been carried about far enough; and we hereby proclaim every druggist who sells 'Roback's' and similar preparations, a contemptible swindler. Now and then one may be found who is ignorant of the true character of such nostrums, and has sold them without a suspicion of his complicity with swindling. Such an ignoramus has no business to dabble with any kind of medicines, and should get out of the business forthwith. If people *must* be murdered by medicines, let the work be done in the scientific modes of the regular medical profession."

[We have here, on Broadway, in New York, several patent or quack medicine palaces, costing hundreds of thousands, not to mention a score or more of the lesser cod liver oil and gin-schnapps fraternity. There is Moffatt's, Brandreth's, Helmbold's, and the establishments of many others, who roll in wealth filched from the sick and the poor.

The very worst enemy with which the temperance cause has to contend is this quack medicine business. All the elixirs, cordials, bitters, sarsaparillas, tonics, and so forth, are alcoholic compounds, and create an appetite for *stimulants*. Then follow ale, porter, beer, wine, cider, Bourbon, rum, gin, brandy, and the whole catalogue of slops, which poison and lead to death and hell. Now, we ask, to what extent are the *regular physicians* responsible for this state of things? Do not they prescribe more or less of these beverages? Do they, who *ought* to be the *guardians* of the public health, give any word of *warning* against the quacks? Or, do they assume a very dignified attitude, counting themselves only guests, instead of hosts; only visitors, instead of entertainers; mere camp followers, instead of true soldiers? Now, we call on these certified sheep-skin gentlemen to rally to the rescue. The nation is being poisoned in its every pore. They must not stand still, mere lookers-on, without lifting a hand to stay the plague. The clergy, too, should speak out. All good men, everywhere, should sound the alarm. Let the cry go forth, *Down with the quacks!*]

SICK HEADACHE—ITS CAUSE AND CURE.—Dr. John Burdell, a dentist of New York—not the Cunningham man—says: "Not a case of this disease (sick headache) has ever occurred within my knowledge, except with the drinkers of narcotic drinks (meaning tea and coffee), and not a case has failed of being cured on the entire renunciation of those drinks. In saying this, however, it is by no means claimed that there are no cases of sick headache to be found except those which owe their origin to tea and coffee. I only affirm that I have never known of any such cases. Whatever may be said of the violations of physical law in other respects, *tea and coffee may claim sick headache* as their highly favored representative."

[Tobacco produces similar effects—and its discontinuance brings relief. A cheap remedy for a most painful malady is to "abstain."]

FALL COSTUMES FOR 1867.

LADIES' FALL COSTUMES.

THROUGH the kind accommodation of our neighbor Demorest, of *Demorest's Monthly Magazine*, we are enabled to furnish our readers an objective view of the fashions in ladies' walking and full dress costumes for early autumn. The following remarks are descriptive of the figures in the engraving:

FIG. 1. Suit of speckled poplin, black and white, the skirt plain, and looped with small jet Benoiton dress-loopers, over a gray Boulevard skirt, braided with black, and edged with a box-plaiting, bound with black. The sac paletot is cut perfectly straight, and the seams left open to the waist, and the center of the back is slashed to the waist. The effect is that of scarf ends in front, and a straight, plain back. It is embroidered with beads in a Greek pattern, and edged with a black cord fringe, to the ends of which a large jet bead is attached. Sleeves long and open, with dress coat sleeves beneath. Gray muff. Bonnet of gray velvet, trimmed with white velvet Marguerites and black velvet leaves. White moire strings.

FIG. 2. Short dress of striped mohair, green and black. Trimming of jet braid and a bias fold of the goods, simulating a double skirt, and side sashes, to the points of which black tassels are attached. Sac of heavy black armure silk, trimmed also with jet braid, in a narrower width. Green velvet bonnet, embroidered with jet, and ornamented with a Benoiton of velvet and crimson rose.

FIG. 3. Cloak and muff of violet plush, over a steel gray poplin dress. Bonnet of gray satin, edged with jet pendants, and trimmed with leaves of violet velvet.

FIG. 4. A visiting dress of very rich black silk, trimmed with triple folds of black satin, fastened down with jet nuii-heads through the center. Handsome black velvet Ristori cloak, which describes a mantilla front and circle back; it is richly embroidered with silk and jet. Black lace hat, with diadem of scarlet velvet, also embroidered with jet, and finished with jet ornaments.

FIG. 5. Misses' short dress of Eugenie blue Lyons poplin, bound round the scallops with black silk, and ornamented with black silk dahlias, over a gray Boulevard, trimmed with three rows of blue velvet. Black velvet sack, embroidered with jet gallons, and ornamented with jet buttons and pendants; fringe of broad passementerie and Benoiton chains. Ermine muff. Blue velvet hat, with white ostrich plume.

The general effect of each of these costumes is an improvement on the scantiness of the fashions of the seasons just past. The hats or bonnets are expanded and cover more of the head they are intended to adorn. The waterfall is disappearing, and will soon perish in fashionable oblivion, as it should. Braids, which are far more natural and comely, are resumed, and in various designs more or less tasteful, impart symmetry to head and neck. The cloaks and sacs are in accordance with physiology, so far as comfort in pattern and fit is concerned; while the walking dresses are cut short, giving freedom of movement and saving material in various ways, to say nothing of the elegance, neatness, and taste which can be exercised in trimming and wearing them without fear of soiling the graceful folds in the dust and mire of the streets, or having the gathers ruthlessly torn out by the feet of uncouth pedestrians.

THE FASHIONS.

WELL, what of them? This: whoever discovers a new and *better* mode of dress than those hitherto in use, is a public benefactor. In dress, five conditions are to be observed, viz.: health, comfort, convenience, taste, and economy. It is unfortunate that ignorant and light-headed creatures abroad should foist upon the public such ridiculous costumes as sometimes prevail. The hideous, barbarous bag of wadding, vulgarly called a waterfall, is one of the most absurd of the foolish modern inventions. The bustle, of a few years ago, was of the same class. The little chips and boxes worn in place of bonnets are not so bad. The hard, high, and tight stove-pipe hat—bell-crowned or sugar-loaf—worn by men at present, is one of the worst and most uncomfortable of contrivances. Much of the bald-headedness prevailing among men—almost never met with among women—may be attributed to this bad thing. Tight, ill-shaped, and high-heeled boots and shoes cause ever so many corns, bunions, aches, and pains. Compare the shape of a fashionable boot or shoe with the shape of a natural foot, and note the difference! When will shoemakers learn to fit the feet of the suffering? At one time we have broad and hideous square-toed shoes; then short, blunt, chopped-off toes; then sharp-pointed toes; then the more sensible round or duck-billed shape was put forward. But even this is imperfect.

Of tight-laced corsets, tilting crinoline, tight, spindle-legged pantaloons, and so forth, we shall have more to say at another time. It has been suggested that a prize be offered for patterns and plans for showing the best style of dresses for men and women. It is believed that inventive Americans may not only surpass the world in reapers, mowers, yachts, sewing, washing, and wringing machines, but that we may teach the world how to dress the most sensibly. Shall the PHRENOLOGICAL JOURNAL offer the prize and publish the patterns? What say our lady readers?

GROWTH OF BRAIN.

A CORRESPONDENT propounds the following:

Is there anything made or lost in the whole brain? Or, can any organ or group of organs be increased by cultivation without a proportionate decrease in the opposite extreme? If the higher faculties, by culture, are increased, do not the lower or the selfish faculties decrease, and *vice versa*?

To which we make answer—Let us suppose a child ten years of age to have a brain developed in perfect harmony. If the culture of every faculty and propensity be equal, the brain, at full maturity, will possess an equal development, every part growing in just proportion. If, however, one set of faculties are exercised chiefly from ten years of age upward, the corresponding organs will become enlarged and strengthened—not necessarily at the ex-

pense of the others; but those which are exercised most will increase in size and activity much more rapidly than those which are exercised but little. It does not make the left arm smaller by using only the right arm, provided there is vitality enough to feed the left arm and maintain its health while the right arm is using ten times more of the qualities which give growth and strength. But if a person has a relatively weak, nutritive system, so that he can not sustain a specific growth of one part of the brain, and at the same time maintain intact the health and size of the other portions, it is easy to perceive that the unused parts would become smaller. If a man or beast in good flesh is deprived of a sufficient amount of food, he or it grows thin and becomes a mere skeleton; the flesh that had been accumulated before is absorbed to furnish fuel to keep up the flame of life. Steamboats sometimes get out of fuel, and their managers are obliged to burn cabin doors, furniture, and other wood-work; so the human system will burn itself up unless it have a supply of fuel in the shape of food.

The brain is not shut up in a tight box which can not be enlarged to make room for the growth of the brain. When one organ grows, it is not obliged to do so at the expense of the others. If one organ wants more room, or if the whole brain requires more room, the skull is absorbed on the inside and built up on the outside. It often happens that a single organ is more active than others by which it is surrounded, and the activity of the one organ causes the absorption of the skull directly over it to such an extent that the skull in that place becomes so thin that a slight pressure would break it or crush it in; and we have known cases where *post-mortem* examination showed the skull to be worn quite through over organs which for many years had been uncommonly active. Thus sometimes a man after twenty years of age will have such an increase of the size of the head that the whole skull changes place; if we may so speak, the skull at twenty would be swallowed by the skull at forty. It is sometimes a mystery to people how a hard, bony structure like the skull can give way and make room for a pulpy substance like the brain. The same reason might be applied to oysters and clams. They are soft and pulpy, and their shells are as hard and a trifle thicker than the human skull. But everybody knows that a clam or an oyster half grown will go, shell and all, into the empty shell of a clam or oyster a year or two older. The whole substance of the shell changes place; it is not enlarged merely, but completely dissolved and thoroughly reconstructed.

An hour passed in sincere and earnest prayer, or in conflict with, and the conquest over, a single passion or a subtle bosom sin, will teach us more of thought, will more effectually awaken the faculty and form the habit of reflection, than a year's study in the schools without them.

NEW YORK,

OCTOBER, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Pbe.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

FORMING CHARACTER.

"Just as the twig is bent the tree's inclined."

It is a *fact* that human beings *GROW*. They grow straight or crooked, and are tall or short, stout or thin, strong or weak, light or dark, good or bad, according to the pattern—or, as we should say, the patterns—after which they are formed; and though we may most *resemble* one, we blend in ourselves the natures of our *two* parents. When this blending is perfect, when the natures of the two so assimilate as to be *one* in will and sentiment, the effect on offspring is most favorable. On the other hand, parents who are ill-mated or ill-formed are not only incompatible themselves in affection, sympathy, and spirit, but they fail to impart to their children those qualities which go to make up a genial nature, a harmonious, self-regulating body and brain. For the even formation of character it is all-important that the *parents* be entirely agreed. The two wills should be blended into one; they should act, think, and feel in *UNISON*. Then the best results may be hoped for. And he who is so fortunate as to descend from *such* a union is far more likely than others to be happily disposed and to make life a success.

QUARRELING PARENTS, QUARRELING CHILDREN. When parents are not adapted to each other, they will not agree, and *their* differences and lack of harmony will appear in their children. The painful spectacle of quarreling parents is too often *seen*; it is like a house divided, that can not stand. The spirit of discordant parents is both inherited by their children, and also taken on by example. Such must undergo a very great change—which is possible—to be ever at peace or in the way of domestic prosperity. But the child is here. He is only three

or four years old, and yet his young parents can not manage him. It is fearful to witness an exhibition of his temper; and then each parent declares that the child is unlike him or her. *Very* young or immature people are more likely than others to become the parents of fiery-tempered and ungovernable children, and the little "perpetual motion" thrashes and bangs about the house like one "possessed." Whipping fails to subdue the turbulent nature, and the young mother gives up in despair. The boy soon discovers that he is master of the house. The tender-hearted father dreads to cross his child and fears to deny his demands. The ignorant or indifferent nurse, regarding him "a spoiled child," teases and stirs him up just to see him rave. If he wants broken glass, a pocket-knife, scissors, and the like, he must have them. Of course more serious trouble is brewing, and very soon a catastrophe occurs; but if he escapes with his life, it's no matter. Is not that boy forming character? Notice how his head bulges out just at the root of the ears, at Destructiveness.* These organs are growing every day by what the mind feeds upon. He is now nine or ten years old. He is without a sense of obedience, and much less of integrity or devotion; "*must* have his own way," so say his over-indulgent parents, and money to spend. Instead of going to school, he plays truant, misleads or is misled by others; gets into bad company and worse habits, and is now, when fourteen, quite lawless. His parents would have him go to Sunday-school, but he will not; they would have him learn some useful calling, but he has nothing in view, and can not decide on anything. He is now eighteen; has tried half-a-dozen different trades, and dislikes them all. He became a clerk in a store, but, from inattention, carelessness, and doubtful honesty, was "not wanted." His parents are distressed, seeing the waywardness of their son, and no hope of his ever amounting to anything.

Neither cloves, cinnamon, spices, nor cologne can neutralize the smell of filthy tobacco with which his "bad breath" is now tainted. Where he spends his evenings till a very late hour, his parents

* See the Phrenological Bust for the location of the organs.

do not know. He is yet "forming character." But why follow this child of sin and sorrow further? The sequel may be inferred. Without a purpose, without occupation, without ambition to be useful or to do good, he sinks rapidly into a life of dissipation, from which the prayers of a heart-broken mother and the too late appeals of a well-meaning but mistakenly kind father can not avail. Look at that young man now. He is a low, coarse, gross, bleary-eyed, foul-mouthed, profane sensualist. His character is now formed and fixed! A few steps farther and he comes to the end of a miserable life. Bad tobacco, bad whiskey, and bad women finish him. He attends all the races, assists in drinking saloons, gambles, gets up swindling lotteries and other gift-swindling concerns—it may be in the name of charity—advertises to send fifty-dollar gold watches for \$5 40 or thereabouts, turns quack doctor and sells quack medicines, tries his hand at counterfeiting, or forging bank notes and checks, robbing stores, post-offices, and persons, and of course is hunted, detected, arrested, brought to justice, and imprisoned. He is now incarcerated for *one* of his many wicked crimes, all of which *may be seen in his face*. His real character, so long forming and partially concealed, now reveals itself. Though in prison, he is incorrigible. He is *punished* into submission, and works or drags out the term for which he was sentenced. He is again free. His reputation follows him. Who wants to employ him now? *He will not work*; but, as "birds of a feather flock together," he returns to his former haunts of vice and crime, commits arson or murder, and the executioner closes the scenes of a worse than worthless life.

This is the way in which *hundreds* of young men are forming their characters to-day! In many cases human agency, through temperance and religious influences, may avail much; in others, nothing but the grace of God can avert the downward course of the perverse and willful victim. How true it is that "the way of the transgressor is hard!"

But there is another way of forming character, of a far different stamp, in which the beautiful image may be made to reflect the high attributes of God who

made it—attributes which are high, holy, heavenly, such as may be seen only in those who know His will and do it. The first condition to be taught the child is obedience to rightfully constituted authority, then respect, then justice, kindness, faith, hope, meekness, industry, frugality, the regulation, restraint, and subordination of appetite, ambition, affection, love of money, of display, and to do all things in accordance with the will of God, as indicated in the Holy Scriptures. He whose character is formed after such a pattern will live a circum-spect life, and grow in grace to the end. How beautiful, how sublime is the life, and even the death, of a good man! In life he will be guarded against temptations, and guided in the paths of prosperity, happiness, and peace.

EAST AND WEST.

To keep a people UNITED, it is indispensable that the means for cheap and free intercourse among themselves be had. Isolation simply means separation. Every new avenue open for trade, commerce and travel is an additional link to unite and bind closer the people of different states and nations. Make it convenient for the people East and West, North and South, to visit, exchange products, and thus to become acquainted with and to help each other, and no standing army will be necessary to keep the peace.

Had it not been for the irrepressible conflict between freedom and slavery—an utter incompatibility between the democracy of one and the aristocracy of the other—there would have been no war between the States North and South. That great natural highway, the Mississippi River, and the main line railway, will serve to reunite North and South; while the great lakes in the North, and the Trunk Railway East and West, will tend to consolidate all our people and all our interests into one. Instead of one Atlantic and Pacific Railway, we shall, in twenty years, need half a dozen. The West is being rapidly peopled and developed. In the course of a few years the entire Rocky Mountain regions will be teeming with its millions of miners, and the great prairies and plains will be alive with farmers. The East—the best nursery ground in the world—will continue to grow men and women, and to educate them in the arts, sciences, and mechanics. She will also manufacture mowing-machines and mouse-traps, sewing-machines and school-books. The South will grow sugar and cotton, and the North will refine the one and work up the other. There will be an exchange of labor and of products, mutually advantageous to all concerned. There will be no selfish dog-in-the-manger policy—no isolation or exclusiveness; we will have a uniform cur-

rency, uniform laws, free education, and no special favors or privileges. Each may choose his calling and the section of country where he would settle.

Years ago the lakes and the old New York and Erie Canal served as the channel of intercourse between New England and the Mississippi. Then the New York Central Railroad divided the traffic with the Canal. Afterward, the New York and Erie Railroad was built, and came in for a share, and soon the Pa. Central, Baltimore and Ohio, Charleston and Memphis, and, over the borders, the Grand Trunk in Canada, were built and put in operation. At present these few lines are entirely inadequate to move the vast amount of freight and passengers passing to and fro, and every day increasing. For slow and heavy freight a ship canal around Niagara Falls, connecting the lakes, is necessary; another between Norfolk, Va., and the Ohio River, is also demanded; and in many sections, new Eastern and Western railways must soon be built. Just now a lake shore railway, from Oswego to Lewiston, is projected, and will be built. It will cross the Niagara River on a much lower grade than the present suspension Bridge Road, and will form a trunk line with Detroit, Chicago, Omaha, and San Francisco, in the West; and with the East, through a short cut, *via* the Hoosic Tunnel, to Boston and Portland. This new road will become a successful competitor of the Grand Trunk in Canada, and of that great monopoly the New York Central. It will have an easy grade on the south shore of Lake Ontario, near the line of the old ridgeway, and pass through a region of the most healthful and delightful country in America.

It will not be many years before our country will become the great highway of the world. We lie on a line between Europe, India, China, and Japan. All our Eastern and Western railways will participate in the through traffic. Portland in the East, and San Francisco in the West, will be great railway depots, while Boston, Buffalo, Detroit, Chicago, Omaha, Salt Lake City, etc., will be way stations; and the Northern and Southern lines will all be feeders to those running East and West.

Who can conceive the magnitude of our future? This is a great country.

ANNOUNCEMENTS.

OUR readers will find, in an elaborate biography of the late General Curtis, which we will present in our next number, an interesting sketch of some of the more prominent incidents connected with the military operations conducted in the West during our late war. It is purposed, also, among other good things, to give a rejoinder, by Mrs. George Washington Wyllys, to the article recently published in the *North American Review*, under the caption of "A Plea for Bachelors," and an article on "Our Social Relations," by John Neal, Esq.

FALL FAIRS AND CATTLE-SHOWS.—This is the favorite season of the year—the most beautiful month of the twelve—when our thrifty farmers and fruit-growers, our ingenious mechanics, and our enterprising manufacturers assemble in their county seats and State capitals to take account of the year's progress and products. They compare notes, and compete for prizes. Each brings his best pigs and potatoes, plows and pumpkins, apples, pears, and quinces. There are in the tents and stalls great mountains of breathing beef—good-natured bulls, gentle cows, with tired calves; short horns, long horns, and no horns—Durbams, Devons, Ayrshires, Alderneys, Herefords, Galloways, etc., each with excellent points. Horses of all sizes, colors, and qualities—Arabians, for speed; Normans, for artillery; Clevelands, for roadsters; Clydesdales, for the plow; Hunters, for the saddle; Blackhaws and Morgans, for families and physicians; Shetlanders, for boys and girls. What spirit! What speed! What power! What pride! [But we beg the managers *not* to turn these, their most useful annual exhibitions, into those low, miserable, and wicked horse races where gamblers, tipplers, and thieves do congregate, to the shame and disgust of all decent people.] Look at the innocent, timid, beseeching-faced sheep. They almost ask you to open the gate and release them from their prison-pens, that they may hie to their green pastures. Here are the long-wooled Leicestershires; there the fine-wooled Merinos; here the dark-faced and best of all mutton-sheep—the hardy, handsome Southdowns. Farther on are the lazy, lymphatic, adipose pigs—Suffolks, Berkshires, Essexes, Chesters, Chinese; you will see no "Land-Pikes" at these shows.

Now let us look at the poultry. What a chattering among the Chittagongs, Shanghaes, Dorkings, Black Spanish, Polanders, Seabrights, Bantams, Burmahs! See how those gobblers strut! wonder if they dream of Christmas, or of their certain fate?

What apples! What pears! And how fragrant the golden quinces! Won't they flavor the apple-sauce? Do look at the grapes! What beets, turnips, and squashes! "Oh, my! where did they come from?" Notice the sun-burnt men trying the new pumps, straw cutters, fanning mills, mowers, and reapers; while the good women are examining new ranges, stoves, churns, clothes washers, wringers, sewing machines, and other labor-saving implements. All are having a good time generally. Returning each to his home, reflecting on what he has seen, he determines to improve his stock, improve his seeds, roots, plants, fruits, machinery—and last, but not least, he resolves to improve his wife, his children, and HIMSELF. The next annual fair shall bring him a prize for something, if it be only for a potato. So the spirit of useful rivalry and competition is awakened, and great good to the nation and the world is the result.

P. S.—Keep away from the *side shows*—of two-headed calves, five-legged sheep, striped pigs, gambling tables, and drinking saloons. Buy a season ticket, and "look out for pick-pockets."

THE CHINESE IN CALIFORNIA.

THEIR CAPACITY AS SERVANTS—RELIGIOUS BELIEF, ETC., ETC.

THE emigrants from the Celestial Empire who have taken up their residence in the Golden State still retain their national characteristics, and do not in the least conform to American habits and customs. Speaking just enough of our language in their broken manner to make themselves understood, is all they desire; and farther than this they seem either unwilling or unable to progress. During a two years' residence in California I had every opportunity for studying their peculiarities, there being many of them employed as servants in private families, and with few exceptions I found them, when well trained, extremely neat, obliging, and obedient. I saw none but male servants among them—the females being low, abandoned creatures, and unfit for any capacity in respectable families. The men did our washing, ironing, and cooking; and as it is a well-established fact that Californians are luxurious livers, they who minister to their palates and preside over the culinary department of their homes must be well skilled in the mysteries of cookery—and I think I can safely say that never have I partaken of a better or more palatable dinner than that prepared by the hands of a Chinaman!

As I before said, they are extremely particular, and I well remember when "Hop," our help, seemed rather inefficient for all the tasks which were devolving upon him, and a girl was engaged to share his labors. The time for her arrival came, and "Hop" was on the *qui vive* of expectation, and no doubt at the same time on the alert for any exhibition, on her part, of what, to him, seemed like inefficiency or negligence; for no sooner was the dinner over and the "dishes washed," than "Hop" removed the goblets, one by one from the closet, and carrying them to the window, then holding them up between his dusky face and the light, muttered in the greatest disgust, "No good, Mellican man! No good, Mellican man!" "No good American! No good American!" This event seemed to decide him as to his future course of action, for he was so quarrelsome with the new-comer that we were obliged to discharge her at once.

Nearly every mountain town, as well as each of the larger towns of California, has its portion which is designated as "China Town," and here such of them as have the means carry on their various kind of business and engage in their respective vocations. The merchant may be seen at his counter in the loose blouse and flowing pants which is the prevailing costume, dealing out Chinese sugar, rice, opium, and tobacco to his brother customers, and smoking his native *cigarette* just as contentedly as his luxurious neighbor a little farther "up town" does his "Spanish best."

Here, too, you will see advertised, in Chinese characters, "Chee-Mung & Choo-Chong, Laundrymen." They seem to be well patronized, not only by the miners, but also by many fam-

"A GENUINE CELESTIAL."

ilies, who find it convenient to send "out" their washing occasionally. The clothes undergo what would seem a very singular process. They are carried to a stream of clear, pure water, and being dipped into it they are then taken out and dashed forcibly against a large rock, and thus with alternate dipping and dashing they are made clean (with perhaps a slight rubbing of the hands, if necessary), after which they are "blued" and "starched" with a preparation of their own importation, and hung up or spread out to dry. When thoroughly dry, the irons are heated, and the sprinkling and ironing process goes on at one and the same time. Each garment is placed separately upon the ironing-cloth, and with a mouth full of water the dusky laundryman blows a fine mist, in a manner peculiar to himself, over the garment as it is being smoothed. Notwithstanding this may seem a very strange and unsatisfactory manner of proceeding, yet when complete the clothes very often present a fine appearance, which could not fail to please the most fastidious housewife, providing she had seen nothing of the singular process through which they had been carried.

The religious belief entertained by the Chinese, or at least that ignorant portion of them which we meet here, is very remarkable. The long, dark hair (the tail) which is worn in a solitary braid, extending below the knees, and sometimes to the feet, seems to be regarded by them with a feeling akin to veneration; and no sooner does poor "John" lose his chief ornament (which is not a rare circumstance, as the Americans punish petty crimes by depriving him of it), than the poor victim is regarded by his fellows as a lost *soul*, not only for time, but *eternity*, and his bones are not allowed to rest with those of his kindred upon their native soil. They bury their dead in a very uncere- monious manner, and it is not unusual after the heavy rains to see the rude coffin of poor John protruding from beneath the little mound of earth where they have laid him. They are not forgetful of their lost ones, however, but visit them occasionally in their silent homes, carrying with them their favorite drinks and edibles, seeming, as they do, to regard this as a peculiar expression of regret and mourning on their part, and one which is received with due

appreciation by their dead. After gratifying their own appetites, they leave a rare portion for the sleeping brother, who may partake at leisure. This custom seems to have become a portion of their religious ceremony, which is rigidly adhered to, until a suitable opportunity offers to remove the bones, when they are removed to China for future burial.—*Mrs. Wilkin- son's California Sketches.*

PAPAL ENTERPRISE IN LOUISIANA.

"THE Rev. Dr. Chaplin, of the Baptist Training-School for Colored Preachers, says in a late report: 'The Catholics have imported sixty priests into the State of Louisiana to educate the blacks. This looks like work. These sixty act in concert; move together like one man—one man trained and armed for service. The Council at Baltimore adopted the programme sent from Rome, and have already embodied their resolution in living men.'"

To this the *Christian Intelligencer*, Reformed Dutch, says: "All honor to the Romanists! Their zeal is most praiseworthy. While other bodies are thinking or discussing, Holy Mother acts. She has no scruple about black skins, or red, or white. In this matter she is truly catholic, ready to operate anywhere, among any class, and in any way, so as to gain her end. We do not think her proselytism will amount to much among the freedmen as a race, for they will prefer the freer and more demonstrative worship of Protestants; but the effort shows a degree of interest and activity worthy of Rome's palmiest days. And while she continues to have so much life and energy in her missions, she can afford to smile at the hopeful vaticinations of decay founded upon the loss of her temporal power. A Church which, whatever her corruptions, has enough truth and life to maintain numerous and costly mis- sions, can not die."

[In America there is a free and open sea in which all may fish for men. Our wish is that the best fishermen may be instrumental in saving the most souls. Let all religious denominations put away prejudice, and vie with each other in educating, elevating, and spiritualizing both black and white, and God will bless their efforts.]

THE NATIONAL DEBTS OF THE WORLD. The statistical tables, as just published by the British Government, give the subjoined list of the principal national debts, with the date to which each is made up. The calculations are made on a gold basis.

Date.	Nation.	Total Debt.	Per Head of Population.
1865	Great Britain	\$4,041,446,640	\$138
1865	United States	2,794,867,780	88
1864	France	2,685,444,925	72
1861	Russia	1,318,048,280	17½
1864	Austria	1,235,472,370	33
1864	Italy	881,195,195	51
1865	Spain	819,637,555	40
1864	Holland	423,012,115	115
1864	Turkey	247,500,000	7
1864	Prussia	208,258,535	10½
1864	Portugal	208,257,000	47½
1864	Belgium	126,780,080	96½
1861	Brazil	114,618,580	11½
1863	Denmark	53,550,795	20
1863	Greece	53,536,880	48½
1863	Peru	34,288,290	13½
1865	Chili	14,667,500	8½

IRA ALDRIDGE,

THE COLORED TRAGEDIAN,

WHOSE death in Poland has been recently announced, was born in New York city about the year 1820. His father was a colored preacher in Church Street, and intended Ira for the ministry. With that view he sent him at an early age to England to be educated. The youth, however, did not take kindly to the course marked out for him, but having very early imbibed a taste for theatricals, turned his attention to the stage. He took an active and prominent part in juvenile performances, and at length made his appearance on the public stage. His first performance before a popular audience was at the Royalty Theater, London, where he at once made a favorable impression. The subsequent career of the young African Roscius, as he was called in England and other portions of the United Kingdom, was attended with the most brilliant success. He became a recognized favorite, and was held to be one of the most faithful delineators of the immortal Shakspeare, always commanding crowded houses at the leading theaters of London. As he advanced in reputation he ventured to appear in various Continental cities, at first playing with an English company; but difficulties arising in various ways, he determined on trying the novel—but as the result proved successful—experiment of giving his own Shaksperian parts in English, while the native company used their own language. A complete master of his art, Ira Aldridge was enabled to accomplish in this way what was never attempted before. Throughout the chief capitals of Europe his ability was acknowledged by all; decorations having been conferred upon him by various sovereigns, as well as the more substantial testimonials of crowded audiences. He was remarkably popular in Russia, and very successful at Constantinople, where he performed with a French company. In the Ottoman capital theatrical celebrities but rarely appear. Ristori, who was there some time since, was considered to have made the greatest hit, but it fell very much short of Ira Aldridge's success, as was attested by the crowded houses that witnessed his performances up to the last. This was a striking appreciation of the force of his genius from a very mixed population, such in fact as is only to be met with in the city of the Sultan. In Germany, Aldridge was looked on as performing the Shaksperian characters with marked ability, but in England has not often appeared in any of Shakspeare's plays, except Othello and the Merchant of Venice. In Zanga, Orozembo, Zorambo, Rolla, Hugo (in the Padlock), and other characters, the physiognomy of which suits his color, he was thought to display rare excellence. He was also a good comedian. In his personations of character he appeared to realize with remarkable exactness and vigor the conception of the dramatist. His style at once seized on an audience and commanded their closest attention and admiration. Perhaps his best rôle was Othello, whom he is said by our consul at Odessa to resemble much in character and demeanor.

IRA ALDRIDGE.

Some years ago a law procedure, affecting his domestic relations, attracted much attention in London. His wife was a white woman. At the time of his death he was fulfilling an engagement in Poland. He was engaged to appear at the Academy of Music, in this city, during the month of September.

The head of this eminent colored man was very much larger than the average size for a white man, which, as is generally known, is above the negro type of head. According to the measurements sent us by the American consul at Odessa, it was about twenty-three and a half inches in circumference. Referring to our portrait we find the indications of an excellent combination of the organs, a fair balance of the intellectual faculties. The knowing organs were predominant, Individuality, Eventuality, Language, Form, Locality, and Time were large, and gave his mind the tendency to inquire, examine, observe, and hold in memory tenaciously whatever he deemed worthy of attention. The high forehead denoted a sympathetic nature and considerable ability to read character. Large Human Nature and very large Imitation qualified him to enter into the spirit of dramatic impersonation, and assume with unusual facility the various phases of human character as he understood them. He had also much force, resolution, and positiveness; much more fire and pluck than is a dispositional characteristic of his race. The width between the ears exhibits a large degree of Destructiveness, while the facial indications of Combative-ness show a good degree of it. His social nature was strong, evincing warmth of affection for friends, children, and home. His interest in woman was far from weak. In fact, we are led to believe that he excelled most in those plays which represent life as associated with the domestic circle, or wherein earnestness of affection and vigor of action should characterize the performance. He evidently possessed large Approbativeness; but his Se-

cretiveness and Caution being also strongly marked, rendered him prudent, careful, and shrewd in the prosecution of whatever ambitious designs he may have cherished. Commendation—the applause of the world—was acceptable to him, but he was not the one to manifest any special desire or appetite for it. He picked up information rapidly in his associations with the world, and had much facility in adapting what he learned to his needs and purposes. He did not go through the world blindfold, but kept his eyes and ears open, gathering much from experience that was profitable. The negro is physiognomically striking, and evidences the directness of his origin. His superior talents furnish a strong testimonial in favor of those who advocate negro equality; but unfortunately his, like that of Fred Douglass, is an isolated case, and proves only rare possibilities or outcroppings from the common stock. Morally considered, Mr. Aldridge possessed a very happy organization, such as is desirable in the case of any one, white or black.

ACQUISITIVENESS VS. BENEVOLENCE.—No. 1.

BENEVOLENCE may shake her pure hands and say: "Not a drop of the blood of Acquisitiveness runs in my veins! Acquisitiveness is of the earth, earthy! I am from heaven." And this she may say, not in the spirit of Pharisaism or pride, but in ignorance of the fact that Acquisitiveness has a strong arm on which she may lean, and coffer, full of silver and gold, into which she may put her hand and take out what she will; for Acquisitiveness—if well brought up and properly trained—is never stingy, and never locks up his coffers and puts the keys in his pocket for fear his sister Benevolence will help herself too freely, but puts the keys into the hands of Benevolence, and tells her to grow strong and flourish on his bounty.

The mutual relation of Acquisitiveness and Benevolence, and the value of each to the other, has not been sufficiently considered or frankly acknowledged, even by firm believers in Phrenology.

Benevolence is supposed to be—and is—one of those "bumps" that allies man to the skies; while Acquisitiveness is supposed to be—but is not—one of those "bumps" that binds a man fast to the earth, and that ought to be torn out of the brain, root and branch, and worked at with all the patience that is sometimes spent on Canada thistles, that it may be utterly exterminated.

"Look," says the man of large Benevolence, "look at that man, look at his palace, look at his carpets, look at his furniture, look at his paintings, look at his equipage, look at his selfishness, look at his Acquisitiveness! He does not give away half as much as a poor man. Missionary societies, benevolent societies, orphan asylums, homes for the aged, hospitals for disabled soldiers—all these have to live without him. The great founders of good institutions for the race never get a dollar out

of him. He spends all his money on himself. He keeps it all within the inclosure of himself, and the secret of it all is—his *organ of Acquisitiveness*. If there were no such organ in the brain, how much nobler men would be!" Stop, O man of Benevolence, for those who hear you talk, add, as a natural inference from what you say, that God is the author of evil. But he is not. He has never put into any man's brain an organ that has not a priceless value. Every organ has its uses, and its noble uses, too. And when you say that the secret of that man's selfishness is his organ of Acquisitiveness, you slander the works of the Creator.

You have a child—a pampered, spoiled child—you have made him so, and yet you look at him and say: "The Creator made a great mistake in creating children. There ought to have been no such period in the life of the race as childhood. There never ought to have been any children—there never ought to be any more, for children are a great curse to themselves and everybody else. Look at my child." Now your child fails entirely to show how divine a thing a child may be made, and that man's Acquisitiveness fails entirely to show how divine a thing Acquisitiveness may be made. Both have been wrongly, wretchedly trained, and yet both are needed in the world.

If children should cease to be, where would the race come from, in future?

If the organ of Acquisitiveness should be blotted out of the human brain, where would Benevolence get money to spend? Nowhere. Her income would stop—her resources would fail. She might continue to walk the earth with love in her eye, and pity in her face, and kindness in her touch, but what could she do? Could she provide for the necessities of the sick and the suffering? Could she say: "My Acquisitiveness—or the Acquisitiveness of others—has acquired a large property, that I, Benevolence, may do a large work in the world, and now I will satisfy your hunger and your thirst, and clothe you, that you may not shiver with the cold?"

Could she do all this? No. All she could do would be to reach forth her hands, and with pity in her eye, but no money in her purse, say: "Depart in peace—be ye warmed and filled."

Thus her work on earth would soon cease to be a great work or a useful work, for pitiful looks and pitiful words are often but airy nothings in the great sea of human suffering. Money, however much despised by some, is a great, substantial good, and blessings on the organ of Acquisitiveness that knows how to make it.

Go on, oh, most useful organ—expand, strengthen, and incite the man, in whose brain you live, to patient, persevering, money-making toil, that Benevolence may not work in vain, and spend her strength in useless efforts, or still more useless desires.

And Benevolence—may she understand how great would be her poverty, how mocking and tantalizing her warmest impulses, and how wearisome and unsuccessful all her undertakings, if she could not look, for help, to Acquisitiveness.

OLD CRELE.

THROUGH the kindness of our esteemed correspondent, Mrs. Helen J. Underwood, Portage City, Wisconsin, we are enabled to lay before our readers a short sketch of Joseph Crele, or "Old Crele" as he was called, who was the oldest man of his generation, being one hundred and forty-one years of age at the time of his death, which occurred last year at his home in Caledonia, near Portage City, Wisconsin.

"Old Crele" was of French origin, and was born in the year 1725. The place of his birth is somewhat obscure, one authority placing it in Montreal, and the other near the city of Detroit. How his youth and early manhood were spent is unknown, or unrecorded, if known. About the year 1755 he visited New Orleans, and while there he married his first wife, he being then thirty years old. He lived in that city for many years, and afterward removed, with his third wife, who was an Indian woman, to Wisconsin, where he lived more after the fashion of his Indian wife than of civilization.

A lady, a near neighbor of "Old Crele," thus describes his habits: "He lived only a short distance from our home. I never could talk to him much, as he spoke the French and Indian languages only; but often saw him chopping wood, carrying water, and working in his garden. This was but a few years ago. His daughter, Madame Po Guetta, was then seventy years old, and she, his youngest daughter by his Indian wife, said he was not married to his first wife until he was thirty years old. He could not, I am sorry to say, be cited as a living testimony of the life-preserving benefit of temperance, save, perhaps, his freedom from the Anglo-Saxon strife after wealth, and the mental exhaustion which shortens so many lives. He lived much as do the Indians of this section. He smoked almost incessantly, and in his later life, at least, was not strictly a temperate man as regards drink. But he seldom or never got drunk. He did not seem to die of 'old age,' even at his advanced period of life. He suffered intense pain, so much so, that he begged of his friends, to kill him, in order to be relieved from his great sufferings."

Up to within a period of ten years ago he appears to have preserved excellent health. The Mad son (Wisconsin) *Argus* thus speaks of him at that time:

"There is an older citizen than Peter Nassau, of Pomfret, Vt., in Wisconsin. He is called 'Old Crele,' and was born in the city of Montreal one hundred and thirty years ago. His memory is distinct for a period of one hundred and seventeen years. He was married at New Orleans a century ago, and now resides with one of his grandchildren, who is upward of sixty years old. He is still hale and hearty, and does not appear to be over seventy."

MANY are constantly deceiving themselves in the attempt to pursue a life of rigid probity, inasmuch as they mistake the love of virtue for the practice of it.

DEACON PILLSBURY'S ORCHARD. CONSCIENTIOUSNESS DIRECTED.

DEACON PILLSBURY was not only a deacon "in good and regular standing" in the Church, but a very good man. His seat in the sacred temple was rarely empty. He never stayed at home for *bad weather*, and whenever the bell rang of a week-day evening, to call the people to praise and prayer, the deacon was often heard to say to his sons: "Come, boys, we must hitch up and go to meeting. I'll never do to tell the good Lord, at the last day, that we lived a mile and a half from the church, and so couldn't go up to his courts, for he'd turn round and ask us how many shows and such like places we went to, and then we'd be pretty mum, I'm thinking."

One of the boys—either Matthew or Arthur—always started for the barn at once, convinced by the sound argument, although they did wish sometimes that "father wouldn't have quite so many crotchets in his head, or that he'd give up that one about going to meeting all the time."

Deacon Pillsbury's goodness did not, by any means, all lie in going to meeting. He always tried to do not only about right, but *quite* right. He never failed to pay his debts, to the last cent, and he gave all he could to charitable objects. More than this, he tried, as he said, "to set a good example before everybody, and not let his preaching be better than his practice." He succeeded pretty well, but, unfortunately, he not only "set a good example before everybody, but a very fine orchard, too, and while he prayed most earnestly, "Lead us not into temptation," and would not, for all the orchards in the world, have had anybody else led into temptation, there hung from rich green boughs in his slightly orchard, golden fruit, and boys, without the help of any serpent, plucked and ate. At first they were firm in their steadfastness, and only stood and looked over the wall, and wished they owned *such* an orchard, and had nothing to do but eat apples. This, however, did not last long, for *looking* is but a step from *yielding*, and over the wall and up the trees they went, and gladdened their eyes and satisfied their stomachs with what was not their own. This always stirred up the Deacon to discourse upon his favorite theme, *justice*, and to do all he could to execute justice upon the boys who carried off so many bushels of his apples. "The great trouble with the world is that there's too much *mercy* in it," he said, "and so everything is at loose ends." With this firm conviction, no boy once in his grasp was released until well shaken or well whipped; but still the apples went off as fast as ever. None of the boys on whom "*justice*" was executed were reclaimed.

Now it happened one day that Harry Drew, a boy of honest intentions, but with a sad weakness for apples, came along by the orchard. "Oh, those elegant, bright yellow apples!" he exclaimed. "Why, I never knew that Deacon Pillsbury had such apples! How I wish he'd give me some; but I never begged for apples,

or anything else in my life, and I won't turn beggar—I'll go without them first. "Conscience and pride triumphant for a moment. Harry Drew went on a few steps, but the sun suddenly struck the apples in such a way as to give them added glory, and the temptable boy turned back to give them another look. And then the poor young son of Adam, although too proud to "turn beggar, was not too honest to turn thief. "It's the first time, though," he said to himself, "the very first time I have ever stolen anything, and it seems to me I can't do it, and yet I must have some of those apples."

He delayed no longer, but jumped over the wall, and taking off his coat, prepared to climb one of the best trees. But the devil, although a good hand to get people into trouble, is very slow to help them out of it, and he didn't proffer his services to Harry Drew when he most needed them. No. After helping him over the wall, he left him to the "justice" of Deacon Pillsbury, who, just as the transgressor was about to ascend the tree, appeared in sight, and at once caught him.

"Now, you young thief!" exclaimed the Deacon, "you'll spend one night at least in my barn. I shall lock you in there, and keep you till to-morrow morning, and feed you on homelier fare than apples."

"Oh, don't shut me up—don't," begged the boy. "My father'll find out what I've done, and he'll whip me terribly."

"I can't help it, my boy. I must do you justice. There's no use of your begging so, for I can't let you off. You have reason to be very thankful, you young scapegrace, that I punish you so lightly."

"Oh, please let me go, sir. It's the first time I ever stole anything, and I'll never take a thing from you again, or from any one else, as long as I live."

In the midst of the scene Matthew Pillsbury suddenly appeared, and as soon as his father's eye lighted on him, he said: "Come, Matthew, help me take this boy down to the barn. He's to spend the night there. It's no more than common justice."

"Well, he's been in bad business," replied Matthew, "and I'll do as you tell me, father, if you insist upon it, but let me speak to you first. I don't believe that this boy has been in the habit of robbing orchards, and I've never seen him around among other bad boys, and there's one good thing I know about him—he's kind to his sick mother. Your name is Harry Drew, isn't it?" added Matthew.

"Yes, and it's the first time I ever stole anything."

"Well, father," continued Matthew, "justice is a good thing, I know, but mercy is good too; so, suppose we let Harry go for once, and not shut him up in the barn, or expose him to his father either. Let's try him."

Good Deacon Pillsbury could hardly reconcile it with justice, but Matthew's remark—"Justice is a good thing, I know, but mercy is good too"—had made him waver, and he concluded to let him go.

"Thank you, sir—thank you," said the boy,

as he wiped his eyes on his coat sleeve and hurried off.

"Now, father, I think we've done what's for the best—don't you?" remarked Matthew, while he stood and watched Harry Drew hurrying down the street. "You see he's a young offender, and so much disgrace might be very bad for him. Mercy sometimes does a boy a great deal of good. And there's another thing, father, that we ought to think of. Our orchard is *very tempting*, and a boy has to be pretty strong in his honesty not to jump over the wall and help himself. We've got a right to have an orchard, I know, but then we must remember that it's a great temptation to boys. I've been thinking of another thing, too, and if you won't be offended, father, I'll tell you what it is. I've been thinking that we have more than our share of those apples."

Deacon Pillsbury had begun to come under the influence of Matthew, but at this crisis he exclaimed: "More than our share of those apples! What do you mean, Matthew? I'd like to know if they're not all *ours*?"

"No, sir," replied Matthew, respectfully, "I can't think so. That word '*ours*' makes a great deal of stealing in the world, father, and if people would only be more generous, and make it a matter of duty to give away as many of their apples and as much of everything else as they could possibly spare, there would not only be better times among the poor, but more honesty too."

"Well," replied the Deacon, with a half-ashamed look, "we won't gather as many bushels of apples this year, and we'll have it understood that, if boys will come and ask for apples instead of stealing 'em, they shall go away with their pockets full, at least."

And the stern lover of justice added—but no one heard it, for he said it to himself: "Who'd have thought that so old a man as I would have to learn of such a stripling as Matthew what mercy is? The boy don't know how much he has taught his old father. Well, after this, I think I shall mingle a little more mercy with my justice, and I'll give away more, that I may tempt boys less."

HEREDITARY SIMILARITIES.—A subscriber, residing at Trenton, N. J., writes us the following:

"There is a lady living in this city with a family of grown-up children. On the 18th of last September, about 2.30 A.M., this lady was awakened by a loud knocking at the door. She was not expecting any one at the time, and was at a loss to know who it was. Before opening the door, however, she decided to ask who was there and what was wanted at such an unseasonable hour. On receiving an answer from the party outside, she remarked to her daughter that it was either her nephew or brother, because she knew his voice! It proved to be her nephew, a young man about twenty years of age, whom she had *never seen before*. She had not seen his father for twenty-five years."

THE CLASSICS VENTILATED;

A TALE OF INDECISION.

In tempus old a homo lived
Qui loved puellas deus;
He ne pouvait pas quite to say
Which he amabat mieux.

Dit-il lui-même un beau matin,
"Non possum *both* avoir;
Sed si malim Samantha Ann,
Then Kate and I have war!"

Samantha habet argent coin
Sed Kate has aureas curls,
Et both sunt very agathal
Et quite formosae girls."

Enfin the youthful anthropos
Philown the duo maids
Resolved proponere to Kate
Devant cet evening's shades.

Procedens then to Kate's domo,
Il trouve Samantha there
Kat quite forgets his late resolve—
Both are so goodly fair.

Sed kneeling on the new tapis
Between puellas twain
Coepit to tell his flame to Kate
Dans un poetique strain.

Mais glancing ever et anon
At fair Samantha's eyes
Illae non possunt dicere
Pro which he meant his sighs.

Each virgo heard the dernier vov
With cheeks as ronge as wine,
And, off'ring each a milk-white hand
Both whispered, "*Jch bin deit!*"

DON'T DO IT

THERE are some things that it is both unpleasant and unprofitable to do. In every community there are thriftless, shiftless people who are always "short," and always anxious to borrow. Some of these borrow money to pay borrowed money, and they are then, to use a street phrase, "all right" until they become sick, or their business fails, or they die; then somebody has to lose. I once asked a man of this stamp who wanted to borrow twenty-five dollars of me, "Why don't you live on mush and milk one month, and thereby get square with the world, and then live from week to week on your own money?" His reply was: "I expect when I die somebody will have to lose by me, and it might as well be you as anybody else." Pleased with his frankness I made the loan, and was seven years getting it back.

It may be accepted as a settled fact, that nine out of ten who are in the habit of asking for small loans are entirely unworthy of trust, and either do not intend to or do not expect to pay, or they are careless, shiftless, and unable to pay, and therefore make no effort. Trusting such persons is a premium on dishonesty and laziness, and should not be practiced. If the pockets of everybody could be closed against such unworthy borrowers, it would be to them a much needed stimulus to personal exertion, and none others would be half so much benefited thereby as the thriftless delinquents in question. Borrowing, moreover, is a mean

business, and he who practices it long comes to feel mean and unmanly. A man borrows a few dollars, and if he fails to pay at the time agreed he feels depressed and inclined to shun his creditor, or if confronted with him, he is tempted to frame some false excuse, and thus little by little every vestige of manliness and moral courage is frittered away. For two dollars I have known a borrower avoid his helper and friend, and for a year stay away from church even, lest he should meet him. If you want to make an enemy of a man, lend him money without security, especially one of those men who are unworthy of credit, and the thing will be done. There are some persons who will get up a plausible story about some prospective business matter by which they are to realize something handsome. This will be mentioned several times, and thereby a hopeful interest in the enterprise will be awakened. This being done with twenty or perhaps fifty persons, there is a large field ready for reaping. Some fine morning the person will come rushing in, saying the papers are just being drawn or the affair is now to be consummated, and it is found that just five dollars or ten dollars more than the person has are wanted to finish up the matter. Of course the money is loaned, but is to be returned in a couple of days. But days and weeks roll by, and months and years accumulate, and neither the money nor the face of the friendly deceiver is seen. It generally turns out that twenty or fifty persons have been thus swindled, and the perpetrator has gone to Mexico, or to parts unknown.

Another unprofitable thing to do is to volunteer counsel and assistance to others. As a general thing one gets not only no thanks, but censure and unpleasant responsibility, if not the enmity of his old friends. If you recommend to another a person to act as a clerk or workman, you are tacitly held responsible for a lifetime of the most faithful service. If you have a bootmaker that fits your feet and makes work that lasts and suits you, never officiously advise anybody else to go there. If your tailor gives you a good fit at reasonable figures, tell your friends who makes your clothes, if they ask you, but do not try to influence them to employ him. If you know a man who sells first-class coal and gives a full ton, be thankful, but say nothing in a direct way to induce others to buy at the same place; and last, but not least, when you find a person whom you think just the one for a life-companion, secure the prize if you can; but on no account, without a special request, undertake to make matches for others.

I have in nearly every way possible tried to aid my acquaintances, but I declare that I have lost more friendship than I have gained by it. Mankind do not like to be advised, but they do like to have some one to cast blame upon, in case of fault or deficiency. "The woman THOU GAVEST to be with me, *she* gave me, and I did eat," was a special plea, a mean and cowardly, as well as a thankless reply, but the

CHARLOTTE BRONTË.

same spirit exists in the sons of Adam to this day. Men are ungrateful, and generally do not thank others for advice or assistance.

Be just, and you will be respected. Help the needy, but do not expect thanks, or hope thereby to secure friends. PERSONAL EXPERIENCE.

CHARLOTTE BRONTË.

THE life of this remarkable authoress is one which, in the recital of its affecting details, enlists the deepest sympathies of the auditor. Her pathway lay, not through smiling meadows, beside tinkling streams, and over beds of roses, but it was thickly beset with the thorns of care and sorrow. From her childhood to within a year or two previous to her death she knew little repose of mind, little of body. She was born at Thornton, Yorkshire, England, in 1816. Her father, Patrick Brontë, was born in Ireland. Early in life he maintained himself independently of his father's assistance by teaching school, and succeeded in obtaining a thorough education by his own exertions. He entered the ministry, and settled in Thornton, near Bradford, as curate, where he became acquainted with a Miss Branwell, who soon afterward became his wife. Six children were the fruits of this marriage, of whom Charlotte was the third. They were all of very delicate physical constitution, and of unusual intellectual power. Soon after the birth of the sixth child, the only boy, Mrs. Brontë died, and not long afterward the two eldest children, Maria and Elizabeth, died. They had been sent to a seminary for the training of the daughters of clergymen, where the discipline proved too severe for their weak systems. Charlotte was only eight years of age then, but was deemed by her father sufficiently advanced to attend the same school. She remained there, however, but a year, the treatment of the institution

proving injurious to her health. A few years after this she and her next sister, Emily, went to a foreign school at Brussels, where they made rapid progress in their studies, and after a short stay there returned.

She then determined to open a school at Haworth, England, but after receiving only assurances of good wishes and no pupils, and despairing of success, the project was abandoned. Thenceforth she, together with her sisters Emily and Anne, remained at home, dividing her time between household cares and literary studies.

Thus were two years spent, at the end of which time the trio put forth a volume of poems, under the names of "Currer, Ellis, and Acton Bell." The publication was at their own risk, but its sales were very limited. They did not despair, however, of success. Their next attempt was in prose, the three sisters each writing one tale, hoping that the three would be published together. The result was, "The Professor," by Charlotte; "Wuthering Heights," by Emily; and "Agnes Grey," by Anne; the names assumed in the volume of poems being still retained. But Charlotte could not obtain a publisher for hers, while the two latter were published shortly after they were offered. But this was far from discouraging the noble woman. She next wrote "Jane Eyre," which was published in 1847, and secured for her at once a high position in literature. This work was translated into most European languages, and was dramatized both in England and Germany. The incidents and characters of that remarkable novel are largely drawn from the recollections of the ill treatment she received in her youth at school, and from the effects of which her two sisters had died. The influence of this bitter experience lives more or less in all her writings, but especially in the somber fascinations which brood over the pages of "Jane Eyre."

The hard-won success achieved by the publication of "Jane Eyre" was followed by severe afflictions. Her sister Emily died December, 1848, and in less than six months Anne followed, viz., May 28, 1849.

In Oct., 1849, Miss Brontë published her second novel, "Shirley," which hardly made good the expectations raised by "Jane Eyre." In 1852 her "Villette" made its appearance, which met with almost unbounded approbation. Her last work was written in the intervals of a care-worn life and a failing health.

About this time Miss Brontë was surprised by a declaration of love from Rev. Mr. Nichols, her father's curate, who had known her for a long time. But her father objected to the match; she acquiesced in his judgment, and Mr. Nichols resigned his curacy. In the spring of 1854, however, Mr. Brontë took a more favorable view of the matter; Mr. Nichols was reinstated in the curacy, an engagement formed, and the marriage took place in June, 1854. The newly-married pair resided at the parsonage with her father. She was now happy; but the cup of joy was soon to be snatched away from her thirsty lips ere she had more than fairly tasted of its sweetness. She died March 31, 1855.

CHOICE NEW CROP TEAS.

THE SHIP "GOLDEN STATE" has arrived from Japan with 22,000 half chests of the finest Japan Teas to the GREAT AMERICAN TEA COMPANY, Nos. 31 and 33 Vesey Street, New York.

These Teas by the ship "Golden State" were purchased direct from the Japanese factor, and in consequence of the magnitude of the transaction, were transferred at about half the usual commissions. This is the largest cargo ever imported from Japan by about seven thousand packages. By this operation the GREAT AMERICAN TEA COMPANY put these Teas into the hands of the consumers with but one very small profit—an achievement in commercial enterprise seldom if ever before attained. These Teas are acknowledged, both here and in Japan, as being the finest full cargo ever exported from that country.

Also the ship "George Shotton" has arrived from Foochow with 12,000 half chests of the finest Foochow Oolong Teas.

The cargo of the ship "George Shotton" is the second in size that has ever come to this port from Foochow (which is the finest Black Tea district in China). These are the *finest first-picking contract Teas*—rich, fresh, and full-flavored. This will enable us to supply our trade with uniform fine-flavored Teas for a long time to come. These Teas were contracted for before the picking. Contract Teas are always far superior to any others. A large proportion of contract Teas of first pickings go to the European markets. That is one of the principal reasons why the English people consume *three* pounds of Tea, on an average, to *one* in an equal number of population in the United States. Heretofore, the United States have been compelled, to a considerable extent, to put up with lower grades of Teas and later pickings. This unfortunate result for the consumers of this country has been brought about heretofore in consequence of the many and great profits of the "middlemen" in the Tea trade. But this has been in a great measure remedied by the establishment of the GREAT AMERICAN TEA COMPANY, and their system of furnishing Teas to the consumer direct from the Chinese and Japanese factors, thus saving them many intermediate profits.

The receiving of these two large cargoes by the GREAT AMERICAN TEA COMPANY for their own trade is acknowledged by the mercantile community as the largest transactions ever made in this country. They were deemed of so much importance, that the fact was telegraphed to all the principal commercial papers in the country by their correspondents here, and thus appeared as an important news item throughout the United States at the same time.

The importance of these transactions in this market is thus noticed by the oldest and most respectable commercial paper in this city—the *New York Shipping and Commercial List*—which says: "The trade have again been startled by the arrival of two large cargoes of Teas to the GREAT AMERICAN TEA COMPANY; the ship 'Golden State,' from Japan, with 22,000 half chests; and the ship 'George Shotton,' from Foochow, with 12,000 packages." And in another place it says: "The recent large operations of the GREAT AMERICAN TEA COMPANY have taken the Trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 12,331 packages Black, and 23,849 packages Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands."

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivaled for fineness and delicacy of flavor.

This is the season of the year when we receive new Teas, and, consequently, our customers will not fail to notice a marked improvement in freshness from this time forward.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small

additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well), can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey Street.

Parties sending Club or other orders for less than thirty dollars had better send post-office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the custom-house stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the List of Prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70 c., 80 c., 90 c., best \$1 per pound.
MIXED (Green and Black), 70 c., 80 c., 90 c., best \$1 per pound.

ENGLISH BREAKFAST (Black), 80 c., 90 c., \$1, \$1 10, best \$1 20 per pound.

IMPERIAL (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.

YOUNG HYSON (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.

UNCOLORED JAPAN, 90 c., \$1, \$1 10, best \$1 25 per pound.

GUNPOWDER (Green), \$1 25, best \$1 50 per pound.

COFFEES ROASTED AND GROUND DAILY.

Ground Coffee, 20 c., 25 c., 30 c., 35 c., best 40 c. per pound. Hotels, Saloons, Boarding-House Keepers, and Families who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30 c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50 c. to \$1 per pound by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,

Nos. 31 and 33 Vesey Street,

Post-Office Box, No. 5,643, New York City.

The GREAT AMERICAN TEA COMPANY (established 1661) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, New York City, Orange Judd, Editor.

Christian Advocate, New York City, Daniel Curry, D.D., Editor.

Christian Advocate, Cincinnati, Ohio, J. M. Reid, D.D., Editor.

Christian Advocate, Chicago, Ill., Thomas M. Eddy, D.D., Editor.

Evangelist, New York City, Dr. H. M. Field and J. G. Craighead, Editors.

Examiner and Chronicle, New York City, Edward Bright, Editor.

Christian Intelligencer, E. S. Porter, D.D., Editor.

Independent, New York City, William C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., D. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

CLUB ORDERS.

Edwards, St. Lawrence Co, N. Y.,
June 8, 1867.

To the Great American Tea Company,

31 and 33 Vesey Street, New York.

Dear Sirs: I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were nearly out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other and oblige

Your obt. servant,

DAVID C. McKEE.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name, either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

Post-Office orders and drafts made payable to the order of the GREAT AMERICAN TEA COMPANY. Direct letters and orders to the

GREAT AMERICAN TEA COMPANY,

Nos. 31 and 33 Vesey Street, New York.

June 6—14

Post-Office Box, 5,643.

THE KITTATINNY BLACKBERRY.

THE KITTATINNY BLACKBERRY.

HAVING always taken a deep interest in fruit culture for well-known physiological reasons, we esteem it a pleasure to bring to the notice of our readers any new and worthy developments in that department of gardening. In 1853 we were the first to announce, editorially, with engraved illustrations, the excellence of that now well-known variety of blackberries the Lawton, repre-

senting it in beautiful and life-like cluster on the JOURNAL page, which engraving was afterward transferred to nearly all of the agricultural journals in the United States. Even the wild blackberry, at the present day, needs no voice or pen to extol its merits. People universally esteem its peculiar flavor, and the market never suffers a glut, in its season, from a lack of appreciative purchasers of the sable fruit.

Coming in after the strawberry, to fill the interval between the raspberry and the grape, the blackberry

preserves unbroken the chain of small fruits which in the heat of summer and early autumn are a hygienic necessity. The New Rochelle or Lawton, Wilson's Early, and the Dorchester varieties have, until very recently, commanded the attention of cultivators of the blackberry. These varieties, and one or two others not generally known, are the few gratifying results of attempts made by many horticulturists to domesticate the wild plant. The Lawton has been pronounced the "king" of blackberries, and is the most extensively cultivated of the varieties already mentioned. Very recently a new species, called the "Kittatinnny," from its having been discovered growing wild near the Kittatinnny Mountains, in New Jersey, has been developed by careful culture to a degree of productiveness and quality that even the Lawton has been pronounced to be scarcely its equal. The Kittatinnny berry, when fully matured, attains a size equal to that of the Lawton, but exceeds it in sweetness and general flavor. The Lawton, in some soils and sections of country, is said to be a treacherous berry, occasionally offering a flavor absolutely delicious, and sometimes cheating an expectant palate by a peculiarly unpleasant sourness, while the berries present the same glossy jet. A Kittatinnny, on the contrary, is ripe when entirely black, and when ripe lusciously melts in the mouth. In appearance the bush resembles the Lawton, although the leaves are more coarsely serrated. Our illustration represents a cluster of Kittatinnny blackberries as taken from the bush. This fruit has some advantages which commend it at once to the gardener. One is, that it is catable before it is "dead" ripe, and therefore is especially desirable for market purposes. Another is, that the crop ripens gradually, so that the season of the fruit is agreeably prolonged. It also can be grown successfully in our most northern States.

A few words with respect to its culture, although that can not be said to differ materially from the production of blackberries in general. A rich sandy loam drained so as to prevent an excessive accumulation of water is probably the best soil. The plants may be set in rows from six to eight feet asunder, the plants themselves being six or eight feet apart. A small trellis of wood or wire should be erected for the vines to run on. As the cane which bears fruit one season dies before the next, it is well after fruiting to nip off the old canes so as to produce a more vigorous growth in the new sprouts for the following year.

In the fall the roots of the plants should be fertilized with compost, and in the spring mulching will be found serviceable both for producing an early growth and for keeping down weeds. It has been found to make but little difference with the health and yield of the plant whether it be planted in the autumn or in the spring, provided that care is taken in the process of planting, and the soil is sufficiently fertile.

It is thought by horticulturists that the Kittatinnny can be still more improved and brought to a degree of perfection which shall even rival the strawberry in delicacy, quality, and healthfulness. As with the Lawton, this new species thrives without especial regard being paid to its cultivation, and will grow luxuriantly wherever any of the common varieties of the blackberry can be produced. It is claimed that an acre of ground may be made to produce the worth of from \$1,000 to \$2,000 a year of the Kittatinnny berries. There can be no doubt of its excellence or of its profit under suitable management.

We are indebted to Mr. E. Williams, of Montclair, N. J., for the use of the engraving with which our article is illustrated. For the convenience of our distant readers who may wish to grow this new variety, we propose to furnish plants, by mail or express, at the rate of \$9 a dozen. Or we will send six copies of the JOURNAL a year to new subscribers at \$3 each, and give as premium a dozen Kittatinnny blackberry plants—i. e., two plants, which sell singly at \$1 each—to each subscriber. This would enable persons to start a nursery at small cost, and aid in the dissemination of a very useful and healthful fruit.

ABOUT SMOKING.—Napoleon never smoked; and Goethe says, that a man of true genius can not cultivate both science and his pipe together. There may be a few illustrious exceptions; but they only prove the correctness of the rule.

INTRODUCTION OF MIND INTO ANIMALS.

I BELIEVE there are but three imaginable processes for the introduction of incipient mind, or intelligence, into animal organization. The first is by direct creative implanting or bequeathment of mind into each individual at a certain stage of fetal growth, in which direct creative power and superintendence would have to be exercised for each individual introduction in man alone, about once in every minute—since the human births and deaths in this world average about one each per minute—and correspondingly the fetal embryo averages a particular stage of development about equally frequent. Thus, without counting the almost infinite host of lesser animals in the scale of organization, all possess some share of the sentient or intelligent principle, and constantly require creative superintendence for their share. All such routine of constant creative attention for this world only, would seem to limit creative modes for the introduction of minds to imperative and constant supervision, which renders such supposed processes as incompatible with infinite adaptability or choice of methods.

The second supposes that mind, or intelligence, pervades all space (which is scarcely plausible), and that brain organization, when it reaches a certain stage of development in all animals, as necessarily absorbs a proportionate amount of this universally pervading mind as the variously organized porous sponges absorb corresponding amounts of water when immersed in that fluid. This doctrine would leave no individuality to mind after separation from the body, all being again absorbed or returned to such all-pervading mind, which is scarcely admissible.

The third and last supposable method is by transmission or inheritance, as co-working in the designs and order of progression in creative laws. This does not define the mode of introduction of mind into the animal organization. Such transmission or inheritance of mind I consider to be definitely derivative, by the union in compound brains of all the incipient minds of animalcules, whose bodies are sacrificed in building up all compound animal organizations. Thus by this formulative process, minds may be indefinitely accumulated in compound animals in proportion to brain development, without further creative superintendence than such infinitesimal formulative process or the laws of development engender; and thus is simplified the otherwise direct and complicated method of constant creative superintendence, and it is brought in harmony with all the observed simple constructive processes of tangible nature.

In either case there is a positive affinity between mind and brain organization, which holds the two together, and thus as clearly proves the first to be material as we know the second is, or else there could be no harmonizing affinity and retained associate reciprocal action, as it is incompatible with matter to hold in abeyance that which is not matter also. Such evident affinity between mind and brain largely increases the probabilities of animalcule sentient incorporation into compound brain organization, as the animalcule bodies, entombed within us, I assume, are sacrificed in our animal construction.

If mind is spiritual, as some claim (a vague, indefinable idea—sometimes called immaterial substance—an evident contradiction), there could exist no connecting and retaining affinity with material brain organization; for existence must have a positive property, some share of cohesive materiality to be so associated or linked together; hence by spirit or spiritual part is probably meant essence or essential part, which is only a refined subtle materiality. So we return from the ambiguous, non-entity idea of spirit to its known defined characteristics, the essence or subtle part of a material.

CHAS. E. TOWNSEND.

TOBACCO.

TOBACCO is a filthy weed,
A poison full of evil;
And those who use it are indeed
Slaves to one common devil!

HOW THEY LIKE IT.

NEWSPAPER and magazine editors generally do us the credit to praise the PHRENOLOGICAL JOURNAL and LIFE ILLUSTRATED when they mention it.

The New York *Atlas* says: "The JOURNAL deals in ideas rather than in words, and discussing questions of vital importance which are out of the ordinary way of journalism, every number contains something at least of lasting value."

"All its articles are distinguished by good sense, sound morality, and a love of truth for truth's sake. No one can read it without being made to think, if he is capable of that intellectual exertion."

The Cape Ann *Advertiser* says: "There is a vast amount of valuable and instructive matter, and the reader will obtain a fund of useful information by a perusal of its pages."

The *Tri-Weekly Publisher* says: "It is one of the best monthlies issued, and ought to be found in every intelligent family."

The *Randolph Co. Democrat* says: "The PHRENOLOGICAL JOURNAL should be read by all."

The *West Virginia Times* says: "This work is of a progressive character, unrestricted by the prejudices of the past. It is devoted to the science of man, and is replete with interest to all who desire to be instructed in the greatest study of mankind."

The JOURNAL *vs.* THE CHURCH.—We have never proposed to make the PHRENOLOGICAL JOURNAL a substitute for going to church, but here is what the *North Missouriian* says: "To the young men of our town who won't be persuaded to attend church on the Sabbath, the next best thing we think you can do, is to go to James Osborn's news depot and get the PHRENOLOGICAL JOURNAL. It is full of interesting and useful matter. If you read the JOURNAL, you will feel that you have been benefited." To all of which we say, AMEN.

The New York *Christian Intelligencer* says: "The PHRENOLOGICAL JOURNAL and LIFE ILLUSTRATED is universally conceded to be the ablest exponent of Phrenology in the world. If that so-called science makes no progress and gains no new adherents, it will not be for want of an able advocate. The number just issued has, in addition to the matter pertaining to its specialty, a large and interesting variety of reading on subjects of a general character."

[After our thanks and best respects, we beg to state that the work progresses most satisfactorily. We now have a very large circulation among an intelligent class, and have every reason to feel most grateful, not only to the members of the press for their kind notices, but to our large, warm-hearted co-workers and voluntary agents everywhere, who lose no opportunity to speak a good word for the JOURNAL and the cause we advocate.]

The *Civilian and Telegraph*, of Cumberland, Md., says: "Of all the journals published in America, this has the most valuable information, and is best calculated to aid in the great work of progression and civilization." [The editor of that paper must have a good head.—ED. A. P. J.]

The *Mythic Star* (Masonic) says: "The PHRENOLOGICAL JOURNAL comes to hand laden with its usually rich and practical instruction. We unreservedly commend this interesting monthly to our patrons."

The *Boston Courier* says: "Even those who do not believe in the doctrines of Phrenology will find in the JOURNAL a fund of instruction which no other periodical within our knowledge can supply."

The *Kenosha Telegraph* says: "It is one of the best educators in the United States, and should be extensively circulated among all classes that love good reading."

The *Springfield Union* says: "Aside from the particular theory this work advocates, as a literary and scientific journal it is taking a prominent position."

The *Fulton Republican* says: "There is no other secular journal published which we can so cheerfully recommend as this."

The *Alton Democrat* says: "It exhibits in unmistakable language the huge difference existing between man and animal, with the gradual rise in intelligence from the latter to the former."

The *Brockville Republican* says: "No one can read the logical and able articles contained in this JOURNAL without receiving great benefit and pleasure."

The New York *Tribune* says: "The PHRENOLOGICAL JOURNAL commences a new volume with the July number, and offers generous promise of the same popular qualities which have given such a wide and increasing currency to its forty-five previous issues."

The *Anamosa Eureka* says: "This is the best periodical on the subject in the world. It should be extensively taken by and for young people who have the prospect of twenty to fifty or more years before them to aid them in shaping their courses of life and characters."

The *Owen Co. Journal* says: "One noticeable feature in the PHRENOLOGICAL JOURNAL is its progressive nature. Each succeeding volume is an improvement on its predecessor. The July number begins a new volume, and in its long and successful career we have seen no one that equals it."

The *New Era* calls it "by far the best compendium of practical information we know of."

The *Evansville Daily Journal* says: "It is brimful of interesting and useful reading matter and attractive illustrations."

The *Harvard Independent* pays it the following high compliment: "It is one of the best educators in the United States, and should be extensively circulated among all classes that love good reading matter."

The *Clarendon (S. C.) Press* says: "The PHRENOLOGICAL JOURNAL, with its richly stored pages, comes to us greeting. It is not, as many would suppose, a publication simply to reiterate the claims of Phrenology, but it is a magazine of a very high order of literary merit, comprehending in its design scientific articles on a great variety of subjects, biographies and portraits of distinguished men and women, trenchant and judicious criticisms on works of a solid character, and other articles of a miscellaneous kind, forming one of the most attractive periodicals, for a thoughtful and cultivated mind, ever published in this country."

The *Marshall Co. Republican* pronounces it "one of the most interesting and useful magazines in the country."

The *Fulton Democrat* says: "It would be impossible to say too much, in a brief newspaper paragraph, in commendation of a periodical such as it is, which, since its establishment, a quarter of a century ago, has grown better and more useful each succeeding year. The number before us is worth really more than many a volume that costs more than a year's subscription to the JOURNAL."

The *Waukegan Gazette* says: "No more valuable compendium of general information can be found anywhere for the same money."

The *Lansing Mirror* says: "This is the most ably edited periodical of the kind in existence, and we are pleased to note the evidence of its prosperity. It has now reached the forty-sixth volume, and bids fair to double the number."

The *Tioga Co. Agitator* pronounces it "A capital magazine—an authority in Mental, Physiological, Physiognomical, and Social Sciences—one of the finest of illustrated magazines—not an idea publication, and is an invaluable family journal. It is the sturdy advocate of the betterment of mankind, a fine educator, and ought to be on every center-table."

The *Green River Democrat* says: "Publications like this, that tell you what you are, what you ought to do, and how to do it, are the ones that should be patronized. There is no higher attainment in knowledge than to 'know thyself.'"

The *Hollander*, among other remarks, says: "Het Julij nummer van het PHRENOLOGICAL JOURNAL, zijnde no 1 van het 46 deel, is ter tafel. Een eene nie nigte andere stukken van onderscheiden aard en strekking. S. R. WELLS, 389 Broadway, New York. Prijs, \$3 per jaargang. Nieuwen jaargang. Juist den tijd voor in-teekening."

The *Natchitoches (Texas) Times*, emerging from the darkness of secession and seclusion, now sends for the A. P. J., and on receipt of the first number exclaims: "The PHRENOLOGICAL JOURNAL realizes more than was anticipated; full of good notions, it can be read with advantage by the Lawyer, the Doctor, the Merchant, the Mechanic, and in fact all classes of society. It is the best compendium ever published at so small a price. We doubt very much if this rich publication will not be-

come the very *home paper* needed in every family circle." [You are right, *Mr. Times*, and the A. P. J. is finding its way into many family circles. It numbers among its readers many of the most intelligent ladies of the land, and this is the foundation of its highest hopes.]

The Henderson (Texas) *Times* copies the Natchitoches *Times'* notice, and says: "It is a deserved compliment. The JOURNAL ought to be more generally taken in this section of the country than it is. We know of no paper better worth the subscription price."

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

CHAMBERS' ENCYCLOPEDIA, a Dictionary of Universal Knowledge for the People. On the basis of the latest edition of the German Conversations Lexicon. Illustrated by Wood Engravings and Maps. J. B. Lippincott & Co., Philadelphia; William and Robert Chambers, London and Edinburgh. 9 vols. issued. 8vo. Cloth, \$4 50; sheep, \$5 per vol.

This elaborate compilation is fast approaching completion. Already numbers 123 and 124 of Vol. X., the last of the series, have been issued by the enterprising American publishers. It is eminently fitted for the people, and when critically considered as a work of reference, it is in many important respects superior to any other publication of the kind now extant. Having for its chief promoters those widely-known *litterateurs* William and Robert Chambers, whose individual abilities and unsurpassed connections with writers of eminence admirably adapt them for the successful accomplishment of so extensive a work, and being based on the German Conversations Lexicon, which is universally valued for its accuracy and comprehensiveness and has already taken a foremost position in the solid literature of Europe, this new Encyclopedia is fully qualified to take the precedence, and when its merits become generally known will assuredly take such precedence.

There are many particulars which especially recommend it to the enlightened intellect. First, its comprehensiveness. All arts, all sciences, all literatures, all systems receive in alphabetical order due attention. Without straining at undue brevity, it is sufficiently elaborate for the general reader on any subject of which he may require definite information. It aims in each case to present the essential features of a subject, and so clearly that all of average mental culture shall understand it. The critical acumen of the compilers is strikingly evinced in the brief but pertinent analysis of intricate philosophical questions. Those who have striven vainly elsewhere to obtain a clear idea of the views entertained by speculative philosophers like Plato, Aristippus, Anaxagoras, Kant, or Comte, can find it in the comparatively few lines devoted to the consideration of the philosophical opinions respectively of such world-famous sages. The distinguished men of ancient and modern times, and celebrities still living, receive careful attention in the thousands of succinct biographical sketches which in many instances are enriched with engraved portraits. Through-

out the compilation thousands of finely executed illustrations and maps are inserted. Scientific terms and elucidations are especially honored with careful diagrams exhibiting the meaning of the text in the best manner. Geography and Natural History in this way are copiously illustrated. The utmost care has been evidently taken in furnishing correct data in every department, so that an author can confidently rely on the statistical information he may obtain therein for any purpose.

The man who possesses a complete edition of this Encyclopedia, besides his Bible, has an ample library, and if he diligently stocks his mind with its contents will become a well-informed person; he will have a supply of general knowledge which will adapt him to any society and to nearly all situations. For, having obtained an idea of the essential features of a subject from a careful reading of its treatment in the Encyclopedia, his mind is prepared to grasp the further elaboration of that subject when conversing with those who have given particular attention to it, or when he meets with a book specially treating of it. Appleton's New American Cyclopaedia possesses many marked excellences; its treatment of American history is very elaborate, but for general comprehensiveness and typographical correctness it does not equal the work under consideration. Opening one or two of the later parts of Chambers', we meet with articles involving considerable detail and scientific research, and interspersed with frequent engravings, under the headings of Vegetable Chemistry, Vegetable Physiology, Vital Statistics, of which we find no similar mention or treatment in Appleton's.

So rapid has been the advance of the present age in scientific acquirements, and so many and important the mutations in national affairs in Europe and America, that the old Cyclopedias do not possess the value which ten years ago was attached to them, and new books of reference in keeping with the times are necessary. In fact, since the commencement of the publication of Chambers', about eight years ago, there have been developments scientific, artistic, governmental and otherwise, which are deemed sufficient to require the preparation of an Appendix in order to bring the whole compilation down to the present date. And it is probable that in the future additional volumes of similar finish and beauty, and in keeping with the progress of events, will be published from time to time.

We predict for this Encyclopedia abundant success in American literature, and we congratulate the Philadelphia publishers for their sagacity and foresight in securing it for their press in its introduction to the American public.

BURIED ALIVE. By Alexander Dumas. Philadelphia: T. B. Peterson & Brothers. 8vo. Paper, 25 cts.

This is said by those conversant with the works of this author, to be one of his best. A mere glance through it has revealed several startling passages of arms and remarkable escapes.

THE QUARTERLY JOURNAL OF PSYCHOLOGICAL MEDICINE AND MEDICAL JURISPRUDENCE, for July. Edited by William A. Hammond, M.D., Professor of Diseases of the Mind and Nervous System in the Bellevue Hospital Medical College, etc. New York: A. Simpson & Co., 60 Duane Street, Publishers.

It is evident that the science of Psychology is attracting the attention of the public as well as of scientific intellects more and more, since a special organ is now being devoted to its consideration; and this must be very gratifying to all who feel interested in the subject. The principal article in this first number is that "On Instinct: Its Nature and Seat," by Dr. Hammond. The subject is clearly set forth and the ideas well expressed, and though some of the statements are not in precise accordance with phrenological principles, the article on the whole is much superior to what has been written on the subject by the old-school metaphysicians, and worth perusing.

AN ARCTIC BOAT JOURNEY in the Autumn of 1854. By Isaac J. Hayes, M.D. New edition, enlarged and illustrated. One vol., 12mo., pp. 387. Price, \$2 50. Boston: Ticknor & Fields.

Americans will never tire of reading about strange countries and strange people. Indeed, above all others, we have an almost morbid love for travel and adventure. Sir John Franklin, who was lost in the Arctic regions, awakened throughout the world an insatiable desire to know something more definitely about the North-land. Dr. Kane took hold where Franklin left off, and pushed his way beyond; and now we have the intelligent, ambitious Dr. Hayes, who tells us what *he* saw and what he did away up where we look for the aurora borealis. When noticing his first edition of the present work he wrote: "And right well did it serve his purpose; for the Expedition to the Arctic Seas, which was intended to be aided (and was aided) by it, sailed in accordance with the plan therein set forth, and the Expedition returned in some sense more, and in some sense less successful than was expected. If, however, owing to unusual obstacles, the enterprise did not result, as I had hoped it would, in the launching of my boat upon the Open Polar Sea, it was yet fortunate enough to penetrate to the shores of that mysterious water, where (carried thither over the ice by a dog sledge) I planted the American flag upon a land nearer to the north pole than had ever been reached by any previous explorer—thus giving to the Republic the extreme northeastern border of the American continent, while purchase has recently contributed the northwestern."

The author gives an account of the Open Polar Sea, which was discovered by Mr. Morton, of Dr. Kane's Expedition, in 1854, and was subsequently reached by Dr. Hayes, during his late voyage; in another and more northerly quarter; Grinnell Land, the most northern known land of the globe, projecting into the Open Polar Sea, and which was also discovered by Dr. Hayes in 1854, and was revisited in 1861, and traced to within four hundred and fifty miles of the north pole; the Great *Mer de*

Glacé of Northern Greenland, which he discovered, in company with Mr. Wilson, in 1853, and over which he performed a journey of exploration in 1860, the only journey of the kind ever made.

The book is beautifully illustrated, printed, and bound. We hope the author may continue his explorations in that interesting quarter of our globe, and tell us even more about it.

DOMBEY AND SON. By Charles Dickens. People's Edition. With illustrations by H. K. Browne. Philadelphia: T. B. Peterson & Brothers. 12mo. Cloth, \$1 50.

The binding of this edition of Dickens' works is excellent, making it a fit associate on the library shelf with other more costly books. Of course it can not be expected by those who know anything about the cost of paper, that they will find a very superior quality inside the covers; but the work is well printed, and, considering its bulk, is very low-priced. The number of illustrations is twelve, executed in clear and racy style, on tinted paper.

JACQUES BONNEVAL; or, the Days of the Dragonnades. By the author of "Mary Powell," "The Faïre Gospeller," etc., etc. New York: M. W. Dodd. Cloth, \$1 25.

This book is written in a style similar to that of the *Schonberg Cotta Family*, and recites, in connection with a deeply interesting tale, some of the leading incidents in the dark days when the Huguenots were so cruelly persecuted under the authority of Louis XIV.

A PRACTICAL HOMEOPATHIC TREATISE ON THE DISEASES OF WOMEN AND CHILDREN. Intended for Intelligent Heads of Families and Students in Medicine. By Henry Minton, M.D. New York: Blelock & Company. 8vo. pp. xxvi., 461. Cloth, \$3; sheep, \$4.

This elaborate work is written in a clear and chaste style, so that no one would find in the course of its perusal any occasion to condemn it for a lack of delicacy and propriety. There is, as every intelligent physician must acknowledge, a want of proper medical books prepared for family use. While quackery has imposed on the public a thousand dangerous "Medical Guides" and treatises, a single work written in a popular style, free from the thousand-and-one technicalities of the profession, is scarcely to be found. In his "school," Dr. Minton enjoys an extensive reputation as a practitioner, and his book is highly recommended by publications in the homeopathic interest. He candidly states in his preface that he has seen "what every other practicing physician must have seen, the imperative necessity of a work upon this particular branch of medicine (domestic medicine). He has endeavored to supply the want to the best of his ability. * * The work must stand upon its own merits, or fall."

HANNEY'S GUIDE TO AUTHORSHIP.—An aid to those who desire to engage in literary pursuits for pleasure or benefit. 12mo., paper, pp. 110. Price 50 cents. New York: Hanney & Co.

Young aspirants for literary fame and fortune (?) will find many very useful hints in this little hand-book. It will also prove useful to all, old and young, who write for the press.

HAND-BOOK FOR HOME IMPROVEMENT: Comprising How to Write, How to Talk, How to Behave, and How to do Business. Four books in one. Published by S. R. Wells, 389 Broadway, New York. Price, post-paid, \$2 25.

The *Highland Democrat* says, "This valuable compendium of information necessary to every man of any pretensions to respectability in life, deserves the attention of everybody. It tells how to write letters, how to write compositions upon any and every subject, how to prepare copy for the printer, and contains, besides, a multitude of suggestions from which many great men might derive wholesome instruction to their own benefit and others, especially the poor printer who has to revise and guess out their manuscript. The anecdotes in this book are exquisite specimens, some of which illustrate points of etiquette admirably, and in such a way that any one who reads 'How to Behave' can not fail to become 'a wiser and a better man.' Every boy, girl, young man, or young woman especially, should read this book, and it is so written that if they once read it, they will forever remember the valuable suggestions it contains.

THE TRAPPER'S GUIDE.—A Manual of Instruction for Catching all kinds of Fur-bearing Animals, and Curing their Skins; with Observations on the Fur Trade, Hints on Life in the Woods, and Narratives of Trapping and Hunting Excursions. By S. Newhouse, and other Trappers and Sportsmen. Second edition, with New Narratives and Illustrations. Edited by J. H. Noyes and T. L. Pitt. One vol., octavo, pp. 280. Thirty-two full-page illustrations. Price \$1 50.

Standard authority on Trapping, Hunting, and Fishing, and is the most complete work of the kind in America. It tells How to Trap all kinds of Fur-bearing Animals; How to Cure their Skins; How to Live in the Woods; How to Build Boats, and Catch Fish in Winter; How to Destroy the Pests of the Farm and Poultry-yard; How to Hunt Deer, Buffalo, and other Game. It gives Narratives of the Exploits and Experience of Trappers and Sportsmen, old and young. It is a book for lovers of Wood-craft, for Excursionists, and for Boys.

The first edition was only a pamphlet, with indifferent woodcuts—but this new edition is beautifully illustrated with lots of the finest engravings, handsomely printed on fine tinted paper, bound in fancy muslin; and is worthy of a place in every library. It may be obtained at this office.

THE HOUSEHOLD OF SIR THOMAS MORE. By the author of *Mary Powell*. New edition, with an appendix. 18mo., pp. 257. Price \$1 50. M. W. Dodd.

All who enjoy descriptions of domestic life, all who would look at the life of a religious martyr away back three hundred years ago, should read the story of Sir Thomas More, who was beheaded by Henry the Eighth. Sketches are also given of Erasmus, Luther, Cromwell, and others. The book is beautifully got up—clear type, tinted paper, and handsome binding.

THE LIFE AND ADVENTURES OF NICHOLAS NICKLEBY. By Charles Dickens. With Eight Illustrations. 12mo., pp. 515. Price \$1 50. Boston: Ticknor & Fields.

This is the handsome Charles Dickens' edition. It depicts with masterly power certain phases of English life, especially the abuses practiced in the common schools of England. The work will do—has done—good, both there and here. The illustrations are excellent.

THE WATER-CURE JOURNAL. Since "the surrender," and since communication with the South has been reopened, numerous inquiries come to us by letter for the *Water-Cure Journal*. Before the war that Journal enjoyed an immense circulation throughout that section—altogether 60,000 copies per month—and there were, in the whole country, nearly a hundred water-cure establishments in operation. The war made sad havoc with it and them. The name of the *W.-C. J.* was first changed to *The Hygienic Teacher*, which was sold to Dr. R. T. Trall in 1864, when its name was again changed, and it was then christened *The Herald of Health*. It was sold by Dr. Trall to Messrs. Miller and Browning, and is now published under the same title by Messrs. Miller, Wood & Co. It is quite a different thing from the original ultra-radical *Water-Cure Journal*. Instead of keeping within the exclusive limits of the former, it opens its pages to various writers, lay, clerical, literary, and medical. It is now a handsome octavo monthly magazine suited to the classes addressed. But it does not claim to be *Water-Cure* or *Hydropathic*, nor does it meet the views of *ultra* medical reformers. It favors female physicians, Turkish baths, gymnastics, the movement-cure, etc., and must continue to do a useful work, and be profitable to its owners. But why not resuscitate the old pioneer *Water-Cure Journal*? It was *that* which went home to the convictions of the advanced minds of a drugged, poisoned, and quacked people. Were our hands not already full, we would do it ourselves. It could not be regarded as a competitor of any other journal. *Hall's Journal of Health*, *The Herald of Health*, and dozens of homeopathic, eclectic, allopathic, Thompsonian, and other periodicals of a medical or quasi-medical character, have their fields. But there is not at present a water-cure journal in existence. Shall we not have one? Who will start it? Who will subscribe for it? We wait for an answer.

THE PRINCIPLES AND PRACTICE OF LAND DRAINAGE. Embracing a Brief History of Underdraining; a Detailed Examination of its Operation and Advantages; a Description of Various Kinds of Drains, with Practical Directions for their Construction; the Manufacture of Drain-Tile. Illustrated with nearly 100 Engravings. By John H. Klippart, author of the "Wheat Plant," Corresponding Secretary of the Ohio State Board of Agriculture, etc. Second edition. One vol., 12mo. Price \$1 75. A capital work.

VINEYARD CULTURE Improved and Cheapened. By A. Du Breuil, Professor of Viticulture and Arboriculture in the Royal School of Arts and Trades, Paris. Translated by E. and C. Parker, of Longworth's Wine House. With Notes and Adaptations to American Culture, by John A. Warder, author of American Pomology. With 144 Illustrations. One vol., 12mo., neatly printed and bound. Price, cloth, \$2. Beveled cloth, gilt top, \$2 25. A new edition.

GOOD STORIES. Besides the *Atlantic Monthly*, \$4 a year; *Young Folks*, \$2 a year; *Every Saturday*, \$5 a year; and the *North American Review*, at \$6 a year, all of which have been pushed into an extensive circulation, Messrs. Ticknor & Fields have just commenced a new serial, at fifty cents a part, entitled "Good Stories," to be made up out of the magazines, and furnished in very readable pamphlet form. The popular title will secure readers.

We have before us the **FOURTH ANNUAL REPORT** of the New York Society for the Relief of the Ruptured and Crippled, whose institution is located at No. 97 Second Avenue, New York city. Although it may not be generally known in this city that an institution of this character exists for the gratuitous relief of the suffering, yet the report presents a large exhibit of the good done during the year reported. Hundreds of ruptured adults and crippled children have been under treatment and afforded all the relief which the best surgical and medical talent could give. Since May, 1863, upward of 5,000 patients have experienced the beneficence of this Society. The work is ably administered by faithful and efficient officers, and in all respects merits the esteem and hearty support of the benevolent.

THE ANNUAL OF PHRENOLOGY AND PHYSIOLOGY FOR 1863—now in press—will probably be ready to issue with the next number of this JOURNAL. It will be larger than ever before—handsomely illustrated, and will be sold at 25 cents per copy. Agents, newsmen, and booksellers may send in their orders at once. A liberal discount will be made to the trade.

HOLIDAY PRESENTS.—Generous-hearted persons who seek the happiness of others will soon be casting about seeking the most appropriate PRESENTS for boys and girls, and for men and women. Books have been, are now, and always will be among the most valued and most cherished of presents. With a good book, the giver imparts a wish that it may not only entertain but also instruct and improve the recipient. It is at once a good gift, and a perpetual blessing. The gift of a Bible or a Prayer Book has but one significance, namely, a care and a wish for one's moral, religious, and spiritual good. A book of etiquette implies the necessity of social culture. On science, philosophy, etc., a desire that the receiver shall become informed on the subjects treated.

It has given us the greatest satisfaction to observe how deeply interested the public is

becoming in the teachings of this JOURNAL. One who has imbibed the spirit can not rest till he has induced his best friend to share with him the same. And hundreds of copies of this JOURNAL are now subscribed for every year and sent to those who never before heard of it—by those unwilling to enjoy alone that which may be so easily and so cheaply shared with others. The following books are selected from our own list as the most appropriate for holiday gifts from one friend to another, from parents to their sons and daughters, and from one lover to another:

New Physiognomy; Emphatic Diaglott; Æsop's Fables; Pope's Essay on Man, illustrated; Hand-Books for Home Improvement; Weaver's Works; Hydropathic Encyclopedia; Education Complete; Phrenological Bust; Family Gymnasium, etc. For full titles with prices, see our New Illustrated and Descriptive Catalogue, sent by return post on receipt of two red stamps.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

THE AMERICAN SCHOOL DIALOGUE BOOK. No. 1. Paper, 50 cents.

ARTEMUS WARD IN LONDON, and Other Papers. By C. F. Browne. Illustrated. Cloth, \$1 75.

A ROMANCE OF THE REPUBLIC. By Lydia Maria Child. Cloth, \$2 25.

TEN MONTHS IN BRAZIL; with Incidents of Voyages and Travels, etc. By John Codman. Illustrated. Cloth, \$2.

THE SAYINGS OF DR. BUSHWHACKER AND OTHER LEARNED MEN. By F. S. Cozzens et al. Cloth, \$1 75.

EVERY LITTLE HELPS. By the Author of "Country Sights and Sounds," etc. Cloth, 35 cents.

BIBLE SKETCHES AND THEIR TEACHINGS, for Young People. By S. G. Greene. Second Series. From the Israelites' Entrance into Canaan to the Close of the Old Testament. Cloth, \$1 15.

THE CRITTENDEN COMMERCIAL ARITHMETIC AND BUSINESS MANUAL. For Merchants, Business Men, Academies, and Commercial Colleges. By John Groesbeck. Abridged Edition. Cloth, \$1 40.

A STORY OF DOOM, and other Poems. By Jean Ingelow. Portrait. 16mo, pp. vi., 200. Cloth, \$2; Blue and Gold, \$1 75.

EUGENE ARAM. By Sir E. B. Lytton. Globe Edition. 2 vols. in 1. Cloth, \$1 75.

THE MULE. A Treatise on the Breeding, Training, and Uses to which he may be put. By Harvey Riley. Illustrated. \$1 75.

THE LORD'S SUPPER, a Manual; or, a Scriptural and Devotional Guide to the Table of the Lord. By Rev. D. Smith. 40 cents.

DRAINING FOR PROFIT, AND DRAINING FOR HEALTH. By George E. Waring, Jr. Illustrated. \$1 75.

THE RESOURCES OF MISSOURI. By Sylvester Waterhouse. Paper, 30 cents.

HISTORY OF THE AMERICAN CIVIL WAR. By John W. Draper. In 3 vols. Vol. 1. 8vo, pp. 565. Cloth, \$3 75.

GEYELIN'S POULTRY BREEDING IN A COMMERCIAL POINT OF VIEW. Natural and Artificial Hatching, Rearing, and Fattening. With Plans, Elevations, Sections, and Details. With Preface by Charles L. Flint. Illustrated. Cloth, \$1 40.

HEART BREATHINGS; or, The Soul's Desire Expressed in Earnestness. A Series of Prayers, Meditations, and Selections. For the Home Circle. By S. P. Godwin. Cloth, 90 cents.

LINCOLN'S ANECDOTES: A Complete Collection of the Anecdotes, Stories, and Pithy Sayings of Abraham Lincoln. Paper, 20 cents.

CHRISTIANITY AND ITS CONFLICTS, Ancient and Modern. By E. E. Marcy. 12mo. Cloth, \$2 25.

TOURIST'S AND INVALID'S GUIDE TO THE NORTHWEST. Containing Information about Minnesota, Wisconsin, Dakota, and the Lake Superior Region. Compiled by C. H. Sweetser. Paper, 45 cents.

THE CULTURE DEMANDED BY MODERN LIFE. A Series of Addresses and Arguments on the Claims of Scientific Education. By Tyndall, Hensley, Huxley, etc. With Introduction by E. L. Youmans, M.D. Cloth, \$2 25.

BENCH AND BAR: A Complete Digest of the Wit, Humor, Asperities, and Amenities of the Law. By L. J. Bigelow. Illustrated. Cloth, \$2 75.

THE ANCIENT SCHOOLMASTER, and the Greatest School of Old Times. By Rev. Wm. M. Blackburn. Cloth, 65 cents.

"A. WARD IN LONDON; and Other Papers. By C. F. Browne. Illustrated. Cloth, \$1 75.

WALKING IN THE LIGHT. By Daniel D. Buck, D.D. Cloth, 70 cents.

THE ART OF SECURING ATTENTION IN A SUNDAY-SCHOOL. By Joshua G. Fitch. From the London Edition. Paper, 30 cents.

BIBLE SKETCHES AND THEIR TEACHINGS, for Young People. By S. G. Green. Second Series. Cloth, \$1 15.

PELHAM. By Sir E. B. Lytton. Globe Edition. Illustrated. 2 vols. in 1. 16mo, pp. 365, 368. Cloth, \$1 75.

LOUISA OF PRUSSIA AND HER TIMES. By Louisa Mulhbach. (Clara Mundt.) Translated from the German by F. Jordan. Illustrated. 8vo, pp. 277. Paper, \$1 75.

COLLEGE LIFE: Its Theory and Practice. By Rev. Stephen Olin, D.D., LL.D. Cloth, \$1 75.

ONE HUNDRED CHOICE SELECTIONS IN POETRY AND PROSE, both New and Old. By N. K. Richardson. Paper, 35 cents.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—TO CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE slips.

OPTICS.—The reason we do not appreciate the reversion of objects on the retina is, that everything visible is so disposed thereon and the relative harmony of the sight preserved. If, in contemplating a landscape, some parts of it were upside down, the irregularity would at once be apparent, but as all parts of it preserve the same relative position through the operation of an immutable law of nature, the harmony of the whole is unbroken.

HEALTH OF A YOUNG MAN.—I am a young man who desires to improve his health, have left off the use of tobacco and alcoholic liquors, as I am aware that my health would be injured by their use. I have understood that certain kind of food are nearly or quite as injurious to health as tobacco and alcoholic liquors, and I would like to be informed through the PHRENOLOGICAL JOURNAL what food is unhealthy.

Ans. Our unknown friend has struck the right string for himself, and we cordially congratulate him that he has thus early dropped two of the worst of habits. He is now prepared to make a thorough reform in all his habits. We can not undertake here to give the subject exhaustive treatment, but will simply say that most people eat too much, and especially too much oily matter, and too much sugar. Nearly all the articles used as condiments are a curse to the people and should be repudiated. Many a man eats, on his roast beef, enough of pepper and mustard to blister the back of his hand if it were applied there instead of being put in the stomach; and when that much abused organ breaks down and refuses to digest food sufficient to sustain the body, the victim wonders. He has lived temperately, *i. e.*, he has not been a slave to alcoholic liquors, nor kept dissolute company, and he can not imagine what is the cause of his trouble. Pies, cakes, candies, pickles, condiments, pork, superfine flour bread, strong tea and coffee, late suppers of whatever description, are among the things to be avoided; while lean beef and mutton, eggs, poultry, plain unbolted wheat bread, vegetables and fruit, constitute a diet fit for a rational Christian. Those who wish to become intelligent on the subject of food would do well to read "Food and Diet," containing an analysis of every kind of food and drink—price, by mail, \$1 75; "Physiology of Digestion" by Dr. Combe, 50 cents; "Tea and Coffee," 25 cents; "The Science of Human Life," \$3 50; "Combe's Physiology," \$1 75, and so forth.

ASTRONOMICAL.—Why does the sun shine on the north side of a house of a morning and evening, and not at noon?

Ans. In our May number we gave a lengthy elucidation of this phenomenon from the pen of our occasional contributor Mr. C. C. Townsend. We can not do better than refer our subscriber to that number of the JOURNAL.

PERSPIRATION.—Some thin men perspire more than many who are stout, just as some little lean men eat twice as much as some larger men. It is in their nature to do so, but it constitutes the exception. The rule is the other way.

RESEMBLANCE TO PARENTS.

—Suppose a woman resembles her father, and she marries a man who resembles his mother; in such a case how can you tell which parent their children most resemble?

Ans. It is not important that we should decide a question of this sort. We should simply say of a son of theirs, if he resembled his father, that he had more of the feminine than of the masculine in his mental and physical composition. We should say of their daughter, if it were true that she resembled the mother, that she had more of the masculine than of the feminine. There is, however, a constant tendency in the feminine nature, having inherited the masculine, to assert the feminine quality; hence a woman who resembles her father, may have a child closely like her, but that child would be more feminine, if a daughter, than the mother. A son resembling a father who resembles his mother is more masculine than the father—each sex tending to assert its own peculiarity.

PHONOGRAPHY.—We furnish all the phonographic instruction books which are most in use. It is hardly necessary for us to go into a lengthy description of this time-saving and labor-saving art. Its merits have been too well known to, and are too much appreciated by, the world to require a special plea now. The time taken in acquiring the skill of the reporter is dependent on the industry and aptness of the learner. Some have become good reporters in six months. Send stamp for a list of phonographic works, and it will be sent by return post.

MY CHILDHOOD'S HOME.—If Delta Kappa Phi will send us his address, and vouch for the authorship of the very beautiful verses we have received from him, we may be induced to publish them.

NEW TESTAMENT.—Among the MSS. collections of the New Testament, the oldest of which we have any trace are dated no farther back than the fourth century after Christ. The Sinaitic MS. is believed to be the oldest extant, and to have been written in the early part of the fourth century. The whole of the New Testament was first printed in 1514.

JEALOUSY—MARRIAGE OF COUSINS.—H. H. C. You will find these subjects fully discussed in the new and enlarged illustrated ANNUAL OF PHRENOLOGY AND PHYSIOGNOMY, for 1868, now in press. It will probably be ready in October. Price 25 cents.

SPITTING.—A healthy man—or woman—very seldom spits. Those who smoke and chew tobacco are in a diseased—or perverted—condition, and are never "PERFECTLY WELL." Nor are opium-eaters or arsenic-eaters well. One cause of the stunted growth of many men is traceable to the fact that they spit away their vitality. They can not see that chewing or smoking does them any harm. Indeed, many claim that it does them good, and attribute their bad memories, poor vision, hard hearing, and general dullness, inertness, and stupidity to other causes. If half-grown boys ever hope to become tall, strong men, they must stop spitting.

STUDYING FRENCH, GERMAN, etc.—Several correspondents have requested us to name those manuals of instruction which will enable them to acquire certain foreign languages with facility. In response we have been to some pains in preparing the following selection from the best text-books for learning French, German, Italian, Spanish:

FRENCH.

Ahn's French Method. Practical and easy, with pronunciation. 12mo. \$1 50. Ollendorff's French Grammar, by Jewett. Universally recommended. \$2.

Sue's French Method—complete—comprising a new and practical method, exercises on the French Syntax. The Vicar of Wakefield as a guide for the construction of French sentences. A Key. 4 vols. 12mo. \$4 50.

De Fivas' Elementary French Reader. \$1 15.

Surenne's French and English Dictionary. \$1 75.

Surenne's Manual and Traveler's Companion. \$1 40.

GERMAN.

Ahn's German Method. \$1 40.

Ollendorff's German Grammar. \$2.

Adler's German Reader. \$2.

Adler's German and English Pocket Dictionary. \$3 25.

Fulborn's German Instructor. \$1 15.

ITALIAN.

Greene's First Lessons in Italian. \$1 15.

Ollendorff's Italian Grammar. \$3 25.

Foresti's Italian Extracts. A reading book in Italian for beginners. \$2.

Meadow's Italian and English Dictionary. \$2 75.

SPANISH.

Ahn's Spanish Grammar. \$1 40.

Ollendorff's New Method. \$2 25.

Butler's Spanish Teacher and Colloquial Phrase-book. \$1 25.

Mandeville's Spanish Reader. \$1 15.

Secane and Neuman's Spanish Dictionary—abridged. \$3 25.

Roemer's Polyglot Readers; French, German, Italian, and Spanish, with English Translations. Each, \$2 25.

Any of the above supplied, postage prepaid, at prices annexed, from this office.

CAUTION.—Dr. Robinson desires us to caution the public against a company in Williamsburg, N. Y., who send out certificates, and say when said certificates are returned, with two dollars and forty, fifty, or sixty cents, to pay for packing, they will send what the certificate calls for—when in fact they send nothing but some bogus jewelry. For instance, they send a certificate which calls for a patent lever gold case timepiece, and if you send the certificate, with \$2 65, you get in return a small compass, with sundial combined, worth about twenty-five cents. So our readers now have the "caution," with thanks to Dr. Robinson, whom we suppose got caught in the trap. Experience is a good teacher.

CROOKED NOSES.—What causes the nose to grow crooked?

Ans. A straight nose is the exception, while more or less of divergence from a straight line is the rule. Some noses are straight, but set crooked on the face; others are crooked, but on a general line with the face; others, again, start straight with the face, and crook toward one side to such an extent as to amount to a deformity. It is interesting to look over the collection of casts of heads and faces in our cabinet, and to see how few can be

found with straight faces. The same may be observed in almost any album of pictures. One half the face is generally larger than the other, which causes the central line of the face to curve sometimes as much as an inch, caused by placing the young child habitually on one side to sleep; which becomes a habit, and makes us lopsided. This will account for many of what are called crooked noses. The loss of teeth on one side permits the muscles to contract, and these draw the nose around to one side and make it crooked. The partial paralysis of some of the facial nerves, occasioned by a fall or a blow upon the face, may produce crooked features.

DREAMS—WARNINGS—

DEATH.—I have a friend who is forewarned of the death of any of her relatives in this way: Several years ago, during a dream, one of her teeth came out, and in a few days she received a letter informing her of the death of a near relative. Some years after another tooth came out, during a dream [was it loose?], and in a few days later she heard of the death of another relative. Some months after that two more teeth came out [were they natural, or were they "store teeth?"] during a dream; the next post brought the sad news of the death of an uncle and a nephew. Can you give the "why and wherefore" of these strange warnings?

Ans. "No, not much." It is very natural for diseased teeth to get loose and come out, and for friends to die. But we can see no more relation of one to the other than we can between "crowing hens" and a death in the family. How the woman could manage to knock out a sound tooth, in her dreams, we can not see; the teeth must have been loosely set in, or she must have given them a hard knock. There is a touch of superstition in the above; we can not regard it as anything supernatural, nor even wonderful. We would advise light suppers in future, and no more dreams of this sort. Losing one's teeth can not benefit the departed, and it is a sad loss to the mouth of any lady. Go to a dentist at once, and have the mouth mended.

Publisher's Department.

In several thousand copies of our last number the portraits of Mrs. Hoge and Mrs. Husband, the latter especially, were horribly printed, owing to defects in the stereotyped plates, which defects were not discovered until nearly half an edition had been thrown off from the presses. It is our aim to present fair likenesses of all whom we deem worthy to grace our columns, but when a failure occurs of this nature, when worthy ladies, whose devoted and patriotic philanthropy have won the highest esteem of all, suffer in features from a surfeit of printers' ink, it is doubly mortifying.

TO CONTRIBUTORS.—Each day's mail brings us "original" MSS., in prose or poetry, accompanied by the modest request "that they be published in the PHRENOLOGICAL JOURNAL, if deemed worthy." While we would encourage all aspirants for literary honors, we must have it understood that only those articles which are meritorious, and in keeping with the elevated character which we are striving to maintain for the JOURNAL, will be published; and we would repeat the notice given heretofore, that if contributors would have their articles returned to them in case of rejection by us, they must expressly request such return, and inclose sufficient stamps to pay postage.

NO TRAVELING AGENTS FOR THIS JOURNAL.—Instead of giving certificates of agency to strangers, who may or may not be responsible, we prefer to depend entirely on **VOLUNTARY CO-WORKERS**, who are known and trusted where they reside. In this way we escape the swindlers, and the JOURNAL is placed, by its friends, in the hands of those who can appreciate it. Every reader may thus become a volunteer, and form a club in his own circle, shop, or neighborhood. Generous promises are made for the new year. May we be "on time" as to date, quality, quantity, and all the excellences. Reader, do you not know of a neighbor—have you not an esteemed friend who would be benefited by taking the A. P. J.? A little effort on your part would make him ever your debtor.

REV. L. HOLMES, who goes to Little Falls, is a minister of the Missionary School. One of the most stirring speeches we ever heard any man make was an off-hand address that came from his lips in the Massachusetts Convention which met two years ago in Worcester. We never heard him preach, but if that is a specimen, there will be stirring times in Little Falls and vicinity ere long.—*Ambassador.*

TEN-MINUTE SPEECHES ON TEMPERANCE, by Messrs. Colfax, Yates, Wilson, Grinnell, Patterson, Dodge, Price, McKee, Woodbridge, senators and representatives in Congress, is having a great run. It is sent, postpaid, at 25 cents a copy, or five copies for \$1; and by express, carriage paid by receiver, at \$15 a hundred. It is one of the best temperance campaign documents now in print.

RELIGIOUS—NOT SECTARIAN—Books. We have been desired to name a few such works as are deemed best for family reading. We give a brief installment, with prices, in the present number. It would be well for the morals of the rising generation could these works be placed in every family. Much of the literature with which the country is flooded has a demoralizing tendency—perverting and corrupting old and young. Let it be displaced by something which will tend to save, rather than to destroy the bodies and souls of mankind.

General Items.

EMINENT METHODIST MINISTERS.—The Rev. Mr. C. C. Goss, of 200 Mulberry Street, New York, has brought into the compass of a handsome cabinet or library picture—the result of a year's labor—the likenesses of two hundred of the most eminent clergymen of the Methodist Church. The group, with JOHN WESLEY for its center, is handsomely photographed, and sells for \$5. It will be sold chiefly through agents, and every Methodist preacher is expected to act as such. Full particulars as to terms, etc., may be obtained by addressing Mrs. C. C. Goss, at 200 Mulberry Street, New York. We predict the best success for this splendid combination picture.

A STATESMAN OR A MILITARY MAN FOR PRESIDENT.—Which will serve the nation best? It is a good thing, a great thing, to "put the right man in the right place." Then why not nominate a statesman for President, and appoint a

military man to manage the army? The policy of America is peace, with no disturbing elements—slavery is dead. We can devote our undivided energies to the development of our immense resources; restock our docks, lakes, rivers, and seas with ships, work our mines, clear our forests, break our prairies, and "think of living." With a war President, a war cabinet, and all the offices filled with military men, we should fear strife instead of thrift, and war instead of peace. Let us put away party spirit, put down party demagogues, and put in office only good, religious, temperate men. Then all will go well.

THE GAMBLERS.—Denouncing gamblers in the newspapers will not stop them. Reports of suicides by young men fleeced, swindled, and robbed by the gamblers will not abate the nuisance. It would be as futile to attempt to write them down, talk them down, or put them down by moral suasion, as to keep a mouse away from cheese after tasting it. No; the only way to serve them is to legislate them down, by making such laws as will send them to States prison when convicted. Let each State do this, and the country would soon experience a most sensible relief from these human wolves.

There is a society in New York, whose office is at 24 Duane Street, for the suppression of gambling. Let the poor picked geese go there and enter complaint against the villains who plucked them, and they may get redress.

AN ILLUSTRATED AND DESCRIPTIVE CATALOGUE OF STANDARD WORKS ON PHYSIOGNOMY, PHRENOLOGY, PSYCHOLOGY, PHYSIOLOGY, ETHNOLOGY, EDUCATION, HYDROPATHY, ETC. Just published at this office. This new catalogue, consisting of thirty-six pages, contains the full titles and descriptions with quotations and illustrations from upward of one hundred works on the above and kindred subjects, and is the most complete list we have ever issued; will be sent by return mail, to any address, on receipt of two three-cent stamps.

THE NEW BOULEVARD SKIRT.—A handsome colored skirt is now deemed indispensable to comfort as well as economy during the fall and winter season, and taste and ingenuity have been at work devising something as an improvement on the old Balmoral—a style which, while retaining all the good qualities of that useful and sensible article of dress, would be better adapted to the present restricted style of costume.

This desideratum has been found in the New Boulevard Skirt, the best, most useful, and most beautiful colored skirt which has yet been introduced.

It is made in the gored shape, without plaits, and produces a most graceful ensemble over a small hooped skirt. It is all wool, warm, without excessive weight, and is simply bound, or made highly ornamental by effective embroidery in a border or detached pyramidal patterns. Green or purple with black, gray with scarlet embroidery, are fine combinations; and also brown with bright blue.

Dirt can be sponged or brushed off from these skirts; or they can be washed, if necessary, like a piece of plain cloth.

The price is only the average of good Balmoral skirts, and much less than those which are as highly ornamented. It ranges from three to eight dollars; children's skirts half price. The New Boulevard Skirt can be obtained of dealers generally.

Wife has tried this new American invention, and says it is splendid. She knows.

A LIST OF RELIGIOUS BOOKS ADAPTED TO ALL CLASSES. Supplied by S. R. WELLS, 339 Broadway, N. Y.

THOUGHTS FOR THE CHRISTIAN LIFE. By Rev. James Drummond. With an Introduction by J. G. Holland (Timothy Titcomb). 12mo. \$2.

Copies of these works will be sent, prepaid, by return post, at prices annexed. Address, S. R. WELLS, New York.

BEST SEWING MACHINE—OUR PREMIUMS.—Among the half dozen really good sewing machines, we selected the one we deemed the very best for general use. The correctness of our choice is confirmed by the following:

PARIS EXPOSITION. SEWING-MACHINE AWARDS.
We recently published a brief telegram from Paris, announcing the award, over eighty-two competitors, to Messrs. WHEELER & WILSON of the Highest Premium, a Gold Medal, for the perfection of Sewing Machines, and Button-Hole Machines. The following are copies of the official documents confirming the announcement:

EXPOSITION UNIVERSELLE, PARIS, 1867. COMMISSION IMPERIALE, CHAMP-DE-MARS, 16th July, 1867.

MR. R. HUNTING, No. 139 Regent Street, London:

Dear Sir: Replying to your inquiry, I beg to state that the ONLY GOLD MEDAL for the manufacture and perfection of SEWING MACHINES and BUTTON-HOLE MACHINES was awarded to Messrs. WHEELER & WILSON, of New York.

Yours, respectfully,
HENRY E. Q. D'ALIGNY,
Member of International Jury and Reporter of same.

Another letter of the same date, says:
Dear Sir: Replying to your inquiry, I herewith give you the list of gold medals awarded to my class:

DUPUIS ET DUMERY, for Screw Shoe Machines.

WHEELER & WILSON, New York, for the manufacture and perfection of their Sewing Machines and Button-Hole Machines.

There is, also, in the list of "CO-OPERATORS," a Gold Medal granted to Mr. Elias Howe, Jr., personally, as Promoter of the Sewing Machine.

Respectfully yours,
HENRY E. Q. D'ALIGNY,
Reporter of Class No. 57 (Group No. 6),
Member of the International Jury at the Exposition Universelle.

Extract from *Le Moniteur Universel*, official journal of the French Empire:

"The Wheeler & Wilson Company of New York, manufacturers of American Sewing Machines, have just received the Gold Medal at the Exposition Universelle, for the good construction of their machines; the new improvement for making button-holes applicable to their sewing machines; also, for their machine especially for making button-holes. This award is accorded for the great development that Messrs. Wheeler & Wilson have given to the sewing-machine industry, in bringing their machines to the doors of all, by their cheapness and solid construction, which allows their employment with satisfaction in families, and with great advantage in work-rooms."

[For twenty-five new subscribers at \$3 each, we give one of these sewing machines, worth \$55. Is it not worth working for? Reader, will you have one?—Ed. A. P. J.]

THE GALAXY.—For club rates at which the GALAXY and PHRENOLOGICAL JOURNAL are furnished, see advertisement on fourth cover page. Previous announcements are withdrawn.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

THE ADELPHI ACADEMY, Nos. 236, 338, & 340 ADELPHI STREET, BROOKLYN, L. I.

GROWTH OF THE SCHOOL.

Number of pupils at the re-opening under the new regime (Sept., 1865),	11
Whole number of pupils for 1865-6,	23
Whole number of pupils for 1866-7,	61
Whole number of pupils for 1867-8,	164
Whole number of pupils for 1868-9,	312

This institution (hitherto for boys alone) has made itself a name for the careful systems of instruction and training which it has employed. The system of physical training known as the *Calisthenic drill*, which it has introduced and carried to a high degree of excellence, is one of its most popular features.

The success of this feature has been such as to warrant the belief that an effort to afford the same advantages to girls would be appreciated. As a test of the adaptability of the drill to girls, a private class has been conducted during the past year in this institution with entire success. Accordingly the proprietors of the Adelphi Academy have concluded to re-organize the school, and admit at the re-opening (on the 9th of September), boys and girls together, of about five to twelve years of age, to the Preparatory Department, and to the enjoyment of all its benefits, removing the Academic Department, which will continue, as at present, to be exclusively for boys, to a new building now erecting for the purpose on Lafayette Avenue, corner Hall Street.

Scores of letters from parents whose sons have enjoyed the benefits of the drill during the last year bear unequivocal testimony to its value.

The intellectual training of the school is as carefully conducted as the physical. There are twelve grades, under fifteen to twenty teachers in constant attendance.

Pupils from a distance are accommodated with board in teachers' families.

Pupils crossing Fulton Ferry, from New York, can ride within a few steps of the school by the Fulton or the Greene Avenue cars. Those crossing the South Ferry should take the Atlantic Avenue cars.

For Circulars apply to
LOCKWOOD & ELLINWOOD.

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movement and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

THE MOVEMENT-CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 38th Street, N. Y. city. Aug., 18.

MRS. E. DE LA VERGNE, M.D.,
235 ADELPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO,
N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y. 18

Circulars obtained by addressing

AMOS DEAN,

July 41.

Albany, N. Y.

NEW NATIONAL RELIGIOUS

PAPER.—A national religious newspaper, to be called "THE ADVANCE," will be published weekly, from the first of September onward, in the city of Chicago. It will represent Congregational principles and polity, but will be conducted in a spirit of courtesy and fraternity toward all Christians. The form will be what is popularly termed a double sheet of eight pages, of the size and style of the New York *Evangelist*. The pecuniary basis is an ample capital furnished by leading business men and others, to be expended in the establishment and improvement of the paper, which is intended to be second to none in the country, in its literary and religious character. The purpose of its projectors is indicated in the name: their aim being to ADVANCE the cause of evangelical religion, in its relations not only to doctrine, worship, and ecclesiastical polity, but also to philosophy, science, literature, politics, business, amusements, art, morals, philanthropy, and whatever else conduces to the glory of God and the good of man by its bearing upon Christian civilization. No expense has been spared in providing for its editorial management in all departments, while arrangements are in progress to secure the ablest contributors and correspondents at home and abroad. The city of Chicago has been selected as the place of publication, because of its metropolitan position in the section of the country especially demanding such a paper, and the fact that it is nearly the center of national population, and in a very few years will be the ecclesiastical center of the Congregational Churches. Issued at the interior commercial metropolis, "THE ADVANCE" will contain the latest market reports, and able discussions of financial subjects, such as will make it a necessity to business men in all parts of the country. The editor-in-chief will be Rev. Wm. W. Patton, D.D., who resigns the pastorate of the leading church of the denomination at the West for this purpose, and who has had many years' experience in editorial labor. The subscription price will be \$2 50 in advance. Advertising rates made known on application. Address THE ADVANCE COMPANY, P. O. Drawer 6,374, Chicago, Ill. S. 61.

TEACHERS.—A lady, an experienced teacher, desires a situation as Governess (no objection to act also as private secretary), or would teach in a private school or seminary. She does not understand foreign languages well enough to teach them; has a good understanding of Mathematics, General Literature, Composition, Elocution, the Physical, Mental, and Moral Sciences. In a school or seminary, she would prefer to teach Mathematics and Elocution, or Natural and Mental Philosophy. Her method of teaching is thorough and philosophical. Address S. M., care FOWLER & WELLS, 389 Broadway, New York.

THE MASONIC HARMONIA; A COLLECTION OF MUSIC, ORIGINAL AND SELECTED, For the use of the

MASONIC FRATERNITY.

BY HENRY STEPHEN OUTLER,

Doctor in Music, Director of the Cecilia Choir, etc.

Being the most complete and best adapted for use in Lodges.

Published under the auspices of St. Cecilia Lodge, No. 568, city of New York.

Price, \$1. Sent free of postage on receipt of price. Descriptive Catalogues of Masonic Books, Regalia, etc., sent free on application.

MASONIC PUBLISHING AND MANUFACTURING CO.,
432 Broome Street, New York.

THE CHURCH UNION.—The largest and best Religious Family Newspaper in the world.

Owing to the unprecedented reception of this paper, it is now enlarged to twice its original size.

It is devoted to Liberty and Union in the whole Church of Christ, opposes Ritualism and Rationalism, and advocates Radical Doctrines in both Church and State.

It favors universal suffrage, and equal rights for every man and woman of every nationality.

It is the organ of no sect, but will endeavor to represent every branch of the Church, and every society organized for the purpose of converting the world to Christ.

It is Trinitarian in creed, but favors free discussion by all Religionists of every faith.

It will advocate a free communion-table for all the Lord's people, and a free pulpit for all his ministers.

It will print a sermon from Rev. Henry Ward Beecher in every issue. This sermon, published at twelve o'clock every Monday, will be selected from one of the two sermons preached by Mr. Beecher the day before publication. It is not copyrighted, nor is it prepared for the press by Mr. Beecher.

Terms—\$2 50 yearly. \$1 to agents for every subscriber. Sold by American News Company at 5 cents, and by Publishers.

Address, CHARLES ALBERTSON,
Supt. Church Union, 103 Fulton Street,
New York. Sept., 18.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 35 cents a line, or \$35 a column.]

FILTER THE WATER.—The best preventive of cholera and kindred sickness is pure water. Get one of McKENZIE'S Filters. Sent by express, with directions how to use it, on receipt of \$7. S. R. WELLS, 389 Broadway, New York.

AMERICAN ARTISAN AND PATENT RECORD.—New Series.

The *American Artisan*, now in the second year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$3 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COMBS & CO.,
Proprietors of the *American Artisan*,
No. 189 Broadway, New York

SOMETHING TO THE POINT.—

A desirable companion, having a beautiful form, brilliant complexion, clear eye, an iron constitution, nerves of steel, and in every point perfection—with a plant nature, and arrayed in new style and tasty wrapper.

MME. DEMOREST'S DIAMOND NEEDLES.

These Needles are made of the best quality of steel, best in form, best points, best eyes, best finish, and best in every particular, including the superior and convenient manner in which they are put up. They are made in Europe, expressly for our trade, and are warranted the best needles in the world—one of them being worth nearly one dozen of the ordinary kind. Ladies, do not fail to try these exquisitely superior needles.

Price 15 cents per paper, or 40 cents per 100. Mailed free on receipt of price.

473 Broadway, New York.

GUIDE TO AUTHORSHIP.—A

valuable aid to all who desire to engage in literary pursuits of any kind, for pleasure or profit. With hints on securing success and preparation, value and disposal of MSS. Also editing, etc. 50 cents.

PHONOGRAPHIC HANDBOOK

For Self-Instruction in the recently improved and simplified art as now used by all practical reporters. 25 cts.

\$30 a day, to introduce our new patent STAR SHUTTLE SEWING MACHINE. Price \$30. It uses two threads, and makes the genuine LOCK STITCH. All other low-priced machines make the CHAIN STITCH. Exclusive territory given. Send for circulars. W. G. WILSON & CO., Manufacturers, Cleveland, Ohio. Oct. 31.

ACTIVE AGENTS can make

from five to ten dollars daily in selling Mr. and Mrs. LYMAN's new and brilliantly written book—THE PHILOSOPHY OF HOUSEKEEPING. High percentage and exclusive territory given. For circulars and agencies apply to GOODWIN & BETTS, Hartford, Ct. Oct. 7.

CULTURE FOR HOMES AND

SCHOOLS.—What are the means by which the mental faculties may be best developed and strengthened; how much, and when, and how to study; how to acquire the art of rendering one's self agreeable; what are the errors into which the young are likely to fall? What are the habits they should most carefully avoid? These are questions which have been greatly neglected. With scarcely a word of counsel in his whole scholastic course, the youth is expected to develop for himself mental success and social excellence. To remedy this defect is the design of MENTAL AND SOCIAL CULTURE, a Text-Book for Schools and Families, by L. C. LOOMIS, A. M., M. D., (President of Wheeling Female College.)

CONTENTS:

- Chapter I. How to obtain Knowledge.
- II. Observation, Reading, Lectures, Conversation, and Meditation compared.
- III. Rules relating to Observation.
- IV. Of Books and Reading.
- V. Judgment of Books.
- VI. Of Living, Instructions, and Lectures.
- VII. Rules of Improvement by Conversation.
- VIII. Practical Hints—How and When to Speak, and What to Say.
- IX. Of Study or Meditation.
- X. Of Fixing the Attention.
- XI. Of Enlarging the Capacity of the Mind.
- XII. Of Improving the Memory.
- XIII. Of Self-Control.
- XIV. A Cheerful Disposition.
- XV. Politeness.
- XVI. Practical Hints on Behavior.

A convenient and valuable Manual for Home Study. Price \$1. Sent free by mail. J. W. SCHERMERHOEN & CO., Publishers, 430 Broome Street, New York.

MME. DEMOREST'S CHILD-

DREN'S MAGIC DRESS CHART. With full instructions for cutting all sizes of Waists, Jackets, Aprons, and Sacks for Children, from one to fifteen years of age. Fifty cents each.

Every mother should possess this invaluable Guide and Model for Children's Dress Cutting. Mailed free. It.

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indulging either the opinions or the alleged facts set forth.

"WORK IS THE SALT OF LIFE."

THIS text may be found—no matter where. Let it suffice to know that it is *not* contained in Psalm 107, 80th verse. A few moments of well-guided reflection will convince every thinking mind of the truth of the assertion. Work is the salt which seasons, improves, and preserves all our enjoyments, recreations, thoughts, pleasures—indeed, all our *living*. Without it, life is insipid, unenjoyable, and becomes finally *stale*, and the liver is appropriately called by the French term *blasé*.

Work imparts to life the pungent flavor and zest which salt gives to all the compounds of the *cuisine*. But how if one gets *too much* salt in his pudding? That which was agreeable as a flavor becomes hateful when it rises to take its rank among the ingredients. Then we make wry faces over what we think should have been entirely omitted. The only remedy seems to be to add more pudding. Parbleu! what becomes of those who have none to add, and no means of getting any? It seems to me, that even these are less to be pitied than those who see opportunities to change their diables altogether, and would gladly season their pudding for themselves, instead of allowing fate to salt it in such a remorseless way, but are prevented doing so by the caprices, obstinacy, and *whims* of others.

Many of the wry, crooked, soured, and twisted faces we meet are contorted by a continual tasting of the superabundance of the saline element in their life pudding—for each must eat his pudding if he live. If he lives *not*, what then? So, for dread of the great uncertain future, before which many and many a dark heavy curtain has been hung by man in addition to that supposed to have been placed there originally by the Supreme One, we grope along toward it strangling and choking with big, unmanageable lumps of salt in our throats, trying to cover with feigned smiles our grimaces at the horrid taste. And it would seem that fate is determined to serve all in opposition to their natural taste. Here is one who is quite discouraged at the sight of a *lump* of the obnoxious element, though he may unconsciously have been suffering from an entire lack of it for some time. He draws back, groans, laments, complains, tries to eat around it without touching it; but the dish is narrow, and he is at last compelled to yield to the necessity of eating it, or give up his pudding.

Another thinks it preferable to get rid of the superfluous saltiness all at once, and would willingly be almost choked by it for a little while, provided the remainder might be unsalted. But ten chances to one, this eater finds the salt thoroughly and evenly mixed with every mouthful. By no present penance can he improve the future, but must work continually and continuously.

How often might two persons be found willing to exchange lives even to the minutest detail! Happy is he who by strength of will, energy, and well-directed effort forces the salt of his life to take its proper place as an improving flavor, and eats his pudding with relish and enjoyment as well as with a quiet conscience. CAL CARL.

MIND AND MATTER.

WHEN we look around and see the variety of manifestations of mind, from the idiot up to the highest human intellect, we are naturally led to examine into the causes that produce these differences. Whether these differences arise from inherent qualities of mind or the texture and development of corporeal organization, is the question. Though our finite mind may never be able to fathom these causes, yet they ever have been, and ever will be, matters of speculation and inquiry.

All bodies are combinations of certain elements or original atoms. One combination forms a tree, another a horse, and another a man. The more nearly perfect is this combination in man, the more nearly perfect are the relations of his spiritual and material nature, and the more susceptible of improvement by impressions—having a perfect organ through which to observe and operate.

The mind and body stand in perfect relation only when the body is composed of such elements as are appropriate. There are elements that should not form a part of man's corporeal organization. To reject these, and select congenial properties out of our food, are the functions of the nutritive organs. But, by disregarding the laws of nature, this foreign matter is introduced into the system, and when introduced and forming part of the bodily organization, then that organization is changed from its original type and design, and the relation between mind and its corporeal organ will not be so intimate. This is proven by the ascending series of animals. The closer they approach to man in organization, the more intellect they evince.

Poisons, and some medicines constituted of materials foreign to the body, can be taken in such quantities as to impair reason, cloud the mind entirely, or part mind and matter in death. By thus obscuring the intellect, it is not to be taken that the identity of the mind or any of its functions are damaged or destroyed, because matter can not destroy spirit or mind, either partially or totally, but that the instrument is damaged or changed through which mind manifests itself. In this case we see where foreign elements are introduced into the organic body of man, that they retard the operation or action of the mind, and that according to the amount of dross in the system is the mind obscured. These false combinations are acquired by bad habits, and then transmitted from generation to generation, causing that perversion of human nature and the very different degrees of mental ability we observe every day of our lives.

We readily adduce from the above, that God gives through the agency of his laws to every human being the same germ or embryo of mind, with the same latent powers and functions. That man, by disobeying the laws that govern his body, has entailed upon himself the penalty of these laws, which are disease and derangement of bodily organs, and widened the breach between his mind and body—thus being disqualified to draw knowledge from the material world.

It is self-evident, that if all mankind had body and brain organizations alike, that the manifestations of mind would be the same through all. The power to act and the ability to perform would be the same. This proves that our corporeal organizations are deficient, and not the innate functions of the mind; and in a few generations man could be restored to his original perfection and prestige by a rigid observation of the laws that govern him; and it is our duty to our God and ourselves to endeavor to restore the equilibrium which has been lost by disobeying the laws of our being. B. F. H.

PHRENOLOGY IN THE SCHOOL-ROOM.

A WESTERN school-teacher writes us the following:

DEAR EDITOR: I am a constant reader of the JOURNAL, and desire, through its columns, to say a few words concerning it, and the science it so nobly advocates. About two years ago I purchased a copy at a news depot—this was not the first copy that I ever saw, but it was the first copy that I ever paid much attention to. I took it home and read it through attentively. Its pages were stored with useful information concerning subjects of which it behooves every man, woman, and child to become acquainted. It is true, some of the terms were new to me, and therefore I could not fully comprehend their meaning. I knew nothing about the names of the faculties and the location of their organs; but this difficulty was soon obviated by purchasing one of your Self-Instructors and large-size Phrenological Busto, which I placed in my study, and whenever I had any leisure time, I devoted it to the science of Phrenology; thus in less than three months I became familiar with the name and location of every organ. I continued to study it, and every day its truths became more and more impressed upon my mind. I have made many practical observations both on myself and fellow-men, and in a thousand cases have I seen the science of Phrenology verified. My occupation is school teaching, and never could I so fully understand the different dispositions and inclinations of children; never could I so easily and successfully govern a school, as when I obtained a knowledge of this important science. Every teacher in the land should make it a study, and all young men, and women too, who would have a safe star to guide them through the journey of life, who would aspire to health, wealth, and happiness, should acquire a knowledge of this important branch of education.

Respectfully yours,
EVANSVILLE, IND.

Such is the experience of all preceptors who have taken the time and pains to investigate and apply the principles of Phrenology.

CURE OF CANCER.

[We insert the following interesting case of cancer cured, not only because it seems important, but because we have been well acquainted with the patient and his family for more than twenty years, and have received this statement in writing, for publication.]

When about fifty years of age (A.D. 1836), there appeared near the outer corner of my left eye a small scab, which slowly enlarged and soon became painful, attended with a constant itching, or rather a twitching sensation. Feeling anxious about it, I applied to a physician in Hartford, Conn., who said it was a cancerous affection, but advised me to let it alone and give it no medical treatment. As the affected place continued to enlarge and the irritation increased, I applied to another physician, who attempted to cure it by applying caustic, which treatment proved an injury instead of a benefit. The sore increased in size, spreading over the temple, eating off both lids of the eye, discharging matter constantly, destroying the sight of the eye, and causing almost insufferable pain. Thus matters stood at the end of twenty years' affliction, and I had reached the age of seventy. I had up to that time consulted six physicians, from none of whom did I receive any relief. The cancer now assailed the substance of the eye-ball, eating it out entirely. The sore spread over the temple to the size of the palm of my hand, and below the eye about three quarters of an inch.

I then applied to an eminent physician in New York (Dr. Blake), and remained under his treatment one year without any benefit, but rather grew worse. I now gave up all hope of recovery, ceased taking medicines, and merely washed the affected part often in cold water. During the summer of 1865, it had become so painful that I slept but little, was very weak and nervous, was confined to my bed most of the time, and expected soon to die; my friends thinking I could not live till the following spring.

In the month of August, 1865, I heard of a remarkable cure of a cancer by the use of a tea made from common red field clover. Thinking it was at least harmless, I used it as a common beverage, making it very strong, and also washed the eye with the same. In less than two months, to my utter astonishment, the pain entirely ceased, and the sore began to heal at the inner corner of the eye. The healing process went on rapidly until the eye socket was healed over, forming a skin as smooth as that on my cheek, and the redness is now gone. The sore on the temple is also healed. There is not over my eye even the semblance of a scar, and but a few scars remain on the temple. My sleep is now sweet, my appetite good, am more fleshy than ever before, my general health was never better, and I think I have as few infirmities, and am as hale and hearty as any man of my age, which is now eighty years.

WEST HARTFORD, CONN.

TRUMAN WOODFORD.

[Whether it was the clover tea and clover wash which put the patient in the way of recovery, or whether the disease had already exhausted itself, may never be known; such testimonials, however, will have their influence. Calomel and other drugs of a poisonous nature would only aggravate such a case and hasten the exit of the sufferer. Clover tea or pure soft water would at least not obstruct the processes of nature, and the work of repair could go on.]

I'LL NOT FORGET.

BY MRS. WILKINSON.

No! I'll not forget thee, darling,
Though thy bed be lowly made,
And the daisies on thy bosom
With the summer's bloom will fade.
Though our little one may never
Breathe again a father's name,
Yet I'll not forget thee, darling,
Yet I'll love thee all the same!

No! I'll not forget thee, darling,
Though the coffin claims thee now,
With the earth upon thy bosom,
And the dust upon thy brow.
Though the pallid lips may never
Ope again my heart to cheer,
Yet I'll ne'er forget to love thee,
Dearest, as I loved thee here!

THE WALTER GRAPE.

THE WALTER GRAPE.

We have received the following description of this new variety of grape from the producer.

It is a seedling of the Delaware crossed with Diana. It was originated by A. J. Caywood, of Modena, Ulster County, N. Y., and is now owned by Ferris & Caywood, of Poughkeepsie. It was moved to Poughkeepsie, N. Y., in the spring of 1865, then being five years old, the main stem measuring one inch in diameter, and having fruited

three times. The soil in which it first grew was about seven inches deep, overlaid with an almost impermeable mixture of blue clay and gravel. It now stands in a dry situation, soil a slaty loam, and is bearing the sixth time. The Walter was the only one of twenty-seven vines raised from the crossed cluster that bore fruit, excepting one of the same lot standing near it, that four years ago bore two berries, but has never borne since. It much resembles the Delaware, as did all of them. The Walter is so perfect a mixture of the Delaware and Diana

that most of the leading horticulturists of the country have declared it difficult to decide which it most resembles. In growth the vine surpasses the Diana, the wood appearing in every particular like an overgrown Delaware. Persons unacquainted with its leaf could not distinguish it from the Delaware under a glass. Out of doors its leaves are more lobed than those of the Delaware, while they are as large as the largest Concord, and fleshy and leather-like, but a little darker green beneath and on the surface than its parent, the Delaware, and as free from down on the under side of the leaf as that variety. It has never yet shown mildew. In bunch and berry it is a medium between the Delaware and the Diana, some berries being as large as those of the latter. The cluster in shape differs from the Delaware very little, if any. The berries are globular, and not a particle of pungent acid can be found in it. It is highly charged with sugar throughout the flesh, and the seeds are small, and from one to two in number. When the sugary substance which adheres to the skin is drawn off with the tongue, it is left as thin as that of the Delaware, and this skin also can be generally eaten, as it is fully as rich as the skin of a raisin.

Grapes of this sort are converted into raisins readily, if placed in any dry situation indoors or out. We now have a few raisins two years old. The vine is a great bearer, and needs thinning. It ripens in this vicinity by the 30th of August, but ripe berries have been plucked as early as the 6th.

Mr. Caywood in a communication addressed to us says: "As you know, I have said many good things for this grape, and expect that I shall be arraigned before the horticultural world if my statements are not true, I will say, in view of my responsibility, what I may have said before, that it has but one fault, viz.: it is, like its parents, too compact in the cluster, notwithstanding the statement in the November number of the *Horticulturist* that it was too loose. I did not intend to publish a description of this grape so soon, but have felt compelled to it by the strictures of Penn Yan and others."

The Modena, the black grape that was exhibited with the Walter at Cleveland last fall, is an accidental seedling of the Concord, the same age of the Walter, originated at the same place, within a few rods of it, and passed through the same changes, and is now growing near it, but has never fully recovered. We have young vines of both it and the Walter from which we hope soon to see better clusters. The leaf is a little darker than the Concord, and considerably wrinkled in the center, which cures it slightly. The vine in every other particular so nearly resembles the Concord, that a further description is unnecessary. The cluster is not often shouldered, and is broad at the base and tapering. It is much sweeter than the Concord, has less of the American aroma and foxiness than its parent, and ripens with the Hartford Prolific.

WORKING CHEAP.—"What does Satan pay you for swearing?" asked one gentleman of another.

"He don't pay me anything," was the reply.

"Well, you work cheap; to lay aside the character of a gentleman; to inflict so much pain on your friends and civil people; to suffer; and lastly to risk losing your own precious soul—and all for nothing, you certainly do work cheap—very cheap indeed."

THE
PHRENOLOGICAL JOURNAL
AND LIFE ILLUSTRATED.

Is devoted to **The Science of Man**, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in **Choosing a Pursuit**, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

Man, know thyself. All wisdom centers there;
To none man seems lovable, but to man.—Young.

GENERAL CURTIS.

BEHOLD a manly man! broad, high, liberal, grand! Most men develop particular qualities of mind or traits of character by which they become known. One is inventive, and his name goes down to posterity connected with a screw, a lever, a steam engine, or a sewing machine. Another is artistic, and with his chisel works rough stone into the exquisite statue that we see and admire; or with his pencil almost makes the canvas breathe with life. One has a gift or a genius for playing chess, and becomes known for this. Another for taming or subduing vicious horses. Another for walking on a rope. Another composes immortal music—and thus writes his name on the page of

PORTRAIT OF GENERAL SAMUEL RYAN CURTIS.

history. One composes a poem, which all the world repeats—and his name is connected with "sweet home." One discovers a continent—and the name of Columbus can never die. Coming down to lesser persons, we find men becoming famous as rogue catchers, play actors, clowns, showmen, balloonists, gymnasts, money-getters, misers, gamblers, thieves, lock-pickers, robbers, murderers, and assassins. Indeed, there are fellows who *pride* themselves on these things. It is a very low ambition—human nature not only unregenerated but awfully perverted—still, by perseverance, men sometimes become famous or notorious in

some one thing on a very small capital of brains.

Not so with the subject of our sketch. He was at once a philosopher, a scholar, a statesman, and a soldier. Something like Washington in temperament and in patriotism, like Franklin in science and in philosophy, like Webster in argument, like Clay in eloquence, and like Jefferson and Jackson in comprehensiveness and in executiveness. He was, in short, one of the most marked men among us. But he was one of the most modest, mild, gentle, just, and steadfast of men. He was kindly, hopeful, humble, devotional, affectionate, and loving. Then why was

he not more famous, more widely known? Simply because he was too broad, liberal, generous, and NATIONAL to become a mere political partisan. He was not "available" for corrupt or party purposes. It was only the few who knew him best that could appreciate him most. Temperate, honest, intelligent, honorable, circumspect, he moved among common men like a grand chief or patriarch whose duty it was to correct, advise, instruct, and to direct.

But had he *no* faults? Fewer than most men, and only such as are common to the best. He was human, therefore fallible. But with such specimens of humanity among us, we may take courage, and feel assured of the possibilities to which the race may attain.

The following, though lengthy, will be read with interest, giving, as it does, a history of important events connected with the life of one so true, so noble, and so good.

BIOGRAPHY.

The late General Samuel Ryan Curtis was born near the village of Champlain, in north-eastern New York, February 8d, A.D. 1805. While yet an infant his family emigrated to Licking County, Ohio, settling at Newark. The correctness of the preceding statement is assured by a reference to the family Bible record of his father, and by the statements of all the elder members of his family.

The father and grandfather of Curtis were Revolutionary soldiers, the former having been a sergeant of dragoons during the later, and the latter a captain during the earlier period of the war. The General was the youngest of a large family of sons and daughters, nearly all of whom survive him. His two brothers became lawyers in Ohio, and much of the General's life was occupied in the practice of the law. He was educated at West Point, where he graduated July 1st, 1831. At the military academy his record was excellent, and he was made the commander of his class. After graduating he was appointed Brevet Second Lieutenant in the Seventh Infantry, and served for a time in Arkansas, and at Fort Gibson in the Indian Territory, but resigned June 30th, 1832, and engaged in civil engineering in Ohio. In 1833 he resided at Mansfield, where he raised an infantry company, the "Mansfield Blues," distinguished for its perfection in tactics. For a time he was occupied as a civil engineer on the "national road," and from April, 1837, to May, 1839, he officiated as chief engineer of the "Muskingum River Improvement." By a system of locks and dams he rendered the river navigable from its mouth, at Marietta, to Zanesville, a distance of over one hundred miles, besides affording a vast amount of valuable water power at va-

rious points along the stream. In this office Curtis rendered himself very useful and extremely popular. Being a Whig in politics, he was removed by the opposition party to make room for a Democratic successor. A large number of young Democrats, who were employed under him, signed a testimonial of regret at his removal, but were notified that they must withdraw their names or lose their positions for this act of disrespect to the dominant party. But one obeyed the demand, and, accordingly, the others were removed on account of their professed friendship to their chief. In 1841 he was admitted to the bar, and engaged in legal practice at Wooster, where he resided until the beginning of the Mexican war.

On May 20th, 1846, he was appointed Adjutant-General of Ohio, specially to muster into service Ohio volunteers for the Mexican war. On the 25th of the next month, although a prominent Whig, and against a strong opposition, he was elected Colonel of the Third Regiment of Ohio Infantry, by the regimental officers, a large majority of whom were Democrats. He remained colonel until the regiment was mustered out of service in 1847. Much to their chagrin, he and his regiment arrived in Mexico too late to take part in any battles. Colonel Curtis, however, served honorably and capably as civil and military Governor of Matamoras, and subsequently of the cities of Camargo, Monterey, and Saltillo. When General Taylor was surrounded, and fought the battle of Buena Vista, Colonel Curtis organized and commanded a column of twelve hundred men, and went from Camargo in pursuit of General Urrea, driving him, with five or six thousand irregular Mexican troops, before him for several days, thereby opening a line of communication with General Taylor, whom he met at Remas, near Monterey. After his regiment was mustered out of service, the Colonel remained in Mexico by order of General Taylor, serving on the staff of General Wool until the close of the war, when he returned to Ohio and resumed his legal pursuits.

In 1847 he accepted the position of chief engineer of the "Des Moines River Improvement," in Iowa, and removed to Keokuk, always afterwards regarded by him as his home, and where he also engaged in legal practice. It was intended to render the Des Moines River navigable from its mouth, near Keokuk, to the city of Des Moines, the State capital. But after the accomplishment of much labor, the enterprise, owing to its great expense and the cheapness and growth of the railroad system, has been abandoned. From 1850 to 1853 Colonel Curtis served as engineer in charge of the harbor improvement and other public works at St. Louis, Missouri. The encroachments of the Mississippi on the Illinois shore had threatened to open a new channel through a series of lakes and ponds, which would have made St. Louis an inland city, several miles distant from the river. The plans of several engineers had seemed unavailing to prevent the impending calamity. Cur-

tis succeeded, with sand bags, in building a dike connecting Bloody Island with the Illinois shore, and thus permanently diverted the channel of the river to the Missouri side, securing to St. Louis a depth of water always navigable by the largest river boats.

From 1853 to 1855 he acted as chief engineer of several railroad lines leading through Indiana, Illinois, and Iowa, under the name of the "American Central Railroad;" and for these companies, in 1853, he indicated the probable central route of a Pacific railroad through the great Platte Valley in Nebraska, commencing at Council Bluffs, Iowa, substantially as the road has since been constructed. In 1855 he was elected Mayor of Keokuk, and devoted his energies to the local improvements of the city of his residence. For many years he strongly and constantly advocated the construction of a steamboat canal, twelve miles long, around the Des Moines Rapids, a complete impediment to navigation in the Mississippi, terminating at Keokuk. The Government has spent many hundreds of thousands of dollars in vain attempts to clear out the channel, on a plan originated by Robert E. Lee. At length this scheme has been abandoned, and the plan for a canal, as originated by Curtis, is recognized and adopted as the only means of overcoming the obstacle.

In 1856 Colonel Curtis took a prominent part in the organization of the Republican party, and was elected to represent the first of the two congressional districts of Iowa in the Thirty-fifth Congress, and was afterward re-elected to the Thirty-sixth and Thirty-seventh Congress for the same district, which then comprised nearly the southern half of the State. In Congress he was a prominent member of the lower house, serving as one of the standing committee on military affairs, and as chairman of the committee on the Pacific Railroad. He introduced a bill for the construction of this road by the central or Platte Valley route, with branches at each end, entirely similar to the bill finally passed by Congress, which owed much of its success to the previously applied energies of Curtis.

During the recesses of Congress, it was his custom to visit the several portions of his district and address his constituents on the political issues of the day. While at Council Bluffs, in the summer of 1858, occurred the Indian war in Nebraska. Colonel Curtis, leaving his district, served as volunteer aid on the staff of General Thayer during the campaign.

At the beginning of the secession troubles in Congress, Curtis was a member of the Compromise Committee, of which Tom Corwin was chairman. He also represented Iowa in the celebrated "Peace Conference," of which John Tyler was president, and which failed to prevent civil war. In the House and in the conference he advocated honorable terms of adjustment; but foreseeing the certainty of civil war, he early and constantly urged the most extensive and efficient military preparations for the impending conflict.

When Sumter fell, Curtis, then at Keokuk,

started immediately for Washington. On arriving at Philadelphia, he heard of the troubles in Baltimore and the destruction of railroad bridges, cutting off communication with the national capital. The "New York Seventh Regiment" was about taking passage by sea for Washington; carpet sack in hand, he pressed through the crowd and reached the boat. The presence of a man in the costume of a civilian excited considerable suspicion, but satisfactory explanations were made, and Curtis was appointed a volunteer aid to Colonel Lefferts. During the voyage to Annapolis his advice was very useful; and on the advance to Washington he marched day and night on foot, and in the front, his counsel as an old soldier and an engineer being of great value, and materially contributing to the success of the expedition. For these services he was unanimously elected an honorary member of the New York Seventh Regiment, Colonel Lefferts affixing the badge of honor, with generous acknowledgments for the assistance he had rendered.

On arriving in Washington, Curtis called on General Scott and the Secretaries of War and of the Navy, informing them of the great excitement in the loyal States, and the troubles in Maryland, which had been detailed to him by Governor Hicks in Annapolis. He also visited the Quartermaster and Commissary-Generals, and advised them of the rush of troops toward Washington and the great preparations that would be needed for their comfort and sustenance. Receiving authority to assist in the organization of Iowa troops, he returned to Keokuk.

During his absence the First, Second, and Third Iowa regiments of infantry had been ordered to rendezvous, and had arrived at Keokuk, and the First (three months) Regiment had elected its officers. Curtis had also succeeded in obtaining arms for the first two regiments from Governor Yates, at Springfield, Ill.

On the 1st of June, 1861, the Second Regiment (the first regiment of three years' volunteers), by the unanimous vote of its officers and men, elected Curtis its colonel. He immediately commenced drilling and perfecting the organization of his regiment. To his energy and military knowledge was it indebted for the honor of having the first dress parade, and of being the first of all Iowa regiments to leave the State for the seat of war.

At midnight on June 13th a dispatch was received from General Lyon asking Colonel Curtis to move to Hannibal, and to seize and occupy the Hannibal and St. Joseph Railroad. Before daybreak his regiment was embarked and moving down the Mississippi; ammunition, cartridge-boxes, and other necessary accoutrements being given the men for the first time, on the boat. On arriving at Hannibal, the regiment, with part of the Sixteenth Illinois Infantry, was quickly distributed over the railroad as far west as Brookfield, and being rapidly followed by the First Iowa Infantry, was on the morning of the 14th pushed forward to St. Joseph, two hundred miles west of Hannibal,

and then occupied by a few companies of regulars. The important towns, bridges, and strategic points were soon occupied by detachments and guard parties, and national supremacy was at once firmly established throughout north Missouri, with the loss of but two rebel lives and with no Union loss. The movement had been executed just in time to prevent the burning of the railroad bridges by the orders of Sterling Price. Colonel Curtis assumed command of the whole line of road, and devoted his energies to breaking up rebel organizations and preserving order, and in two weeks' time had entirely subdued all open rebellion, the signs of which were everywhere conspicuous on his arrival. Having completely won the esteem of all in his regiment, on the 30th of June he left it forever as its colonel. He was still a member of the Thirty-seventh Congress, and hastened to Washington to attend the extra session of July 4th, 1861, where he desired to urge some important modifications of military law. He advocated the adoption of a plan for a volunteer army both in time of peace and war, securing harmony among our forces by a system that would exclude all distinctions and consequent jealousies between regulars and volunteers. His views were in part adopted by equalizing the term of service, pay, and emoluments in both classes of our army, and by extending the opportunities of regular officers to secure promotion in the volunteer service. While he was in Washington occurred the first terrible battle of Bull Run. Hearing of the disastrous retreat of the Union army, he went at once to the field and did all in his power to turn defeat into victory. At this session of Congress he was, on the recommendation of General Scott, appointed Brigadier General of Volunteers, his commission dating from May 17th, 1861. Resigning his seat in Congress, he was ordered to report for duty to General Fremont, then commanding the Western Department at St. Louis.

General Curtis arrived at St. Louis in August, 1861, and was ordered to organize a camp of instruction. The camp was first organized at Jefferson Barracks, but, for greater convenience and better accommodation, it was on September 12th removed to Benton Barracks, in the outskirts of St. Louis, where Curtis assumed command. Troops were at this time pouring into St. Louis. Public enthusiasm was at its height, and thousands were rushing to serve under Fremont. The work of organization, and of drilling and disciplining the raw mass of volunteers was a vast and arduous task which the General well and faithfully performed.

While he was still in command at Benton Barracks, Fremont left St. Louis for Jefferson City, and assumed command of the "Army of the West." During the absence of Fremont, Curtis was placed in command of St. Louis. At this time arose the cry which finally resulted in the removal of Fremont and the substitution first of Hunter and afterward of Halleck in command of the Western Department. The determination to change commanders imposed

upon Curtis some very delicate and intricate duties. He was consulted by Mr. Lincoln as to the state of affairs in Missouri and the policy of a change of commanders, and subsequently it devolved upon him to notify the several officers of the change, to preserve order, and to check all undue popular outbreaks.

When Halleck assumed command of his new "Department of the Missouri," Curtis was for a time retained in command of the "District of St. Louis." His command extended over the troops for fifty miles around St. Louis, except the troops at Benton Barracks, with headquarters at St. Louis. His knowledge of the topography, people, and condition of the Department was of great use to Halleck, and the regulation of the steamboat commerce on the Mississippi occupied considerable of his attention.

In the mean time Sterling Price was roving over southwestern Missouri with his rebel army of "Missouri State Guards," and it was determined by Halleck to drive him completely from the State.

General Curtis was sent to Rolla to assume command of the "southwestern district of Missouri," which included nearly all the southwestern country as far as it could be penetrated from St. Louis, and contained in all about 15,000 Union troops. On December 26, 1861, just five years preceding the day of his death, Curtis first assumed command of those troops whose brilliant actions first rendered his name distinguished in military history. He found everything in very poor order for taking the field. The army was encumbered with useless baggage, many changes were to be made, and new troops obtained to replace others withdrawn, while almost nothing was known of the real position or force of the enemy more than a hundred miles distant in the wilderness. An expedition of cavalry was at once sent reconnoitering toward Price, who was found to be in Springfield. In the mean time everything was rapidly being prepared for a long campaign.

About the 10th of February the army was ready to move. An advance was rapidly made through Marshfield to Pierson's Creek, eight miles from Springfield, where the first skirmish occurred with Price's army on the 13th. On the same night Price evacuated Springfield and retreated south. On the next day Curtis occupied Springfield, and at once stripping his army of everything that could possibly be spared, commenced a close pursuit of Price, through the woods and ravines of the Ozark Mountains, which lasted for more than one hundred miles, and was almost continuous for three days and nights. Several severe engagements occurred, the Arkansas line was passed by Union troops for the first time during the rebellion, and a battle was fought at Sugar Creek, Arkansas, on February 17th, in which the rebels, who had been reinforced by a part of Ben. McCulloch's command, were defeated and driven first to their stronghold of "Cross Hollows," and afterward south of the Boston

Mountains. Fayetteville and Bentonville in northwestern Arkansas were captured, and our army was allowed to rest after its long and wearisome march in midwinter of over two hundred miles, Sigel's two divisions being encamped near Bentonville, Carr's division at Cross Hollows, and Davis' division at Sugar Creek, three points from twelve to eighteen miles distance from each other. Sugar Creek, to the rear of Bentonville and Cross Hollows, had been selected by Curtis as the best of several points for a general engagement, which he now considered as impending.

Such was the situation when, on March 5th, Curtis, then at Cross Hollows, heard of the advance of the combined rebel armies of Price, McCulloch, Pike, and McIntosh, reinforced by large numbers of irregular troops, numbering about 40,000 men, all under the command of Earl Van Dorn. The whole Union army, numbering scarcely 10,000 men, was at once ordered to concentrate at Pea Ridge, on Sugar Creek, to resist the attack. On the 6th, Sigel, with a small detachment of about 600 men, was attacked and surrounded by the enemy near Bentonville, while in the rear of his division, which had marched to Pea Ridge. He made a gallant running fight for about seventeen miles, and cut his way through the rebel armies, arriving safely at Sugar Creek about nightfall. On the 7th and 8th the action became general, and was fought with terrible pertinacity and bloodshed on the part of both armies. The rebel leader was so confident of success that he had planted his whole army on the north of Curtis, thus endeavoring to cut off all retreat to Missouri. But the rebel Generals Ben McCulloch, McIntosh, and Slack were killed in action on the 7th, and the rebel armies, deprived of these leaders and suffering a tremendous loss, were completely defeated on the 8th by the superior generalship of Curtis. They fled in complete rout, leaving the Union army encamped on the battle-field. The Union loss was only about 1,500 in killed, wounded, and missing; but the broken fragments of the rebel armies suffered so terribly that they were no longer able to contend for the possession of Arkansas. The commands of Price and Van Dorn therefore sought shelter with the army of Beauregard, east of the Mississippi, at Corinth, leaving Curtis in undisputed possession of southwestern Missouri and northern Arkansas.

Many efforts were made to give the glory of the victory of Pea Ridge to Sigel, by rumors of his superior generalship, and statements that Curtis, in despair, had abandoned the command to Sigel. It is only necessary to read the official reports of Curtis and Sigel, as well as the division commanders, Osterhaus, Asboth, Carr, and Davis, to understand that the command of Sigel took comparatively a small share in the battle, the hardest fighting having been done by the 3d and 4th divisions, under Davis and Carr, and under the immediate supervision of Curtis. These divisions were first attacked by the enemy, and were long hard pressed before Sigel's command

could be brought to their assistance. General Sigel hearing these rumors, with the spirit of a true soldier addressed a letter to Curtis, which was afterward published, in which he entirely denied these charges, and nobly gave the chief credit of the hard-won victory to General Curtis. Almost immediately after the battle, Sigel, being in ill health, left the army of the Southwest. He never returned, being next ordered to Virginia. In the meanwhile Curtis encamped at Cross Timber Hollows, on the State line, to recruit his forces, take care of his wounded, and prepare for another long march of more than three hundred miles to the eastward, through Missouri and Arkansas, and southward along White River to Helena, on the Mississippi.

In March, 1862, Curtis was made major-general of volunteers, and while encamped at Cross Timber Hollows he learned of the sudden death of his daughter in St. Louis. The victorious General, but afflicted father, was unable to attend her death-bed or funeral. Duty demanded his presence in the field.

His army was now in the remote northwestern corner of Arkansas. To render it of further avail it must be brought nearer the enemy. About the 1st of April the march was resumed in an easterly direction to West Plains, Missouri, over the wild and difficult roads of the Ozark Mountains. At West Plains the army turned south and arrived at Batesville, Arkansas, about the 1st of May. It had been intended to assist in the capture of Memphis, or of Little Rock, but much rain, swollen streams, and bad roads prevented either of these movements. At Batesville, Curtis was suddenly called to reinforce Halleck at Corinth with most of his infantry. Two divisions, under Davis and Asboth, were accordingly sent to Halleck, and Curtis was reinforced by the arrival of a division under Steele from Pilot Knob. He now reorganized his army in three divisions, commanded by Steele, Carr, and Osterhaus. Memphis having been captured, several attempts were made to send supplies by steamboats up White River to the army of Curtis; but these expeditions were repulsed by the enemy or delayed by low water, until Curtis determined to move down White River to some point where they could reach him. About the last of June, therefore, he abandoned his communications overland with loyal territory and started on his hot and weary march through an enemy's country. Skirmishes and hostile meetings with the enemy were frequent, a large number of newly-arrived Texan Rangers constantly annoying the front. The roads were frequently barricaded by fallen timber, and everything possible was done by the enemy to cripple the movements of the army. After leaving Jacksonport it was hoped to meet gunboats at Augusta. The army moved down the east bank of White River to Augusta, where it arrived on July 4th, finding no gunboats. A detour eastward from White River now became necessary, to avoid cypress swamps near the mouth of Cache River. On July 8th oc-

curred the battle of "Bayou de Cache." The enemy, composed of Texan Rangers about two thousand strong, supported by a much larger force in the rear, were defeated by our advance, numbering about six hundred. Continuing the march, Curtis arrived at Clarendon, on White River, on the 9th, where he learned that gunboats escorting supply steamers had been but the day before, and being unable to hear from him had departed down the river. The army was now almost without supplies, hundreds of miles from its late base of operations, and in an enemy's country, where there was almost nothing upon which to subsist. The only possible course to insure safety was adopted. Curtis immediately marched his command, followed by hundreds of liberated contrabands, a distance of sixty miles, to Helena, on the Mississippi, where he arrived on the 14th of July, having completed a march of over five hundred miles from Rolla, Missouri. "Sherman's march to the sea," at a later period, affords the only parallel, during the rebellion, to this long and difficult march of the army of Curtis through an almost unsettled wilderness, and involving an abandonment of all communication with the loyal regions in the rear, and an entire change of base after moving hundreds of miles, completely surrounded by the enemy. By the time all the command had reached Helena, boats with supplies had been obtained from Memphis, one hundred miles above, and the army rested from its long march, garrisoning the important point of Helena, then the advance post on the line of federal occupation of the Mississippi.

The army was now increased by the addition of a division under Hovey. Curtis engaged in several expeditions down the Mississippi, and up the Yazoo and Arkansas rivers. The expeditions captured a large number of boats, arms, and rebels. A fort in the vicinity of Vicksburg was taken and its guns were spiked. The steamer *Fair Play*, with a cargo of improved English muskets, which had just run the blockade, was also captured while en route to the enemy.

Helena was an attractive point to cotton buyers, and consequently it soon swarmed with them. All manner of fraud and corruption began to prevail. To preserve order and prevent dealings with the enemy, Curtis was compelled to interfere with the speculators and break up most of their traffic. This excited the malice of some, who accused him of favoring his friends and improperly engaging in the business himself. This charge became widespread, and was finally investigated at the request of General Curtis. His enemies made many efforts to convict him of participating in the trade, but no evidence could be found to sustain their charges, and the papers in the case were finally placed before President Lincoln, who expressed himself satisfied of the entire innocence of General Curtis.

In the midst of his military career, General Curtis still retained his interest in the Pacific

Railroad, and having obtained a brief leave of absence in August, 1862, he acted as president of that Pacific Railroad Convention at Chicago which actually inaugurated the work now being so successfully extended toward completion.

He assumed command of the "Department of the Missouri" at St. Louis, September 24th, 1862. It embraced the States of Missouri, Kansas, and Arkansas, the Indian Territory, and the Territories of Nebraska and Colorado, together with the military prison at Alton. It included the armies of "The Frontier," "The Southwest," and of "Southeast Missouri," besides numerous other small posts. He probably for some time commanded over one hundred thousand soldiers scattered over his broad department, and contending with Indians, guerrillas, and rebel armies.

To effect organization and preserve local order, all resident Missourians were made "enrolled militia." Rebel sympathizers were excused from bearing arms against their friends, while loyal men were liable to be called into service to suppress guerrillas and local insurrection. The latter class was very large, and at times became of great service and vast importance. Governor Gamble, of Missouri, claimed entire control of this organization, while General Curtis, both as military commander of the Department, and as a General of the State Militia, sought to exercise the same command when the militia were in actual service, and it seemed of importance for him to have the entire regulation of military affairs. These conflicting claims produced dissension, which was increased by a division of the Union party into two elements, one of which was called Conservative and the other Radical, the former being headed by Governor Gamble, and General Curtis being, from the necessity of his position, to a considerable extent associated with the latter.

During the summer of 1862 the rebels had rallied in small parties throughout Missouri, while the southwestern, and at a later date the southeastern, portions of the State were repeatedly invaded by the enemy in force, under Marmaduke, Jeff. Thompson, and others from Arkansas. To repulse the enemy in the southwest, General Schofield had organized the "Army of the Frontier," which advanced beyond Springfield to the Arkansas River at Fort Smith, and under Schofield, Blunt, and Herron, with troops in the rear under Brown and others, again broke up the rebel armies, winning the victories of "Cane Hill," "Old Fort Wayne," "Prairie Grove," "Fort Smith," "Van Buren," "Springfield," and "Hartsville."

The "Army of Southeast Missouri," under Davidson and McNeil, was also contending with rebel armies in that quarter, fighting a severe battle at "Cape Girardeau," and driving the enemy as far as Pocahtontas, in Arkansas.

The "Army of the Southwest" at Helena, besides holding that post, was engaged in various raids into Arkansas and Mississippi. Two divisions were ordered in October from Helena to Pilot Knob, Missouri, to prevent a

rebel invasion, but were subsequently returned to Helena, and at a later date the State of Arkansas and the Indian Territory were for greater convenience taken from the command of Curtis and attached to the Department of the Tennessee.

Besides the regulation of these various armies, Curtis was continually occupied with guerrilla parties throughout Missouri. To effect their suppression, in 1863 he instituted a code of military law commonly known as "General Order, Thirty," which defined the nature of military offenses, classified offenders, and provided for their punishment. This code, with subsequent additions, continued in force in Missouri until the end of the war. It was adopted by other commanders, and was cited with earnest approval by the Judge-Advocate-General of the Army. The regulation of commerce in the Department and the prevention of illicit trade with the rebels also called for much attention. General Grant was engaged in conducting the long series of operations against Vicksburg, and General Curtis was continually called upon to furnish him with reinforcements. So many of his troops were sent to Grant, that his own feebly garrisoned department was very liable to rebel raids, and was still somewhat overrun by guerrillas.

The political elements in Missouri became continually more embroiled, and the General's relations with Governor Gamble became constantly more unpleasant. An accident revealed to Curtis that a member of Mr. Lincoln's cabinet from Missouri was opposed to his course in that State, and, together with other prominent conservative politicians, was exerting himself to effect a change of commanders. Curtis therefore requested Mr. Lincoln to relieve him of his command. The request was granted, and General Schofield assumed command of the Department May 24th, 1863, Curtis having been in command just eight months.

In making the change, Mr. Lincoln wrote a letter forwarded both to Curtis and Schofield, but addressed to the latter, which was one of the most remarkable acts of his public life. He alluded to the unfortunate division of the Union party in Missouri into two factions, and stated that he wished to harmonize the contending elements, which would then be vastly in the majority, and as he could not remove Governor Gamble he was compelled to remove General Curtis. In another letter to Curtis on the same subject he concluded in these words: "With me the presumption is still in your favor that you are honest, capable, faithful, and patriotic." Subsequent events, however, demonstrated that this course of the President was a mistake. The radical element continually gained strength in Missouri. Both parties sent full delegations to the national convention which renominated Lincoln. The opponents of Curtis were the avowed friends of the renomination of the President, but they were not received into the convention, and the "radicals" being preferred, expressed their displeasure with the administration of affairs in Missouri, by voting for Grant, thus casting the only votes

which prevented the renomination of Lincoln from being at once unanimous.

Curtis now retired to his home in Iowa, where he remained during the rest of the year 1863. In October he was called to mourn the death of his son, Major Henry Zarah Curtis, assistant-adjutant-general on the staff of General Blunt, who was killed in action at Baxter's Springs, in the Indian Territory, by a gang of guerrillas under Quantrell, Todd, and others, after he had been completely surrounded in an effort to rally his troops.

On New Year's day, 1864, the War Department assigned Curtis to the new "Department of Kansas." It included all of his old territorial command except Missouri and Arkansas, Rosecrans being about the same time assigned to the command of Missouri as successor to Schofield, who was sent into the field. On arriving at Fort Leavenworth, his new headquarters, Curtis found that in all his vast territorial command he did not have over four or five thousand troops. With these he must hold various important posts, contend with hostile Indians, and with guerrillas and rebels on the eastern and southern borders of Kansas.

In the fall of 1864 Sterling Price undertook to make good his oft-repeated promise of returning to Missouri and driving out the Union army. After the disastrous campaign of Banks on the Red River, in Louisiana, and the consequent failure of the plans of Steele at Little Rock, taking advantage of the prostrated condition of federal affairs in the Southwest, he rallied his army, crossed the Arkansas, and advanced into Missouri. He was followed by a Union force in the rear, and Rosecrans prepared to resist him in front. But his movements were too rapid to allow of their being checked suddenly. After a severe engagement he captured Pilot Knob, advanced to the vicinity of St. Louis, and turning west, vainly besieged Jefferson City, the capital of the State. In the mean time his army had increased until it numbered about 30,000. Not succeeding in his attempt on Jefferson City, and being hard pressed by Rosecrans and Pleasanton, he again looked westward and determined to capture Kansas City and Leavenworth, together with the post of Fort Leavenworth with its vast supply of arms, clothing, and provisions. To oppose him Curtis had not over 4,500 troops, and most of these were scattered over his department; some were inaccessible, and no reinforcements could be expected from other departments. But there was no time to lose, and Curtis called upon Governor Carney to order the militia of Kansas into service, which was promptly done. The militia comprised nearly every able-bodied man in the State, and most of them had seen more or less of warfare and were inured to hardship. Leaving their families to take care of themselves, the MEN of Kansas turned out *en masse*. Twenty-four regiments, numbering over 16,000 men, were placed at the service of Curtis, and in addition to these he collected about 3,000 volunteer troops and organized his forces in two divisions

as the "Army of the Border." The left wing, constituting the main portion of the militia, was under General Deitzler, of the militia, and the right wing, composed of volunteers and militia, was commanded by General Blunt. Much of the militia had, however, been left to protect various exposed points, considerably diminishing the strength of the army in the field.

The army of Curtis was now concentrated near Kansas City, and the division of Blunt, 2,000 strong, was marched to Lexington, Missouri, where the army of Price, 28,000 strong, was encountered on the 19th of October, moving westward closely pressed in the rear by General Pleasanton. A battle ensued, lasting twenty-four hours. Early on the morning of the 20th Blunt fell back to a favorable position on the line of a stream called "Little Blue," eight miles east of Independence, and was rapidly followed by the enemy. Here Curtis reinforced him, and another severe engagement occurred on the 21st, at the end of which the Army of the Border abandoned the field, falling back and fighting continually to the line of "Big Blue," a stream a few miles west of Independence and east of Westport. On the 22d was fought the battle of "Big Blue," lasting the entire day, at the end of which time the army of Curtis retired to Westport and Kansas City, and the same night the command of Pleasanton arrived in Independence. Curtis thus far had been fighting to gain time, and had held Price in check until the arrival of Pleasanton, who effected a junction during the battle of the ensuing day. On the 23d occurred the severe battle of "Westport," which checked the rebel movement westward and turned it south, saving Kansas City and Leavenworth. Pleasanton's command being now joined to the army of Curtis, and the danger to northern Kansas being past, the militia from that section of the State were allowed to return home, while the remainder of the army at once commenced the pursuit of Price, who had turned south and was in rapid flight along the State line of Kansas and Missouri.

At daybreak on the 24th began the pursuit of the enemy, which was continued with the greatest possible celerity. Price was fleeing in the utmost haste and confusion, and the road was strewn with the abandoned *debris* of the rebel army. The pursuit was continued for sixty-eight miles without rest on either side. At night the rebels encamped on the "Marais des Cygnes" River. Before daybreak on the 25th Curtis attacked them, and after a severe fight drove them again before him, inflicting severe loss and capturing Generals Marmaduke and Cabell. The flight and pursuit were continued as hotly as ever, and the battles of "Osage" and "Charlot" on the same day assisted the disintegration of the rebel army. Fears had been entertained for the important post of Fort Scott, near the State line, but it was now safe, the rebels having been too closely pressed to attempt its capture. Regarding the danger to Kansas as being past, Curtis now discharged the remainder of the militia. Here also Gen-

eral Pleasanton abandoned the pursuit, leaving the commands of Generals McNeil and Sanborn and Colonel Benteen to continue with Curtis.

On the 26th Curtis resumed the pursuit, and on the 28th overtook and defeated the enemy, after a severe engagement, at "Newtonia." General Rosecrans now ordered the troops of his department to return to their several stations. The effect was to deprive Curtis of the support of McNeil, Benteen, and Sanborn's brigades, leaving him only his own volunteers under Blunt. Twenty-four hours later, orders were received from Lieutenant-General Grant directing Curtis to take command of all available troops and pursue Price to the Arkansas River, or until he met the forces of Generals Reynolds or Steele. It was too late to recall Sanborn and McNeil, but Benteen succeeded in overtaking Curtis at the old battle-field of Pea Ridge on the 1st of November. The rebels were besieging Fayetteville, Arkansas, where a garrison of over one thousand men was commanded by Colonel Harrison. Curtis therefore pressed on with his small force, and on his appearance the enemy fled. The pursuit was then continued, and terminated November 8th on the banks of the Arkansas, between Forts Smith and Gibson, with a parting volley at the rebel rear on the south side of the stream.

Curtis now returned to Fort Leavenworth. In a campaign of twenty days he had driven Price's army from the Missouri River to the Arkansas, a distance of three hundred miles, fighting the battles already enumerated, and almost completely destroying the rebel army, with a Union loss not accurately known, but quite inconsiderable. The enemy admitted a loss of over ten thousand in killed, wounded, and missing after leaving Westport, at which point his force numbered nearly thirty thousand. Many may have deserted, but no guerrilla bands were on the Missouri border for a long time afterward. So thorough was the defeat of Price that, upon his return from his Missouri expedition, he was court-martialed for the miserable termination of his campaign.

Kansas was divided by innumerable political cliques, and the operations of Curtis had been seriously embarrassed by their maneuvers. He had been accused of calling the militia into service to promote the political interests of his friends and prevent the men from voting at the Presidential election, and it had been asserted that there was no danger whatever of a rebel invasion of Kansas. A few of the militia became mutinous in consequence of these reports, and abandoning the field returned to their homes, while others entirely refused to march across the State line into Missouri until the sound of the enemy's guns convinced them of the necessity of saving their homes and families from the havoc of war. But now Curtis was universally admitted to have saved Kansas from being converted into a desert, and its inhabitants from murder, rapine, and destruction in accordance with the vindictive and oft-repeated threats of the enemy. Since then the State has enjoyed continuous peace

for the first time in its history. The popularity of Curtis with all parties was unbounded, and the State legislature tendered him a formal vote of thanks for the manner in which he had saved the State from invasion.

During the remainder of his stay in Kansas, nothing of special interest occurred. On February 7th, 1865, he was relieved of his command, and on the 16th of the same month he assumed command of the "Department of the Northwest" at Milwaukee. This command included the troops thinly scattered over Wisconsin, Iowa, Minnesota, Dacotah, and Montana. The duties were principally of an administrative nature, and on the 26th of July his command became absorbed in other departments instituted at the end of the war. He was next sent during the fall of the year as one of the government commissioners, far up the Missouri River, to negotiate treaties with the Sioux and other Indians. This duty occupied several months, and upon his return he was mustered out of the military service. He was the first brigadier and major-general from Iowa, and when mustered out was one of the highest in rank on the list of volunteer generals. He was next appointed one of the government commissioners to inspect the various branches of the Pacific Railroad in Kansas and Nebraska. On the morning of December 26th, while in apparent perfect health, and accompanied by his fellow-commissioners, he was going to inspect a section of the Kansas branch of the road. They started on foot across the frozen surface of the Missouri River, and after a brisk walk in a keen wind got into their carriage on the Iowa side. Within half a mile of the river bank, General Curtis, not having manifested any symptom of pain or illness, suddenly grew very pale, rolled up his eyes, and without a word fell over insensible. His fellow-commissioner, Doctor White, finding no pulse or action of the heart, pronounced him dead. The party at once drove to the nearest house, the residence of his friend Colonel Nutt, in Council Bluffs, and the General was removed from the carriage and every effort made to restore life, but all in vain. The remains were placed in a metallic coffin and conveyed to his home in Keokuk, where amid the universal sorrow of the community they were committed to the earth on last day of the year 1866.

So terminated an almost continuous life of varied public usefulness and prominence. As a soldier, although others became more distinguished, few were more uniformly useful, and as a general he never lost a battle. Both as an engineer and a statesman he left many monuments of his ability, and his name must forever be associated with the construction of the Pacific Railroad. In every position his administrative abilities were great, and although much engaged in public strife and political contention, his personal dignity combined with his uniform courtesy and fairness with his opponents, gave him a popularity superior to party.

General Curtis was married in 1831 to Belinda Buckingham. Three sons and a daughter went

before him into the other world. His widow, a son, and a daughter are the surviving members of his family.

He was a sincere Christian both in belief and in life, while his good qualities as a husband, a father, and a friend made him the life of the home circle. He was singularly free from all vices both great and small, never using profane or improper language, and being exceedingly temperate both in his food and drink. Personally he was remarkable for his unusual modesty and diffidence, qualities which often kept him unduly in the background, and prevented him from doing himself justice in his official reports and upon various occasions. In person he was large, very erect, and rather stout, with a dignified and martial bearing.

SAINTS AND SINNERS.—No. 1. WHO ARE THEY?

THE two great classes of human beings who figure in the Bible are saints and sinners; and the same two great classes have figured in the world ever since the days of inspiration.

And Phrenology, though it has been thought a sham science, a science based on falsehood and built up with falsehood, and the most terrible of infidel makers, recognizes these two classes of men, saints and sinners, and thus far at least proves itself in harmony with the Bible.

No one, we think, can take up the Bible and study book after book without being convinced that saints and sinners are no myths, but actual existences; and whoever will study the science of Phrenology with equal fairness, will see saints and sinners again. Phrenology is not at war with the Bible, neither has it any pet notions of its own that are not found in the inspired book. Phrenologists do not claim to be inventors, but close students and discoverers of what really is, of a science—the science of man; and if Peter and Paul could sit down with any intelligent phrenologist and compare views, they would, doubtless, agree perfectly.

"Ah," says the cavalier, with some phrenological book or journal in his hand, "if you wish to see saints and sinners, you must look in the Bible, or go out into the world. You must not turn to Phrenology, for the sum and substance of Phrenology is, that man is a machine, propelled by his 'bumps,' and therefore he can act neither rightly nor wrongly, and can be neither a saint nor a sinner." Now, this is a black badge, fastened upon Phrenology, and one which it will not long wear; for if there be one science more in harmony with the Bible than another, it is Phrenology. Clear and broad is the distinction it makes between the good and the bad, but it tries to follow in the footsteps of the great Inspirer of the Bible and judge righteous judgment, giving every man the place he deserves, whether that of a saint or a sinner.

It is worthy of notice, and admiration also, that the phrenologist does not observe mankind *superficially*, or give the race *hasty* glances, and thus deal unjustly. On the contrary, he

makes every man who comes within the range of his eye, or the reach of his hand, a study. He studies his face and the shape of his head; if the result of his examination is such as to satisfy him that the man's propensities are strong, that his inclination to evil is great, but that he keeps up a life-long fight with himself, being determined to be a conqueror, and more than a conqueror, he calls him a Christian hero or saint. It is true that the man does many more wrong things than the man of weak propensities, but he is engaged in a noble and honorable warfare. He has enrolled his name among those who sincerely want to "lay aside every weight," in the race of life, and shine at last among those who have "overcome."

And here we ought to say that we do not mean by the term saints and sinners, men of perfect goodness, and men of entire badness. Such men we call myths. They have no existence in this world. For want of a better term we call those men saints who have the firm purpose to become saints, and who actually live in the daily resistance of the evil to which their propensities incline them. And yet we would not erase from the list of saints the names of those who have little to resist, and therefore no great warfare in which to engage. A man may be a soldier and not go out to battle, for the simple reason that there is no battle to be fought, or he may be called only into some inferior engagement, and have no opportunity of resisting unto blood.

As to sinners, there is a great and important sense in which all are sinners; but many who are branded as sinners above all others, are not so deeply dyed in guilt as we imagine. They have not only a sense of the beauty and desirableness of all virtue, but strive after it most earnestly, and put forth most noble efforts to subdue and control the propensities.

"What's done we partly may compute,
But know not what's resisted."

Neither do we know the grandeur and nobility of the resisting soul; but we shall know one day, when the books are opened, and all the hidden things of the earthly life are made manifest, and all that men tried to be and do is made known.

That grand revelation day is surely coming. Every added year brings it nearer, and all who on earth were called saints, and all who were called sinners, shall see it and stand in its light, and appear to be *exactly* what they are.

And then—let no reader call this irreverence—the truths of Phrenology will be fully believed as never before, and men will no longer laugh at "unfortunate physical organization," or "unfortunate mental constitution," or even at *hereditary sin*.

"*Hereditary sin*!" exclaims the doubting reader. "What! will a man talk about hereditary sin, and thus 'charge God foolishly'?" Is there no such thing, as human responsibility?" Yes, dear reader, there is. Human responsibility is an actual fact, and so is hereditary sin a fact, although the expression may startle you as something new.

Your child is a poor invalid. You say "he has a feeble constitution, that he *inherited* it from you." But do you, for this reason, sit down and do nothing for him? Do you not rather feel added responsibility in his case, and stir yourself the more for it, that he may receive in time what he did not receive at his birth—health?

Now, a feeble mental constitution, a diseased soul, can just as easily be transmitted from parent to child as a feeble, diseased body. Let no man start at this as if it were a reflection upon the Creator, for it is not. All are more or less diseased in soul by Adam, our first parent; for the good book tells us that "by one man sin entered into the world," that "by one man's disobedience many were made sinners." Now, if this be so, much more are we spiritually diseased by our nearest kin, whom we call father and mother. Men inherit the mental peculiarities of their parents. Let us suppose the case of a man whose father had strong propensities and weak moral sentiments. Will any one say that that man does not grow up and live under great disadvantages? that he does not have to bear a weight of hereditary sin? Ah, he does, and he must wade through seas of trouble, and go through fearful struggles before he will attain to a perfect manhood. But there is no such sublime sight on earth as that man, putting forth all the energies of his nature, through a lifetime perhaps, to throw off the load of hereditary sin that weighs him down. Such a man, seizing, as he does, all human and divine helps, that he may reach the full stature of a perfect man, is saintly, however many may be his missteps and his falls; but the superficial world looks only at these missteps and falls, and knowing nothing, or caring nothing about his sad inheritance and his mighty efforts to get rid of it, puts him at once on the list of sinners and says: "Stand by, for I am holier than thou."

If we would learn to distinguish between the good and the bad, between saints and sinners, it would be well to examine their heads, whenever we can get a chance.

To sneer at "bumpology" and at "bumps," is the veriest folly; for this "bumpology," as it is often called, is a light lighting us down into the depths of a man's soul, and enabling us to judge him correctly.

When a sincere, intelligent phrenologist is anxious to learn a bad man's true character, he does not simply look at the wrong acts he has committed. He examines his head, and, if possible, the heads of his parents. If he finds, as he will, that the son has inherited the mental constitution of one or both of his parents; if he learns, on inquiry, that all the circumstances and surroundings of the man's life have been such as to give the propensities new strength, and that, with all these things against him, he has struggled, and is still struggling, to make the propensities take and keep their place, he looks upon him with a kind of reverence as a hero of no common type, as one of God's

heroes, striving for the supremacy of the moral sentiments.

Such men have lived, such men live now. They are comparatively unknown, but the phrenologist points them out, and calls upon us to do them justice.

It has been truly said that "the good are never as good and the bad never as bad as they appear to be;" and this we should always consider, if we would give men their true place.

Many of those we call good have only what might be called borrowed goodness. Their fathers and grandfathers had strong constitutions, both physical and mental; and their sons and daughters received from them neither dyspepsia nor weak moral sentiments, but a strong stomach and a high-toned moral nature, and, in addition to these great advantages to start with, all the circumstances of their life have been favorable to goodness. They have never known anything of the struggles of those who are compelled to row against wind and tide, and they look with wondering eyes at those who were born and have lived under great disadvantages. They exclaim, with a mixture of ignorance and pride, "How can men be so bad!" and thus they reveal how little they know of themselves and of others.

It is no small task to learn men as they really are—to learn what was their inheritance of good or of evil, and what the circumstances of their birth and their life. And until we learn this, it becomes us to approach all with charitable, unprejudiced minds, and be as slow to call men sinners as we often are to call them saints.

"Know thyself!" has for ages been sounded in the ears of the human race; but *know all men!* is as solemn a charge, and every man should heed it, that he may know the good from the bad, saints from sinners.

"THE TENANTS OF THE HEART HAVE MOVED AWAY."

Moved away? Oh, no! they've only
Cast aside the clothes they wore,
And in purer robes, and saintlier,
They are with us as before,

Only that our spirit's vision,
Dimmed by scenes of earth so long,
Can not grasp at once the glory
That enfolds the heavenly throng.

But by holy, sweet emotions,
That our heart-strings wildly thrill,
Know we that our soul's dear kindred
Are not lost—but near us still—

Near, to whisper hope in sorrow;
Near, to comfort in despair;
Near, to strengthen in temptation;
Near, our sweetest joys to share.

Oh! the heaven we fondly cherish
Can not be so far above
That no spirit-message ever
Comes to us from those we love.

Not in words of human weakness,
Not in sounds for human ears,
But in strains the spirit singeth,
And the spirit, only, hears.

HOPE ARLINGTON.

PORTRAIT OF OTILIE WILDERMUTH.

TWO GERMAN AUTHORESSSES.

OTILIE WILDERMUTH AND ELISE POLKO.

OUR portraits of Miss Muhlbach and Madame Pfeiffer have proved so acceptable to our German readers, and indeed to all our friends, that we have caused to be engraved two other authoresses of the Fatherland, who, though perhaps not so well known by reputation, will be considered worthy of occupying a place in the JOURNAL.

Otilie Wildermuth is by birth a Swabian, at present a resident of Tübingen. Her books have won to her the hearts of all Germany—in the north and in the south, in city and hamlet. Her "Swabian Parsonages," her "Pictures and Stories of Swabia," her "Life Riddles," etc., are among the favorite books of German women. They are paintings full of the purest sunshine of poetry, faith, and tranquillity. They have brought comfort into thousands of huts and palaces where sorrow had found a home for many years. Not less has Otilie Wildermuth written for the happy. She prompts to modesty, to humility, to the imperishable virtues which forestall envy while they check pride. She says a moderate measure of earthly happiness, enough to live cheerfully, is appointed for *all*, and her golden doctrine is—CONTENTMENT!

Otilie Wildermuth's head and face indicate solid character. She is a fine specimen of the Teutonic stock. See how broad and full the head is at Conscientiousness! How high at Benevolence, Veneration, and Spirituality! and how beautifully developed the whole moral region! Approbativeness and Cautiousness are also large, while the social affections are evidently strong, and even ardent. (Note the chin and the lips.) Her whole nature is overflowing with kindness, humility, justice, sense of propriety, obedience, and love. The intellect

is ample, but Ideality, Sublimity, Mechanism, etc., are but moderately indicated. There is no mere love for show or display. The first consideration with her would be, "Is it right? Is it proper? Is it generous?" and she would fully realize the saying that it is "more blessed to give than to receive." Her throne would be in the social circle. It is in the domestic relations and in the religious and spiritual that her nature would culminate. Whoever is blessed with such a character for a mother will miss her when she is called hence. Though strong-minded, she would be modest, retiring, and entirely feminine. Observe the features. That is an amiable mouth. Those are intelligent and trusting eyes, and the whole expression is confiding.

Turning from the motherly, goodly face of Otilie Wildermuth, we see in the face of Elise Polko indications of vivacity, imagination, love of art, of poetry—a crisp, racy, vigorous mind. She is the opposite of "slow and steady." She is more like the French and Italian than like the Teuton. She has the inherited face of an artist. She discovers all the hues, tints, and shades of character. She can also describe them. She enters into all the details, and she can fill up a picture by the aid of a vivid imagination. Her whole nature is filled with poetic imagery. She is musical, too, and such a spirit would go into ecstasies when listening to the harmony of grand and beautiful sounds.

There is no lack of affection in her nature; but she loves elsewhere than in restricted social life. Her mind is on the wing, and is abroad in the world. She would not be content tied down to the kitchen, the nursery, or the drawing-room. She would seek the companionship of kindred spirits, to be found in the galleries of art, on the mountain, the plain, or the sea. She is a natural teacher; takes impressions clearly and quickly, and imparts them readily.

Miss Polko has a beautiful head, as well as an attractive and handsome face. The head is broad and high in the moral sentiments, in the crown, and at Ideality and Sublimity. To know such a nature would be to love and respect. Such a nature would not give up in despair if reverses came; and though tried by the severest afflictions, she would cheerfully accept what she could not avoid, and be thankful that it was no worse. The mouth inclines up at the outer corners instead of drawing down, indicating a spirit of gladness, acquiescence, meekness, and goodness. How closely the following description, from the German, of Miss Polko coincides with her organization:

Elise Polko may truly exclaim, in the words of Michel Masson: "I am not the historian, who judges; not the moralist, who teaches; I am a narrator—I narrate." And more agreeable narratives than Elise Polko has strewn like flowers in numerous tales and pictures, in sketches and fancies, it is long since the world has received; there is so much mind, so much music of sentiment, so much droll humor in them. Her talent is like an Æolian harp; under the roses, upon the fragments of fallen

temples, in the summer night, murmured through by the whispering breath of the wind, it oft resounds in a wonderful lovely manner. May we venture to criticise these melodies of the wind and the night? They are irregular sometimes—but even that is their charm! They are transitory—but that is even their nature! Let her dream, let her talk, let her narrate; many a time you will give her, as Goethe says, but “half attention,” but you will hear her; and her “Musical Pictures,” her “Beautiful Women,” “Old Gentlemen,” “Beggar Opera,” “Woman’s Life,” “Little Sketches for the Nursery,” “A Maiden’s Toy,” “Sabbath,” and “Poetical Greetings,” will always be pleasant and fantastical company.

Ottillie Wildermuth is, as Rudolf Gottschalk so charmingly expresses it, the “sleek high priestess of domestic bliss—”

While Miss Polko, if not as domestic in her tastes, would be a most delightful companion for a refined, cultivated, high-toned person.

Our Social Relations.

Domestic happiness, thou only bliss
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
We smile, appearing as to truth we lie,
Heav’n-born, and destined to the skies again.—Cooper.

MATRIMONY AMONG AUTHORS.

BY MRS. GEORGE WASHINGTON WYLLIS.

HAVE any of our readers seen an article recently published in the *North American Review*, entitled “A PLEA FOR BACHELORS?”

We presume they have; any article of that peculiar tendency is generally read, re-read, copied and circulated with astonishing promptitude. A sermon, an essay, a reasonable argument, stands no chance whatever by the side of its meretricious sparkle, its shallow foam of sophistry.

We have no patience with such opinions so expressed. There is something morbid and misanthropic about them which will scarcely bear the full daylight of public opinion. We do not see why an author, wielding an able and trenchant pen, should descend into the highways and byways of life only to search out all the unhappy marriages, the notorious *mésalliances*, the ill-assorted unions from which author-life is no more exempt than other life, holding them up to public view with a strange species of bitter exultation! To be sure, he reluctantly admits, toward the conclusion, that “there are two sides to this question!” But he only gives us one. He keeps resolutely in the shade. He groans over the infatuation of literary Benedicts, and regards matrimony as only one degree preferable to suicide!

What manner of man is this? What does he mean by his half-uttered innuendoes and sneering influence? Does he expect to overturn the entire foundations of society by his goodly goose-quill? Why don’t he come out at once and assert that, after all, it is no very venial sin to steal, and that drunkenness is

PORTRAIT OF GEORGE WYLLIS.

rather laudable than otherwise, and that the holy Sabbath-day is nothing but a habit people have gotten into! After reading his “Plea,” we are prepared for almost anything.

Of all the glaringly *ex-parte* evidence—of all cold-blooded selfishness—of all unblushing audacity—of all deliberate fallacy, this Plea for Bachelors constitutes the height and quintessence!

Addison’s unfortunate marriage forms one of the leading arguments. “He married a countess, ‘who was no better,’ says Thackeray, ‘than a shrew and a vixen.’” The Countess of Warwick died and made no sign. We never shall know what pangs of disappointed affection, what repulsed tenderness turned her whole nature into gall. Perhaps she thought a man who could frame the musical sentences that flowed from the Great Essayist’s pen was perfection; perhaps he found but a mere mortal after all. One would almost as soon think of marrying an iceberg, as this calm, cold monarch of the intellect. Were there not faults on both sides?

Heine, the great German poet, the representative man of the century, is instanced as one who never married. Not so fast. Heine *was* married—and his wife, sharing his intellectual joys as well as his physical sorrows, watched over his slow death-bed for years with all a woman’s devotion.

“Irving never married.” And why? Was not his whole life sanctified by the mere memory of the same holy, undying affection which is, in itself, the spirit and essence of marriage?

“Sterne complains that the presence of his wife stops the flow of his ideas, and finds inspiration in the presence of another man’s wife!” What driveling sentimentality—what weak nonsense—what unsound morality! We can easily believe almost anything of Sterne, whose life was one great epitome of selfish-

ness, and whose domestic tyranny has been a watchword, always!

“As marriage among the Greeks,” says our author, “was simply a house-keeping convenience, the husband spending his day and evening abroad, while the wife sewed, cooked, and paid the bills, all the Athenian poets and philosophers should be accounted bachelors!”

Are we to understand that *this* is the basis of old bachelorhood? Then, indeed, we are living in a nation of bachelors, married and otherwise; the cry will soon be, and not without reason, “Have we a husband among us?”

Coming down, rather abruptly, from poetry to prose, we are told that “no ingenuity can prove the superiority, in an economical point of view, of a family caldron over the bachelor’s stew-pan.” Let those believe in this that never saw bachelors rushing to expensive restaurants because they have no home-prepared “mess of pottage;” that never beheld theaters crowded with homeless *scélérates* “who must spend the evening somewhere;” that never saw shirts and stockings consigned to oblivion ere half their race was run, because there were no skillful fingers to mend and darn and rejuvenate! Let such believe in it, we say. *We* know better!

“Domestic cares, like rainy weather, damp a gentleman’s wings.” All this would be very plausible if any man or woman of us all could, without the grossest selfishness, ignore the cares and trials of the world. When we were bidden to “rejoice with those that do rejoice,” it was not forgotten that we were also to “weep with them that weep.” No man can, or ought to entirely isolate himself, unless, indeed, he be a dweller on a desert island, like Robinson Crusoe. We have not the shadow of respect for “a gentleman” who deliberately proposes to shirk whatever may have the tendency to “damp his wings.”

“Everybody knows some one who, finding the domestic burden which he had rashly assumed, too heavy for comfort, has dropped it, as Coleridge did his Sara, and gone on unencumbered toward the temple of Fame!” *His* Sara!—the Sara whom he promised at the altar to love, honor, and cherish, and then—dropped! Of all the dark blots that obscure the memories of the grand old opium-eating Sybarite, this is the darkest and saddest! He went on “unencumbered,” but the shadow followed him, and follows him still. We think our Reviewer made a signal mistake when he instanced this case in point.

Charles Lamb, another example of a life of celibacy, was himself one of the greatest match-makers in his time. To be convinced of this, one has only to read his charming “Letters.”

Many unmarried authoresses are instances, but not more, we imagine, than might be found in any other profession or trade. “Others, like Miss Brontë, found that matrimony put a needle between their fingers instead of the pen!” Are the two implements incompatible? we should like to know. Because a woman has the grand gift of expressing beautiful thoughts in graceful words, is she

supposed to have no other tastes, preferences, and accomplishments? This smacks a little too much of the intolerance of the dark ages to pass current in the year 1867!

The Bible—an old-fashioned authority, indeed, but one which, after all, is the safest and most reliable, tells us that “it is not good for man to be alone;” but the man who writes for the *North American Review* knows better. He “ventures to ask” (we are quoting his own words now), “whether it be indispensable for a man of literary faculty to be a husband, in order to attain his highest development, or to achieve the most for the world?” He might, with equal point and justice, ask if it were indispensable for him to be vaccinated, or to believe in a vegetarian diet! If he seriously intends to reconstruct the world, he is beginning at the wrong end!

There are enough would-be geniuses who think that if they follow Byron's example in wearing pointed shirt-collars and imbibing gin-and-water, they will become Byrons. If these go a step farther and remain single that “they may attain their highest development,” we can only say, as we do of the measles, “let the disease run its course!” There will be very little harm done.

But we hardly think that the author-world in general will thank this special pleader for bachelors. He has bad logic, bad morality, and a very bad principle to support. Possibly he is, speaking from experience; in this case we are heartily sorry for him, but we object none the less to his poisoning the public mind with theories as false as they are baleful.

It is a part of our creed that no man, under ordinary circumstances, leads the full and perfect existence for which his Creator designed him, unless he is happily married. A bachelor, whether he is a quill-driving bachelor or a dirt-digging bachelor, is but half a man. Do you not agree with us, Authors?

BAD SERVANTS MADE GOOD.

“Good-evening, Mrs. Strongthot. I thought I would run in to see you a moment, in our old informal way. Never mind! Go on with your darning. You know I like to see people doing something useful, if it is homely. Why, how cosy you all seem to be! Now, Eddie, don't let me interrupt your reading, or break up the family circle. You were reading something pleasant, I know, from the expression of all your faces. Dear me! you always seem so peaceful. Nothing troubles you, I believe, Mrs. Strongthot. Your servants always seem so happy, good-natured, neat, industrious, and respectful, while mine are so discontented, slovenly and saucy—that is, when I can manage to keep them. I can't see how it is. There is your Betty, now, who has lived with you nearly a dozen years, and others you have fairly driven away. Dear me! now, when did your Eddie steal away so slyly? I meant he should go on reading. But I'm always so full of troubles, especially just now. Will you be-

lieve it, that Bridget, that thankless creature, has left me to-day? Now, isn't it too much, when I have taken her saucy impudence and flings for a week past? submitting to it like the lamb, which you know that I am, because I expect my sister every day, with her six children. And now there is the washing and ironing not done, and baby so cross that she will not stay with Lelia while I go in search of some one. Husband hates girl-hunting. Says I am everlastingly sending him after help. He is sick of it. Thinks it strange I can not keep a domestic as long as my neighbors do. Advised me to come in and get your recipe or secret, if you have one. Now do, Mrs. Strongthot, reveal to me your enchantments, for I am nearly crazy at the glance ahead.”

Now, Mrs. Strongthot was not fully acquainted with Mrs. Clarke's disposition. In fact, Mrs. Clarke had but recently moved into the neighborhood. But Mrs. Strongthot possessed large intuitions, and was somewhat of a phrenologist withal. She glanced at Mrs. Clarke's shrewish face and guessed the riddle quickly and rightly.

She said, “Mrs. Clarke, my recipe or enchantment is adaptiveness and adherence to the spirit of the golden rule. The first ingredient of the recipe I obtained by the study of Phrenology. By the aid of that science I can readily conclude whether an applicant will suit me or not, and reject or accept accordingly. Suppose, now, my help or domestic should show great Approbativeness—”

“Oh, Mrs. Strongthot, I know nothing of Approbativeness or any other science. Mr. Clarke hates *blues*. Besides, I have very little time to read, and when I do read I am glad to divert my mind from care by perusing sprightly novels. They are all the amusement I have.”

“That is not the best amusement for you, Mrs. Clarke. I devote a few minutes every day to solid reading and study. The education of your children demands this.”

“Well, what were you going to say of Approbativeness, Mrs. Strongthot, when I interrupted you?”

“I was trying to say, or rather convey the idea, that it was best to praise somewhat the person in your service, provided such person possessed large Approbativeness. In fact, such persons will be fretted and disgusted, very possibly become discouraged, if they are frequently blamed and never commended. But a little praise now and then, judiciously administered, will work wonders. For instance, there is my little girl-nurse. Do you know, Mrs. Clarke, that every one who spoke of her to me advised me not to take her. The lady who was about to discharge her pronounced her one of the most mulish, irritable, spiteful little mortals alive, and predicted that I would find my patience with her exhausted in about two weeks. But as soon as I saw the child, by the aid of Phrenology I fathomed her disposition in a short time. I saw that she possessed very large Approbativeness, Conscientiousness, and Firmness. My first glance at her unhappy,

downcast, and prematurely old countenance showed me that the child had been misunderstood and misgoverned. Two very unfortunate *misses*, you will allow, Mrs. C. ‘Would you like to go live with me?’ I asked her, and I was pleased to see the expression of mistrust and doubt, which had so long rested there, vanish from her face, as she answered very politely, ‘Yes, ma'am.’ She very soon learned that I understood and appreciated her. It may seem incredible to you, Mrs. Clarke, when I inform you that I never have had occasion to speak crossly to that child. I govern her through her naturally ardent affections, Conscientiousness, and Approbativeness. Sometimes she is disposed to go beyond her strength in serving me, such is her love.”

“Well, Mrs. Strongthot, I must say such ascendancy does astonish me.”

“You are not the only surprised one, Mrs. Clarke, for her former mistress asks me, every time we meet, how I do manage that lump of obstinacy so admirably.”

“Well, Mrs. Strongthot, I begin to think there is something in Phrenology after all. I mean to study it.”

“Do, Mrs. Clarke, and you will not regret the outlay of time. Put your golden rule and Phrenology together, and you will have the ingredients of my recipe for making and keeping a good servant. When you have accomplished this desirable feat, perhaps your husband will think more kindly of the *blues*.”

As a commentary on the foregoing conversation, it happened that the following spring Mrs. Strongthot was obliged to hire an extra domestic during house-cleaning. It chanced that the new auxiliary was the Bridget who had been in the service of Mrs. Clarke.

During her stay Bridget was asked “why she left her pleasant neighbor Clarke.” “Is it pleasant now did yees say?” answered Bridget, with a merry ringing laugh, as though she had suddenly discovered an immense joke. “Indeed, then, mum, she was awful pleasant whin she was saying nothing. And sure, mum, I did my best to plaze her, but 'twas onpossible. Whin she wasn't rading the novels, she was raging about like a hoongry tiger all over the house. And if you sat down one blissid minute to rest your weary bones, she was sure to drive you at somethin' again, even if she had to make you do the same over again. Sure, mum, there was no pace only whin she was rading. And, mum, your woruk was niver done in that house.”

Mrs. Strongthot asked no more questions, fearing to encourage servants' gossip, but she thought she had a little inkling of the why Mr. Clarke disliked “*blues*.”

THE FAMILY.

O HAPPY home! O bright and cheerful hearth!
Look round with me, my lover, friend, and wife,
On these fair faces we have lit with life,
And in the perfect blessing of their birth,
Help me to live our thanks for so much heaven and earth.

EDUCATION OF THE HEART.

AN ADDRESS DELIVERED AT THE COMMENCEMENT EXERCISES OF
AURORA (ILL.) SEMINARY, JUNE, 1867.

BY HON. SCHUYLER COLFAX.

In all the realm of animated Nature there is nothing so absolutely helpless as a child when it first opens its eyes upon the world. And yet there is nothing of vaster importance. The greatest works of Art will perish. The cataract of Niagara will cease to flow. The proudest Nation, whose conquering eagles have defied a Continent, will pass away. But the sleeping infant, in its mother's arms, enshrines a soul that shall live, in joy or misery, throughout the countless ages of Eternity; and may even, in its brief span of earthly years, like Moses, David, or Paul; or Homer, Plato, or Demosthenes; or Cæsar, Washington, or Lincoln; or Zenobia, Joan of Arc, or Florence Nightingale, *live* that History shall never tire of the record of its deeds while time doth last or this earth of ours endure.

We come, too, into this breathing world with Good and Evil mysteriously combined within us. Our souls are immortal, and we are created in the image of God. But a little time, comparatively, passes by before the child develops temper, self-will, defiance, anger, revenge, in a greater or milder degree, and compels that parental restraint so valuable and necessary in every household. And thus the Spirit of Good and the Spirit of Evil struggle for the mastery in every heart. With every good impulse drawing us toward the Right, and every wicked temptation and unrestrained passion drawing us toward the Wrong, we commence the earnest, ceaseless Battle of Life.

"Our birth is but a starting-place,
Life is the running of the race,
And death the goal."

Properly trained, conscientiously directed, the child grows up into the affectionate, enlightened, energetic, self-denying man or woman, an honor and a blessing to the community, loved while living, and when life's fitful fever is over, remembered by many hearts long after the funeral flowers of the cemetery have blossomed on their grave. But how different the life and character of him who, unblessed by healthful and virtuous surroundings, or madly defying them all, cultivates only the evil side of his nature! Like the rank weed of your garden, it soon extirpates all that is good and valuable; and you see before you a life, of which you can not truthfully say that it is worthless, because it is far worse.

All around us we see this contest. And the responsibilities for its results lie at our very door. Whether those who are to come after us shall have every advantage to arm and strengthen themselves against the influence of Evil depends in a large degree on the conduct of the generation which precedes them in the family circle, or the wider sphere of the community wherein they dwell.

It is *men* that make the State. An island full of savages can be nothing but a savage State. Where the people worship idols of wood and stone, mankind call it a heathen State. A country of impure men must be an impure State. But where Morality and Intelligence prevail, and Right bears sway, and Conscience is respected and obeyed, the onlooking world recognizes that *there* is a country worthy to be embraced in the circle of Christendom, and to rank high among the civilized States of the earth.

The hope of any country must therefore always be with its young. With them we see the candle of life, not like us of middle age, half consumed, but just lit; and so to be trimmed that it shall burn brighter and brighter till it expires in the socket. And this fact has been recognized in every age of the world. Heraclitus, who twenty-five hundred years ago was called the crying philosopher, refused to accept the chief magistracy of his nation, preferring to spend his time in educating children than even to govern the corrupt Ephesians. Catiline, when he sought two thousand years ago to overthrow the liberties of his country, and—as traitors in our own era have done—to act the parricide toward the land which had given him birth, and honors, and power, attempted first to corrupt the younger Romans, and thus to win them to his nefarious endeavors.

If you concede, then—as you must, for History is full of its proofs—that the hope of a country is with its young, how priceless are the hundreds of institutions like this, and the tens of thousands of schools of other grades in which our land rejoices to-day! How truly did Cicero declare: "Study cherishes youth, delights age, adorns prosperity, furnishes support in adversity, tarries with us by night and by day, and attends us in all our journeyings and wanderings!" And again, when on another occasion that eloquent orator enlorged Wisdom: "For what is there," said he, "more desirable than Wisdom? What more excellent and lovely in itself? What more useful and becoming for a man? Or what more worthy of his reasonable nature?" And in the inspired record Solomon, in even a loftier strain than the master of Roman eloquence, exclaims, "Happy is the man that findeth wisdom, and the man that getteth understanding. For the merchandise of it is better than the merchandise of silver, and the gain thereof than fine gold. Length of days is in her right hand, and in her left hand riches and honor. She is a tree of life to them that lay hold upon her, and happy is every one that retaineth her. Exalt her, and she shall promote thee. She shall bring to thy head an ornament of grace. A crown of glory shall she deliver to thee."

Recognizing, as I trust all of you do, without further argument or illustration, that the mind, like the earth, yields the richest fruit only when cultivated, I wish to improve this opportunity accidentally opened to me by a few remarks, first to the teachers, and lastly to the taught.

Of all the earthly professions I know of none more honorable, more useful, wider-reaching in its influence than the profession of the teacher. If faithful in this vocation, they have a right to claim, as John Howard did, that their monument should be a sun-dial, not ceasing to be useful even after death. They are to so fill the fountains of the minds committed to their charge that from thence shall ever flow streams fertilizing and beneficent; and they are to be the exemplars for the young before them in healthful moral influence, which is the foundation of character.

As no one is fit to be an officer in war who has not heroic blood in his veins, or to be an artist who has no esthetic taste, or to be a poet who does not understand the power of rhythm or meter, or to be a historian or a statesman without a broad and comprehensive mind, so no one should be a teacher who has not a heart full of love for the profession, and an energy and enthusiasm willing joyously to confront all its responsibilities. It requires great patience, untiring industry, abounding kindness, pure unselfishness, and fidelity to Duty and Principle. And when happily combined, Success is absolutely assured.

And first let me say, as children resemble their parents in feature, so will they resemble in character the teacher who trains their youthful years. If that teacher has an excess of the gall of bitterness instead of the milk of human kindness, its daily exhibition will assist in the development of the evil side of all who witness it. But if, on the contrary, he or she brings sunshine into the room when they enter—diffuses happiness, by genial conduct, on all around them—plays on the heart-strings of their pupils by the mystic power of Love—the very atmosphere they thus create will be warm with affection and trusting confidence; and that better nature which is ever struggling within us for the mastery over evil, will be strengthened and developed into an activity which will give it healthful power for all after-life.

It is for this reason the teacher should ever be just what he would have his pupils become, that they may learn by the precept of *example* as well as by the precept of *instruction*. He should find the way to the heart of every one within his circle, and lead him thereby into the walks of knowledge and virtue, not *driving* by will but *attracting* by love. And if he searches faithfully he will find the heart of even the most wayward. It may be overlaid with temper, selfishness, even with wickedness; but it can be, nay, it *must* be, reached and touched.

The teacher, too, should be an exemplar in punctuality, order, and discipline, for in all these his pupils will copy him. He can only *obtain* obedience by himself obeying the laws he is to enforce. A minister who does not practice what he preaches will find that his most earnest exhortations fall heedless on leaden ears; and children of both a smaller and a larger growth quickly detect similar inconsistencies. Whoever would rightly guide youthful footsteps must lead correctly himself; and one of our humorous writers has compressed a whole volume into

a sentence when he says, "to train up a child in the way he should go, *walk in it yourself*."

Finally, let the teacher, recognizing the true nobility and the far-reaching influence of his profession, stretching beyond mature years, or middle age, or even the last of earth, and beyond the stars to a deathless eternity, pursue his daily duties with ardor, with earnestness of purpose, with tireless energy. And let him feel that as a State is honored by its worthiest sons—as Kentucky enshrines the name of her Clay, and Tennessee her Jackson, and Massachusetts her Adams, Webster, and Everett, and Rhode Island her Roger Williams, and Pennsylvania her Franklin, and Illinois her Lincoln, and New York and Virginia their scores of illustrious sons—so will his pupils rise up to honor him if he so trains them as to be worthy of their honor. Success *will* be his if he but deserves it. Gov. Boutwell, who added to his fame as chief magistrate of Massachusetts by gracing for years the superintendency of her unrivaled educational system, said truly and tersely, "Those who succeed are the men who believe they can succeed; and those who fail are those to whom success would have been a surprise."

I pass from this rapid review of the duties of a teacher to a few thoughts addressed more especially to students. Let me leave the beaten road of educational addresses, and saying nothing of history, geography, grammar, astronomy, mathematics, the languages, and other special accomplishments, ask your attention to *characteristics* that it seems to me should be cultivated and developed. Not that I would not inculcate, primarily, every possible acquisition of knowledge. Learn all we can in a lifetime, and we shall feel at last like that eminent and self-taught Grecian philosopher, Socrates, who said that all he professed to know was that he knew nothing; or as Isaac Newton more strikingly expressed the same idea in his oft-quoted simile, that he felt like a child on the shore of time, picking up a few pebbles, while the great ocean lay unexplored before him. But I would improve these passing moments by some suggestions as to those elements of character and thought that seem essential to a well-rounded life. And in using the masculine in referring to students as well as teachers, I do it for brevity only, intending of course to include both sexes. For neither sex is inferior or superior as such. Man is fitted by nature for rough contract with the world. Woman for the more graceful duties of the domestic circle. Man for the hard, stern, laborious labor of life. Woman to really rule the world, by being the mothers of those who are to govern it.

Conspicuous among these characteristics is the duty of Self-control, and its natural offspring, Self-reliance. The great maxim of Socrates was "Know thyself"—the famous inscription on the Delphic temple, which the ancients claimed came down from the skies. I can not, in a brief address, even allude to all which is embraced in these two comprehensive words—Self-control. The inspired record declares in language which combines counsel with prophecy, "He that is slow to anger is better than the mighty, and he that ruleth his spirit than he that taketh a city." You *must* master yourself. You *must* rule your passions and your temper, or they will rule you. It is strength to have moral principle. It is strength to stand up against shocks of adversity. It is strength to be calm and self-contained, even when the arrows of malice pierce you most cruelly. It is strength to perform your whole duty to man without hope of reward. The man of unbending moral principle is a real hero. The man who stands erect, with his heel on the demon of Temptation, hydra-headed as it is, is nobler and stronger than the most gifted statesman or the conquering chief. The taint of sin gives all of us passions, temper, and evil, and opens a hundred avenues to the tempter. To close them all, and to live true to yourself and the right is to bless your own heart while you bless mankind. Your character is to be built up like a dam in a river. While being compacted and solidified, the restrained waters, like evil passions and wicked impulses, seek to break through; a single breach, and it widens; and at last the torrent destroys. But guard against the smallest fracture, and it is safe, and strengthens year by year, until at last, firm as the anchored rock, it breasts the mightiest floods and freshets unharmed. Without this enlightened, unyielding Self-control, our life is like a ship, without compass or rudder, blown about by every wind, and at last wrecked upon the beach. But with it, it is like the same ship with a safe, strong arm at the helm that holds her to her course when the storm-cloud lowers or the angry gale seeks to drive her to-

ward the breakers; that avoids the shoals and hidden rocks, and brings her safely into port.

In this endeavor fail not to war against Vice in all its myriad forms. Evil is often robed in splendid attire; but however gorgeous the monumental shaft, yet within is always corruption and decay. The apple may appear tempting and beautiful to the eye, but if the canker-worm is at the core, it is destined to a rottenness no earthly power can avert. It is the *first* approach, too, which should be the most sternly repulsed. Each temptation, from without or from within, which moral rectitude enables us to resist, leaves us that much stronger for the next encounter. But woe to her or him who yields. At each successive attack the moral stamina becomes weaker and weaker, as the walls of even a Sebastopol lose their protective value whenever a single breach in them is made. How truthfully has a gifted poet declared,

"We are not worst at once. The course of evil
Begins so slowly, and from such slight source,
An infant's hand could stem its breach with clay.
But let the stream grow deeper, and Philosophy,
Aye, and Religion, too, shall strive in vain
To stem the headlong torrent."

All writers on Education agree that the chief means of intellectual improvement are five: Observation, Conversation, Reading, Memory, and Reflection. But I have sometimes thought that educators did not bring out the two last into the commanding and paramount importance they deserve, sacrificing them to a wider range of reading and of studies. Knowledge is not what we learn, but what we *retain*. It is not what people eat, but what they *digest*, that makes them strong. It is not the amount of money they handle, but what they *save*, that makes them rich. It is not what they read or study, but what they *remember*, that makes them learned. And Memory, too, is one of those wondrous gifts of God to man that should be assiduously cultivated. Much of your mental acquisitions will form a secret fund, locked up even from your own eyes till you need to bring it into use; a mystery that no philosopher has yet been, or ever will be, able to explain. There it lies hidden, weeks, months, years, and scores of years, till mayhap a half century afterward it bursts when needed, at Memory's command, upon the mind like a hidden spring bubbling up at the very hour of need in the pathway of the thirsty traveler.

While I have counseled Self-reliance, and would go further and urge you to labor to deserve the good opinion of your fellow-men, I do not counsel that longing for fame which is so much more largely developed under our free republic than in any other realm upon the globe. Lord Mansfield once uttered as advice, what history teaches us he should have declared as an axiom, that that popularity is alone valuable and enduring which follows you, not that which you run after. It was Sumner Lincoln Fairfield who wrote:

"Fame! 'tis the madness of contending thought,
Toiling in tears, aspiring in despair;
Which steals like Love's delirium o'er the brain,
And, while it buries childhood's purest joys,
Wakes manhood's dreary agonies into life."

Far be it from me to counsel longings for such a fame as this. "Toiling in tears, aspiring in despair" is but a poor preparation for the enjoyment of popular honors or the performance of public trusts. And there is an exceedingly better way. It is to climb, young men, with buoyant heart, the Hill of Knowledge. It is to boldly scale the Alps and Appenines which ever rear themselves in your pathway. It is to feel your sinews strengthen, as they will, with every obstacle you surmount. It is to *build yourself*, developing mental strength, untiring energy, and sleepless zeal, fervent patriotism, and earnest principle, until the public shall feel that you are the man they need, and that they must command you into the public service. And if perchance that call should not happen to come, and you should be forced to remain an American sovereign instead of becoming a public servant, you shall have your reward in the rich stores of knowledge you have thus collected, and which shall ever be at your command. More valuable than earthly treasure—while fleets may sink, and storehouses consume, and banks may totter, and riches flee—the intellectual investments you have thus made will be permanent and enduring, unfailing as the constant flow of Niagara or Amazon; a bank whose dividends are perpetual, whose wealth is undiminished however frequent the drafts upon it, which, though moth may impair, yet which thieves can not break

through nor steal. Nor will you be able to fill these storehouses to their full. Pour into a glass a stream of water, and at last it fills to the brim and will not hold another drop. But you may pour into your mind, through a whole lifetime, streams of knowledge from every conceivable quarter, and not only shall it never be full, but it will constantly thirst for more, and welcome each fresh supply with a greater joy. Nay, more. To all around you may impart of these gladdening streams which have so fertilized your own mind; and yet, like the candle from which a thousand other candles may be lit without diminishing its flame, your own supply shall not be impaired. On the contrary, your knowledge, as you add to it, will itself attract still more as it widens your realm of thought; and thus will you realize in your own life the parable of the Ten Talents, for "to him that hath shall be given."

I can not pass by in silence another characteristic so necessary for a worthy, useful, honored life. It is that moral courage which sustains those who stand frankly, fearlessly, inflexibly for what their conscience tells them is the right. *Vox populi* has not always been *Vox Dei*, and when it requires of you what duty to yourself or your country forbids you to perform, it is *Vox Diaboli*. From the graves of the fathers of our land come the words both of instruction and example; teaching us rather to imitate, as they did, the fearlessness of Paul when he stood, proudly and alone, before Felix, than the craven cowardice of Pilate when he shrunk from what he confessed to be his duty before a blinded and infuriated populace. Truth may have, as in the olden time, but a single worshiper, while Baal has his thousands of priests. And the man who stands fearlessly for the right amid the devotees of wrong; who wars, single-handed if need be, against tyranny or treason where Evil and Injustice have their legions of minions; who loves the good and follows in its ways because it is the right, and eschews error and wickedness however easy or profitable may be its service; who calmly and confidently looks to the future for his vindication; and who, like Christian in that sacred Iliad, the "Pilgrim's Progress," presses forward in the journey of life with steady and fearless step, regardless of Apollyon, of Vanity Fair, or even the giant Despair—that man, whether in palace or cottage, under a republican or despotic flag, the most learned or the most illiterate of his land, is the true moral victor on the battle-field of Life. He shall have his reward; for in that land where the streets are gold, and the gates are pearl, and the walls are jasper and sapphire, his star of victory shall shine brighter and brighter; while the laurels of scepter and of crown, of office and of fame, shall wither into the dust and ashes out of which they were formed.

How forcibly were all these duties imprinted on my mind while listening, some years since, to a lecture for young men from that twice-repeated proverb of Solomon, "There is a way that seemeth right unto a man, but the end thereof are the ways of Death!" And as these ways were pointed out, I was reminded of one of the precepts of that eminent philosopher, Pythagoras, who, though born in Samos nearly six hundred years before the Christian era, converted by his teachings a wicked and corrupt nation to sobriety, virtue, and frugality, and whose quaint simile seemed to be based upon that very inculcation of the Old Testament. It was, "Remember that the paths of virtue and of vice resemble the letter Y." Starting at the same point, the roads soon diverge to the right and to the left. It was Persius, I think, who, hundreds of years afterward, wrote of this precept:

"There did the Samian Y instruction make,
Pointed the road thy doubtful foot should take;
There warned thy faltering and unpracticed youth
To tread the rising right-hand path of Truth."

Thus shall you win the noble attribute of virtuous Self-reliance—not the arrogance of egotism and the vanity of self-esteem—but the manly independence of a manly mind—the fidelity to your own conscience and to principle—the assurance that if you have placed yourself on the rock of truth, if you have armed yourself with the panoply of justice, if you have guarded yourself with the shield of right, "even the gates of hell shall not prevail against you."

Nor can I leave this boundless theme, which wide before me as I progress, without alluding to that duty which towers above all others, both in the magnitude of its sphere and the commanding authority of Him who proclaimed it. Up through the long procession of centuries our minds travel back to that sacred mount where the assembled mul-

titudes from Galilee, and Decapolis, and Jerusalem, and Judea, and from beyond Jordan, listened reverently to Him who spake as never man had spoken before. And after that striking exordium of blessings, and the subsequent inculcations of love, of charity, of concord, of forbearance, of humility, and of prayer, he opened the peroration of that extraordinary discourse which stands without a rival in the realm of sacred or human eloquence, with that which he announced as the embodiment and concentration of all:

"THEREFORE all things whatsoever ye would that men should do unto you, do ye even so unto them; for *this* is the law and the prophets."

Some there are who regard this comprehensive rule of action and of life as paraphrased from that eminent and learned Chinese philosopher, Confucius, who, five hundred years before, had laid down as a maxim, that none should do unto their fellows what they would not have done to themselves. But apart from the broad distinction between the affirmative command of the one and the bare negation of the other, the rule itself, thus laid down on the Mount, is but a repetition and condensation of what the Creator had declared to Moses, in the tabernacle of the Congregation, a thousand years before Confucius lived and died. "Thou shalt not defraud thy neighbor, neither rob him." "Thou shalt not avenge nor bear any grudge against the children of the people." And then, rising from the language of prohibition to that of command, here, in the same spirit as on the Mount, fifteen centuries after, the conclusion of the whole matter is, "But thou *shalt* love thy neighbor as thyself."

Such is the rule of all rules—the duty of all duties—the law of all laws—for human conduct in this wide world of ours. How it sparkles in its brilliancy in contrast with the iron rule of tyranny, which teaches that "might makes right!" How it glows in the firmament when compared with what has been called the silver rule of the earth, which bids you to mete out to others as they have measured to you! Rightly has the whole civilized world recognized the inspired command as indeed the golden rule. And if lived up to by all on earth, what a paradise would it make of this globe. May it ever go before you as the pillar of fire of old, guiding your footsteps and governing your lives.

I can not close this address, which you have already found has treated of the education of the heart more than of the mind—the moral nature more than the intellectual—without insisting that all of you have it in your power to make this world happier and better by your presence in it, and that you have no right to hide this power in a napkin. Look around you on every side as you go out from these walls into the busy world. You will find some selfish, cold, austere, repulsive, forbidding. No noble charity affects their souls. No unselfish duty warms their natures. No generous act unlocks their hearts. No blessings are invoked upon their heads. Living for self alone, they carry with them to their graves hearts of steel and faces of iron. But there are others active in every good word and work. Is there a cry of distress? They do not lecture the unfortunate, but promptly proffer the helping hand. Is there misery to be assuaged? Is there a wounded heart that needs the oil of consolation? Do the rough winds of adversity smite their neighbor?—and all mankind is your neighbor. How cheerfully they speed on their errand of humanity! How joyously they go forth on their labor of love! My young friends, the true felicity of this world is in making others happy. It is this which fills your own soul with joy. It is this which causes a constant influx of gladness into your own heart. For in blessing others you bless yourself. To me the most beautiful couplet in the English language is,

"Count that day lost whose low descending sun
Views from thy hand no noble action done."

None of us can live up to this noble lesson of life fully; but in *striving* toward this ideal, you shall diffuse a genial sunshine around you, which will make you, in many hearts, beloved while living and mourned when dead. Lord Bacon said most beautifully that "man's heart was not an island cut off from all other lands, but a continent which joins them." And if you will thus, while educating the intellect, and enlarging the mind, and filling yourselves with the priceless knowledge you acquire here, and which is to fit you for useful members of society hereafter, also educate the heart, widening the sphere of your affections and the scope of your duty to the less fortunate who are ever near to your very doors, you shall all

"Earn names that win
Happy remembrance from the great and good.
Names that shall sink not in oblivion's flood,
But with clear music, like a church-bell's chime,
Sound through the river's sweep of onward rushing time."

EMINENT AMERICAN CLERGYMEN. BIOGRAPHICAL SKETCHES, WITH PORTRAITS.

THE undertaking which we inaugurated many months ago, of publishing portraits and biographical sketches of the representative clergymen of the various denominations in the United States, has proved one of no little labor. The large number included in a single group involved many difficulties, which only the biographical historian can fully realize. In some cases we owe the successful presentation of a religious body to the generous activity and co-operation of friends prominently connected with that body. In the present case we must acknowledge the valuable aid afforded us in the preparation of the sketches by a literary friend of another denomination. The Methodist Church, though not numerically great, has begun to take a position, especially in the Western States, which is influential. Its ministers are energetic, progressive men, and command general respect by their abilities as orators or authors. Many of the names and faces in the group will not be altogether new to our readers.

GEORGE BROWN, D.D., one of the original founders of the Methodist Protestant Church, was born in Washington County, Pa., Jan. 29, 1792, in a fort where his parents were temporarily sojourning, on account of the Indian hostilities. From 1797 until 1800 he attended such schools as were in the vicinity, crude enough to be sure, but sufficient to plant the seeds of knowledge. When a lad he ran barefoot all over the fields and woods where now stands the city of Steubenville, Ohio; and one of the earliest records on the public documents, which may be seen to this day in the Treasurer's Office, is that of prize-money paid by John Ward, County Treasurer, to young Brown, for six wolf-scalps, procured at great hazard in a den among the hills of Jefferson County.

He attended a private school at Holliday's Cove, Va., for some time. In 1811 he became a teacher, and continued in that profession until he enlisted in the war. He was sent with his soldier-comrades—all hardy boys—to the Northwest, under command of General Harrison, and served out faithfully the term of his enlistment.

Returning from the army, he went east to Baltimore, and at a camp-meeting in that vicinity he became a disciple of Christ. He was influenced to become religious by the preaching of such men as Snethen, Shinn, Ryland, and McCain, all of whom were powerful preachers in that day. After his conversion he united with the Methodist Episcopal Church. He studied church history and theology as he found opportunity, while working in a tan-yard, improving every leisure moment, until 1815, when, January 1st, he preached his first sermon to a country congregation. He was appointed to Anne Arundel Circuit, Md., the first year of his itinerancy, and for several years traveled in the vicinity of Baltimore, Md., and Carlisle, Pa., until, in 1819, he was appointed to Washington, Pa. He was subsequently appointed to Steubenville, Ohio, and in 1823 was made Presiding Elder of the Monongahela District. While occupying this official position he was led to investigate the principles and powers of episcopacy, and soon determined to stand out an advocate for mutual rights of preachers and people. This brought him into contact with ecclesiastical authority, and after long and unavailing controversy he became one of the founders of a church economy which he considered compatible with the republican institutions of the country.

In 1829 Mr. Brown organized what is now the First Methodist Church of Pittsburg, and became its first pastor. Dr. Brown has been Conference President, College President, Editor, and is now an author, having just published "Recollections of Itinerant Life," a large volume of very great interest and ability. As a preacher, he was in his prime the peer of Bascom, Shinn, and Snethen; unlike either of them in style, but strong, profound, convincing. His sermons abound in argument, illustration, and genuine pathos.

In person Dr. Brown is hale and hearty, a little inclined to corpulency, but straight and active, as twenty years ago. He has an inexhaustible fund of anecdote—is always happy, and will be missed as much, if not more

than any man in this denomination, when he departs hence to his reward.

Rev. Dr. Brown is staunch and earnest in the prosecution of his plans and purposes. His physiognomy is marked by a strong will, and reflects emphasis. He is practical, individual, and positive, yet sympathetic, tender, and somewhat imaginative. He has strong perception and lively intuition, and is well calculated to engineer an undertaking or control men successfully.

THOMAS HEWLINGS STOCKTON, D.D., widely known as an able divine, a charming poet, an elegant religious *literateur*, and one of the most fascinating pulpit orators of the age, was born at Mount Holly, N. J., June 4, 1808. He received a plain education, and at the age of sixteen began authorship by publishing a brief poem in a Philadelphia newspaper. Thenceforth he made frequent contributions to various periodicals, furnishing essays, tales, poems, criticisms, and a variety of productions.

At the age of eighteen he lost his admirable mother, and about the same time he formally united with the M. E. Church. The following year he became a student of medicine, attending lectures in Jefferson College, Philadelphia. In March, 1828, before he had completed his twentieth year, he was married to Anna Roe McCurdy; and soon after her father removed to the "forks of the

PORTRAIT OF GEORGE BROWN, D.D.

Yough," between the Youghiogheny and Monongahela rivers, in the western part of Pennsylvania.

In 1829, the year after his marriage, he became a preacher. He had previously made various efforts in other directions—medicine, from the practice of which he shrank; type-setting, newspaper-writing, and editing. At last, upon the suggestion of Dr. Dunn, a minister of the Associate Methodists (afterward Methodist Protestants), he commenced preaching. He preached his first sermon at an unoccupied country-seat near Philadelphia, May 31, 1829. He afterward traveled several large circuits on the Eastern Shore of Maryland. In 1830 he was in Baltimore; but in the following year, on account of ill health, he was missionary at large, traveling North and West.

In 1832 he returned to Maryland, and was nominated for the chaplaincy of the U. S. Senate. Next year he was stationed at Georgetown, D. C., and was elected Chaplain of the House of Representatives. Not being re-elected in 1835, he engaged in writing a poem, "Faith and Sight." In the winter he was re-elected to the chaplaincy. In 1836 he had charge of St. John's Church, Baltimore. In 1837, he finished compiling the Church hymn-book; for which service, by the way, the Church afterward displayed marked ingratitude.

He was still in Baltimore in 1838, when he wrote the poem on the Duel of Graves and Cilley; but he soon

afterward removed to Philadelphia, where he continued for the next nine years, engaged with successful zeal in religious labors of various kinds. From 1847 to 1850 he resided in Cincinnati, in charge of the Sixth Street M. P. Church. While there he declined the presidency of Miami University, to which he had been unanimously elected. From 1850 to 1856 he was again in Baltimore, chiefly at St. John's. In 1856 he returned to Philadelphia, where he preached regularly for the Church of the New Testament, except when absent at Washington, serving as Chaplain of the House of Representatives.

All of these labors, incessant as they have been, he has prosecuted under the depressing circumstances of ill health, for he has been a consumptive from his youth. Yet his industry has never failed and his courage has never seemed to waver.

His writings are many, and his pulpit labors have been great and extended. There are very few persons in America who have not either heard his eloquence or of his power as an orator. His volume of "Sermons for the People" has passed through several editions and has been widely circulated.

Dr. Stockton possesses an exceedingly fine-grained organization, with a temperament elastic, active, and vivacious. He has a strong appreciation of the true, the beautiful, and the regular. Much as he owes to nature for the gifts bestowed on him, a great part of his present acknowledged ability and mental power is due to careful culture. We may confidently say, too, that the science we advocate has contributed in no little degree to Dr. Stockton's mental development and present prominence, as he for many years took a warm interest in phrenological principles, both theoretically and practically.

WILLIAM COLLIER, D.D., was born in Hagerstown, Md., in May, 1803. His childhood was spent in that place, under the care and tuition of religious parents and in the midst of the best society. His education was such as the best schools afforded, and his natural inclinations for learning enabled him readily to acquire information from books and the times. He was an early and apt observer of human nature. This has always been a leading characteristic of Dr. Collier. He intuitively comprehends the condition of things in a social company or in a public congregation, and his language takes key from the tone of surrounding circumstances.

In 1829 William Collier entered the ministry in the Maryland Annual Conference of the Methodist Protestant Church, and he at once attracted public attention by his pulpit efforts and pastoral attentions. He filled the most important stations in the Conference until 1851, occupying the position of president of that distinguished body. In 1851 he removed to Pittsburg, where he has since been a leader of this denomination. In 1861 he received the honorary title of Doctor of Divinity from the Wayneburg College.

As a preacher, Dr. Collier is always in earnest. His manner is vigorous and emphatic, yet tender, affectionate, and winning. His sermons are systematic, original in plan, expository, plain, full of force, argument, zeal, and often eloquent in a high degree. On the subject of missions and missionary efforts, Dr. Collier is generally selected by the Annual Conference to speak, and he always responds by a happy, enthusiastic, appropriate, and telling address.

General F. H. Collier, one of the first attorneys of Pittsburg, who distinguished himself as a brave soldier and efficient commander in the army during the war, is a son of Dr. Collier.

This organization is one of marked intensity; the whole expression denotes earnestness and emphasis. Dr. Collier, in this portrait, appears to us to be incapable of entire repose—of "taking things easy." Whatever he becomes interested actively in, he promotes with great zeal and diligence. He scarcely allows himself sufficient rest. Having much wiry endurance, he is inclined to strain it to extremes. He is a worker in every sense of the term.

REUEL HANKS, D.D., was born in New England in the year 1823. He was sent to school early, and almost constantly until he was twenty-one years of age, acquiring a thorough education in institutions of learning of the first order. He finished his classical and scientific course at Poughkeepsie, Vermont, and Oberlin,

Ohio. In his twenty-second year he commenced reading law, and in three years was admitted to the bar.

He was converted at the age of fourteen, and was an active Christian from that time forth, making his studies, his social relations, and his business avocations conform to the teachings of the Gospel. He received Christianity as a spirit suited to every legitimate life-thought and life-work, and hence from early manhood has been a cheerful and devoted disciple of Christ.

In his twenty-fourth year Mr. Hanks was brought to the grave's verge by disease, and then a previous and persistent impression of his call to the Gospel ministry became so intense that he could no longer refuse obedience to its demand. In the crisis of his illness he promised the Lord that should his health be recovered, he would give himself to the work of the ministry. Accordingly, when he became able to leave home, he turned his whole attention to a preparation for his new life-work, and in his twenty-fifth year united with the Methodist Protestant Church, and in a short time preached his first sermon. After preaching two years with great success, he was appointed to the principalship of an institution of learning, in which capacity he served for several years, preaching almost every Sabbath as opportunity presented. In 1853 he was appointed pastor of the Attorney Street Methodist Protestant Church, New York, where he labored with great acceptance until he was elected President of the New York Conference, which eminent position he held for three years.

In 1858 he was elected delegate to the General Conference which met in Lynchburg, Virginia, and distinguished himself as a friend of freedom in the face of frowning and "peculiar institutions." Mr. Hanks was also a delegate to the Non-Episcopal Union Convention which met at Union Chapel, Cincinnati, in May, 1866; and again to the General Conference which assembled in Allegheny City late in the autumn of the same year.

For the last fourteen years he has filled some of the best stations, and been charged with some of the most responsible offices in his denomination. In 1866 he received the honorary degree of Doctor of Divinity from Adrian College, Michigan.

Dr. Hanks is an impressive and eloquent preacher. His personal appearance is dignified, his face round and radiant, his voice rich and mellow, his gesticulations graceful and unstudied, and his language chaste, clear, and forceful.

Dr. Hanks has resided for some time on the banks of the Hudson, near Tarrytown. With a good degree of vitality, a large brain, and a vivacious nature, Dr. Hanks should be responsive to all that is emotional and forceful in his professional life. He is evidently a clear, direct, and practical man, while a strong sense of the tasteful and beautiful must so infuse and lubricate his excellent capacity for expression as to round off and render attractive his natural individualism.

ZACHARIAH RAGAN, D.D., is well known as a prominent and able minister in lay-representative Methodism. From 1834 to 1854 he served in all the General Conferences of the Methodist Protestant Church. He has also filled some of the most important appointments in Pennsylvania and Ohio, and has frequently been President of the Annual Conference.

Dr. Ragan is a native of Pennsylvania. He was born in Westmoreland County, February 22, 1804. His education was such as the best schools of his youth afforded, supplemented by unceasing study through subsequent life—for he is still a student.

He was licensed to preach by Rev. Charles Elliott, of the Methodist Episcopal Church, February 22, 1825—the day he was twenty-one years of age, and was at once employed on the Grand River Circuit, in the northeastern part of Ohio. In 1827 he was ordained by Bishop George.

When the reform movement began in the Methodist Episcopal Church, he at once identified himself with it, and in September, 1829, he started to Cincinnati to unite with the "Associated Methodist Churches"—the precursor of the Methodist Protestant Church—at their first Conference in Ohio; but being detained at Marietta for several days, by low water, he reached Cincinnati the day after the Conference adjourned. He was, however, employed to serve the church on Sixth Street, to relieve Rev. Asa Shinn, who had been elected President of the

Conference, and who was expected to travel the District. After Mr. Shinn's return, Mr. Ragan labored effectively in the neighborhood of Louisville, Ky., organizing the Louisville Circuit. He subsequently served four or five terms as President, first of the Pittsburg, and afterward of the Muskingum Conference, to which he still belongs.

In 1850 he retired from the active itinerant work, and soon afterward began the publication of a secular paper in Steubenville, Ohio, entitled *The True American*, which continued up to the beginning of the rebellion, in 1861, when he entered the army as Chaplain of the Twenty-fifth Regiment Ohio Volunteer Infantry. After serving for a year and a half in this capacity, he was appointed a Chaplain in the regular army. His appointment was confirmed by the Senate, and he was stationed at Memphis, Tennessee, where he remained until January 4, 1866. He received the honorary degree of D.D. from Adrian College, Michigan, in 1866.

In person Dr. Ragan is large, without corpulence, muscular, erect in form, manly in bearing, and of commanding presence. His whole physiognomy is indicative of great mental power, of strong will, and of unflinching self-reliance. As a preacher he has more than ordinary power. His thoughts are always dignified, his language well chosen and copious, and his manner earnest and impressive. His cast of mind is peculiarly philosophical. He deals with principles mainly, and these he develops with much ability, and with such reference to their practical application that he may be properly considered a practical rather than a theoretical preacher.

REV. ANCEL H. BASSETT was born at Sandwich, Mass., July 1, 1809. His parents emigrated to the then village of Cincinnati, Ohio, in 1810. From infancy, therefore, he was reared in the West. In 1821, at twelve years of age, he embraced the Christian religion, and united with the Methodist Episcopal Church. From his youth he was conversant with the controversy on church government, which resulted in the formation of the Methodist Protestant Church. He was identified with the reform party which seceded from the Methodist Episcopal Church in that city in 1828. His age at that time was nineteen. August 30, 1830, he received license to preach. Three days after, viz., September 2, the Second Annual Conference of the new denomination convened in Cincinnati, and he was by that body received into the traveling connection and appointed to a circuit.

In the outset of the new connection, such was the demand for laborers, that young men were "thrust out," who would gladly have taken more time to seek proper qualifications. For his first year in the itinerancy Mr. Bassett was appointed assistant colleague to the Rev. Dr. Reeves, now of the Pittsburg Conference. For his second year he served in the same relation to Rev. Dr. Z. Ragan, in each instance upon a large circuit. The work was then new, and embraced large tracts of territory. Indeed, for four or five years the Ohio Conference included the entire West; but not less than twenty conferences have been set off and have gone into effective operation within the same scope since the subject of this sketch entered the Conference. Subsequently, for many years, he was placed in charge of various circuits and stations, and he was one year a College Agent. When quite a young man, he was chosen to serve as Secretary of his Annual Conference, and he so served for seven successive years. He was called from this position to the Presidency of the Conference. This was at a period when the office involved arduous duties, with extensive traveling through a large district. He was again elected to serve in this relation for four years, and retired from it in 1845, to take charge of the religious paper of the denomination, then called the *Western Recorder*, and which had been commenced several years before by Rev. C. Springer, at Zanesville, Ohio. For ten years Mr. Bassett conducted this journal as an individual enterprise, under the sanction and patronage of his Conference, and, it may be said, of nearly all the Free State Conferences. In 1855 the publication was transferred to the Church, and became its religious organ for the entire North and West. A. H. Bassett was now, by a General Convention, unanimously elected to serve as Editor and Book Agent under the new arrangement. He was re-elected in 1858 to the same service; but in 1860, the duties in both relations having become too oppressive

to be united in one person, he was, by a General Convention, elected Publisher and Book Agent, while Rev. Dr. G. Brown was chosen Editor. In 1863 Mr. Bassett was re-elected by General Convention, and served until near the end of 1864, when, in poor health, he resigned his position, and retired for the remaining portion of the term. The General Conference, however, of November, 1866, at Allegheny, Pa., and again at Cleveland, Ohio, in May, 1867, chose him to serve as First Publishing Agent. Mr. Bassett was elected from time to time a representative to all the General Conferences of his denomination, for nearly thirty years past, and also a delegate to all the General Conventions (seven in number) delegated and held by the Free State or Anti-Slavery Conferences. It was his lot to conduct the press through several periods of critical agitation in the Church. He was one of the founders of the Book Concern, located at Springfield, Ohio, and delivered the Address at the laying of its corner-stone in 1860. He is now devoted to the care of this establishment.

As a preacher, Mr. Bassett is plain and practical. He is more eloquent in his consistent private life than in his public ministrations in the pulpit; yet his sermons are always full of sound thought, suggestive sentiment, and are spoken with a frankness and freedom that win their way to the hearts of the audience. Mr. Bassett is a chaste writer and an instructive preacher.

CORNELIUS SPRINGER was born of Swedish parentage, near Wilmington, Del., December 29, 1790. He is the fourth descendant from Charles Christopher Springer, so favorably referred to in Clay's "Swedish Annals" and Ferrie's "Original Settlers on the Delaware."

His parents removed to Western Virginia in 1798, and settled in the forests below Wheeling. In 1806 they removed to Ohio and again settled in the forests, near Zanesville. He had, therefore, but little opportunity for education; but by intelligent and industrious use of the meager advantages he had, he acquired a good knowledge of English literature. At the age of twenty-one he engaged in school-teaching, as affording the best available opportunity for coming in contact with books.

In 1808 he was converted under the ministry of Rev. Robert Manly, and joined the M. E. Church.

Mr. S. served as lieutenant of a company in the "war of 1812," and acquitted himself with distinction.

In 1816 he quitted a position in the Academy at Putnam, opposite Zanesville, to enter the itinerant ministry of that denomination, in which he continued about thirteen years. He was one of the first men in the West to advocate reform in the government of the Church. As early as 1822-23, he wrote a series of articles on the subject, which were published in the *Wesleyan Repository*. But although he desired a modification of the government, he never would have left the denomination upon that account. When, however, his associates in the controversy and his friends holding common sentiments were expelled on account of their opinions, he felt himself bound in honor and by Christian morality to go with them into their new isolation; and he was, therefore, one of the founders of the M. P. Church, and of course one of its leading men.

His first year in the new organization was spent in forming churches in Western Virginia, in the Monongahela Valley. After filling several other appointments, he was appointed by Conference as editor of the *Methodist Correspondent*, a semi-monthly paper devoted to the interests of the Church. This he published four years.

In July, 1839, he commenced, on his farm near Zanesville, the publication of the *Western Recorder*, a weekly paper authorized by the Pittsburg Conference as its official organ.

In the midst of the anti-slavery agitation he conducted the paper with such prudence and discretion as to insure the success of the *Recorder*, and contribute largely to the welfare of the denomination.

After publishing the *Recorder* for six years, Mr. Springer found that his eyesight was being damaged by his literary labors, and that he must, therefore, withdraw from them. The paper went into other hands, and Mr. S. retired to private life.

Since retiring from regular itinerant labors, he has been engaged chiefly in the management of his beautiful estate, "Meadow Farm," one of the finest in his county.

JOHN SCOTT, D.D., editor of the *Methodist Recorder*, and one of the leading ministers in the Pittsburgh Conference of the Methodist Church, was born in Washington Co., Pa., October 27, 1830. His early educational advantages were limited, but he improved them as well as his circumstances would allow.

In September, 1832, he united with the Methodist Protestant Church. In February, 1842, he was licensed to preach, and in September of the same year was received in the Pittsburg Conference and assigned a field of labor. Since that time, he has regularly performed ministerial duty in his Conference until November, 1864, when he was appointed to his present position, to which he was re-elected by the General Conference of 1866. He was a member of the Non-Episcopal Convention of 1866, and of the last two General Conferences of his Church.

In the ministerial work, he served four years on circuits, sixteen years in stations (chiefly in and about Pittsburg), one year as Corresponding Secretary of the Mission Board, and one year as President of the Conference. Disliking office, he declined candidacy for the latter position a second year. Besides the usual ministerial work, however, he served several years, without general travel, as Corresponding Secretary of the Board of Missions, and during three years of the time edited and published the *Missionary and Sabbath School Journal*.

He received the title of D.D. from Washington College, Pa., an institution under Presbyterian patronage.

Both as a writer and a preacher, Dr. Scott develops the peculiarities which constantly evince themselves in his social intercourse—cool prudence, steady judgment, rather an excess of caution, yet an earnestness unmistakably constant, and an honesty and candor which inevitably command respect and confidence. In social life, he mingles with personal dignity an affability and kindly playfulness which make his society a constant pleasure to his intimate friends. Besides his frankness, his moral probity, his cordial geniality and his steady constancy attract the friendship of the sensible and pious, and settle it as a perpetuity.

This is a marked character. The mental forces predominate much over the physical. He is an earnest and deep thinker, a warm advocate, and a candid doer and speaker. He has a very powerful sense of duty, in fact, self-sacrifice in its discharge should characterize him as a minister and friend. His vital forces appear to be decidedly in the descendant, and we would caution him against excessive mental effort if he would prolong his days and his labors of love.

WILLIAM REEVES, D.D., was born in the village of Staplehurst, Kent, England, December 5, 1802. Owing to his parents' circumstances, his education was confined to the facilities which a small town afforded.

He was the subject of religious impressions from childhood; but owing to want of vitality in the State Church, in which he was reared, and other unfavorable influences, he did not enter upon a spiritual life until the year 1825. Immediately upon doing so, however, he felt the fire of religious philanthropy, and began to call sinners to repentance. He was soon recommended by his pastor (then a Dissenting minister) to apply to the Missionary College, with a view of preparing for a foreign field. But, unfortunately as it then appeared, through pecuniary embarrassment, the number of students in the institution could not be increased for awhile. So, bearing of the revivals of religion in the United States, he emigrated in 1829 to this country; and being an ardent advocate for both civil and ecclesiastical liberty, he cast his lot with the infant Methodist Protestant Church, at the city of Cincinnati, and received an appointment from their first annual conference, namely, to travel Zanesville Circuit. He has since served in many circuits and stations, usually with marked success, and always with credit to himself and the Church. He has repeatedly been a member of the General Conference, and was one of the very few Northern men who attended the one held in Lynchburg, Va., immediately after the Northern Conference had suspended official relations with the Southern wing on account of slavery. He has been President of Pittsburg Conference six years, two full constitutional terms; which, as the office is annually elective, is an un-

usual honor. At the last General Conference he was elected Fraternal Messenger to the Conference of the Primitive Methodist Church in England.

Dr. Reeves is a man of medium height, of very erect figure, and has black hair, dark-brown eyes, dark complexion, a large mouth, with full protuberant lips, and wears a certain air of sobriety which makes his presence commanding and impressive. He is apparently about fifty-two or fifty-three years of age.

Ready, facile, prompt, he can never be called on amiss, either for a sermon or a speech. He seems to be alike at home in argument, in philosophical discussion, in exegesis, and in fervent appeal. He may, with peculiar emphasis, be called a *good preacher* and an *able theologian*.

Here is a very striking face—an impressive *personality* in every respect. His character is a strong one, and most likely to be strongly manifested. He has a keen perception, strong sympathies, much self-reliance, and but little vanity. He is evidently enduring, tough, and wiry in physique. He is one to be trusted, and trusted implicitly.

ALEXANDER CLARK, A.M., pastor of the First Methodist Church at Pittsburg, and editor of the "School-day Visitor," was born in Jefferson Co., Ohio, March 10, 1834. His father is of Scotch-Irish descent; his mother was born in the Highlands of Scotland.

He received an ordinary English education in the common schools of his native State, engaging during the intervals of school in manual labor. But the routine of school studies did not satisfy him, and hence from an early age he had a thirst for general literature and science, which he exerted himself in every honorable way to gratify. As his father's means were limited, he used when a boy to make simple articles of domestic ware, and peddle them through the neighboring villages, to obtain money for the purchase of such books as he wanted. At the age of seventeen he began to teach school, and continued teaching for several years, all the while, however, himself delving for knowledge and cultivating his tastes.

After he had taught for some six years, he conceived the idea of starting a school-day paper. To think was to execute, and the publication was soon announced. Without capital, influence, or experience—with the greater part of his subscribers in his own village school—the success of the enterprise, which was then a novelty, was more than doubtful. But he had counted the cost. As the subscriptions were too meager to pay the printers, he bought printing material, instructed himself in its use, did his own work, and thus was independent. As soon as it became evident that "The Visitor" would live, it increased rapidly in circulation, and became profitable. It is still published under his editorship in the city of Philadelphia, and is second in interest and popularity to no educational journal in the land.

In 1861 Mr. Clark was ordained as a minister in the Methodist Protestant Church. In September, 1862, he was appointed pastor of a congregation at New Brighton, Pa., one of the charges belonging to the Pittsburg Conference. In 1863 he became associated with the celebrated Dr. T. H. Stockton in the joint pastorate of the Church of the New Testament, Philadelphia, where he remained until he was called to the charge of a large and popular Independent Methodist Church at Cincinnati, known as "Union Chapel." He remained there two years, when he resigned the position to resume regular work in his own Conference. He now occupies its principal pulpit, where he has just had a year of great prosperity in his charge. He received the honorary degree of Master of Arts from Mt. Union College in 1864, and also from Otterbein University in 1865. He was a member of the Non-Episcopal Convention in May, 1866, and of the General Conference of 1867.

Mr. Clark's prominent characteristics as a writer and speaker are exquisite taste united with sturdy strength; the elegance and polish of the poet and scholar, joined to the earnestness, directness, and vigor of the intrepid advocate of right, and the bold, unflinching denouncer of wrong. His style is ornate without frippery, and elegant without affectation. He is one of those few public men who utter great truths and discuss important principles in the glowing language of genuine poetry. As a speaker to children he has had great experience and success.

He is a hard worker day and night, in-doors among books or out-doors among men, and overtaxes his physical strength to fill the measure of his ambition. The only books he has yet published are a story of school life entitled "The Old Log School House," and a compilation of school dialogues. These, with many fugitive poems, sketches, sermons, etc., have given him an enviable reputation in the literary world.

HORACE BARTON KNIGHT, A.M., was born in Rutland, Vermont, about the beginning of the year 1818. At the early age of nine he became an orphan by the decease of his father. His educational advantages were limited to the common schools of the day, save one quarter's tuition at a select school.

At the age of fifteen he was apprenticed to the printing business, in the *Herald* office, in his native village. At this he continued to work until he was nearly twenty-two years of age. He then united, as an under-graduate and probationer, with the Troy Conference of the Methodist Episcopal Church, and pursued the ministry in connection therewith for seven years, graduating to the offices of Deacon and Elder.

When what was called the "Wesleyan movement" was inaugurated by Rev. Orange Scott and his associates, Mr. Knight sympathized with it, and in 1847 withdrew from the Methodist Episcopal Church, and in 1848 united with the New York Conference of the Wesleyan Methodist Connection, and for three or more years was connected with the "Wesleyan Book Concern," then located in the city of New York. Subsequently, viz., in 1856, he was elected the Book Agent and Publisher of the denominational organ, *The Wesleyan*, located at Syracuse, N. Y. This position he resigned in 1858, leaving the Concern in a much more prosperous state, financially, than when he took hold of it. Since then he has been devoted to the regular work of the ministry at Seneca Falls, Albany, N. Y., and more recently at Cleveland, Ohio. In 1843 Middlebury College, Vermont, conferred upon him the honorary title of A.M., at the instance of the late Senator Foote and others, members of that corporation.

In person he is of rather slender build, hair brown, and complexion light. He is about five feet ten inches in height. As a preacher, Mr. Knight is clear in thought and eloquent in language, sometimes rather systematic and precise, but he is never without earnestness and fervor. His sermons are always reformatory and appropriate to the times, and evince a thorough knowledge of human nature. In social life he is courteous and genial, with an inclination to pleasantry. The leading traits of his mental and moral character and habits are frankness, courage, common sense, observant sagacity, sterling integrity, and firmness.

This gentleman should be distinguished for his enterprise and industry; for his practical judgment, taste, and order, and for his analytical ability, appreciation of utility, and good-nature. He is not a proud man in the true sense of the term, but is ambitious, fond of distinction, and careful to avoid criticism or reproach. He is well organized temperamentally, and should be quick of perception and sprightly in action.

JOSEPH J. SMITH, A.M., President of the New York Conference of the Methodist Church, was born in New Jersey, February 3, 1817. At the age of fifteen he united with the M. P. Church. In 1836, at the age of eighteen, he was licensed to exhort, and a few months afterward he was licensed to preach. Having by this time fully made up his mind to devote himself to the ministry, he induced his father to release him from the labors of the farm and place him under the care of Rev. A. Lane, to study theology and such other subjects as would tend to qualify him for his chosen work.

The following year he entered the itinerant ministry. Finding there the inconvenience of his lack of education, he resolved to apply himself to study, which he accordingly did with success. So large was his desire for culture, that he included Latin and afterward Greek among his studies, and pursued them with the same resoluteness that he did the rest.

Besides occupying many important positions in his own Conference, Mr. Smith has frequently served with distinction in the general bodies of the Church. In 1850 he was a member of the General Conference which met

at Baltimore; in 1854 he was a member of the General Conference at Steubenville, O.; in 1855 he belonged to the Convention which met at Springfield, O., where the Conferences North and West separated from those South. He was also a member of the Pittsburg Convention of 1860, and the Cincinnati Convention of 1862; and he represented his Conference in the Union Convention of May, 1866, which met at the Union Chapel, Cincinnati.

He is now serving for the fourth year as President of his own Conference, and his third as pastor of the Grand Street Methodist Church, Brooklyn.

In person, Mr. S. is of medium height, compactly built, and wears a general air of physical and mental robustness. And, indeed, this is the leading characteristic of his mind—robustness. He is a man of strong common sense, without affectation, without circumlocution, almost without any of the aids of art. He says his way with directness and strength, and is usually satisfied with that. He is esteemed a cool and wise counselor, a sensible preacher, and a thorough and efficient executive officer.

DENNIS B. DORSEY, M.D., was born in Baltimore, Md., August 24, 1830. His parents removed, in 1831, to Wheeling, Va. (now West Va.), and in 1840 to Steubenville, Ohio. He was educated principally in the free schools of that State. As his parents were poor, young Dorsey had to leave school while yet a boy and look to his own exertions for support. He obtained employment in a printing-office, but he did not lose sight of the object of his hopes—becoming a physician. In order to secure time for study, he began to teach school before the age of eighteen. In 1849 an opportunity for learning practical pharmacy and also for practicing medicine at Bellefonte, Pa., was offered by a relative, Dr. J. P. Gray, now Superintendent of the State Insane Asylum at Utica, N. Y., and this opportunity was embraced.

Meantime, the solemn problems of moral relations and obligations were occupying his mind, the result of which was a determination to consecrate his life to the service of God. In 1850, therefore, he returned to Steubenville, and in that year or the next received license to preach, from the M. P. Church at that place. He served several charges in Ohio up to 1855 (and while in Cincinnati attended medical lectures), then went to Western Virginia. His health having declined, he practiced medicine for two years near Wheeling, but also, part of that time, had charge of a small circuit. He was a member and one of the secretaries of the General Conference of 1858. In 1859 and 1860 he served as President of Western Virginia Conference. In 1861 he was sent from Monongalia County to the Wheeling Conventions, but before the close of the second Convention received a commission as Surgeon of the Third Regiment (West) Virginia Infantry, and in that regiment passed through the severe campaigns of Rosecrans, Milroy, Fremont, and Pope, in W. Virginia and Virginia, receiving in 1862 promotion to the position of Medical Purveyor of General Sigel's corps. These campaigns broke down his health, and the position was resigned. Soon after leaving the army he was elected editor of the *Western Methodist Protestant*, and served as such. He is now pastor of Fairmont Station, West Virginia.

Dr. Dorsey has written several works, chiefly literary, some of which have appeared anonymously. An elaborate "History of the Methodist Protestant Church" and a work entitled "The Methodist Itinerant's Manual" are unpublished. He is now engaged in writing a metaphysical work, "The Rationale of Religion, or Experimental Piety Considered in Relation to the Laws of Mind."

Dr. Dorsey is a thorough metaphysician. His sermons are metaphysical, and yet so ingenious withal as to be popular and impressive with the masses. He preaches the "new" things more than the "old," and has a way of getting the attention with the very first sentence of a discourse and holding it till he has finished. His preaching is conversational, which is the highest type of oratory, yet he makes no pretensions in this direction.

He has not yet fully identified himself with the newly organized Methodist Church, but owing to peculiar ecclesiastical affairs in West Virginia, remains a Methodist Protestant for the time being. He is non-episcopal as ever, reformatory as ever, and will doubtless in his

own time and way fall in rank with the hosts of his coadjutors in the cause of lay representation. His position ecclesiastically is in keeping with his intense individuality, and if not universally appreciated at present, will eventually take its recognized place in the page of his history in harmony with all the events of his life, which he claims as his own more than any form of fashion or attempt of human arranging.

A sedate, settled, and somewhat intense cast of countenance is presented in this portrait of Mr. Dorsey. His strong Firmness and Human Nature coupled with more than average philosophical insight, tend to render him somewhat opinionated, if not dogmatic. He has a good deal of imagination, and yet a pointedness and directness of expression which would in the opinion of most people ally him with the practical.

THE METHODIST CHURCH.

The Methodist Church, or, as it was lately styled, the Methodist Protestant Church, is, as has been already indicated in many of the preceding biographical sketches of its prominent ministers, a religious body formed by the separation of a considerable number of the clergy and laity from the Methodist Episcopal Church. This separation took place in 1830, and was primarily occasioned by the dissatisfaction felt, by those who withdrew, with the episcopate and the organization of the conferences, as recognized in the parent church.

Previous to 1828 strenuous efforts were made by those who seceded to secure a more general representation of the clergy and laity in the conferences of the Methodist Episcopal Church; but the "reformers," being in the minority, failed, and many of them were expelled from the conferences. In November, 1830, those who were interested in the new movement met in convention in Baltimore, and organized a new religious society under the name of "Methodist Protestant Church."

The doctrinal views of this society are the same as those held by the parent body, while the chief features in which it differs from the latter in ecclesiastical government are, its non-recognition of the episcopate, and lay representation. The General Conference meets once in four years, and is composed of an equal number of ministers and laymen, viz., one delegate of each order from every thousand communicants. The Annual Conference is composed of all the regularly constituted itinerant ministers of a district, and has the control, with a few limitations, of that district. There is also the Quarterly Conference, which is composed of the trustees, ministers, preachers, etc., in the station, mission, or circuit of which it is the immediate official meeting.

The itinerancy of this Church is so modified that preachers and people may remain together for an indefinite period, if mutually satisfied.

The Methodist Church now includes the Wesleyan connection, another branch from the Methodist Episcopal stem, which was organized in 1843. The latter, however, can not be regarded as homogeneous with the Methodist Protestant, although it is in harmonious co-operation with that body. A partial union of the two societies was effected at a convention held in Cleveland, Ohio, in May of the present year. The returns for 1865, as published in Goss' "Statistical History," represent the number of those connected with the Methodist Protestant Church to be 105,120, of which number there are about 60,000 communicants, while the Wesleyan connection claims upward of 25,000 members. These figures probably include the Southern portion of the M. P. Church, which does not properly belong to the new organization. In the interest of this religious body there are four weekly periodicals, seven colleges, and three or four other educational institutions.

EVENING MEDITATION.

When the hours of day are numbered,
And the voices of the night
Wake the better soul that slumbered,
To a holy, calm delight,
Then the forms of the departed
Enter at the open door—
The beloved, the true-hearted,
Come to visit me once more.

PURITANISM.

THE name Puritan, now three hundred years old, was first applied to those conscientious persons who desired a more marked separation from the Roman Catholic Church than the services of the English Church seemed to afford, and they claimed that the sacred Scriptures were the only authoritative rule of faith and practice. Hence they regarded traditions and human authorities and restrictions in matters of religion as not binding on the conscience. Subsequently, however, the irreligious and openly vicious came to call all persons Puritans who were strict and serious in pursuing a holy life, even though they did conform to the Established Church. Before the close of Queen Elizabeth's reign a portion of the non-conformists began to question the prevailing opinions concerning doctrinal points, including predestination and free-will; and under the arbitrary reigns of James I. and Charles I. all persons who opposed their theory of government were regarded as Puritans. Hume applied the name to three classes, viz.: the political Puritans, who maintained the highest principles of civil liberty; the Puritans in discipline, who were averse to the ceremonies and government of the Established Church; and the doctrinal Puritans, who rigidly defended the religious system of doctrines of the first reformers.

The Puritans overthrew English royalty and established the commonwealth. On the restoration of the Stuarts, of course the name Puritan became one of reproach, as implying an unreasonable degree of austerity in both temporal and spiritual matters, and this is the leading idea in regard to them at the present day by those who are not of their way of thinking. Persons representing the three classes above referred to formed the bulk of the original settlers of New England.

In regard to the Puritans who emigrated to North America, and whose influence has been so strongly manifested in the civilization of the continent, Bancroft, the historian, says: "They were formal and precise in their manners, singular in the forms of their legislation, rigid in the observance of their principles. . . . But these were only the outward forms which gave to the new sect its marked exterior. If from the outside peculiarities which so easily excite the sneer of the superficial observer we look to the genius of the sect itself, Puritanism was religion struggling for the people."

If asked for a concise definition of Puritanism, this, we think, would answer: *Religion in earnest, universal education, and uncompromising CIVIL LIBERTY.*

SECTARIAN SETTLEMENTS IN AMERICA.

In the settlement of America there were five or six prominent points made by people from different countries and creeds, and their style of civilization and secular progress were accordingly modified. The Puritans settled New England in four colonies or focal centers, to wit: the Plymouth Colony (by the passengers of the Mayflower), the Massachusetts Bay Com-

pany, the Connecticut settlement at Hartford and Windsor, and the New Haven Company at and near New Haven, Ct. The Hollanders settled at New York and up the Hudson River, and their religion was according to the Reformed Dutch Church, which was in doctrine and discipline similar to the Presbyterian.

WM. PENN brought English civilization and the Quaker religion to Pennsylvania, and to this day the doctrine: he taught and the gentle manners he introduced mark the character and habits of the people at and near the place where he planted his colony.

Lord Baltimore, one of the chief colonists of Maryland, brought the Roman Catholic religion to these Western shores; and in that State—Maryland—there are numerous seats of learning under the care of that Church, and a much larger proportionate number of native adherents to that faith than in any other State of the Union.

In Virginia, at Jamestown, the Episcopalians of England landed and established a colony, and their faith and form of worship for many years took the lead in the number, wealth, and influence of its membership. The Methodist Episcopal Church having the same articles of faith and a form of church government somewhat similar, has since made great headway in that State.

In the Carolinas the French Huguenots founded a settlement. Having suffered persecution in the old country, they were great sticklers for individual liberty and self-government. This sentiment marked their career so late as the formation of this government, and they were the last to waive State sovereignty and come into the Union of the States. This spirit, by a secular perversion supported by Calhoun, became the ultra doctrine of State rights which culminated, under a warped construction, in secession and rebellion. Now, it is to be hoped—by the aid of telegraphs, railroads, steamships, and UNIVERSAL COMMON SCHOOL EDUCATION—that religious sectarianism, State pride, and exclusiveness will be modified if not overcome, and that the American people will be more homogeneous, at least in spirit, and that religion and liberty, hand in hand, may lead the people of this great country to prosperity and happiness.

HAVE YOUR LIKENESS TAKEN.—Not long since a lady entered a photographic gallery, dressed in the habiliments of mourning. By her side was a sweet child, toward whom her eyes ever wandered, her tender watchguard plainly bespeaking the love of a mother. Her errand was told—to obtain a likeness of her boy. Upon its delivery to her, a tear trickled in her eye as she looked upon it, and as only a bereaved one could say it, she feelingly expressed her deep regret that she was without a good portrait of the child's father, now passed from earth. Upon being asked whether she had any sort of a picture from her husband, she replied, "Only a poor faded one, made years ago." She was asked to bring it in, and

with what directions she could give. The artist had no doubt of his ability to furnish her with a correct likeness of the loved but lost one.

The old picture was furnished, all the suggestions she could make were heard, and the matter left with the artist. Time passed on, and the widowed mother called to learn the result. It was shown her. Again she wept; but this time they were tears of joy. "It's he! it's he!" said she, "and it looks as though it could almost speak." Her little faded keepsake had been copied, enlarged to almost life-size, and now appeared as in health and beauty, the partner of her young choice. She pressed it lovingly to her lips, and not the least of the artist's reward was her touchingly eloquent thanks for his well-directed and successful efforts.

We shall all "be changed," and it may be a satisfaction to our surviving friends to look on that which will represent the original. Every son and every daughter would like to possess a good likeness of father and mother, and every parent, friend, lover, husband, and wife would like to possess even the image of the loved one. Then why not?

LIMBLESS, YET TRIUMPHANT.

BY ANNA CORA RITCHIE.

A YOUNG mother lies "faint with pain-bought happiness," stretching out expectant arms to clasp, for the first time, her babe. Why is the imploring action so strangely unheeded? What means the look of dismay on the face of nurse and physician? the irrepressible exclamation of horror which bursts from the lips of the newly-made father? Why do the supplications, the terrified inquiries of the agonized mother call forth no response? She knows that her child lives—she can hear his low wailing. Bring him to her—she will take no denial! Silently and sorrowfully the babe is laid on her breast. Then, indeed, her anguish breaks into loud lamentations, into rebellious cries against the decrees of Heaven. Lovely, in her eyes, is the baby face upon which she looks down; but she holds in her arms the trunk of a male infant curtailed of arms and legs!

The voice of superstition mutters that the father is accursed. He belongs to the proud Mac Murrrough Kavanagh clan, rigid Roman Catholics; he wooed a daughter of the Ormonde family, Irish Protestants, and in order to wed her renounced his faith and espoused her. By this act, men said, he had drawn down a curse, which fell upon his son and heir. Little they dreamed how triumphantly that child's life would disprove their complacent interpretation of God's supposed chastisement. Arthur Mac Murrrough Kavanagh, whose existence commenced forty years ago, in the midst of such piteous lamentations and hopeless agony, was destined to afford one of the grandest illustrations of the conquering power of mind over matter, of the potency of will to mold and rule untoward circumstances. His wonderful intellectual activity, his indomitable perseve-

rance and moral courage have surmounted nearly all his corporeal imperfections.

Last November he was elected as parliamentary representative of Wexford County, Ireland. It may well be imagined that his first entrance into the House of Commons, and his "swearing in," presented a singularly interesting scene. He approached the table, where he was to take the oath, in a handsome cane arm-chair, with a mechanism let into the arms and communicating with wheels below. His appearance reminded one of a bust or medallion. He has fine, well-cut features, and eyes that beam with intelligence. His bust is of handsome mold. The stumps of his arms are dwarfed to five inches; he has but six inches of muscular thigh stumps—their terminations give not the faintest indication of hands or feet. He took the Testament reverently between his two diminutive arms, listened to the oath, kissed the book, received between his stumps a pen from the clerk of the House, placed it in his mouth to steady and square it with the parchment on which he had to write, then taking the pen again in his arms signed without the slightest awkwardness, writing exceedingly well, and evincing perfect coolness and self-possession. Having signed, he wheeled himself toward the Speaker, to whom he bowed—the usual ceremony of shaking hands being necessarily omitted.

When he voted, the Speaker made an exception in his favor, and allowed him to record his vote without passing with the other members through the lobbies.

He is often carried out of the House by his servant, upon whose back he springs with great agility. He takes the deepest interest in the debates, and his countenance usually wears the most enjoying expression. Much is expected of him, and, doubtless, he will not belie the present promise.

Mr. Kavanagh has large estates in Wexford, Kilkenny, and Carlow, Ireland. He is greatly beloved by his numerous and prosperous tenantry. He has a wife remarkable for her beauty and the loveliness of her character, and is blessed with a large family of exceedingly handsome children. His accomplishments are many and varied, and of the precise character which his physical imperfections would seem to render impossible. He is an excellent calligraphist and an artistic draughtsman. He wrote "The Cruise of the Eva," a lively, entertaining book, and made the sketches himself during the cruise. He is the most expert of yachters, an accomplished sportsman too, an unerring shot. Still more remarkable, he is a dashing huntsman. When hunting, he sits in a sort of saddle basket, and his reins are managed with marvelous expertness; and still more astonishing, he is noted for the manner in which he drives a "four-in-hand."

He is not only a man of literary tastes, but an able orator, while he brings to the consideration of every public question the resources of a highly cultivated mind. And this is the man whose birth was pronounced a curse upon his parents, whose life seemed as though it must inevitably be an existence of hopeless misery and endless deprivation! but who has given the astonished world a brilliant example of intelligence, courage, hope, perseverance, fertility of resources, invention, triumphant success.

LONDON.

NEW YORK, NOVEMBER, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiassed truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearlessly, and this is the course I take myself."—*De Puc.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

TIMELY TOPICS.

THANKSGIVING DAY.—The holidays of the year are to human life what hotels on the wayside are to the traveler, or as bright particular stars are to the night. As we look back over the years that are past, however obscured the common days of the year may have been, the cherished holidays bring to us a light as warm as summer, and voices as sweet as bird-songs in the garden.

Human souls seem to require set times in which to be happy in concert; joy is thus enhanced and sanctified. If one must be sad and sorrowful, there is a plaintive joy in having that sorrow a common one, hence set times of fasting, humiliation, and prayer find in the human soul an answering emotion.

THANKSGIVING DAY was born of human necessity; it was destined by its New England founders to take the place of other holidays regarded by them as superstitious; but a strange mutation has time made in respect to the sentiment which designated this day, for while the day itself is kept by the children of its originators with a joy not surpassed by that of its founders, other holidays have been incorporated into the popular calendar which were repudiated by the early Puritans.

Thanksgiving Day is the great social and religious festival of New England, and is a legacy of the Puritans. They regarded Christmas as a relic of Catholicism or Prelacy, and since they had been persecuted and driven into a foreign wilderness, they held all holidays of the Established Church as symbols of oppression, and accordingly passed laws to punish the observance of Christmas; and for many years in New England Christmas was not observed at all, and its original significance was not therefore

appreciated by the descendants of the Puritans. As, however, the Roman Catholics and Episcopalians gradually came in and formed a part of the body politic, Christmas was revived, and now, although Thanksgiving crowns the religious days as Independence Day crowns all secular days, still Christmas is cherished by the children of the Puritans with a joy and entered upon with an alacrity not surpassed by the strictest Roman Catholic or the most sincere Episcopalian. It is a pleasant fact to record, that throughout the United States Thanksgiving day has become a word not only meaning joy to the people, but it is now regularly appointed by proclamations of State Governors, and generally by the President of the United States.

Thanksgiving Day is celebrated on Thursday, and by most of the States the same day in the month of November is chosen. The Governor's proclamation making the appointment is read in all the churches, and there are appropriate sermons and religious exercises. Widely scattered friends meet at the bountiful Thanksgiving dinners, and the roast turkey, the plum puddings, the mince and pumpkin pie are supposed to be a part of the institution. Weddings, in New England especially, are celebrated on the evening of that auspicious day, when all hearts are thankful and hopeful.

The prime object of the appointment of this day was one of solemn prayer and thanksgiving for the blessings of the year, and especially for the bounties of the harvest.

In addition to these ideas, it is common for ministers to give expression to opinions relative to great national affairs, and some of the ablest discourses throughout the chief towns of the United States are published in the newspapers, and disseminated throughout the entire country.

We say, All hail to Thanksgiving, to Christmas, to New Year's, and to every other day when heart beating in unison with heart can forget the dull monotony of real life and rise in sentiment and aspiration, and meditate thankfully on the beneficence of the Giver of all good, and look forward hopefully to a future which a true faith joyfully depicts.

SELF-HELP.—There are some young men and young women who are *willing* and *anxious* to do something. Others shrink from task or toil, and from choice eat the bread of idleness all their days. The first may be without means, education, or apparent opportunity, and yet they "make their way" against opposition and adversity, acquiring knowledge, accumulating property, commanding success. Instead of passively waiting on circumstances, they *force* circumstances to wait on or yield to them. Many a poor boy, at the age of fifteen, without a dollar in his pocket, his entire wardrobe tied up in a cotton pocket-handkerchief, has started out in the great wide world among total strangers, to better his condition, to seek his fortune, and, being fortified by good habits and correct moral principles—thanks to a temperate father and a praying mother—he pursues his course steadily, and always "onward and upward." He commences at the bottom of the ladder—before the mast—an errand boy, a porter, clerk, apprentice,—and works up. If thrown out of employment by fire or flood, he readily betakes himself to whatever offers, and is soon in a better situation than before.

Mind you, reader, this courageous, self-helpful young man is not only sober—he is honest, industrious, frugal, watchful, care-taking, reliable. If a lady, she fits herself to teach, and becomes efficient; she writes for the newspapers and magazines, becomes an author, and shines in "literature." Or she may study a profession—medicine—and this field is now open to her; she takes a place at once in general practice, or is chosen to have the care of an asylum or a hospital. If she chooses Art, she draws, paints, models, composes, or teaches the same. If she learns a trade, and has ability, she will soon turn her skill to good and profitable account, and be independent of father, uncle, or brother. Can she teach? It is one of the highest callings on earth. It is the best personal discipline one can have. It is useful every way, and the young lady who has had two, three, or five years' experience in teaching school, will make all the better wife, mother, and helpmeet. "Where there is a will, there is a way."

Newsboys and book agents become editors, authors, publishers, and book-

sellers; mechanics become manufacturers, architects, builders; students become teachers, preachers, and professors; clerks become merchants, bankers, brokers, business men, etc. Then we have, rising from the common walks, our farmers, navigators, soldiers, statesmen, and the rest. It is the *self-helpful* who rise to stations of usefulness, honor, and trust. Young man! whither are you drifting?

WINTER READING.—Now that the harvest is over, and the summer is past—the barns, granaries, and cellars filled with bountiful nature's rich products, the wherewithal to supply the inner man—thoughtful persons will cast about in search of the most nutritious "food for the mind." One class will select for its mental pabulum educational, scientific, and religious books, magazines, and newspapers, having *personal improvement* in view. Another class will select the light story papers, cheap novels, and the comic journals. They want, and will get, mere amusement, excitement, and mental dissipation. Feeding the mind on husks, they will soon have intellects and memories like a sieve or a funnel, blank. Others, still lower, will seek the literature of the street, the race-course, the ring, the play-house, the cockpit, and the drinking saloons; accounts of prize-fights, robberies, murders, and rapes delight them; they will be filled with what they feed upon, and *become* what these influences are—low, bad, base, brutal. The jail, the prison, or the gallows awaits them!

Hack political blowers fill their sheets with slang and bluster, echoing the noisy demagogues who imbibe whisky and chew or smoke tobacco, and make for themselves a little local fame by defaming their betters. These blatant sheets are numerous, noisy, and filthy. We are now entering upon trying times, and we call on all good men of every sort and sect to stand by and defend the right, and to direct the turbulent passions they can not *restrain*. Mere party newspapers will become simply public nuisances which decent men and women will not use—except to kindle fires. Time—once lost can never be regained—is too precious to be spent in reading or in listening to the low vulgar trash of foul-mouthed babblers. Turn your backs

upon them if you would escape contamination.

Public and private libraries will be stocked with all the choice new books of the season, and our winter evenings may be made most pleasant and profitable by each member of the family.

HOW TO SAVE MONEY.—The question, "How can I save money?" is often asked, especially by worldly young men—"good fellows," generous, honorable fellows, who would not be "outdone" in hospitality even by a prince. We have given attention to the subject—looked at it from a phrenological point of view—and have come to the following conclusion:

The office of Acquisitiveness is to get, and of Secretiveness to keep. These two organs have to do with the acquisition of supplies for our bodies—food, clothing, comforts, luxuries—and with the means for our improvement. It is the *perversion* of these faculties—and the dormancy or absence of the moral—that leads to theft, robbery, and deceit, or makes one mean, stingy, penurious, sordid, miserly. The strictest economy is not incompatible with the largest generosity. One should *save*, that he may have the more to *give*. Waste nothing; carefully utilize all things—time, labor, money. It is the prodigal, the spendthrift, the glutton, the intemperate, who waste all these. Vain and silly persons empty their purses to pay for foolish finery for the envious to look at, thus robbing their minds to ornament their backs. A sensible person looks first to utility, propriety, and comfort rather than to show, and will seek to improve the mind rather than to decorate the body.

But this is moralizing. The reader desires to be told *how* he may save money. Well, here is the recipe: *Cut off at once all superfluous wants*. Do you smoke, chew, or snuff tobacco? Quit it, and see what a large leak you will stop. Do you drink ale, porter, beer, wine, whisky, etc.? Stop these, and another stream is dammed. Do you run after negro minstrels, circus clowns, play-actors? Or do you buy lottery tickets? Put in a peg here, and say, "No more of *that*." Do you buy flash jewelry—flash litera-

ture—or flash clothing? Do you bet on fast horses—fast oarsmen—fast walkers, or other "fast" objects? If so, you will *inevitably* lose. It will, in the long run, make you *poor*, if nothing worse.

The right way to save money is, first, to *EARN* it; secondly, to use it religiously, *i. e.*, in accordance with your highest *moral* sense. You are to regard your money or other property as so much substance placed in your hands for temporary use, for which you are to give account, and with the Saviour for your counselor and guide, you will not "fool away your money." Every dollar should be used with His sanction, His approval. Religious men are, the world over, far more saving, and at the same time far more philanthropic than the irreligious. Who support our foreign and domestic missions? Who provide asylums for the insane, infirm, and imbecile? Who build and sustain our churches, our colleges, and our schools? Take away the *religious* portion of a community, and what would there be left? We grant there are generous skeptics, infidels, atheists, and even liberal gamblers; but all these could be spared, without disturbing the foundations of good society. These worldly ones—or the great majority of them—*live for themselves*, and live in vain. They frequently become poor, dependent paupers, and fill our almshouses. They never learn the art of saving—or, rather, of spending money *wisely*. "Giving, while living," to good objects, according to our means, never impoverishes. No man feels poorer for performing consistently a generous act.

To save money, one must be industrious and live temperately. He will thus preserve his health, save time, and escape doctors' bills. He must exercise his ingenuity, and make his *mind* save his hands. He should, as far as possible, avail himself of improvements which conduce to the welfare of society. He should duly appreciate light, air, water, wind, tides, steam, electricity—all the agencies of art and nature, and use *skilled* labor. He should also come under religious influences, fortify himself against the temptations of pride, vanity, inordinate affection, and love of money. He must subordinate the lower to the higher nature; should, when circumstances permit, take a wife, settle down, and occupy

a respectable position in society, and he will *then* be in the true way of **SAVING MONEY**, not for its own sake, but for the good he may do with it.

NEW PHRENOLOGISTS.

EVERY year ripens the public mind in respect to the truth of Phrenology and its utility as an aid in choosing pursuits and rearing children rightly. The mother and the teacher, and here and there the preacher, are beginning to learn that Phrenology is a friend and benefactor. Young men just emerging from home protection to an independent life of their own, instinctively ask, "What can I do best? who will guide me in the right way? for what has God ordained me?" He would not waste five years in an experimental apprenticeship to some business or profession to which he is not adapted. Who can point out to him the right path? These questions arise in the minds of young men in every town and hamlet in the land. They come to us in letters by post; inquirers come from a distance to consult us in person, and we feel the need of being in a hundred distant places at once to answer these requests. Men write us, "Is there a good phrenologist in or near Chicago, St. Louis, Cincinnati, Charleston, Savannah, Memphis, Mobile, Nashville, Pittsburg, Richmond, New Orleans, Toronto, Montreal, Quebec? (not to mention nearly all the towns and cities of the old world.) I would consult a person who is versed in phrenological and physiological science. I would know what I am best calculated for, what I ought to do or study. Should I build ships or navigate them? should I till the soil or wield the implements of some art or trade?"

With respect to most of these letters we are obliged to say, there is no settled phrenologist in any of the places mentioned.

We can not be everywhere. Much of this great work must be done by others. We have instructed a few pupils who are doing good work for the cause, and achieving for themselves reputation, standing, and remuneration; but as yet these are too few to reap the broad field of America, which is already ripe for the harvest. Since we commenced the practice of Phrenology, a whole generation has passed away, and another now occupies its place. Those friends who hailed our first appearance are mostly sleeping in the tomb. A new generation has come, and as we advance in years the thought occurs, who shall carry on the work when our voices are hushed and our hands are still? The public to-day, in the United States alone, would support a thousand or more good phrenologists—men devoted to their work, imbued with its spirit and qualified for their duties. Three or four populous counties is a sufficient field to give full employment to a phrenologist, if he will bring his knowledge and his talents to bear *practically* upon the wants of the people, and those who understand the science can thus serve their fellow-men

and secure an adequate support. Many launch forth into Phrenology expecting to run a brilliant career, acquire a fortune in two or three years, and retire. In no other pursuit—except it be of the rashly speculative kind—do men attempt this. They study law, expecting to follow it for life, and to grow up into their profession as they grow in knowledge, manliness, and honor. Men study the healing art and the sacred profession; they become teachers, editors, shipmasters, or farmers, not expecting to reap a golden harvest and retire before their beard is grown. Men endowed with an earnest spirit and an honest desire to serve the world while they acquire an honest support, may enter PHRENOLOGY confident of success, assured of respect and sympathy—with here and there a touch of opposition—and as good a compensation for talent, honesty, and industry as in any other pursuit.

Our class for the instruction of students will be opened on the 6th of January next. Those who wish to avail themselves of the opportunity which it affords, may address us, asking for a circular entitled, "Instruction in Practical Phrenology," which will set forth the topics embodied in our course of instruction, together with the works most essential for students.

WHO SHALL RULE OVER US?

In republican America, where every citizen has the right of private judgment—the right of choice as to who shall make and administer the laws—the right, in short, to be his own man and master—he comes short of his duty if he fails or refuses to qualify himself to take part in the management of public affairs. One and all are interested in the right administration of a good government. It will not answer, it is not right for any man who enjoys the advantages of a free government to claim exemption, or to excuse himself from taking part in the election of officers, the payment of taxes, or other duties devolving on the citizen. Shakers, Quakers, Non-resistants, religious men, business men, and the rest, who ignore politics, leave it for the rabble, the riff-raff, the ignorant mob, to have it all their own way in the elections, just because these and other pharisees decline "mixing up with the vulgar herd." If we would provide education for the young, good government, security, prosperity, and peace for ourselves and our posterity, we should see to it that, in all cases, we select and elect "the right man for the right place." Have our religious teachers, religious journals, and religious men and women nothing to say or do in this matter? Why not take a part? why not speak out? Is sectarianism so much more holy than good government that our preachers fear contamination by speaking words of caution and instruction, and by voting? We would have godly men take part in all secular matters having for their object the education, government, and elevation of the nation and the race. And why not elect to civil offices educated clergymen? As a rule, they are far better qualified to legislate than one in ten now

elected. Besides, they are, as a class, temperance men—ordinary politicians are not. They are also self-regulating, and do not resort to pistols nor bowie-knives, which *some* politicians do. They are honorable and honest, which many politicians are not. Let us suppose that it were left for the clergymen throughout the United States to choose who should be our representatives, legislators, judges, justices, treasurers, jailers, sheriffs, and so forth—would there not be a far better class of officers than at present? We think there would. We know there are bad men in the pulpit—indeed, they may be found in all callings, even among phrenologists; still there are *fewer* bad men among the clergy than in any other equally large class, and we wish to see them take an *active* part in secular as well as in religious affairs. If our religious newspapers will but take the lead—and they are at the head of the press—they can have it as it *ought* to be. If they remain silent, the vagabonds will, as formerly, elect low, bad, perverted, whisky-drinking, boxers, showmen, gamblers, and demagogues, in place of statesmen. Americans! whom will you have to rule over you?

ANNOUNCEMENTS.—Owing to the length of our first biographical article, and the amount of other good matter already in type, we have been obliged to defer the article on "Social Relations" until our next number. We shall also serve up for the intellectual consideration of our friends, articles on "Cromwell," "Turkey and the Sultan," "A Glimpse of the Paris Exposition," and a second installment of that readable commentary, "Saints and Sinners," besides our usual, or rather unusual, variety of other things improvable and enjoyable.

DRUNKARDS IN ENGLAND.—The London *Cosmopolitan* says: Two thirds of the crimes and more than half of the follies of the world are committed under the influence of intoxication. And yet men will continue to "put an enemy into their mouths to steal away their brains!" Among the lower classes in London there is more out-door drunkenness than we have ever seen in any other city. Nothing is more disgusting to the eye, to the nose, or to the moral sense than one of these driveling, staggering, stinking street drunkards. "If a man will play the fool, let him do it in his own house," says Shakspeare; and, to repeat the advice, we say, if men will get drunk, let them shut themselves up for it. Here is a stanza we learnt in childhood; let all who find dram-drinking their easily-besetting sin engrave it as an amulet on their hearts:

Oh, whisky, thou'rt the greatest curse
To soul, to body, and to purse;
Pandora's box held nothing worse
Than whisky.

[There are in England to-day 600,000 drunkards! Every year, for more than twenty years past, more than 60,000 drunkards die in England. Who can estimate the crime, poverty, ignorance, and misery following in this train of this tide of drunkenness!]

On Physiologg.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cæcilia*.

My people are destroyed for lack of knowledge.—*Hosea iv. 6*.

CONCERNING MAN.

THE N. Y. *Christian Intelligencer* publishes the following interesting and instructive digest of the human organization:

Wonders at home by familiarity cease to excite astonishment; but thence it happens that many know but little about the "house we live in"—the human body. We look upon a man as we look upon a house from the outside, just as a whole or unit, never thinking of the many rooms, the curious passages, and the ingenious internal arrangements of the house, or of the wonderful structure of the man; the harmony and adaptation of all his parts.

In the human skeleton about the time of maturity are 185 bones.

The muscles are about 500 in number.

The length of the alimentary canal is about 82 feet.

The amount of blood in an adult is near 30 pounds, or full one fifth of the entire weight.

The heart is six inches in length and four inches in diameter, and beats 70 times per minute, 4,200 times per hour, 100,800 times per day, 38,772,000 times per year, 2,565,440,000 in three-score and ten, and at each beat two and a half ounces of blood are thrown out of it, one hundred and seventy-five ounces per minute, six hundred and fifty-six pounds per hour, seven and three fourths tons per day. All the blood in the body passes through the heart every three minutes. This little organ by its ceaseless industry,

In the allotted span,
The Psalmist gave to man,

lifts the enormous weight of 300,700,200 tons.

The lungs will contain about one gallon of air at their usual degree of inflation. We breathe on an average 1,200 times per hour, inhale 600 gallons of air, or 14,400 gallons per day. The aggregate surface of the air-cells of the lungs exceeds 20,000 square inches, an area very nearly equal to the floor of a room twelve feet square.

The average weight of the brain of the adult male is three pounds and eight ounces; of a female, two pounds and four ounces. The nerves are all connected with it, directly or through the spinal marrow. These nerves, together with their branches and minute ramifications, probably exceed 10,000,000 in number, forming a "body-guard" outnumbering by far the mightiest army ever marshaled!

The skin is composed of three layers, and varies from one fourth to one eighth of an inch in thickness. Its average area in an adult is estimated to be 2,000 square inches. The atmospheric pressure being about 14 pounds to the square inch, a person of medium size is subjected to a pressure of 40,000 pounds! Pretty tight hug.

Each square inch of skin contains 3,500 sweating tubes, or perspiratory pores, each of which may be likened to a little drain-tile one fourth of an inch long, making an aggregate length over the entire surface of the body of 201,166 feet, or a tile ditch for draining the body almost forty miles long.

Man is made marvelously. Who is eager to investigate the curious, to witness the wonderful works of Omnipotent Wisdom, let him not wander the wide world round to seek them, but examine himself. "The proper study of mankind is man."

WHAT CAN IT BE?

DEAR MR. EDITOR: In a late number of your valuable JOURNAL I noticed an article headed "Twelve Ways of Committing Suicide." I send you the thirteenth—which you have inadvertently omitted—in the form of a riddle, for publication, if you see fit. M. A. WOOD.

What harmless-looking thing is this?
Surely it never did amiss!
A thing so simple and so plain,
Could never much have given pain.

Hold, sir, you do not know me well—
Have patience and I'll briefly tell;
As harmless as I seem to be,
I'm of a murderous pedigree.

Pride is my father's hated name,
And Cruelty my angry dame;
I'm courted by my lady fair,
Who prizes me with tender care.

I visit in her dressing-room,
And sleep amid her nice perfumes;
I often on her toilet lay,
And doze the lonesome night away.

Nay, more—in her caresses chaste
She always binds me round her waist;
At home, abroad, afar, or near,
I'm her companion everywhere.

And though I am a wicked elf,
Delighting to amuse myself,
Sometimes, to give my mistress pain,
I almost squeeze her waist in twain.

Yet, strange to tell, the more she's squeez'd,
The more she seemeth to be pleas'd.
That I'm an ingrate is most clear,
By such return for all this care.

I pluck away the lily fair,
And spread a livid paleness there;
I snatch with glee the rosy glow,
And let the sickly saffron grow.

I blight the luster of her eyes,
And stain her orb with languid dyes;
That rosy archer called a smile,
I strangle ere it breathes awhile,
And plant disease's pungent smart,
And like a vulture gnaw her heart;
My name, upon your mind indorse it;
My gentle mistress calls me—*Consort!*

INSANITY.

INSANITY is declared by medical writers to be a disease of high civilization. Nations who are most civilized and enlightened are more apt to be afflicted with it than those who make little or no mental exertion. It is very rare among the Africans or Indians, because they do not exert the mind to any marked degree. Dr. Livingstone states that he only found one or two instances of it among the tribes that he

visited; but one of the Bakwains whom he wished to take to Europe with him became insane from the throng of new ideas which oppressed him, and committed suicide before the voyage was over. [More likely from being forcibly separated from home and kindred than from any "throng of new ideas."—*Ed.*]

Insanity until recently was almost unknown in China, owing to the strict despotism under which mental activity was restrained. Lately, however, the increase of the use of opium has enlarged the number of lunatics. India is comparatively free from it. It is less frequent in those parts of Europe where political freedom is restrained than in countries which have constitutional governments. In France, the proportion of the insane is about one to one thousand inhabitants; in England, one to seven hundred and eighty-three; in Scotland, one to five hundred and sixty-three; and in the United States, one to seven hundred and fifty.

Of the poor, warped, excitable eccentrics who do not figure in the reports, there are, alas! a great many. The excessive use of stimulants, alcoholic liquors, tobacco, etc., are among the causes. Inordinate affection is another; and this leads to unseen evils, which undermine the bodies and minds of thousands. More Christianity is necessary to save the world from insanity and the weak ones from suicide. A healthy body, with a well-balanced mind and with Christian principles, never became insane, and never committed suicide.

HEALTH—LONG LIFE.

It was the celebrated Dr. Abernethy, I believe, who left at his death a sealed envelope said to contain the secret of his success as a physician, and upon being opened was found to contain simply the following prescription: "To insure continued health and a ripe old age, keep the head cool, the system open, and the feet warm." The important part of the above directions is to "keep the system open," for if this is done the head will be very apt to be cool and the feet warm. There are many ways of keeping the system open, but the best way to do this is by proper diet, by eating something at each meal that has a tendency this way. Graham bread, apples, peaches, strawberries, dewberries, blackberries, whortleberries, and "last but not least," tomatoes, are all good for this purpose. The last article named, I believe, is the best, and it is a very easy matter to keep a supply of tomatoes for a large part of the year by planting some early and some late. A vigorous and popular writer says that "perpetual youth was the fountain for which the chivalrous Spaniards sought with the enthusiasm inspired by sincere faith in its existence. That there is far more youth for the human race than is enjoyed, there is no doubt. The average life of man has been, and ever will be, affected in its length and pleasures by his habits. It is, we believe, no fable, the tale of men living centuries in the earlier ages of the world, when the habits and pursuits of men were purer and simpler than they since

have been and now are. The American people, could they have their tastes and feelings so changed that honest, peaceful agriculture would be the goal of their physico-industrial ambition, and the whole nation be transformed into simple-lived and happy peasantry, with plenty to eat, drink, and wear, and no inordinate craving for more, three generations would not pass without lengthening their average life at least one fourth. They now hurry themselves out of the world by exciting and straining the delicate net-work in which soul and body are compounded. And this goes to prove that life, peace, and pleasure are granted to man just in proportion to the truthfulness of his thoughts, habits, and pursuits."

To insure health, the best plan is to study the subject by taking such works as *THE PHRENOLOGICAL JOURNAL* (which has been battling manfully in this field for many long years) and other publications, and every reader ought to try and do some good by extending their circulation, for in regard to health matters it is indeed true that "the harvest is ripe, but the laborers are few." Let us all stop spending money for pills, powders, and slops, and save it, so that when diseased we can avail ourselves of rest, simple food, pure air, and good water, and let the doctors "throw their physic to the dogs." ALEXANDER KING.

JEREMIAH DAY, D.D., LL.D.

PHRENOLOGICAL CHARACTER.

THIS portrait of the venerable ex-President of Yale College, taken, we suppose, when he was about ninety years of age—it being the last one for which he sat—evinces some interesting points, not to say peculiarities. His head was large, not from side to side, but from the ears upward and forward. The reader will notice great length from the opening of the ear to the root of the nose, and in another line from the same point reaching to the top of the forehead. The front or intellectual lobes of the brain were very large. He had immense perceptive, indicating a practical and scientific cast of mind, the desire for knowledge, the ability to acquire it, and the power to teach it to others.

He was capable of sharp and exhaustive analysis, and had the power to express in clear and strong terms the knowledge he possessed. He had a most excellent memory, as evinced by the great fullness across the center of the forehead, and from the root of the nose upward. Behold how prominent and expanded the forehead where the hair joins it! indicating very large Comparison, or the power of analytical thinking.

JEREMIAH DAY, D.D., LL.D.

He had also a profound capacity for the investigation of subjects of a deep and philosophical character, and his judgment was not warped by passion or prejudice.

The top of the front part of the head was very high, showing Benevolence in a large measure—and that benignant expression of countenance is in perfect harmony with universal good-will, the desire to be a benefit and a blessing to all. His Veneration was large, hence his mind reached upward toward God, and things holy and devout, with a steady strength, capable of leading others toward things sacred.

If there are heads to be found in harmony with the highest order of religious and philanthropical feeling, that of the late President Day is a conspicuous example.

His Conscientiousness was amply developed, and his life was a pattern of equity. He was cautious, sensitive with respect to reputation, and he prized the good opinion of his friends. He had a serene but not an austere dignity, and that dignity was mingled with such depths of kindness as to give him a fatherly interest in everybody whom he might guide and benefit.

The sense of property, the faculty which gives policy, and the appetite, appear not to have been strong. Temperance came natural to him; avarice, and artifice, and double-dealing were no part of his nature. Frank, persistent, prudent, sensitive, sympathetic, devotional, thoughtful, and practical, he was eminently fit to be a leader and educator

of young men, and to stand at the head of one of the leading institutions of learning in America.

His feeble constitution was, doubtless, owing to the want of digestive power—it exhibited itself in that hollowing or narrowness of the cheeks; but that large chin, and that full cheek-bone, with the well-set features, indicate a good deal of constitutional vigor and endurance. The large chin indicates a favorable circulation; and with his temperate mode of living, and his peaceful spirit, his life was greatly prolonged.

BIOGRAPHY.

On Thursday evening, August 22d, Jeremiah Day, D.D., LL.D., died at his residence on Crown Street, New Haven. He was ninety-four years of age on the third of the month. His feebleness had confined him to the house since last winter. His death was not unexpected; yet the reception of the news will sadden the hearts of thousands who, as students during his presidency, learned to esteem and venerate him above every other man. Till the last commencement he has been present at every Alumni meeting.

Ex-President Day was born in New Preston, Ct., August 8d, 1778. His father was a Congregational clergyman. A student pursuing a course of theology with him acted as private tutor for the family. Under his instruction he fitted for college. He entered Yale College in 1789. Feebleness of health compelled him to relinquish his studies for two years. He graduated in 1795. He acted as tutor in Williams College from 1796 to 1798. In 1798 he received the Master's degree at both Yale and Williams College. In 1798 he became tutor at Yale College, which position he filled till 1801. In 1803 he was elected Professor of Mathematics, Natural Philosophy and Astronomy, which position he held till 1817. This year Middlebury College conferred on him the degree of LL.D., and he was also elected to the presidency of Yale College on the death of Dr. Dwight, which office he filled till 1846. The degree of D.D. was conferred on him by Concord College in 1818, and Harvard College in 1831.

The year of his graduating, Rev. Dr. Dwight assumed the presidency. He came from Greenfield, Mass., where he had been conducting a school. No better indication of the repute in which the then young Mr. Day was held could be asked, than his being chosen to succeed President Dwight in the school at Greenfield. He continued teaching here till he accepted the tutorship in Williams College. While a tutor at Yale College he pursued a course of theological study. Though elected to the professorship in 1801, he did not enter upon his duties till 1803. Through the feeble state of his health at this time, his friends expected but a brief life was in waiting for him. It was at this time that he commenced a thorough system of physical training and a careful diet.

With a feeble constitution, impaired by ill-health, an early death was predicted by his friends; yet he lived to the remarkable age of ninety-four. Up to the time of his confinement he walked daily to the post-office, and generally walked to church at the college chapel every Sabbath. Under his presidency of nearly thirty years the College was greatly prospered. His mode of discipline was kind yet rigid. A word of disapproval was never forgotten. He commanded the respect of every student. Whatever measures were taken by the faculty that were distasteful to the students, he was never blamed. It never seemed possible to them that he could do anything that was wrong in the least.

He was the author of a series of mathematical works which have passed through many editions, and been used in many of the colleges of the country. "Day's Mathematics" are familiar to every graduate of the last thirty years. Many a student poring over them has uttered many a hard word about them, but never one about their author. He wrote also two treatises on the Will, and several miscellaneous articles for reviews and monthlies. He was never considered as a man of brilliancy in one field, but rather as a man of solid attainments, perfectly and symmetrically developed. He was a correct thinker and a clear reasoner. He very seldom gave a wrong judgment on any subject. His opinions on religious subjects were of great weight. He was accustomed once a week to have a meeting at his house of several ministers, to talk over and discuss theological questions. These meetings were continued till about a week before his death. President Day spent the latter part of his life in the family of his son-in-law, Prof. Thacher. Here everything was done to make his last days peaceful and happy.

His funeral was attended from the Center Church, on Monday afternoon, the 26th of August. Though it was vacation, and most of the graduates had but recently been at Yale College, yet a large number were present. The discourse was preached by President Woolsey. His text was: "Mark the perfect man, and behold the upright, for the end of that man is peace."

A BANKRUPT merchant, returning home one night, said to his noble wife: "My dear, I am ruined; everything we have is in the hands of the sheriff." After a few moments of silence, the wife looked calmly into his face and said: "Will the sheriff sell you?" "Oh, no!" "Will the sheriff sell me?" "Oh, no!" "Will the sheriff sell the children?" "Oh, no!" "Then do not say we have lost everything. All that is most valuable remains to us—manhood, womanhood, childhood. We have lost but the results of our skill and industry. We can make another fortune, if our hearts and hands are left us."

Can we wonder that, encouraged by such a noble wife, he is now on the road to fortune again?

THE DRUNKARD'S SONG.

BY JOHN COLLINS.

WITH eyelids tearful and red,
In rags scarcely hiding his shame, [wretch
On the cold pavement stone sat a driveling
Resting his tottering frame.

Want and sorrow and crime
His bosom with anguish had wrung, [clear,
And in trembling tones that once had been
The "Song of the Drunkard" he sung.

"Drink! drink! drink!
In poverty, thirst, and in pain!
It may drive me to madness and woe,
But yet I will seek it again.
Brandy and gin and rum,
Rum and brandy and gin,
The fiery cup, I must drink it up
To feed the fire within!

"Drink! drink! drink!
To drown the thought of the past;
My brain is scorched with the liquid fire,
And my life is ebbing fast.

Drink! drink! drink!
'Tis the only solace I crave,
For my friends are gone, and my loved ones all
Forget their woes in the grave

"But in the silence of midnight gloom
A mild blue eye I see,
And she whom I loved long, long ago,
Breathes softly a prayer for me.
And close at her side, my darling child
Smiles fondly on me then,
While I half decide, between shame and pride,
To shun the tempter's den.

"Drink! drink! drink!
Alas! for the rum-bound slave;
In vain may he seek his chain to break,
Or call on a brother to save.
Oh, men! if such ye be,
Oh, men! with mothers and wives,
It is not liquor ye traffic in,
But human creatures' lives.

"Rum and brandy and gin,
Brandy and gin and rum,
With glittering baits ye spread the snare,
And call your victims to come.
Music and dance and the joyous laugh
Ring loud in the dazzling room;
But little they think that every drink
Hurries them on to the tomb.

"Oh, but for one short hour!
To stand as a man among men,
And the welcome smile of each friendly face
To greet with a welcome again.
For only one short hour
To feel as I used to feel;
To know the joys of my own fireside,
And the well-earned evening meal.

"But why for the early dead
Do I heave the drunkard's sigh?
'Twere better far than a life with me
In the peaceful grave to lie.
In poverty, sorrow, and pain
My little ones languished for bread,
And the wife of my youth, the gentle and good,
Pined away in a comfortless shed.

"Drink! drink! drink!
In the early morning light,
And drink! drink! drink!
When the stars are shining bright,
Till the brain begins to swim,
Till the fount of tears is dry,
And the fire of the cup that I press to my lips
Glazes out from my spectral eye.

"Gin and brandy and rum!
Rum and brandy and gin!
I can not stop, though every drop
Be changed to flame within.
But deeper woe is theirs who for gain
Fill up the poisoned bowl, [stained
Whose hearts are seared, and whose hands are
With the blood of a human soul!"

With eyelids heavy and red,
In rags hardly hiding his shame, [wretch
On the cold pavement stone sat a driveling
Resting his tottering frame.
Want and sorrow and crime
Had palsied his trembling tongue,
But still, in a voice that once had been clear,
(O that its tones could reach every ear!)
This "Song of the Drunkard" he sung.

THE QUESTION.

A soft little hand crept into my own,
And great wondering eyes questioned mine,
On the uplifted face the spirit light shone
With a radiance truly divine.

"Who from my coffin will take me, mamma,
When I am laid under the ground?
Will you take me up? or will dear papa?
You know that I sleep very sound!"

"The angels will come and take you, my child,
Away to their beautiful home;"
"Oh!" then she exclaimed, as sweetly she smiled,
"I'll play with them there till you come!"

SARAH E. DONMALL.

UNDER THE PINES.

[Our friend and former assistant, Mr. Jacques, now pleasantly situated on a farm among the Pine Hills of Georgia, diligently cultivating various fruits, sends us the following description of Georgia scenery, and of the freedmen as they appear in their new relations. The foot-notes are ours.—ED. A. P. J.]

THE hot sun of a Southern summer rides high in the heavens, but I feel not its ardent glances beneath this friendly shade; and the breeze which sweeps through the pine-tops with such a grand swell of harmony is not only bland and balmy, but refreshingly cool. It has but lately kissed the shining waves of Charleston Bay or of Port Royal.

It is good for body and soul to recline here under the pines, on the hill-side, drinking in the sights and sounds of this half-wild but beautifully picturesque country, and breathing an atmosphere untainted by city stenches or by the malarial of the death-haunted lagoons which intersect the great swamp-forests of the level low-country of the South. Here the air which inflates your lungs is loaded only with the odor of the pines, and it is not hard to believe it possessed of medicinal virtues. At any rate there is here a positive enjoyment in the mere sense of animal existence—a pleasure in simply being alive—in the involuntary activity of the bodily organs—the movements of the heart, the tide-like ebb and flow of the blood, the rhythmic beat of the pulse, the rise and fall of the chest, the measured inspiration and expiration of the breath.

Under the Pines! Our pines have never had justice done them as living trees. They have been appreciated only as *lumber*! We have treated them as we treat our greatest and best men—have abused them while living and praised them when dead. Our pines are of the species called by the botanists *Pinus palustris*, and popularly known as the long-leaved pine—a magnificent tree—the monarch of the Southern forest. They grow from eighty to a hundred and twenty feet in height; are often very straight, and sometimes with trunks free from limbs to within twenty feet of the top. The branches are crooked, often drooping, and terminated by bunches of long straw-like leaves (called here *pine-straw*) grouped in threes in long sheaths. When young, these trees have a palm-like appearance which reminds one of the Orient. The cones are very large, nearly cylindrical, and from six to eight

inches long. The seeds are large and very nutritious, and are the delight of squirrels, wild birds, and poultry, which grow fat on them in their season.

Well, these pines overshadow and surround me, but they stand far apart just here, and I look through between these columnar boles to where, at the foot of the hill, a fringe of bright and glossy green-leaved myrtles and hollies borders the low grounds which skirt the creek. Beyond, in the distance, immense forests of pines bound the horizon.

The rhyming sneer bestowed on some portion of the Southern country as a land

Where to the north pine trees in prospect rise;
Where to the east pine trees assail the skies;
Where to the west pine trees obstruct the view;
Where to the south pine trees forever grew,

may seem not inaptly applied here; but a true poet might find in these omnipresent trees a fit subject for one of the grandest poems ever written. The organ-like music of the wind sweeping through their branches has never been adequately described in prose or verse. It reminds one strongly of the ocean heard in the distance, or of a waterfall; but has a compass and a sweetness (as well as a grandeur) not possessed by either.

Dr. Francis Pyre Porcher, in his "Resources of the Southern Fields and Forests," says of the long-leaved pine:

"The terebinthinate odor of the tree, some electrical influence of its long, spear-like leaves, a certain modification of *ozone* (an allotropic condition of oxygen), are severally believed to modify the atmosphere and diminish the effects of malaria; to which they also present a mechanical barrier."

He might have added that they serve a very useful purpose as lightning conductors; for, being so much higher than anything else in the regions in which they grow, they convey to the earth the electrical fluid, and thus save lower objects from being struck; and, like some other benefactors, they often perish in their self-devotion.

But grand and beautiful as the living pine-tree is, the "deadened" pines, which lift their naked trunks and spread their skeleton branches abroad in our newly-cleared fields, are most unsightly objects. My freedman, Tom, is now chopping one of them down in the field yonder, where our peach orchard is to be. It takes many a heavy blow to fell the maimed giant, but Tom works with a will, and the tree must soon come thundering down.

"And how about the Freedman?" I think the reader, who may not care much about my pines, is ready to ask. Well, I will tell you something about them, as they come and go around me here in the "piney woods" of Georgia.

The Freedman is a negro still. Emancipation has not suddenly changed the shape of his skull, the lines of his features, or the color of his skin. He is the same slow, indolent, sensuous, passionate, affectionate, docile, imitative, devotional, superstitious, excitable, careless, vain, ignorant, blundering, awkward, improvi-

dent, polite, obsequious, cunning, politic, and unprincipled being I knew so well years ago as a bondman. If, as the negro has it, "white man berry unsartin," the black man is just a little more so. If you can make it for his interest to serve you faithfully, he may do it; but his notions of the binding nature of a contract are by no means clear, and he tells the truth only when it seems to him best calculated to promote the end he may have in view. Awaken his sympathy, excite his large benevolence, flatter his vanity, or appeal to his affections, and you may win him at once; but if you rely upon his sense of right and wrong, you will find your trust, in nine cases out of ten, sadly misplaced. Phrenologically speaking, Conscientiousness does not "stick out" on the African head. That is no wonder, however. His training in slavery was not calculated to develop it.*

As a negro—as a *freed* negro—he is doing as well, yes, *far better*, than could reasonably have been expected. Where judiciously managed, he is working as industriously and as efficiently as his natural indolence and lack of intelligent skill will permit, and is, as a general rule, docile, quiet, and respectful. I have had little trouble with my "hands." One of them, getting rather unreasonably lazy, was recently discharged, and the aforementioned "Tom" sometimes tries my patience sadly by his stupid awkwardness and careless blundering; but on the whole he is doing well, earning his wages and "rations," and having an eye to my interests, except in cases where they seem to conflict with his own.

From the well-known thieving propensities of the blacks I have suffered but little. Even my melon patch was left undisturbed; but I have reason to believe that the fact—well known in the neighborhood—that I keep one of Howard's breech-loading rifles always at hand, has something to do with our immunity from depredation. I hear many complaints of the unsafe condition of all kinds of movable property, and the Freedmen generally get the credit for all the stealing done in the country; but there are "mean whites" about here who are quite as likely as the "colored brethren" to help themselves to what they need but are too lazy to earn.

* In Mrs. E. L. Sherwood's "My Experience with the Freedwomen," in the Sept. number of the *Ladies' Repository*, occurs this passage: "And yet we must be patient with them. They have been taught to shirk, to be immoral, to be everything but what I fancied I could make them by a judicious application of New England 'ideas.' The poor things must be educated. The wonder is that they are no worse. In spite of all my friends' caution, I persist in keeping my pantry unlocked all day long; give them free access to its contents, and have found them invariably honest and trustworthy—a reputation by no means common among them, for they themselves tell of stealing from each other. My losses can all be summed up in one can of peaches, and I believe that I can see that they do take pride in being trusted. So that, after all, I can see one encouraging spot in my checkered experience among the Freedwomen, and some time I may yet meet with lasting gratitude, and be relieved from the fear that my cook may take 'French leave' at any moment. With this bit of sunshine in my prospect I am comforted."

Almost all the Freedmen and Freedwomen are making more or less earnest attempts to learn to read, and primers are as common in their cabins as corn-bread and bacon. A few of them will persevere till they become tolerable readers, but with the majority of the elder ones the effort is a spasmodic one and ends with the acquisition of the alphabet, or at most with the first easy lessons in spelling. The children learn rapidly, and, where any one will take the pains to teach them, soon master the rudiments of an education. They possess the imitative faculty in large measure, and through that much of their knowledge is acquired. Some of them are quite a match for white children up to a certain low point, but when they have reached that, they fall behind at once, and, in most cases, soon come to a stand-still, further progress involving ideas too complex for their comprehension.*

In this neighborhood educational facilities do not abound for either whites or blacks. The latter have a Sunday-school, however, taught by a colored man, and some of them succeed in getting a little instruction from some member of their employer's family.

I have spoken of the Freedmen as polite and respectful. I am sorry to be obliged to modify this statement, so far as it may be applied to the younger members of the colored community. As slaves, the negroes were taught to be polite (if not naturally so), and compelled to be respectful to white people. With the elder ones the habits thus formed are too strong to be broken, but the boys and girls [like the whites?], with their new ideas of freedom and equality, are, in many cases, fast losing their good manners as well as their habits of obedience.

"Dese young ones dunno dare place, no how, nowadays," said an old negro to me the other day. "Freedom 'pears to spile some folks," he added; and he was right. It is hard to find any good reason in the fact of Sambo's freedom and equality before the law, for his speaking of a neighboring planter as "old man Brown,"* or of another as simply "Smith," instead of respectfully giving them the title of *Mr.*, a title, by the way, which they are very fond of having applied to them as it now is among themselves.

Formerly all white men, or at least all who rose above the ranks of the "poor white trash"—most aptly thus designated—were spoken of by the negroes as "*gentlemen*," while a black man was a "*man*" simply. It is not so now, and here the Freedman is not far in the wrong, for unfortunately all white men are not gentlemen.

* A superintendent of a colored school in New York tells me that her experience has proved that colored children learn faster than white children.

We had in our collection the skull of a negro that showed Causality very large, but on sawing it apart, it developed a thickening of the skull upon the inner table, showing how nature is true to herself in filling with skull the vacuum created by an untuse of brain, and, per consequence, its decrease.

* As white boys call their fathers sometimes.

PORTRAIT OF JAMES P. BECKWOURTH.

All our new-made voters are registered, and are waiting impatiently for the time to come when they can vote, though about what it all means they are most profoundly and amusingly in the dark.

I asked my man Tom the other day if he intended to vote for a convention. He "reckoned" he should, and added—

"I've seed many a barbecue, but I never yet seed a convention, and I dunno what it is, but I'd like mightily to see one."

So we shall, no doubt, have a "Convention," and all who can will go to see the show.

I hear the tin horn sound the dinner hour on a neighboring plantation, and the Freedmen all throw down their implements and leave the field. I can not do better, I think, than to follow their example, hoping, however, to meet the reader again UNDER THE PINES.

DOWN IN GEORGIA.

JAMES P. BECKWOURTH.

THE following brief note explains itself:

OFFICE OF "ROCKY MOUNTAIN NEWS,"
DENVER, COLORADO.

MESSRS. EDITORS PHRENOLOGICAL JOURNAL—
Gentlemen: Thinking it might interest you, I send you a good photograph of the late James P. Beckwourth, one of the most remarkable mountaineers that ever lived. Yours truly,
WILLIAM N. BYERS.

We thank Mr. Byers, who is one of the proprietors of the *Rocky Mountain News*, for the photograph from which we have engraved this portrait, and for the biographical data on which our sketch is founded.

Our portrait, representing our subject when in the prime of life, almost speaks for itself. One versed in character-reading on phrenological and physiognomical principles, would readily infer the leading characteristics of a face so marked. Suffice it for us to say, our subject was a mulatto, half Celt and half African—a combination of the active and the comparatively passive. His Irish blood gave restlessness, impatience, intensity. His African

blood tended to give tenacity and power of endurance, while this combination resulted in giving impatience of restraint, a love of liberty and adventure. There was a large, bony framework as a foundation; a large chest, with ample lungs and heart, giving great breathing power and good circulation, while the stomach was ample to perform its functions.

The brain was evidently large, especially at the base, and rather long and high. Firmness and Self-Esteem were influential. Observe the length of the upper lip. His perceptive faculties were also very large, and he would be not only quick to perceive, but also clear and comprehensive. He would remember every object observed; see how broad between the eyes! and he would read men, civilized or savage, intuitively. The idea of holding such a spirit as this in slavery would be preposterous. He would break the chains, or break his neck in the attempt.

Cautiousness was not large, and he would venture where most others would not; would try experiments absolutely dangerous on themselves. The wonder is that he lived so long. But what he lacked in caution he made up, in a measure, by an acute practical intellect, coupled with strong intuitions. Thus he was guarded and guided; for he was evidently without a sense of fear, knowing nothing of danger, save from absolute experience.

His Language was large; he would easily communicate his desires and purposes, if not in one dialect, in another, so that he would be clearly understood. With a liberal education, one with such an organization could not fail to take a leading place in some sphere; and without education, one having such natural talents, strong, practical common-sense, quickness and clearness of perception, would become a foremost man among his chosen associates.

We see no evidence of compunction here, and doubt if he suffered from the feeling of remorse, though he would feel a disappointment. Benevolence was not wanting, while Veneration was full, but Conscientiousness was moderate. When not especially tempted, he would exhibit generosity, liberality, candor and frankness; but when pushed by necessity, he would stop at nothing. As a friend, his kindness could be counted on; as a foe, distance would be one's only security.

We see nothing of art, refinement, or delicacy of taste in this countenance, but rather a love for the rugged, the rough and the massive. His cathedral would be in the mountain's top, his art-gallery in the glens and the water-falls, and his study the native denizens of the forest and the plain.

There is no malice in this mouth, and not much mirth in this head; nor do we see very marked indications of affection. His social ties would be weak, and easily loosened; for he would be disinclined to pitch his tent, as was the custom of the patriarchs of old, among the people; but, on the contrary, he would most likely be a wanderer and, if perverted, a vagabond on the face of the earth. But we

have said enough. Let the following biographical sketch tell the story.

BIOGRAPHY.

This venerable and celebrated mountaineer, who was as famous in the peculiar life he had chosen as any man who ever lived, is no more. He has gone to the happy hunting-grounds of the savage race whose customs of life he had to such a great degree adopted. Of the exact time, place, or manner of his death we have yet no particulars; but it is reported as having occurred in the North Platte country, where he has been trapping and trading during the greater portion of the last two years. It is probable that his death was occasioned by old age and the gradual wearing out of his once remarkable constitution and powerful physical frame. His age was probably about seventy years, though, we believe, he claimed to be ten or twelve years older.

According to his own account, Captain Beckwourth was born in Virginia, near Alexandria. His mother was a slave, and his father an Irish overseer on her master's plantation. Not relishing a life of servitude, he migrated, of his own accord, at an early age, and took up his residence north of Mason & Dixon's line. Soon afterward he drifted out toward the wild and distant West, and learned his first lessons in backwoods life in the wilderness of Missouri, when that was the hunting-ground of Boone and the old generation of Kentucky hunters, who had been crowded beyond the great river. Westport was the frontier post, and the point from which daring adventurers took their departure for the mythical solitudes of the great plains and greater mountains beyond. At that time, and for many years after, this South Platte country had never been trodden by the foot of white men. The most daring adventurers had ventured only in the direction of New Mexico, for a limited distance up the main Platte, and along the valley of the Missouri.

We think it was in 1817 that young Beckwourth found himself at Westport, and attached to one of the caravans of traders and hunters which annually made its way out upon the "Great American Desert." Since that time his life has been a constant round of adventure. Its scenes spread out over the vast region bordered east by the Mississippi, west by the Pacific, north by British America, and south by Old Mexico. For half a century he was a prominent actor in the real life drama of the border and the wilderness. He was one of old Louis Vasquez's party, when he discovered and explored this magnificent valley of the South Platte, and was a pioneer in many other similar explorations. Subsequently he became an Indian by adoption, or naturalization according to their customs, and won renown as a warrior and leader. For many years he was principal war chief of the Crows, and by his skill and tact established for that nation a prestige in the art of savage warfare which it still retains.

In later years, when Government began exploring this Western country, Beckwourth cut

loose from his Indian friends and became a guide, interpreter, and hunter for various expeditions. In this capacity he served almost every one of the early explorers of any celebrity. At length, California was discovered, or rather its wealth became known. Beckwourth took up his home there in a valley deeply hidden in the Sierra Nevadas, which took his name. He remained there for several years—the first settled home he seems ever to have had. At length he fell under the ban of the Regulators of that country, who charged that he was implicated with a band of horse thieves. Whether justly or unjustly we know not. At any rate, he was permitted to leave the country of his own accord, and at his own time. From California he traveled eastward, stopped awhile about the New Mexico and Texas border, and in 1858 again found himself at his old starting-point—Westport, Mo.

In 1859 he came to Denver, and for some time kept a store on Ferry Street. Old Louis Vasquez, and "Pike" Vasquez, a nephew of the former, were partners in this enterprise. Subsequently, the Captain married, and engaged for two or three years in farming, about three miles up the Platte from this city. Frequently, during that time, he was, for limited periods, in the employ of the Government, as guide, interpreter, or scout. His marriage venture proving unfortunate, he abandoned his farm and gradually relapsed into his old mode of life. Far away from settlements and every trace of civilization, its last two years were mainly spent, and amid such wild scenes his days drew to a close, and were finally numbered. What a history there was in that life! Almost from the Declaration of Independence, by the thirteen feeble colonies, down to the present day.

In wild Western life and adventure he was the compeer of the Chateaus, the Bents, the Sarpy's, the Vasquez, the Meeks, Bridger, Jack Hays, Kit Carson, Bill Williams, and a host of others who have become famous in their way, and among whom none excelled him in wild and daring adventure or peculiar characteristic in mode of life. We know that many looked upon him as a bad man. Men in circumstances such as his were exposed to calumny and detraction. Their rough life has many anomalous phases. We have heard since his death such words as these: "No loss to the country," "It was time," and other similar remarks. He doubtless had his faults, and who has not? Certainly he was not worse than any of us would likely have been with such a beginning, and such surroundings through a long and eventful life. If any one can point to a felony of his, we have yet to know it. At any rate, now that he is dead, let us spread the mantle of charity over his faults, and remember him only as one who marched in the van-guard of the great army which moves ever toward the setting sun; one of that heroic and devoted band of pioneers who blazed the pathway to the giant West, whose exhaustless wealth and unexampled prosperity we now enjoy.

JULIA DEAN.

In our well-known volume, "New Physiognomy," in the group illustrating the greatest of the histrionic types, we selected Sarah Siddons, Charlotte Cushman, Julia Dean, and Mrs. Mowatt Ritchie as the most famous representatives of the English and American stage. Mrs. Lander had not yet made her imposing mark, as she has done within the last few months, whereas Julia Dean, like Charlotte Cushman, was a national name. Notwithstanding that Mrs. Lander is now filling the public mind, through the imperial potency of Queen Elizabeth, Julia Dean, in London, will, ere long, assert her rank with all her might as "Queen of the American Stage," in her own play, "Elizabeth of England." It was written expressly for her, designed for London, and several of its acts were in this lady's hands long before Ristori came to this continent. The writer is Edward W. Tullidge, author of "Famous Historical Personages" and "Characters of Shakespeare," published in the PHRENOLOGICAL JOURNAL.

In speaking of the Italian play, "Queen Elizabeth," and of the relative quality of the Italian and English *artistes*, a New York critic says:

"Undoubtedly it possesses some of the features belonging to the good Queen Bess of English history. Indeed, it may be said to be as near in approximation to the English Queen as Shakespeare's Richard the Third is to that malignant monarch. * * * He [the writer of the Italian play, Giacometti] has doubled her vanity, her coquettishness, and her tyranny, while he has by no means risen to the range of her talent, nor hinted at her occasionally splendid liberality. Such as his Elizabeth is, however, it afforded Madame Ristori the grandest field for the display of her histrionic power, while it has given Mrs. Lander an equally admirable occasion for evidencing her capacity, possibly to even more than rival the great Italian *artiste*. * * * Each have positive excellences, but undoubtedly Mrs. Lander's Elizabeth is nearer the 'good Queen Bess' of English history than that of Madame Ristori, if it is possible for a character so maltreated by the Italian writer to be rendered with any positive degree of approximation to its original."

Mrs. Lander has, therefore, in the judgment of her critics, surpassed Ristori, simply because she made Elizabeth more like herself in rendering the translation. "She seized it by its humanity," says her critic, "and has done all she could to make it more human."

The less we have of her great work, wrought in the body of her times,—the less of Elizabeth moving in her grand imperial methods, winning the issues for a world, the less we shall have of "Good Queen Bess," the idol and heroine of England for three hundred years. If she must slap Essex's face, let her do it; and if the death-warrant of Mary Queen of Scots has to be signed, still let us have historic veracity, and the interpretation and motive—

workings. True, Shakspeare created a Richard the Third from his own conceptive mind, and not from history; but Giacometti is not Shakspeare. The immortal Saxon dramatist, with Bacon and a host of royal names of their quality, are suggesting, "You dare not maltreat Elizabeth and our age. We have left a literature to live forever,—a history that can not be blotted out, and we are as proud of our 'Good Queen Bess,' and her great reign, as when in life we wrote of her."

And this brings us pertinently to consider Julia Dean.

It is said that there is no woman upon the stage, either in England or America, so like Elizabeth in person and the essential elements of her nature and character as Julia Dean; and in this natural fitness she has the advantage both of Ristori and Mrs. Lander. She is imperial in her person, exceedingly fair, and at twenty she was beautiful beyond most women. Elizabeth in her youth played her beauty off to win the hearts of her people, and Julia Dean has done the same. Her splendor consists not in her largeness, though she is very queenly, reaching Elizabeth's stature. Her entire person shows nature's poetic chiseling. There is delicacy and exquisite workmanship in all her form; her features are strongly marked, yet feminine. There is evidently a Sir Francis Drake in her; but the old lion has come through her mother, who was one of the most beautiful women of her times, and, therefore, though strength constitutes her type, it is exquisitely feminine.

Our likeness is of Julia Dean at the age of eighteen. We must add seventeen years of development of character, and the intensities of life, to the luscious beauty of this picture, and then we shall have the imperial-looking woman of to-day. The head is prominent and powerful; but it has not the massive, reflective brain of the masculine type, as seen in Charlotte Cushman. There is abundant force, intensity, and weight in that organization, but all is of the woman quality of feeling—sentiment, passion, instinct. All this she can interpret rarely, and to the last degree of power. The face shows a brain of exquisite mold and delicacy, an eye intense with feeling, a nose and chin of character, a mouth the type of Art. There is in the head a high development of ideality and sublimity. She has the poet's soul, and she esteems her profession a poetic art. This quality of mind alone would prompt her to redeem the stage, if she was omnipotent, and allow nothing but the chaste and classic to be brought before the public; for it is in everything that is exquisite in conception and elaborate in execution that she excels, and not in things bald and showy. Nature has wrought her finely throughout the entire organization. She writes poems on the stage, and the critic and the poet delight in tracing the detail. Her "Julia," in which she first made her appearance, is a work of art. She is unrivaled in this character, in which, in her early days, she won her great celebrity. But she is deemed equal to an Elizabeth, a play of which seems

PORTRAIT OF JULIA DEAN.

to have become one of the great ideas of the age. She should never fear to attempt nor to reach high, for she dare not fail or be second. She is conscious of this every moment. In her person she towers a head above nearly all other women on the stage. Let her make that her type for London, and she will not fail.

Julia Dean is the granddaughter of Samuel Drake, a lineal descendant of Sir Francis Drake. She is the daughter of Edwin Dean and Julia Drake, an actress of great merit and a celebrated beauty. Her grandfather Drake, an Englishman, was the pioneer manager of the drama in the West; her father is also a manager. She made her *débüt* as a star at the Bowery Theater, New York, at the age of fifteen, as Julia, in the Hunchback. Vessels have been named for her, both ships and steamers. She has played nothing but the legitimate drama, and she created a very great sensation from her first appearance to her departure for California in 1856.

She has been very careful, it is said, in sustaining a religious character; in New Orleans and California she persistently refused engagements rather than play on Sunday evenings. She started for the Eastern States in 1865; but on her way she was induced to take an engagement at the Salt Lake Theater. The novelty of playing in the "City of the Saints," before Brigham and his people, was the first attraction; but she found herself playing in the theater so highly extolled in Hepworth Dixon's "New America," whose green-room, he told London, rivals the green-rooms of Italy. She prolonged her stay, for her receipts were large and her houses crowded. She reigned a beautiful Gentile priestess in an Israelitish temple of Art. The daughters of Brigham played with her, and the Mormon king took delight in honoring her.

THEY who tread life's pathway, ever bearing on their faces an expression of cheerfulness, are radiant ministers of good to mankind. They scatter sunshine on all they meet; depression and gloom fade away in their presence.

CONDITION OF THE EARTH INTERNALLY.

MUCH has been said about the interior structure of our earth. In the world of science the stronger party seem to hold that the center of our globe is made up of a molten mass of matter. The reasons given for this theory are: that as we dig down into the earth we are sensible of an increase of heat, and volcanoes throw forth a mass of molten matter. Another party would have us believe, that the nearer we approach the center of the earth, the more *dense* is matter—on the principle that a quantity of matter weighs heavier at a low level than at a high. Again, another party strongly advocate the doctrine that the earth is *cored out*, as though there was a great hole through the earth at its axis.

With neither of these can I agree, because they all would make the earth too heavy. The first theory has the most to commend it, but is objectionable, against reason, because such a mass of molten matter—some seven thousand or more miles in diameter—would weigh enough to throw the earth out of its position. According to the second theory, that space would contain matter heavier by thousands of times. If the first would throw the earth out of its position, this would sink it down to perdition. The third theory would make the earth no lighter than the first, because that hollow would cool off the interior of the earth, which would make it heavy; and again, that open space would be like a large hole in a balloon, which would let the gas escape and make it impossible for it to act as an agent in raising the balloon.

My theory is this: that this three hundred thousand or more cubic miles contain gases, which make our earth a light, buoyant thing, self-sustaining in space by its buoyancy. These gases are being constantly supplied by the various means which the chemist will readily understand; by the action of various substances on each other—substances which percolate through the earth, supplying materials. As after evaporation the waters go to the mountains, and return again to the ocean, there is a like constant change of these materials which form gases, keeping the supply ever abundant and sufficient. The few volcanoes act as safety-valves. These gases confined cause great heat, which keeps the interior of the earth's crust in a molten condition. The volcanoes are just as essential as the safety-valve of a boiler; but for them our earth long since would have been blown into more pieces than a mortar-shell on its explosion.

Now, is not this more reasonable to believe than these other theories? Is it not well to believe that God made our earth light and buoyant, like a thing of life, rather than a heavy, dead mass? Is it not reasonable that all the heavenly bodies are like birds rather than like stones?

Thus it appears to me that I am living on a light, buoyant globe, self-sustaining principally, if not wholly, by its buoyancy. J. P. NOYES.

THE SENECA BLACK CAP RASPBERRY.

THE SENECA BLACK CAP RASPBERRY.

THE Raspberry, claiming, as it does, a place among the indigenous berry growths of this country, has not been neglected by fruit-growers. Though as a wild fruit it is far from unpleasant to the palate of the epicure, in a cultivated state it possesses qualities which render it a very desirable adjunct of the table. Within the past few years several prominent horticulturists have bestowed considerable attention to the Raspberry. The results of their efforts have been two or three varieties of that fruit which, for quality and productiveness, have commanded public appreciation. Of these varieties, the Doolittle Black Cap has been the most extensively cultivated. It has been thought desirable by those interested in growing this fruit, to produce a raspberry which would ripen later than the varieties already known, and thus, as it were, link the strawberry with the blackberry. This object has been lately attained by Mr. H. H. Doolittle, and the Seneca Black Cap, of which we give a full-

sized representation, is such late-ripening raspberry. It was propagated from the Doolittle Black Cap, and possesses the same characteristics of hardness, fruitfulness, firmness, and flavor. It is grown in the same manner as ordinary garden raspberries; but the feature which commends it to general attention is the fact of its ripening a week or more later than other raspberries. For preserving, canning, etc., the Seneca is admirably adapted. We are informed that Mr. Doolittle has in course of publication a work on the subject of raspberry culture, entitled "Twelve Years Among the Doolittles," the price of which is twenty cents, and can be obtained by addressing the author at Oaks Corners, N. Y., or the firm of Doolittle & Wight, Waterloo, N. Y.

The eagerness with which the costliest varieties of fruit are bought up by New York people evidences a growing appreciation of the healthy properties of fruit, and encourages more extended efforts on the part of horticulturists. Were the quantity of fruit sent to this city each season doubled, the supply would not exceed the demand. The producers know this, and strive to obtain the largest results that can be afforded by their land.

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indulging either the opinions or the alleged facts set forth.

EUROPEAN TRAVEL.

It is not generally known that by far the most beautiful entrance from the sea into Great Britain is on the route from New York to Glasgow, along the northern coast of Ireland, and through the romantic islands that, on the map, appear to bar the mouth of the beautiful river Clyde. Americans have generally availed themselves of the somewhat quicker route to Liverpool, but in doing so they have missed an experience in coast scenery seldom gained on sea voyages. For two days before the arrival of the Scotch steamers in Glasgow, each successive stroke of the screw reveals new beauties, which do not pall upon the sight until nightfall closes the view. About the first point reached is the northern coast of Ireland, which, for a hundred miles, presents one of the most wild and picturesque sights that can be imagined. Black, stern, rugged rocks rise perpendicularly out of the sea, and present an impassable barrier to the sea southward. Among these the wild sea-gull finds a home high up beyond the reach of the gun of the hunter. These precipices are broken here and there, showing delightful bits of rustic scenery and Irish agriculture. Small patches of potatoes, interspersed with patches of grain, give the ground the appearance of an immense checker-board, while on the hills beyond large heaps of turf are seen drying in the hazy sun. Smoke curls from nearly every house and headland, and the whole district seems wrapped up in peaceful content. Groups of men may be seen on the coast; but it is not until Londonderry is reached, that the countenances of the natives may be studied. Then the fishermen flock around the ship—all shouting at once—all wanting to sell their fish. They have squeaking voices, and do not show a great amount of intelligence. These rude *habitués* of the sea islands are not like those engaged in agriculture, however, who present a comfortable and well-to-do appearance. After Londonderry comes Portrush and the Giant's Causeway, the latter of which may be said to be one of the greatest of Irish curiosities. Many people do not know that this can be seen distinctly from the ship, yet such is the case, even without the aid of a glass. The Giant, the presiding genius of the place, as well as his cave, is also shown. Rathlin Island, the Mull of Cantire, Sanda Island, the Isle of Arran, most of which are places of historic interest, are passed within hail. The blue peak of the far-famed Ben Lomond is seen at the distance of about twenty miles, behind which is the Loch. Then comes Ailsa Craig, rising like a sugar-loaf a thousand feet above the sea, called by the sailors Paddy's Milestone, from the supposition that it lies half-way between the shores of Ireland and Scotland, there only twelve miles distant. This rock is uninhabited, save by millions of sea-fowl, which here deposit their eggs far up above the clouds. These are collected by an enterprising man and sold in Glasgow for many hundred dollars a year. Then passing the Caves of Bute, the beautiful river Clyde is entered and Glasgow reached. This river is interesting, as on its banks were built the fast steamers that became so notorious in the war. Too much space would be occupied in adequately describing the many other places of interest to be seen on this route, but a voyage is well repaid, not only in its beautiful scenery, but for the kindness shown by the officers of these Scotch boats. The Scotch character is genuine, honest, and obliging, and full of that home spirit which makes every one feel comfortable. This is shown in the willingness of the ship's officers, when off duty, to show and describe every feature of interest on the route, and to weave in with its mention the legends of a place. Another thing which is commendable, as remarked by a recent passenger on board the *Hibernia*, one of the Anchor Line of ships, that "from New York to Glasgow the passengers had not heard a single oath uttered by one of the crew in their presence."

The pleasant experience of a sea trip is worth remembering, and the conduct of the captain and his officers

on board conduce materially to that end. The following is a copy of resolutions adopted at a meeting of passengers held on board the steamer *Hibernia*, August 2d, 1867, while steaming up the Clyde:

"Resolved, That we, the undersigned passengers per steamer *Hibernia*, hereby express our gratitude to Captain Munro, his officers and assistants, for their unfailing courtesy to us as passengers during our voyage from America, just closed.

"Resolved, That we also hereby express our admiration of the beautiful scenery through which we have so unexpectedly passed, including the bold and picturesque Irish Highlands, the Mull of Cantire, the Ailsa Craig, the Giant's Causeway, Dumbarton Castle, and the banks of the Clyde, expressing the opinion that passengers coming to Europe by this route are more favored in respect to near views of splendid scenery than those taking any other European route."

Southward through the north of England the country presents a garden-like appearance. Ivy-covered farm-houses, thriving villages and towns, ruined castles, and palatial mansions make up a pleasant picture in a journey from New York to Paris via Glasgow. J. P. J.

ORGANIC LIFE.

WHAT constitutes life? not, certainly, mere organism, for that exists immediately after death, intact. Animal organism, however constructed, contains an individual vitality, a sentient, an intelligent principle, connected with, pervading, and more or less controlling the whole organization of the individual. Here then resides a central life, which makes a unit of individual organic existence, and should, scientifically, place it distinctively highest in the scale of creation, and thus receive the united title of *vital organism*, in contradistinction to the vegetable, which should remain as simply *organism*. Vegetable organism, though probably constructed, like the animal frame, by animalcule, is not endowed with an individual vitality beyond that of the myriad individual constructors within its frame, and therefore is entitled to the distinctive name of simply *organic* (the constructed), which intimates the direct handiwork of intelligence which such animalcule display in their various constructions.

All inorganic matter is simply the result of chemical affinity, including electric action of one atom upon another, or mere accidental superposition to form a mass, having no possible relation to intelligent construction, and, therefore, no contained warmth beyond surrounding matter, which *vital* and simply *organic* nature has.

The so-called two organic kingdoms of nature seem to require the distinctive relative appellations—*organic* for the vegetable, and *vital organic* for the animal, as the proper comprehension of their comparative characteristics.

CHAS. E. TOWNSEND.

VEGETARIANISM.

MR. EDITOR: In the September number of the A. P. JOURNAL, in an article under the heading of "Gradation of Intellect," some positions are taken to which I think reasonable exception may be made.

The tendency of the age is toward a higher standard of moral and intellectual excellence, and whatever means conduce to this end we should use.

In the article referred to, it is asserted that man is naturally omnivorous, and that a person could not live without meat in the Arctic regions, or in the words of the article, "Natives and explorers in Arctic regions subsist exclusively on a flesh diet."

Now, Sir John Richardson, an eminent Arctic explorer who went out in search of Sir John Franklin, says that bread made from corn furnishes more heat and strength than meat in those regions.

And I think the sooner we obey the Bible injunction, "Be not among the riotous eaters of flesh," cease to inflame our passions, increase our destructiveness by our eating animal food, the sooner we will come to that state of perfection for which we are commanded to strive.

I quote again, "How strangely ridiculous, then, it is for dietetic reformers to attempt to revolutionize society and arrest the progress of civilization by turning us from beefsteaks and roast turkeys to raw acorns, turnips, and fruits which could not be had in the land of Esquimaux!"

So you present the case impartially. Vegetarians do not recommend raw acorns for an article of diet, nor is there the necessity. We have the endless variety of

vegetables, all the grains, and many things besides "turnips and fruits."

Will you inform your readers how such an effect as the arresting of civilization could be produced by a change to a vegetable diet by all men.

I see nothing in it to produce such a dreadful event, and the cultivation of fruits is certainly productive of good in improving our finer faculties and moral sentiments.

With a high appreciation of the importance of the subject, I close with the hope that the JOURNAL may ever prosper in its good work, and in striving for the right.

Yours, very respectfully, J. A. REINHART.

[We cheerfully give this writer a hearing, and submit his criticism to the judgment of our readers. We are advocates of an improved diet; we believe in fruits as aids to digestion and purifiers of the blood. This our JOURNAL proves, and loses no opportunity to urge their culture upon all. But the question of diet is open, and we hope it will be thoroughly discussed in the proper quarter.]

THERE REMAINETH A REST.

BY FRANCES L. KEELER.

LET us never be weary in doing the right—

If we faint not we soon shall be blest;
To the children of God, when their spirits take flight,
There remaineth a rest.

For the frail hands that toil, for the feet that are torn
By the thorns in the path they have pressed,
For the lips that unceasingly quiver and mourn,
There remaineth a rest.

For the heart that is crushed with its burden of woe,
To the cold, careless world unconfessed,
For the heaven-born soul that is fettered below,
There remaineth a rest.

For the spirit that rings an ineffable chime
Through the aisles of the echoless breast,
For the life that is lost by the tempests of Time,
There remaineth a rest.

Far away where the realms inconceivably fair
Lie just through the gates of the west,
To all who are weary of sorrow and care,
There remaineth a rest.

CAN IT BE TRUE?

[THE following account of affairs at the South was recently received from an old subscriber. The picture he draws of Southern social life is a sad one, and we trust somewhat exaggerated. Men in deplorable circumstances are inclined to represent themselves as more miserable than they are. Howbeit, our terribly whipped fellow-countrymen should be sympathized with and encouraged to look up again. No rancorous feelings now should breathe fire upon their bleeding wounds, but a fellow-feeling for our common country should actuate us to aid them in reanimating and reorganizing their desolated and distracted land.]

MOUNT PLEASANT, TEXAS.

EDITOR OF THE PHRENOLOGICAL JOURNAL: You occupy locally, I know, the great pulsating center of the North; but what ground you occupy in the national ferment, I have no means of knowing, having not seen one of your JOURNALS in over six years. The PHRENOLOGICAL JOURNAL was to me a welcome monthly visitor for about twenty years previous to that time. I used to always regret exceedingly to miss even a single number. How much more so, then, the great cut-off of six years! and that, too, at the very time above all others I wished to peruse its pages.

As I said, I have read the PHRENOLOGICAL JOURNAL for twenty years or more; I have attended some lectures of the same nature; have read everything I could procure upon the subject, from Gall to recent writers; have studied hard all that time, and thought I was pretty well versed in human nature; but, sir, nothing has, to my mind, so completely laid bare the human heart as this late civil war. Men in ordinary times are not what they seem to be. It takes something of this kind to develop human nature in all its hideous forms. It has been the probe to the very heart, the dissecting-knife to the understrait of undiscovered human nature. We of the

South are a ruined people—at least until the end of the present generation. Not only did we "stake all, and lose all," but confidence is lost; not only with you at the North, but with one another. "Friendship is but a name," and is remembered only as a thing of the past. The social circle of friends, neighbors, and communities, as they used formerly to come together, are all completely broken up. We have all been tried in this terrible fire, and are yet being tried. Neighbor stands aloof from neighbor—is shy and mistrusting. Human nature has been too much developed. It is a pity we have discovered each other's weaknesses; for men are naturally social beings, and can not live contented and happy without society. Some of the best of men have been so suddenly dug up, and, under existing circumstances, have appeared in so glaring and aggravating a light, that we, in our present state of mind, can not make due and proper allowance for their failings. I, who was so patient, that, before the war, thought I could make allowances for almost any failure in a friend, have so changed that it seems to me I don't know what the word friendship means, or whether it has any meaning at all.

As to my own part, I seem to stand alone. Not a friend but has, or is liable to turn against me at any time, except my bosom friend, and a trio of little children about my knees. These, it shall be my future care to try and bring up as a little community of friends around me.

J. HALL, K.

DOING GOOD.

'Tis a little thing
To give a cup of water; yet its draught
Of cool refreshment, drained by fevered lips,
May give a shock of pleasure to the frame
More exquisite than when nectarean juice
Renews the life of joy in happiest hours.

—TALFOURD.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

NEW WORKS IN PRESS.—We are now printing the following, to be ready next month:

PREVENTION AND CURE OF CONSUMPTION by the Swedish Movement-Cure, with Directions for its Home Application. By David Wark, M.D.

LIFE IN THE WEST; OR, STORIES OF THE MISSISSIPPI VALLEY. By N. C. Meeker.

ORATORY; OR, HOW TO SPEAK EXTEMPORÉ. By Rev. William Pittenger.

LITTLE DORRIT; Diamond Edition. By Charles Dickens. With Original Illustrations, by S. Eytinge, Jr. Boston: Ticknor & Fields.

Spirited illustrations, rich toned paper, and the best of small type are used in this edition. It may be good for very young eyes, but elderly people will need their spectacles to read the Diamond Edition.

BLEAK HOUSE. By Charles Dickens. With Original Illustrations, by S. Eytinge, Jr. One volume. 18mo, pp. 498. Price, \$1 50. Boston: Ticknor & Fields.

The Diamond Edition of Bleak House is no less perfect than previous volumes of the set. If not so good for old eyes as larger letter, it is certainly more portable, and will be preferred by many. Give us long primer, instead of pearl or diamond type!

THE TREE OF LIFE; or, Human Degeneracy. Its Nature and Remedy, as based on the Elevating Principle of Orthopathy. By Isaac Jennings, M.D. One volume. 18mo, pp. 279. Price, \$1 50. New York: Miller, Wood & Co.

A kindly admonition from an experienced Christian physician eighty years of age! The author has given us other works. One, "The Philosophy of Human Life," which gave great satisfaction to those who dislike drugs. Many years ago, when in full medical practice, Dr. Jennings, distrusting the efficacy of poisons when administered as remedies, conceived the idea of giving bread pills to his patients, instead of the usual prescrip-

tions. Imagine his surprise when, during some years of this new mode of treatment, his success was greater than ever before. Testimonials from leading clergymen, judges, lawyers, and others came in unsolicited, certifying to the wonderful cures wrought by the remarkable medicines—simple bran-bread pills, and nothing else. A few years later the worthy Doctor published a complete confession, detailing the whole story of his ten years' practice, and the cures performed. Of course such an exposure created much excitement in the entire circuit of his ride. But the moral and religious character of the author was above and beyond reproach, and his testimony stands confirmed.

The new book gives the views and experiences of this veteran physician, whose teachings tend rather to *prevent* than to *cure* diseases. We commend the work to those who would obtain the greatest amount of physiological knowledge in the smallest space, and at the smallest cost. The book may be ordered from this office.

THE POETICAL WORKS OF JOHN GREENLEAF WHITTIER. One volume, 18mo, pp. 410. Price, \$1 50. Boston: Ticknor & Fields.

A household treasure. This beautiful Diamond Edition of these exquisite poems must become very popular. Mr. Whittier's radical songs once shut him out of the States South; but his prayers and prophecies have now been answered and proved. He will now be welcomed everywhere.

THE BIBLE TRIUMPHANT. By Mrs. H. V. Reed. Price, 50 cents.

This is a work of 144 pages, and is designed as a reply to a work entitled: "144 Self-Contradictions of the Bible." These asserted self-contradictions are introduced and explained. The skeptic has gone through the Old and New Testaments, determined to find all that seemed to be inconsistent or contradictory, and has arrayed them with care, showing an ingenuity and a persistency in a negative spirit seldom equaled. Our author places all of these passages before the reader, and gives, so far as we have been able to discover, a candid and reasonable consideration. We think her work will do good, especially to the skeptical. Many persons who have stumbled upon passages which are not easily explained, and have all their lives been wandering in the darkness and doubt of innocent skepticism, by reading this little work will have their faith enlightened. We think the skeptic did a useful work in bringing out his 144 seeming contradictions, because he thereby induced an examination of them, greatly, we doubt not, to the comfort of those who revere the Bible and try to follow its precepts, and greatly to the profit of those who are inclined to infidelity, and who seek every occasion to excuse a wrong course of life, by attempting to show that the Bible is not an immaculate guide.

TEMPERANCE IN THE AMERICAN CONGRESS: Addresses by Hon. Schuyler Colfax, Henry Wilson, Richard Yates, William E. Dodge, Hiram Price, Samuel McKee, F. E. Woodbridge, J. B. Grinnell, and J. W. Patterson; delivered on the occasion of the First Meeting of the Congressional Temperance Society, Washington, D. C.; with a List of Pledged Members. Reported by James L. Andem, phonographer. Price, 25 cents. New York: S. R. Wells, 389 Broadway.

A *verbatim* report of one of the most remarkable gatherings ever known in Washington, and one which might be repeated frequently, with the best effects during the next session of Congress. So mote it be.—*Chicago Evening Journal*.

[We are happy to state that this good example of our American Congress is being followed by other nations. Already, our neighbors of the New Dominion, over in Canada, are organizing a Parliamentary Temperance Society, and we are told that steps are being taken in England to effect the same thing in the British Parliament—where it is very much needed. This will be followed in France, Prussia, Austria, Russia, and throughout the world. Thus America leads the world in temperance, and our little book is the pioneer!

COLTON'S JOURNAL OF GEOGRAPHY AND COLLATERAL SCIENCES. A Record of Discovery, Exploration, and Survey. Quarterly. \$1 a year.

In their prospectus the publishers say: Our object is, by presenting in a condensed and attractive form mat-

ters of interest connected with the Globe we live on, to supply a demand that already exists, and to waken a more general attention on the part of the public to the study of geographical science. To subscribers for the first year we shall present a copy of a new map of Alaska. This map, 26 by 19 inches in size, will alone be worth the price of subscription. Address, Messrs. Colton & Co., 173 William Street, New York.

THE LADIES' REPOSITORY—devoted to Literature and Religion; edited by the Rev. I. W. Wiley, D.D., and published monthly, at \$3 50 a year, by Messrs. Pol & Hitchcock, Cincinnati, Ohio—is one of the best of our American magazines. It has none of the light, trashy stuff in it that fills too many journals published for ladies. This is at once instructive, entertaining, and elevating. It is healthy, and we commend its every feature, save only one—we do not like to see its fair cover patched with patent medicines. Surely this high-toned, prosperous, and profitable magazine can afford to exclude all such offensive quackery. Its advertising pages can be readily filled with the titles of good books or other useful matter. But we repeat, the magazine stands at the head of its class, and is worthy a place in every family.

THE HORTICULTURIST, AND JOURNAL OF RURAL ART AND RURAL TASTE, edited and published by the Messrs. Woodward, New York, at \$2 50 a year, is an elegantly illustrated and beautifully printed monthly magazine. It is richly worth many times its cost, and can not fail to exert the best influence on the general taste of our people who read, whether agriculturists or not. Its object is to improve and to elevate. Send 25 cents for a sample number and try it.

THE METHODIST, one of our best religious weeklies, announces rare attractions for its subscribers. We give the names of some of its writers—Rev. George R. Crooks, D.D., editor, assisted by Rev. Abel Stevens, LL.D., Rev. John McClintock, D.D., LL.D., Rev. B. H. Nadal, D.D., Rev. H. B. Ridgeway, and Prof. A. J. Schem; with sermons by Rev. Henry Ward Beecher, eminent Methodist orators, and bishops of the Methodist Episcopal Church. Besides all this, the publishers propose to send the paper *gratis*, two months, to those who subscribe for a year.

We find the *METHODIST* broad, liberal, patriotic, up to the time in all religious, educational, and reformatory measures, and yet planted steadfastly in the highest Christian principles. It is orthodox without bigotry; eminently religious without idolatry or superstition. In short, it is a racy, live family journal. Send for a sample copy and judge its merits for yourselves.

THE INSURANCE AND REAL ESTATE JOURNAL is a handsome weekly devoted to the best interests of property-owners and others in New York; published at \$3 a year by Messrs. T. and J. Slaton, corner of Fulton and Nassau streets. Complete reports of real estate sales; prices obtained; progress of city improvements, etc., are conscientiously given. It is commended to all that large class who would be thoroughly posted in regard to the material prosperity of the Empire City.

LITTELL'S LIVING AGE.—Among all literary magazines, for the past twenty years, none have proved more safe or satisfactory than this choice weekly—the best of all the eclectics. And why not? Is it not made up from the best of all the European serials? It is never wild or frothy, never dull or heavy. If a really good thing be printed in a foreign magazine, it is sure to promptly appear in the "Living Age." A wise discrimination is exercised by the judicious and experienced editor, so that nothing offensive, nothing false or sensational, nothing improper for each and every member of the family to read shall appear in its pages. As the literature of the world improves, so the "Living Age" improves. The objects of this favorite and well-established journal are set forth at length in an advertisement. Terms \$3 a year. It will be clubbed with the *PHRENOLOGICAL JOURNAL*, and both will be sent to one address from date of subscription, for \$3 a year.

THE BON TON—a Monthly Record of the Fashions—is an elegantly illustrated publication. We have received the numbers for September and October, both of which abound in large and clear engravings, representing the later improvements or modifications in ladies' and gentlemen's costumes, and furnish distinctly marked patterns for basques, bodices, waists, under-garments, etc. Subscription, \$7 per year, 75 cents a number. S. T. Taylor, publisher, 349 Canal Street, New York.

LE PETIT MESSENGER—by the same publisher—is also a Fashion Monthly, containing graceful and clearly-printed illustrations of the costumes of the month, and two paper patterns. Price per number, 50 cents. \$5 a year.

DIE MODENWALT—also published by Mr. Taylor—contains monthly two illustrated papers, and an elaborate pattern sheet. Price, 30 cts. a number. \$3 a year.

THE NEW DOMINION MONTHLY. A Magazine of Original and Select Literature. Published at \$1 a year—in gold—by John Dougall & Son, 136 Great St. James Street, Montreal, Canada.

This is the best thing of its size and price we have seen. It does real credit to the enterprising, progressive, and reformatory publishers, who also publish the *Montreal Witness*, daily, semi-weekly, and weekly.

ELSIE'S MARRIED LIFE; by Mrs. Mackenzie Daniel, author of "My Sister Minnie;" "My Poor Cousin," etc., etc. Philadelphia: T. B. Peterson & Brothers. Paper. 75 cents.

A lively, versatile tale—one of the best produced by this fertile writer. The domestic portraiture, exhibiting both felicities and infelicities in close proximity, are very natural.

NEW MUSIC.—THE NEWSBOY'S SONG. Annie Arden; Girls, Wait for a Temperance Man. 30 cents each. Published by C. M. Tremaine, 481 Broadway, New York.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

THE AGENT'S MANUAL OF LIFE ASSURANCE. By the Author of the "American Manual of Life Assurance," etc. Sq. 16mo. Paper. \$1 40.

PRINCIPLES OF ELOCUTION AND VOCAL CULTURE. With Exercises and Selections. By Rev. B. W. Atwell. Cloth. 80 cents.

FRESH LAURELS FOR THE SABBATH SCHOOL.—A New and Extensive Collection of Music and Hymns for Sabbath Schools, etc. By W. B. Bradbury. Paper. 35 cts.

ECCLESIASTIC; or Parish Astronomy. In 81 Lectures. By a Connecticut Pastor. Cloth. \$1 45.

MANUAL OF THE CONSTITUTION OF THE UNITED STATES. By Timothy Farrar. 8vo, pp. xii, 532. Cloth. \$4 00.

THE EARLY YEARS OF HIS ROYAL HIGHNESS THE PRINCE CONSORT. Compiled under Direction of Her Majesty the Queen; by Lieutenant-General the Hon. C. Grey. Portrait. Cloth. \$3 25.

HANLY'S GUIDE TO AUTHORSHIP; a Practical Aid to all who desire to engage in Literary Pursuits. With Chapters on Editing, Proof-Reading, etc. Paper. 60 cents.

HOME LIFE; a Journal. By Elizabeth M. Sewell. 12mo. pp. 405. Cloth. \$3 25.

IS IT I? A Book for Every Man. A Companion to "Why Not?" By Prof. H. R. Storer, M.D. Paper. 60 c.

ANGELIC PHILOSOPHY OF THE DIVINE LOVE AND WISDOM. By Emanuel Swedenborg. Translated by R. N. Foster. Cloth. \$3 25.

WOMAN'S RIGHTS. By Rev. John Todd, D.D. Cloth. 20 cents.

POETICAL WORKS OF JOHN G. WHITTIER. Diamond Edition. Cloth. \$1 50.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—TO CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE SLIPS.

SPECIAL NOTICE—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, and ANTHROPOLOGY, or the general SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

SHORTHAND.—Yes, we employ from three to five shorthand writers constantly, and give courses of written instruction by mail to those who wish it. Vacancies frequently occur, and the services of competent reporters are always in demand.

IF J. W. O., of Seaforth, Canada, will give his full address, he will enable us to answer his questions by post.

PHRENO-MAGNETISM.—What is phreno-magnetism?

Ans. You ask collateral questions enough to require for answer ten pages of the JOURNAL. In 1842-3 the columns of the JOURNAL were full of the subject, in its length and breadth. Phreno-magnetism is, in brief, simply exciting the various phrenological organs during the magnetic sleep, thus inducing the subject to talk and act out the nature of the faculty whose organ is touched, and all unconsciously to himself. See "Library of Mesmerism and Psychology."

TEN-PENNY NAIL.—What is the meaning of this term?

Ans. Most people know that a ten-penny nail is about two and a half inches long, and is a very common one for use in building houses, etc. There are also double tons, forties, as well as eight-penny, six-penny, and four-penny nails. We have looked for an explanation of the term "penny" as applied to the size of nails, and find no solution. Some years ago the Farmers' Club of New York had the subject up, and many and queer were the solutions. We presume when nails were made on the anvil by hand, that the term "penny" had reference to the price for making, or the value of the goods, or else it had to do with the size. Who can give the solution?

BASE BALL.—To play base ball well, one wants a predominance of the Motive and Vital Temperaments, large Firmness, full Combativeness, Hope, and Approbativeness, also large Size, Weight, Form, Order, Calculation, and Constructiveness, and enough but not too much Cautionness.

MANUAL LABOR SCHOOLS.—

Excuse me for troubling you, but not knowing who else to write to, I take the liberty of asking, for information, if you know of any manual labor, agricultural, or other school, where a young man, by work, can earn an education? If you can give me any information in relation to any such school, you will oblige one who has not the pecuniary ability to obtain a college education. [We submit this question to our readers and ask for information. Good schools, such as are here suggested, in which one may "earn his way," would be most useful, and to the nation most profitable.—Ed. A. P. J.]

BRAIN—THOUGHT.—Does the brain itself produce thought? If so, how?

Ans. The brain is an instrument of something within. The dog sees, but he does not understand how or why this or that is done. The horse knows the milk route, and stops at each door, but does not comprehend the object of the visit. There must be soul, mind, and a brain through which intelligence can act. The eye is not vision, nor the ear hearing. The brain is an instrument behind the eye and behind the ear, and the man himself is, as it were, behind the brain, using it as an instrument. The soul uses the whole nervous system, by means of which thought is brought to act on matter, through the eye, the ear, the taste, the hand, and the brain is the center through which the inner man acts on the outer world.

THE NOSE.—Will you please inform me if, by cultivating any particular faculty, I can improve the shape of my nose? The bone at the middle rises very prominently, forming a hump, and declines again toward the end and upper part of the nose. Please tell me what organ it is which is situated at the upper part of the nose? A LADY READER OF THE A. P. J.

Ans. Cultivate Benevolence, and this will counteract or modify Combativeness. Cultivate an even temper, with faith, hope, trust, cheerfulness, affection, and not only your nose but your whole countenance will acquire a comely shape, corresponding with a graceful spirit. Our New PHYSIOGNOMY gives all the "signs," names of features, and how to read them.

ASTROLOGY.—I notice you advertise a book entitled "The Mysteries of Astrology and the Wonders of Magic." Price, \$5. This is to ask if you approve the work?

Ans. No. On the contrary, we regard it as quite worthless, save as containing the groundless claims of that old, worn-out superstition. But as the beautiful and useful science of Chemistry grew out of Alchemy, so Astronomy may be said to have grown out of Astrology. Many are curious to trace the truths of modern science to their sources, and to look at the old ladder on which they have climbed into the temple of knowledge. Modern "character-reading" is based on Anatomy, Physiognomy, Phrenology, Physiochemistry, and Temperament, for which see the work NEW PHYSIOGNOMY.

NERVOUSNESS—STAMMERING.—Rectify your mode of living, and your nervousness will be diminished; practice speaking, and you will improve; read an article on "Stammering" in our PHRENOLOGICAL ANNUAL for 1866, and you will learn all we can say on the subject.

PIMPLES ON THE FACE.—Can you inform me what will remove pimples from the face? Sometimes my face is completely covered with them, so much so

that I am ashamed to see any one; they are often very painful, too. I have tried a number of remedies, but without success. My brother is also afflicted with similar pimples. A remedy through the columns of the A. P. J. would be thankfully received.

Ans. Impurities in the blood are worked out of the system through the skin. Hence the eruptions may be regarded as remedial, rather than otherwise. It is better that they be out than in. The blood can be purified in no other way than by right living. Proper food, drink, air, etc., make pure blood, while all the decoctions of apothecary and the distiller only aggravate the evil. Tell us what you eat and drink, or how you live, and you will therein state the cause of the pimples. One of the best external renovators of the skin is the wet sheet pack; another is the Turkish bath. But we must have full particulars before giving a prescription.

"VANITY OF VANITIES."—How do you interpret this passage of Scripture?

Ans. All pleasures of the passions, such as the appetite, love of money, of the opposite sex, etc., are liable to perversion; and the abnormal action of these results in "vanity." But growth in grace is not vanity. It is not "vanity" to live a godly life. And it is clear to us that "the Preacher" had reference to worldly, and not to spiritual things, when he declared, "All is vanity and vexation."

WHO IS DR. WILLIAM FREEMAN, of N. Y.? If the questioner refers to the one who advertises secret remedies for indiscreet young men, we reply: He is not only a quack and an impostor, but something worse than this, as those who have been duped and swindled can testify.

MENTAL PORTRAIT FROM THE LIKENESS.—Those who live at a distance from our office, and can not visit us in person, can have a correct description of character made from the portrait. For full information on the subject—what likenesses are wanted, measurements, etc., required, with terms, send a postage stamp and ask for "The Mirror of the Mind."

SOUNDS.—All sounds are the results of atmospheric vibrations produced by the sound wave. These vibrations are rendered appreciable when a pistol is fired between two tall buildings which are about fifty feet apart. The echoes of the discharge will be heard in a series of rapidly succeeding "shakes," as they would be termed in music.

BEST WORKS ON PHYSIOLOGY.—W. F. B. asks us to recommend a work on Physiology, and to state something about a certain doctor whom he names. We reply. The most elaborate professional work now in use, is "Carpenter's Principles of Human Physiology, with their chief applications to Psychology, Pathology, Therapeutics, Hygiene, and Forensic Medicine." With nearly 300 illustrations. Price, \$6. The best popular works are the following: "Physiology, applied to the Improvement of Mental and Physical Education." By Andrew Combe, M.D. Muslin, \$1 75. "Physiology of Digestion. The Principles of Dietetics." Dyspeptics should read this work. By Dr. Combe. Paper, 50 cents.

The doctor named by you is an egotistical quack who seeks practice. Trust him not.

Publisher's Department.

HANDSOME PREMIUMS.—WHO WILL HAVE THEM?

We offer the following to the appreciative:

For 350 new subscribers, at \$3 each, we will give a Steinway Rosewood Piano, worth \$650.

For 100 subscribers, at \$3 each, we will give a Horace Waters 5 Octave Parlor Organ, worth \$170.

For 60 subscribers, at \$3 each, a Horace Waters 5 Octave Melodeon, worth \$100.

For 30 subscribers, at \$3 each, a Weed Sewing Machine, new style, worth \$60.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

Now, this strikes us as something well worth working for. Every family ought to have one or more of the above. Reader, do you know a poor widow with children, who is trying her best to earn an honest living, to clothe and educate her children? Think how much easier she could do it with one of these excellent machines! Then why not start a subscription paper and induce a few "well-to-do" neighbors to put down their names, each for the trifling sum of \$3, and thus get the JOURNAL a year, and in a few hours put the "Family Treasure" in the poor woman's house. What thankful hearts! what gratitude to God for the real help, and that, too, without inflicting on her the feeling of a beggar! Ladies, you can do this; what man could refuse an appeal for such an object? And here, *Let me head the list.* I hereby offer to give \$3 each toward making up any number of lists, for charity sewing machines, to be given to widows, or other poor women, according to the terms above specified, *i. e.*, I will be one of twenty-five to present sewing machines to one thousand women of the class named. Who will begin the work? The field is open to all charitably disposed men and women. Show your JOURNALS, get your subscriptions, and the machine shall be forthcoming by return express. Here is a chance to "do good and get paid for it." Address, S. R. WELLS, 389 Broadway, New York.

ONE MORE NUMBER CLOSES

THE VOLUME for 1867. See new prospectus for 1868. We are to begin the New Year right early. If all our plans can be carried out, we shall treat our readers to the best yearly volume of the PHRENOLOGICAL JOURNAL ever yet produced. We may not hit the moon, but we shall "aim high," and "do our best." "May all work together for good."

THE Tribune intimates that our criticism on Mr. Charles Dickens must have been dictated by private spleen. We beg to state that no such feeling animated us. We saw the country being flooded with the rily waters of that author, and, as a sentinel on the public walls, felt bound in duty to warn the unwary. Read Dickens, hear Dickens, run after Dickens, if you will, but do not worship him, nor permit his novels to monopolize your minds. There are other authors far more worthy to be read, seen, and heard. The only motive in publishers that we can discover for multiplying the editions of Mr. Dickens' works, is in the money they hope to make by it. Novel reading does not improve the memory, but tends directly to

weaken it. As to morals, each may judge for himself. Mental dissipation is one thing, intellectual and moral improvement is quite another.

LIGHT OR MUSICAL GYMNASICS.—Dr. D. U. MARTIN, formerly from Boston, now of New York, has issued his circular, announcing the fall and winter campaign. In his statement of principles he says:

We are all imperfect in some degree, physically and mentally. These imperfections come to us through disobedience to the laws of nature. To "cease to do evil and learn to do well" is important in physiology as well as in religion.

Muscular tissue constituting the greater portion of the body, and its contractility being concerned in almost every function performed, its culture becomes a matter of vital import. And as this is the only means of growth, we can, by proper exercises, assist nature in the development of the weaker parts of the system.

The more perfect the organization of an animal, the more perfect the food it should select. Man, being the highest, needs the fruits, grains, etc., especially students and thinkers. Animals choose by instinct; man should choose by intellect.

Dark rooms are unfit to live in! Where an excess of carbonic acid exists in a room, ship's hold, or mine, the rays of the sun, if merely reflected by mirrors, will correct the evil. Infants would grow to shapeless idiots without light. Sun-baths are valuable in phthisis, scrofula, and other diseases. Water, air, and correct habits of breathing are invaluable.

To all this we say, Amen. Classes of both sexes will be taught in the Harvard Rooms, corner of Sixth Avenue and Forty-second Street. Dr. Martin refers to some of the best names in the city.

WOMEN PHYSICIANS FOR INSANE WOMEN.—There is not one in existence, but there ought to be. It is now acknowledged by all physicians of eminence and broad culture that it is impossible for man fully to understand woman so as to sympathize with her completely, therefore that it is far better to have physicians of her own sex; but far more important is it that women suffering from that direst of all maladies—insanity—should have one of her own sex to minister to and prescribe for her.

The law has done all it can in providing a matron, but she has her duties, which are outside and separate from what should be those of a woman physician. There are many wants which are never supplied (and the consequences are serious when not attended to), because a woman can not speak so freely to one of the opposite sex as she can to her own; besides, he could not understand if she did; added to that, there are many scenes in the department of insane asylums devoted to women that no man ever ought to see, but which from necessity he must now see. Here is a great want and a great opportunity.—[BY A LADY SUBSCRIBER.]

MRS. G. W. WYLLYS is after the Bachelor Man of the *North American Review*. Read "Matrimony Among Authors," and say if she does not put the timid fellow, who is evidently afraid of woman, in the wrong. A good husband can make a good wife of almost any woman, while a bad husband will inevitably lower the condition if he does not drag down even an angel of a woman.

A LIBERAL PREMIUM.—We have made an arrangement with manufacturers, by which we are enabled to offer a first-class Paris *premium* SEWING MACHINE for TWENTY-FIVE new subscribers to the PHRENOLOGICAL JOURNAL, at \$3 each. We should like to see one of these domestic blessings in every family through-

out the country, and we are ready to supply all applicants under the above conditions. Only think of it, \$75 will secure twenty-five copies of the JOURNAL for a year, and a new and serviceable sewing machine.

"NEW PHYSIOGNOMY" IN FRENCH. We have received an application from a French gentleman, of Havre, for permission to translate and publish "New Physiognomy" in the French language.

TEMPERANCE IN CONGRESS.—"Ten-Minute Speeches," by distinguished Senators and Representatives; price, 25 cents. New York: S. R. WELLS, Publisher.

The newspapers speak well of these model orations.

The New York *Atlas* says: It is much superior to the average of temperance literature.

The *Wisconsin Farmer* says: These brief speeches are very pithy and effective, and no man can read them without getting the impression that we have some noble men in Congress who are not afraid to cast their influence in favor of total abstinence. May their numbers be greatly multiplied.

The *Georgia Citizen* says: These addresses are good, and we hail with pleasure any effort to stay the progress of intemperance in the capital of the country.

LETTERS "PERSONAL."—When matters of a *private* nature, intended for the editor only, are addressed to this office, the word "*personal*" should be placed across the end—left hand—of the envelope, when it will be sure to fall into no other hands.

SHERBURNE'S PATENT SAFETY FASTENING for Boomer, Scarf, Shawl, and other pine, is a new device, of which we have received a specimen from Messrs. Cobb & Manson, the manufacturers. It is very simple in construction, and well adapted to prevent the loss of a valuable ornament which is secured to one's clothing by a pin. This new fastening can be readily applied to any such ornament at a cost of from \$1 to \$2, according to its quality. Address Cobb & Manson, 22 Congress Street, Boston, Mass.

General Items.

We intended to state at this time the present whereabouts of the several phrenological lecturers, so that, by correspondence, their services could be engaged where most wanted. But we are unable to do so. The demand for competent lecturers is increasing, and calls come to us from all over the land. Young men, prepare! The harvest is ripe; the field is large; the laborers are few.

MARRIAGE—TEMPERAMENT.—See "New Physiognomy" for a full statement of this question, as to what colored hair, eyes, etc., blend best in a matrimonial alliance. As a rule, "like likes like," but where there is excess it should be corrected, rather than augmented, by proper selection.

A NEW BOOK-HOLDER AND WRITING-DESK.—Mr. John Connacher, 308 Broadway, N. Y., has invented a very useful contrivance, which may be used for various purposes, as set forth in his advertisement. The thing seems to work well. Send to him for a circular with particulars.

SOUTHERN GENERALS.—Our artist friend, Mr. A. C. PARTRIDGE, of Wheeling, West Virginia, presents us with capital photographs of the following men, for which he has our warmest thanks: Gen. Joseph E. Johnston, Gen. Beauregard, Gen. Bradley T. Johnston, Gen. Fitzhugh Lee, Gen. E. Kirby Smith, Admiral Buchanan, C. S. N., Major Chapman, and Col. Mosby; also Gen. Foster, U. S. A., and Maximilian and Carlotta. We may engrave, analyze, and publish some of these subjects in the PHRENOLOGICAL JOURNAL ere long. It is from a feeling of delicacy that we defer a description of Mr. Jefferson Davis while yet an untried prisoner—released on bail. After the trial, whatever may be the verdict, we shall be ready to comply with the wishes of "many readers." Let the trial proceed, or the bail bonds be canceled.

EDUCATION OF THE HEART. By HON. SCHUYLER COLFAX.—Our readers will thank us for the rich intellectual treat we give them, in the excellent address by this distinguished scholar and statesman. It breathes the spirit of encouragement, hopefulness, and cheer. Read it, take courage, and secure the blessing.

SKULLS FROM THE SANDWICH ISLANDS.—Mr. JOHN BUTLER, formerly from Albany, N. Y., just returned from a twelve years' residence among the Sandwich Islanders, brings us two fine specimens obtained near the sea-beach at Kahaloa, island of Mowhee. They are evidently male and female, and now ornament the shelves of our phrenological cabinet. Thanks, thanks, to Mr. John Butler.

MR. W. T. STONE, phrenologist, formerly of Terre Haute, Ind., is now located in Saint Joseph, Missouri. We hope his professional services will be in constant demand.

YALE COLLEGE SCHOLARSHIPS.—WHO WILL HAVE THEM?—There are still over forty-five scholarships in the Sheffield Scientific School at Yale College open, through the avails of the United States donation, for the education of farmers or mechanics, and any young man in the State, who has a reputable knowledge of the elementary English studies, is entitled to apply for the privileges of these scholarships.

ANDOVER SHORTER COURSE.—Miss Sophia Smith, of Hatfield, niece and heiress of Oliver Smith, Esq., the founder of the Smith Charities, has given to Andover Theological Seminary thirty thousand dollars to found a professorship of theology, homiletics, etc., in an abridged course. The donation becomes available on the 1st of August, and the professor is expected to be chosen so as to enter upon his duties with the opening of this autumn term.

A WATERLOO VETERAN.—A man named Stokey is now living at Milborne Port, near Sherborne, in Dorsetshire, England, who fought at the battle of Waterloo. He is seventy-seven years of age, and has had three wives, and ten children by each. All the children are alive. Stokey's birthday is the 18th of June, Waterloo day.

A CATALOGUE of the Pennington Seminary and Female Collegiate Institute of the New Jersey Annual Conference for the year 1867, of which Rev. THOMAS HANLON is principal, has been received. We note a healthy condition of

things in this well-conducted institution. All the modern appliances are used, including

"A large, airy, and well-furnished gymnasium, which has been erected expressly for the benefit of the students. Such an institution, for the promotion of health and physical development, has long been a want of the Seminary, and it is with great satisfaction we announce so valuable an acquisition. Any student may have the advantage of the gymnasium for the small charge of fifty cents per term." [Instead of "may have," we should say *shall* have, and that, too, *FREE* gratis, without the fifty cents.]

Although this is called a Female Institute, the circular says "The buildings are commodious, airy, and well arranged for the comfort of the students, and for all the purposes of a first-class Male and Female Seminary."

Our views of educating the sexes together are met by the following:

"LADIES AND GENTLEMEN.—No one acquainted with the habits and manners of schools of one sex exclusively, can fail to notice the marked advantages of *well-regulated* union schools. The following advantages are suggested by long observation: neatness, quietness, absence of rudeness, strengthened sense of honor and manliness, self-command and scholarship in the young men, and self-reliance, scholarship, wider views of life, and a more just view of woman's sphere in young ladies."

Parties interested may get full particulars by addressing the principal, at Pennington, New Jersey.

IMPOSTORS.—The "no cure no pay," self-styled doctors. Nine in ten are wicked swindlers. Many so-called doctors are simply "quacks," their diplomas, if they have any, having been "bought" or obtained by fraud. We can count a number now sailing under the title of M.D., or Dr., who have no right to either title, while there are any number of *Professors* in the same category. If we were made "police," we would hunt down, arrest and punish the rascals. Jugglery, fortune-telling, astrology, gambling, prize-fighting are flourishing among the unregenerated sons of Adam. If our authorities were not themselves wicked and corrupt, we might hope to put down and keep down the satanic spirit now rampant all over the world. Look out for impostors!

HELPING THE SOUTH BY GAMBLING SCHEMES.—When will respectable men and women cease to lend their names to the gamblers, who use them to filch money from honest men's pockets to stuff their own? Gift enterprises, etc., with tickets offering diamonds, watches, houses, farms, etc., are "as thick as toads after a shower," and not one in fifty is conducted by honest men. You who have *anything to give*, see that it goes where it may do good. Your clergyman will direct you. Keep out of all lottery schemes, all gift concerts, musical entertainments, opera house tricks, and the like. Give your cash where it will do good, rather than to feather the nests of swindlers.

MR. WELLS, of PHRENOLOGICAL JOURNAL fame, is said to have increased the circulation of that journal thirty thousand copies by judicious advertising.—*New York Evening Gazette*.

After our thanks for the compliment, we may inquire whether the aforesaid increase was not due rather to the enlargement and improvement of the JOURNAL than to the "judicious advertising?" or was it from both these influences combined?

We are disposed to give due credit to the influences of advertising; but the matter advertised must possess real merit to "make it pay."

CHURCH UNION.—We have been informed that the Rev. A. Clark, pastor of the Fifth Street Methodist Church, Pittsburg, while visiting Mount Vernon, Ohio, received and accepted an invitation to preach in St. Paul's Protestant Episcopal Church of that city. Such incidents evince the spirit of Christian recognition and union. The rector of St. Paul's is the Rev. Mr. Peate, formerly of East Liberty. In this connection we may add that Mr. Clark is a lecturer in no little favor with popular audiences. He has a new lecture which library associations, committees, etc., throughout the country would find it to their interest to engage him to deliver.

LIFE INSURANCE.—We advertise *The American Popular Life Insurance Company*. As to its merits, here is what the *Herald of Health* says of it:

If you have a good constitution which you have never injured by dissipation; if you are at present strong and healthy; have good habits and follow a healthful occupation; if you are descended from a healthy, long-lived ancestry, then this company is by all means the best and cheapest one to insure in. If you have made an apothecary shop or a beer barrel of your stomach, and a tobacco box of your mouth; if you have bad habits, an unhealthy occupation, or a sickly, short-lived ancestry, then this is not the company for you, for to such persons it is the dearest one there is. My confidence in its reliability is evinced by the fact that I have insured my own life in it.

There are very few who come up to these requirements, but these few are expected to live—accidents excepted—into a ripe old age. We know several of the managers of the company—Quakers—who are honorable, intelligent, and sagacious men.

THE LIVE GORILLA at Barnum's Museum is simply a baboon, nothing more. We are surprised that so respectable a paper as the *New York Evening Post* should lend its columns to so palpable an imposture, as to publish what it did about the arrival of a live gorilla, when it is nothing more nor less than a common baboon. Was there ever exhibited a more utter want of truth? Ought such things to pass without rebuke or punishment? Is it not a downright swindle? What is the motive, except to get money? and getting it dishonestly? Our duty clearly is to expose such imposture.

Every Month is a small quarto journal, published by S. T. Taylor, 849 Canal Street, New York, at thirty cents a year. It is printed in the interest of the Church of the Strangers, Rev. Charles F. Deems, of North Carolina, pastor, whose sermons, or portions of them, will appear in *Every Month*. The congregation occupy the chapel of the New York University, formerly occupied by the late Dr. Hawks. The Church of the Strangers cordially invite those of all denominations to join them in their worship, Sunday-school, and missionary work. We wish *Every Month* and the New Church the best success.

Will you please change the address of my JOURNAL? Certainly, if you inform us where from and where to. Always name post-office, county, and State.

JOHN BRIGHT.—What Howard was to prison reform, and what Luther was to religious reform, John Bright is to political reform to-day. Our countrymen ought to know more of this English statesman. We have already given his portrait, with a biographical sketch, in this JOURNAL. Those who would know more, should

hear the lecture of Mr. Moses C. Tyler, now of Poughkeepsie, N. Y., who spent some time in England, teaching and learning. Mr. Tyler proposes to visit the chief towns of the States the coming winter, and will tell the people who hear him all about the English Quaker statesman and reformer.

IMPOSTORS.—There is a vagabond in Troy, N. Y., who has "done" country editors out of a nice lot of advertising. Dr. Andrews, of the *Weekly Citizen*, Americus, Ga., shows up the swindler in lively style. The fellow advertises "Madame Perigo's Astrology, Madame Thornton's 'Knowledge of thy Destiny,' 'Crisper Coma,' 'Circassian Balm,' Prof. Debenx's Friser le Cheveux, Dr. Sevegne's Restaurateur, Chastellar's Hair Exterminator, or Liquid Enamel, Dr. Joinville's Elixir," etc.

Dr. Andrews says: "We went to Troy on purpose to make the acquaintance of this individual, and to collect our quarter's toll for advertising, and there, after some strategy, we had an interview with him—but not a red cent could we collect. He acknowledged the justness of our bill—but would not pay, or give an acceptance at thirty, sixty, or ninety days—but coolly told us, in his own office, that he preferred to let the thing stand just as it was! He would do nothing with it."

"Some fifty creditors per day were 'rapping' at his door—but few finding him—only a note on his door, stating that he would be in in an hour, but he took good care to be absent nearly all the time. Buffalo, Syracuse, Hudson, Troy, and other places were named as the post-offices where orders were to be sent, but all came into the hands of this consummate rascal. [This is the way he gets names and addresses, which he sells to lottery vendors and gift watch concerns, who send out their circulars.] A more wholesale system of swindling can scarcely be conceived, while the advertising agent is not known at all to the people who are duped. He is behind the curtain, and is only known to the press by his sham certificates of being an honest advertising agent! A greater rascal is not living, we verily believe."

Dr. Andrews pronounces the fellow *Imman*, of the Bible House, *Hayward & Co.*, and *Hickling*, arrant impostors. He might have extended the list to dozens of others in New York. He says: "It is a wonder to us that they have not long since fallen into the hands of the police and made to serve their country in the State prison. Shutte, the advertising agent, is a young man, fashionably dressed, and plausible as Satan. He is destined to a great elevation, at the end of a rope, one of these days, and may we be there to see his exit, while dancing in mid air!"

Editors generally are not sufficiently careful or discriminating in their advertisements, and through them the public are often swindled out of their money.

IT SHALL NOT "RUN OUT."

—We are already receiving renewals from present subscribers, who are taking time by the forelock, and sending in their names more than a month in advance of date when their subscriptions expire. They intend to keep up the connection, nor allow a break in the chain of monthly numbers. This is "all right," and enables us to judge how many to print for the New Year. Of course some will fall off. Our teachings are too far in advance of the mass of mankind to be regarded with favor. Some, who enjoy such luxuries as we disapprove—whisky and tobacco—don't like to pay for a whip for their own backs. Then there are rogues, who don't believe in having their crafts exposed. They will not renew. But we have the assurance of not a few that they will get up clubs of a dozen or more where but one is now taken; so that while we shall lose now and then one, we shall gain many

more. The good work will go steadily on, and a rich blessing shall repay every good effort in behalf of God and humanity.

CHARACTER BY LIKENESSES.

—It may not be known to all our readers that we make written descriptions of character from likenesses of persons who reside too far from us to permit them to visit our office. There are also many instances in which we are consulted by persons who send us the likenesses of their friends unknown to them. Sometimes another sends the likeness of her daughter's lover, and asks some very plain questions—sometimes parents send the likenesses of their sons, asking which will succeed to educational and professional life, or for what trade or business they are best fitted; sometimes an orphan boy or girl, with none to counsel or guide him or her, asks, "What can I do best?" to prepare for my real wants, to do good to others, and "rise in the world?" Many hundreds consult us in this manner every year. As an evidence that we can serve our patrons and give satisfaction, we produce, from among the many recently received of a like character, the following letters:

IOWA, May 27th, 1867.

MESSES. EDITORS: I have received your description of my character. It gives entire satisfaction. On first reading it I was inclined to think you had made several errors; but after some reflection and self-examination I became conscious of the entire correctness of your description. My friends all say every word is true. One of my cousins, older than myself, who has known me from a child, and for the last few years has lived under the same roof, and who, by the way, is an excellent judge of character, after reading the description, remarked that he knew me as he did, could not have described me as truly and thoroughly as you have done.

Yours truly, L. G.

NEW JERSEY, Sept. 11, 1866.

MESSES. EDITORS: Your exposition of my character is received, and it is but simple justice, due to merit, that I should acknowledge the truth and entire correctness of your description of my traits of character. You have astonished my unbelief—not that I had no faith in the science—but to describe the character without a direct personal approach, or without even seeing the original, was more than I could believe was in the power of man, uninspired, to accomplish. Accept the thanks and best wishes of yours truly,

A. N. B.

Those who desire to learn in what manner likenesses should be taken for this purpose, and what measurements of head, etc., we require, in order to do justice to themselves and to the science, may send us a prepaid envelope, properly addressed to themselves, asking for the "MIRROR OF THE MIND," and through this they will learn the particulars. Address this office.

THE HYGEIAN HOME, in the Pennsylvania Highlands, has recently been considerably enlarged and the grounds improved, attesting the prosperity of the institution. The proprietor, Dr. SMITH, is planting trees, shrubs, and vines with a view to health, beauty, and use. When the improvements begun shall be finished; when the roads, out-houses, etc., shall all be put in proper order, there will be nothing wanting to render the Hygeian Home one of the most delightful resorts for health and recreation. Even now the air is always salubrious, the water surpassingly soft and cold, while the mountain views and splendid scenery are nearly equal to those of the Catskill Mountains. One feels himself almost in the thermal world when away up in the Berks County mountains of Pennsylvania.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

THE MOVEMENT-CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 38th Street, N. Y. city. Aug., 67.

MRS. E. DE LA VERGNE, M.D., 325 ADELPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y.

NEW NATIONAL RELIGIOUS PAPER.—A national religious newspaper, to be called "THE ADVANCE," will be published weekly, from the first of September onward, in the city of Chicago. It will represent Congregational principles and polity, but will be conducted in a spirit of courtesy and fraternity toward all Christians. The form will be what is popularly termed a double sheet of eight pages, of the size and style of the *New York Evangelist*. The pecuniary basis is an ample capital furnished by leading business men and others, to be expended in the establishment and improvement of the paper, which is intended to be second to none in the country, in its literary and religious character. The purpose of its projectors is indicated in the name; their aim being to ADVANCE the cause of evangelical religion, in its relations not only to doctrine, worship, and ecclesiastical polity, but also to philosophy, science, literature, politics, business, amusements, art, morals, philanthropy, and whatever else conduces to the glory of God and the good of man by its bearing upon Christian civilization. No expense has been spared in providing for its editorial management in all departments, while arrangements are in progress to secure the ablest contributors and correspondents at home and abroad. The city of Chicago has been selected as the place of publication, because of its metropolitan position in the section of the country especially demanding such a paper, and the fact that it is nearly the center of national population, and in a very few years will be the ecclesiastical center of the Congregational Churches. Issued at the interior commercial metropolis, "THE ADVANCE" will contain the latest market reports, and able discussions of financial subjects, such as will make it a necessity to business men in all parts of the country. The editor-in-chief will be Rev. Wm. W. Patton, D.D., who resigns the pastorate of the leading church of the denomination at the West for this purpose, and who has had many years' experience in editorial labor. The subscription price will be \$2 50 in advance. Advertising rates made known on application. Address THE ADVANCE COMPANY, P. O. Drawer 6,374, Chicago, Ill.

TWO MONTHS FOR NOTHING.

THE METHODIST,

A First-Class Religious Newspaper. IXth Volume Commences January 1st, 1868.

Now is the time to subscribe, as by doing so you will get the paper for the remainder of this year for nothing.

THE METHODIST is an eight-page Weekly Newspaper, now in its eighth year of highly successful publication. It is Religious and Literary: Independent, Fraternal, Loyal, and Progressive.

As a Family Paper it is unsurpassed. It commands some of the best Literary ability of the METHODIST EPISCOPAL CHURCH, and of other Christian Denominations, and is largely patronized by all classes of Christians as a Family paper.

It is Edited, as heretofore, by REV. GEORGE R. CROOKS, D.D. Assisted by the following able Editorial Contributors: REV. ABEL STEVENS, LL.D., REV. JOHN MCCLINTOCK, D.D., LL.D., REV. B. H. NADAL, D.D., REV. H. B. RIDGAWAY, and PROF. A. J. SCHEM.

Sermons by HENRY WARD BEECHER, every fortnight. Also, Sermons from Eminent Methodist Pulpit Orators, among whom are the Bishops of the Methodist Episcopal Church.

Other experienced writers contribute to the various special departments, rendering it one of the most original, thorough, and comprehensive religious periodicals of the day.

In typographical appearance THE METHODIST is unrivaled, being a large quarto printed on good paper, with the best of ink, from the clearest of type.

It has a valuable Correspondence, both Domestic and Foreign; a fresh Story every week for the Children; a Financial, Commercial, Mercantile, and Agricultural Department; a valuable Religious and Secular News Summary brought up to the hour of going to press.

Altogether, as a Religious and Literary Weekly Newspaper, THE METHODIST has been pronounced, by disinterested judges, to be without a superior in point of talent, beauty, and punctuality. Its visits to any family will pay back its price, to every careful reader, a hundred-fold.

Terms to Mail Subscribers, Two Dollars and Fifty Cents per Year, in Advance; to all Ministers, for their own Subscription, Two Dollars.

Postage prepaid at the Post-office where received, Twenty Cents per year. Twenty Cents must be added by Canada subscribers, to prepay postage. Fifty Cents additional if served by carrier in New York City.

Any one sending Three Subscribers and \$7 50, will receive a Fourth copy free for one year.

Subscriptions received at any time during the year.

Liberal Premiums consisting of Sewing Machines, Gold and Silver Watches, Organs, Melodeons, Books, etc., etc., and cash commissions to persons getting up Clubs. Send for Premium Circular. Specimen copies sent free on application. Address

THE METHODIST, 114 Nassau Street, New York, or

It.

H. W. DOUGLAS, Publishing Agent.

THE CHURCH UNION.—The largest and best Religious Family Newspaper in the world.

Owing to the unprecedented reception of this paper, it is now enlarged to twice its original size.

It is devoted to Liberty and Union in the whole Church of Christ, opposes Ritualism and Rationalism, and advocates Radical Doctrines in both Church and State.

It favors universal suffrage, and equal rights for every man and woman of every nationality.

It is the organ of no sect, but will endeavor to represent every branch of the Church, and every society organized for the purpose of converting the world to Christ.

It is Trinitarian in creed, but favors free discussion by all Religionists of every faith.

It will advocate a free communion table for all the Lord's people, and a free pulpit for all his ministers.

It will print a sermon from Rev. Henry Ward Beecher in every issue. This sermon, published at twelve o'clock every Monday, will be selected from one of the two sermons preached by Mr. Beecher the day before publication. It is not copyrighted, nor is it prepared for the press by Mr. Beecher.

Terms—\$2 50 yearly. \$1 to agents for every subscriber. Sold by American News Company at 5 cents, and by Publishers.

Address, CHARLES ALBERTSON, Supt. Church Union, 108 Fulton Street, New York. Sept., 11.

HERALD OF HEALTH

FOR 1868.

THREE NUMBERS FREE!

Every person who values good habits, temperance, fine health, and who would secure for his or her children beauty, symmetry, fine vigorous constitutions, should subscribe.

The New York Tribune says:

THE HERALD OF HEALTH well sustains the high standard it has held forth since the commencement of the new series.

Dr. Dio Lewis writes:

Dear Dr. Holbrook:—THE HERALD OF HEALTH delights us. The friends of Physiological Christianity must make it in circulation what you have made it in scope and spirit—cosmopolitan. I am deeply gratified with its broad, genial, catholic spirit.

Moses Colt Tyler writes:

Everybody to whom I have shown it, of late, expresses astonishment and delight. People say: "Why, it's a grand magazine—racy, practical, liberal, strong, and full, too, of all kinds of most important information!"

Our Monthly has been a great success in 1867. Those who subscribe at once for 1868 will get OCTOBER, NOVEMBER, and DECEMBER NUMBERS FREE. Those who send a Club of Thirty Subscribers for 1868 and \$60 will get a Wheeler & Wilson Sewing Machine, worth \$35, as a premium. \$2 a year; samples 20 cents.

MILLER, WOOD & CO.,

11 15 Laight Street, New York.

LITTELL'S LIVING AGE.

A MAGAZINE PUBLISHED EVERY SATURDAY.

Containing the best Reviews, Criticisms, Tales, Fugitive Poetry, Scientific, Biographical, and Political Information, gathered from the entire body of English Periodical Literature, and forming four handsome volumes every year, of immediate interest and solid permanent value.

EXTRACTS FROM NOTICES.

From the late President of the United States, John Quincy Adams.

Of all the periodicals devoted to literature and science, which abound in Europe and this country, the LIVING AGE has appeared to me the most useful.

From N. P. Willis.

"Tenderloin," "fole gras," are phrases, we believe, which express the one most exquisite morsel. By the selection of these from the foreign Reviews—the most exquisite morsel from each—our friend Littell makes up his dish of LIVING AGE. And it tastes so. We recommend it to all epicures of reading.

From Rev. Henry Ward Beecher, May, 1867.

Were I, in view of all the competitors that are now in the field, to choose, I should certainly choose the LIVING AGE. * * * Nor is there in any library that I know of, so much instructive and entertaining reading in the same number of volumes.

From the New York Times.

The taste, judgment, and wise tact displayed in the selection of articles are above all praise, because they have never been equaled.

From the Springfield (Mass.) Republican.

We can do those among our readers who love sound and pure literature no better service than by referring them to this sterling weekly. It is decidedly the best magazine of the class published in the United States, if not in the world.

From the New York Independent.

No one can read, from week to week, the selections brought before him in the LIVING AGE, without becoming conscious of a quickening of his own faculties, and an enlargement of his mental horizon. Few private libraries, of course, can now secure the back volumes, sets of which are limited and costly. But public libraries in towns and villages ought, if possible, to be furnished with such a treasury of good reading; and individuals may begin as subscribers for the new series, and thus keep pace in future with the age in which they live.

From the Syracuse (N. Y.) Journal, 1867.

The cheapest and most satisfactory magazine which finds its way to our table. It is a favorite everywhere.

From the Mobile Daily Advertiser and Register, June 30, 1867.

Of all the periodicals ever issued in America, probably none has ever taken so strong a hold upon the affections and interest of the more cultivated class of people, none has done so much to elevate the tone of public taste, none has contributed so much genuine enjoyment to its thousands of readers, as LITTELL'S LIVING AGE.

From the Round Table, New York, Aug. 10, 1867.

There is no other publication which gives its readers so much of the best quality of the leading English magazines and reviews.

From the Chicago Journal of Commerce, July 4, 1867.

We esteem it above all price.

From the Illinois State Journal, Aug. 2, 1867.

It has more real solid worth, more useful information, than any similar publication we know of. The ablest essays, the most entertaining stories, the finest poetry of the English language, are here gathered together.

Published every Saturday, at \$3 a year, free of postage, by LITTELL & GAY, 30 Broadway Street, Boston.

THE LIVING AGE and the PHRENOLOGICAL JOURNAL will be sent a year to one address, for \$9. Address as above, or, S. R. WELLS, 389 Broadway, New York. Send P. O. orders.

From the Richmond Whig, June 1, 1867.

If a man were to read Littell's magazine regularly, and read nothing else, he would be well informed on all prominent subjects in the general field of human knowledge.

From the Daily Wisconsin, Milwaukee, June 15, 1867.

The best reprint of foreign literature issued in this country.

From the Church Union, New York, Aug. 10, 1867.

Its editorial discrimination is such as ever to afford its readers an entertaining résumé of the best current European magazine literature, and so complete as to satisfy them of their having no need to resort to its original sources. In this regard, we deem it the best issue of its kind extant.

From the Boston Journal.

The weekly issues of the LIVING AGE make four octavo volumes of about eight hundred pages each, yearly; and we venture to say that few volumes published in this country comprise so great an amount and variety of good reading matter of permanent value.

From the Congregationalist, Boston.

No better present can be made for the enjoyment of a family circle through the year than a year's subscription to LITTELL'S LIVING AGE. It is always well filled with instructive articles on science, philosophy, theology from the reviews, stories by the most popular writers from the magazines, choice poems, brief biographies, and a selection of tid-bits of the most entertaining character. The bound volumes for the past year (1866) are among the most valuable books on our shelves.

From the Philadelphia Press.

The volume for October, November, and December, 1866 (being the third quarterly of the fourth series, and the ninety-first of the whole), fully sustains the high character of the work. It contains the following serials: "Nina Balatka," and "Sir Brook Fossbrooke," from "Blackwood;" "Madonna Mary," from "Good Words;" "Village on the Cliff," from the "Cornhill Magazine;" and "Old Sir Douglas," from "Macmillan." THE LIVING AGE, we repeat, is a library in itself, worthy of its high repute.

From the New York Home Journal, June 12, 1867.

LITTELL'S LIVING AGE, long distinguished as a pioneer in the republication of the choicest foreign periodical literature, still holds the foremost rank among works of its class. Its standard of selections is a high one, and its contents are not only of interest at the present moment, but possess an enduring value. Its representation of the foreign field of periodical literature is ample and comprehensive; and it combines the tasteful and erudite, the romantic and practical, the social and scholarly, the grave and gay, with a skill which is nowhere surpassed, and which is admirably suited to please the cultivated reader.

From the Protestant Churchman, June 27, 1867.

Age and Life are alike its characteristics. It is linked with our memories of the old library at home, and it seems to grow fresher and better in matter as it grows older in years. Once introduced into the family circle, it can not well be dispensed with; and the bound volumes on the library shelves will supply a constant feast in years to come.

From a Clergyman in Massachusetts, of much literary celebrity.

In the formation of my mind and character, I owe as much to the LIVING AGE as to all other means of education put together.

80,000 COPIES SOLD OF THE JUBILATE, a Collection of Sacred Music for Choirs, Singing Schools, Musical Conventions, etc., by L. O. Emerson, Author of "Harp of Judah," "Golden Wreath," "Merry Chimes," etc.

AMERICAN ARTISAN AND PATENT RECORD.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2.50 in advance. Single copies, by mail, six months, \$1.25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COOMBS & CO.,
Proprietors of the *American Artisan*,
It. No. 189 Broadway, New York.

IMPORTANT TO OWNERS OF

STOCK.—THE AMERICAN STOCK JOURNAL AND FARMERS' AND STOCK BREEDERS' ADVERTISER.

A first-class Monthly Journal devoted to Farming and Stock Breeding. Each number contains thirty-six large double-column pages, illustrated with numerous engravings. Only one dollar a year. Specimen copies free, for stamp.

HORSE AND CATTLE DOCTOR FREE.

The publishers of the AMERICAN STOCK JOURNAL have established a Veterinary Department in the columns of the Journal, which is placed under the charge of a distinguished Veterinary Professor, whose duty it is to receive questions as to the ailments or injuries of all kinds of stock, and to answer in print in connection with the question, how they should be treated for a cure. These prescriptions are given gratis, and thus every subscriber to the Journal has always at his command a Veterinary Surgeon free of charge. Every Farmer and Stock Breeder should subscribe for it. We will send from June until the 1st of January for 50 cents.

CURE.—What it is, and what it can do. By WM. W. WIER, M.D., Room 23, Cooper Institute, New York. Price, 25 cents. 1t

GOOD BOOKS BY MAIL.—

Any book, magazine, or newspaper, no matter where or by whom published, may be ordered at publisher's prices, from S. R. WELLS, 389 Broadway, New York.

CHOICE NEW CROP TEAS.

THE SHIP "GOLDEN STATE" has arrived from Japan with 22,000 half chests of the finest Japan Teas to the GREAT AMERICAN TEA COMPANY, Nos. 31 and 33 Vesey Street, New York.

These Teas by the ship "Golden State" were purchased direct from the Japanese factor, and in consequence of the magnitude of the transaction, were transferred at about half the usual commissions. This is the largest cargo ever imported from Japan by about seven thousand packages. By this operation the GREAT AMERICAN TEA COMPANY put these Teas into the hands of the consumers with but one very small profit—an achievement in commercial enterprise seldom if ever before attained. These Teas are acknowledged, both here and in Japan, as being the finest full cargo ever exported from that country.

Also the ship "George Shotton" has arrived from Foochow with 12,000 half chests of the finest Foochow Oolong Teas.

The cargo of the ship "George Shotton" is the second in size that has ever come to this port from Foochow (which is the finest Black Tea district in China). These are the *finest first-picking contract Teas*—rich, fresh, and full-flavored. This will enable us to supply our trade with uniform fine-flavored Teas for a long time to come. These Teas were contracted for before the picking. Contract Teas are always far superior to any others. A large proportion of contract Teas of first pickings go to the European markets. That is one of the principal reasons why the English people consume three pounds of Tea, on an average, to one in an equal number of population in the United States. Heretofore, the United States have been compelled, to a considerable extent, to put up with lower grades of Teas and later pickings. This unfortunate result for the consumers of this country has been brought about heretofore in consequence of the many and great profits of the "middlemen" in the Tea trade. But this has been in a great measure remedied by the establishment of the GREAT AMERICAN TEA COMPANY, and their system of furnishing Teas to the consumer direct from the Chinese and Japanese factors, thus saving them many intermediate profits.

The receiving of these two large cargoes by the GREAT AMERICAN TEA COMPANY for their own trade is acknowledged by the mercantile community as the largest transactions ever made in this country. They were deemed of so much importance, that the fact was telegraphed to all the principal commercial papers in the country by their correspondents here, and thus appeared as an important news item throughout the United States at the same time.

The importance of these transactions in this market is thus noticed by the oldest and most respectable commercial paper in this city—the *New York Shipping and Commercial List*—which says: "The trade have again been startled by the arrival of two large cargoes of Teas to the GREAT AMERICAN TEA COMPANY; the ship 'Golden State,' from Japan, with 22,000 half chests; and the ship 'George Shotton,' from Foochow, with 12,000 packages." And in another place it says: "The recent large operations of the GREAT AMERICAN TEA COMPANY have taken the Trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 12,331 packages Black, and 23,849 packages Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands."

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivaled for fineness and delicacy of flavor.

This is the season of the year when we receive new Teas, and, consequently, our customers will not fail to notice a marked improvement in freshness from this time forward.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small

additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well), can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey Street.

Parties sending Club or other orders for less than thirty dollars had better send post-office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the custom-house stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the List of Prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70 c., 80 c., 90 c., best \$1 per pound.
 MIXED (Green and Black), 70 c., 80 c., 90 c., best \$1 per pound.
 ENGLISH BREAKFAST (Black), 80 c., 90 c., \$1, \$1 10, best \$1 20 per pound.
 IMPERIAL (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.
 YOUNG HYSON (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.
 UNCOLORED JAPAN, 90 c., \$1, \$1 10, best \$1 25 per pound.
 GUNPOWDER (Green), \$1 25, best \$1 50 per pound.

COFFEES ROASTED AND GROUND DAILY.

Ground Coffee, 20 c., 25 c., 30 c., 35 c., best 40 c. per pound. Hotels, Saloons, Boarding-House Keepers, and Families who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30 c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50 c. to \$1 per pound by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY.

Nos. 31 and 33 Vesey Street,

Post-Office Box, No. 5,643, New York City.

The GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, New York City, Orange Judd, Editor.

Christian Advocate, New York City, Daniel Curry, D.D., Editor.

Christian Advocate, Cincinnati, Ohio, J. M. Reid, D.D., Editor.

Independent, New York City, William C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., D. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

CLUB ORDERS.

Edwarda, St. Lawrence Co, N. Y.,
 June 2, 1867.

To the Great American Tea Company,

31 and 33 Vesey Street, New York.

Dear Sirs: I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were nearly out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this at the other and oblige

Your obt' servant,

DAVID C. McKEE.

THE SOLDIER AND THE TIGER.

ACTION, THE SOURCE OF POWER.

In the degree that we employ ourselves we acquire Power. As nature, ever shifting and transforming, is most beautiful and delicious when it is not strictly either spring or summer or autumn, morning, noon, evening or night; so all the potency we ever possess is referable to our moments of action, or when we are experiencing or effecting Changes; the period of transition is that in which power is developed; to acquire and to wield it we must be forever seeking to quit the state we are in and to rise into a higher one. Power, accordingly, which is only life under another name, is resolvable, essentially, into constant progression! It never consists in the having been, but always in the becoming; we flourish in proportion to our desire to emerge out of To-day. It is often asked concerning a stranger, Where does he come from? The better question would be, Where is he going to? Never mind the antecedents, if he be now in some shining pathway. Other people are continually heard wishing to be "settled." It may be useful to be settled as to our physical resources; but to be settled in any other way is the heaviest misfortune that can befall a man, for when settled he ceases to improve, and is like a ship stranded high upon the

sand. Who is the man from whose society and conversation we derive soundest pleasure and instruction? Not he who, as it is facetiously said, "has completed his education," but he who, like a bee, is daily wandering over the fields of thought. The privilege of living and associating with a person who knows how to think, and is not afraid to think, is inestimable; and nowhere is it felt more profoundly than in the intimate companionship of wedded life.

To exchange those thoughts and sympathies which make the life of one the property and inspiration of the other, and to be so vitally united as to render marriage the natural expression of a common nature and destiny, is surely a great and divine end, worthy the ambition of God's most perfect men and women.

A CASUS ANATOMIUS.

A WEALTHY merchant died; his body was dissected:

No symptom of disease was anywhere detected,

Until they reached the heart—which to find they were unable,

But in the place they found—a compound interest table.

THE SOLDIER AND THE TIGER.

OUR engraving is in illustration of a story told of an English soldier belonging to a regiment doing duty in the interior of India. He was one day sitting in a grove not far from the military post, when suddenly a large tiger appeared before him. Of course the soldier was greatly surprised if not terrified by this unlooked-for and very undesirable visitor. He remained as quiet as he could for a short time, during which the ferocious beast seemed deliberating whether it were worth while to make a dinner of him or not. But soon the tiger crouched as if to spring upon him, when the man took off his tall and furry grenadier's hat, and putting it before his face roared in it as loudly as he could. Then the tiger was surprised, and no doubt thinking he had encountered an antagonist of no mean prowess, concluded to defer active hostilities until another occasion, and so turning about he left the grove with hasty leaps. The soldier by his thoughtful experiment saved his life.

TAKE CARE!—How many of us, in our mad pursuit of wealth, or fame, or pleasure, are willing to give a passing glance at the laws upon which our very existence depends? The subject that should first interest mortal man is man himself. He should look into the organization of his body, and study the laws by which that organization is governed. Yet, in this nineteenth century—this age of science—how few there are who have been educated or have educated themselves for the important work of taking care of their bodies! And in consequence of this neglect, how many there are who, day after day, throughout a lifetime, continue to violate the plainest and most imperative laws of nature—till, finally, they bring disease and premature death upon themselves, a penalty for violated law.—*Chippewa Union.*

[If all men and women would learn the laws of health, and obey them, physicians would have very little to do, and the quack would find other modes of swindling the public. It is in *ignorance* that much sin is committed, laws violated, and constitutions ruined. When will parents qualify themselves to teach their children how to regulate, restrain, and direct their appetites, propensities, passions, and whole natures? Oh, the blighting curse of ignorance and violated law!]

THE
PHRENOLOGICAL JOURNAL
AND LIFE ILLUSTRATED.

Is devoted to The Science of Man, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in Choosing a Pursuit, and in Judging of the dispositions of those around us, by all the known external "Signs of Character."

Published monthly, \$3 a year in advance. Sample numbers, 30 cents. Clubs of ten or more, \$3 each. Supplied by Booksellers and Newsmen everywhere.

GEORGE PEABODY.

THEODORE D. WOOLSEY, D.D., LL.D.

The Journal.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

GEORGE PEABODY AND THEODORE D. WOOLSEY; OR, THE AFFLUENT BANKER AND THE ACCOMPLISHED SCHOLAR.

Most of the active-minded young men of our country are looking to one of two paths, both of which lead to distinction. At the end of one of these avenues lies material success—at the other intellectual eminence. If they require models in either of these lines, they can not find any more admirable or more worthy of imitation than is afforded them in the character and career of the two men whose widely contrasting faces look upon us at the head of this article.

Let us study them for a little while in the light of phrenological science. The heads are very much in contrast. The

brow of the great banker is broad rather than high; the side head is large and well developed, giving full Acquisitiveness and all the balancing or regulating faculties in large measure. The look of the head is as though the whole brain moved together, and his mental activity was principally expended in giving sound, important judgments on practical affairs. The knowledge of such a man is very little superior to the knowledge of most other business men; and the reason why his judgment on questions of finance is sound, is not so much because of an enlarged experience, as because of the admirable equipoise of all his faculties. The motive power is sufficient to make him active and enterprising, yet not such as to drive him into rash and ill-advised ventures. The leading characteristic of such a man as George Peabody is strong, unerring common sense. He does nothing

wild, extravagant, or erratic, nothing that is calculated to dazzle or astonish. His mind moves in the same lines that most business men advance upon. The difference between him and Wall-Street men on an average is not in kind but in degree. It is men with his class or balance of faculties that make Wall Street what it is—the financial heart of the Republic; but one would look in vain behind the counters of Wall Street for a brain so broad, harmonious, uniform in its action, and reliable in its conclusions as this. He has no theories to ventilate, no pet ideas to carry out, no castles in the air to build, no chateau in Spain.

He takes the world as he finds it, is not chagrined, mortified, or disgusted with the race because he discovers one man to be a knave or another an enthusiast. The judgment or decision to be made on Monday noon he makes on

Monday noon; and if the market is entirely changed on Tuesday, he acts according to the facts as they can be known on Tuesday.

Such a brain acting on questions of finance for a series of years, would be likely to give a greater number of sound judgments than most other business heads; and other things being equal or nearly so, the best and most successful financier is he who gives the greatest number of sound judgments on the business questions arising in his office. He must know not only what to do, but *what not to do*—when to sell as well as when to buy—when to invest in American securities, and when to decline. As the fortune of such a man accumulates, there is greater and greater need of caution, for, if he does not lose, the funds will increase in his hands. Hence there is an expression on Mr. Peabody's face that would repel and discourage any rash or hasty operator, every dealer in wild-cat stocks. He would be slow to examine the claims of the most hopeful silver mine in the Rocky Mountains, for, in the nature of such things, there can be no sure and positive basis on which to found an opinion.

Mr. Peabody is an excellent judge of men. He does not speculate on human nature, but he makes up his mind at once, and with great precision, whether or not a man will answer for the position for which he designs him. Next to his sagacity and caution, the most prominent organs of his head are Human Nature and Benevolence. Phrenology, as well as his noble acts known and read of all men, credit him with a noble organ of Benevolence.

You have to look at the part of his head where this organ is situated in order to see how a man could be so cautious, acquisitive, and secretive for sixty years, and then part with more than half the winnings of a lifetime in a few years of regal benevolence. And looking at his Benevolence, one wonders how he kept himself from being a Howard or a Wilberforce. The same sagacity, caution, and good sense which make his financial judgment so valuable, render him equally wise and sensible in the distribution of his largesses.

He has always dealt in great staples and great figures. Hence in his donations his aim is to reduce the general sum-total of want, ig-

norance, and discouragement; to give young men of this day better opportunities than the youth of his day enjoyed; to supply books, lectures, buildings, and apparatus to the devotees of science; to give the poor English laborer a home where he can be sure of pure water and good air; to give the "poor white trash" of an unhappy and misguided South a primer, a grammar, and an arithmetic.

One secret of Mr. Peabody's great success in life has been the few demands his body has ever made upon him.

He inherits from poor, industrious parents a constitution singularly normal and sound. For the greater part of the time his body and its wants do not occur to him at all, but leaves him wholly free and unembarrassed to give the whole vigor of his mind to the matter in hand. Another secret is the happy blending or mutual action of the three largest organs on his head, Acquisitiveness, Human Nature, and Benevolence. *He is master of the art of winning the friendship of the men with whom he deals.*

There is only a few years' difference between the ages of Mr. Peabody and President Woolsey, and the career of the one in scholarship has been as brilliant and successful as that of the other in financial life. The head of the great scholar is high and narrow as compared with that of the banker. The intellectual faculties proper, those which are principally active in the acquisition of knowledge, are in beautiful development. What ivory whiteness and polish of brow! How active and how vigorous is the look of the front brain! How admirably balanced are the perceptive and reflective faculties! Such a man is not a mere bibliophile; he explores the annals of the past and unrolls the histories of dead republics, not to gratify an idle curiosity, but to arrive at great and perpetual social and political laws.

Though President Woolsey reads six or seven languages, and can repeat nearly all the New Testament in the original tongue, he makes no vain show of his learning. It is simply the means to an end; and that end is the knowledge of what the wisest men in all ages and countries have said on the great social and civil questions that are as important now as they were in the day of Socrates, and about as well understood then as now.

A prominent trait of President Woolsey is his modesty and the abhorrence he shows for all display, vanity, or adulation. His great acquisitions were made, not for fame, not for glory, not even in the hope of the mention of his fellow-men, but simply out of the inherent activity of the knowing faculties. It is as natural and as easy for him to acquire knowledge as for George Peabody to acquire property.

Each in his way is a millionaire. One has hardly ever touched an enterprise that did not yield him large pecuniary returns. The other takes up a book in Greek, in Latin, in German, or even in Hebrew, Arabic, or Sanscrit, and if it has wisdom, intelligence, sagacity, or worth of any sort, he will be sure to glean it out, no matter how much chaff may surround the

grains of wheat, and the fact, the principle, or the aphorism will be stored away in the crowded cells of a memory which is never at fault.

Few Americans of this generation have led a life so earnest, strenuous, and self-sacrificing as that of President Woolsey.

Horace Mann was not more truly in earnest. The hereditary fortune of Mr. Woolsey was such as to place him above the necessity of labor. Yet he has been as constantly active and laborious as though his bread and the shelter of his family depended on his unremitting toil. How fine the pattern he thus gives for our young men of fortune! Born in the class whose talk is mostly of horses, guns, dogs, yachts, watering-places, and theaters, his whole life, boyhood, manhood, and riper years, have been given to nothing but truth, wisdom, humanity, and religion. A natural patrician by hereditary wealth, and a grandson of President Dwight, the deepest theologian and the most brilliant man except Alexander Hamilton that lived in the Revolutionary times, he has not given himself a day of indulgence on these accounts, but devoted himself wholly to the deepest studies and one of the noblest lines of activity. In this way he has won for himself a position among that small number, the inevitable leaders of the race, the finest thinkers and the ripest scholars of his time. When elected President of Yale College in 1847, he refused to draw a salary for his services, simply remarking that his estate was such that he did not require an income from that source. Thus for twenty years he has given his time, his erudition, and his character to the cause of sound learning and liberal culture; seeking no human rewards, nor any praise but the approbation of Him who said to the servant to whom He had given five talents: "Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things; enter thou into the joy of thy Lord."

The lives of these men have been in wide contrast. One has lived among ledgers, invoices, and reports of the exchange market; the other has been an earnest, sad-faced scholar, living in the past, a companion of the laureled dead, only too happy if he might behold "the bright face of Truth beaming upon him from the sacred air of still studies."

How different are the gifts which they bring to lay upon the altar of humanity! One contributes massy bags of gold, the fruits of well-earned financial success; the other gives the ripe conclusions of a lifetime devoted to the search for Truth. One erects the building,

* GEORGE PEABODY, whose name has become so well known in America and England through his extended munificence, was born at Danvers, Mass., February 18, 1795. His parents were poor, and his only education was obtained at the district school of his native place. At the age of eleven he was placed at work with a grocer of Danvers; at fifteen he became clerk in the dry goods store of his brother in Newburyport, and two years afterward had the entire management of the business of his uncle in the same place.

In 1817 he became a partner with Mr. Elisha Riggs, of Baltimore, engaged in the dry goods trade, visiting England several times with important commissions. In 1827 he removed to London, and seven years afterward became a banker there, where he accumulated his immense fortune. His extended charities, which have since rendered him so popular, amount to many millions of dollars. His fortune is estimated at \$30,000,000; he is one of the richest private individuals—save Baron Rothschild—known to us.—*Our Annual of Phrenology and Physiognomy for 1863.*

* THEODORE DWIGHT WOOLSEY, D.D., LL.D., was born in New York, October 31, 1801. He graduated from Yale College in 1820, studied theology at Princeton, and subsequently from 1823 to 1825 was a tutor in Yale College. In 1825 he was licensed to preach. In 1831 he was appointed professor of Greek in his alma mater, and in 1846 he was chosen president of that institution, succeeding Dr. Day, who then retired. He has prepared several text-books for instruction in Greek, and also has printed various occasional sermons and addresses, besides frequently contributing to the quarterly periodicals, especially the "New Englander."

purchases the books, and prepares the apparatus of a great school; the other becomes the informing spirit, the presiding intelligence of that school. One generously parts with a large share of his princely fortune; the other gives to education *himself* as a whole burnt-offering—himself with all his abilities and attainments—all the wealth of his love and the weight of his character.

It is not for us, nor any human critic, to arbitrate between two such splendid characters. Each in his way is most noble. And the essence of the abounding worth and dignity in each of these men is not in the fact that each is in his line a millionaire, but in the fact that both alike are insensible to pleasure, indifferent to all merely physical enjoyments, emancipated from the thralldom of earthly tastes and passions, and devote themselves wholly to the public weal. L.

WASTE.

BY E. OLDCHILD.

SCIENCE has searched out the economies of nature, and affirms that nothing is lost. She finds no wasted energies, but a conservation of power; and looking toward ultimate results, it may appear that by a correlation of unseen forces, all well-meant human endeavor, all holy aspiration, shall, finally, in some far-off and unknown future, avail something for good. But if we estimate life according to its immediate and visible uses, much seems wasted in misapplied activity, and the souls that have inherited richly, often squander most.

If some optimist should say that failures are not so many efforts thrown away but are needed warnings, it may be answered, that it is easy to get entangled in paradoxes. We all must deal in partial truths, and therefore be subject to self-contradiction. Although observation testifies that examples, unless accompanied by outward pain or punishment, are more often followed than used as warnings, yet it can not be denied that the failures of which we are *conscious*, since they involve suffering of some sort, might serve to warn others if we lived more open lives, allowing our fellows to read that which might add to their wisdom as well as to their knowledge.

As things are, it seems plain that our failures are, in most cases, a waste. They retard the slow advance of humanity, and cause suffering to the individual, and therefore deserve the gentle condemnation of help; but if we have thought it in the main an easy matter to give this help; if we have believed it always sufficient to love largely, independently of return, and thus loving, to go forth seeking to bring out the hidden good in others, we have soon grown sadder and wiser. If we have sometimes drawn sweet sounds from chords that were silent before, we have as often awakened discords. Doubtless we have found the law of help an inexorable law of conditions and limitations. Of that outward help which consists in almsgiving

and the like, I do not speak here; too many are restricted to other modes.

As our finer perceptions develop, and we search the possibilities of life, we shall find nowhere such capability of mutual help as in companionship of soul, in that spiritual relation which rises above outward circumstance, and occasionally even dares to include some "not in our set." But they who enter here must leave behind the grosser needs, therefore you will pass on, vain world. You will peer curiously at the communings of the blest, but you will go on with your eating and drinking and your money-making. You will send base thoughts to hover like harpies over the "feast of souls," but where "immortal hungers are stilled," you will not sit down; to you it is a feast of Barmecide.

Our inconsistencies of living and teaching fill the way with stumbling-blocks. Principles should be vitally illustrated; yet we who profess to believe in Christ, fail to work out the logical results of that belief. We who are commanded to be like Him, are as full of conventionalities and artificialities as if we had somewhere read that He observed the polite proprieties. Was there any saving clause in that new and best commandment, or is it only our modern paraphrase which reads, "Love one another, provided it be convenient and politic, and seemeth good to Mrs. Grundy?"

"Oh, Consistency! thou art a jewel;" and we set thee in rare logic and goodly paradoxes, but wear thee on unfaithful hands, till, like the fabled stone of olden story, thy waning luster reveals our treachery to the very truth we feign to worship most.

Love, companionship; we gather up the words, but too often waste their sacred meanings on mere outward association. We may pity others, may devote our lives to them, but neither in friendship nor in marriage can we truly and happily love those who do not represent our favorite virtues, who do not largely realize our ideals; and our ideals are projections of ourselves, or of what we might be under more favorable circumstances, for we can not conceive of what we do not know either experimentally or intuitively.

Companionship affords the most abundant help where there is both likeness and difference—difference in strength or power, and in the degree of development to which the faculties have attained, and likeness in primal conditions, in organic quality, which involves likeness in general tendencies, in all essentials, and usually includes a capacity of being so modified, each by the other, as to bring about a still further resemblance, and that oneness of spirit from which proceeds a power to bless the world.

There is much glib talk of the oneness of humanity by some who do not take these things enough to heart, and we are grown so familiar with the idea of the "colossal man" whose shadow fell across English orthodoxy, that we should hardly be surprised to meet him in tangible embodiment at the next street corner; but humanity is the product of individual

souls, and in so far as these factors are wrongly combined, the working out of the problem is delayed.

Passing influences may leave their fleeting impression; but help, whether conveyed by words and other symbols, or by a silent effluence of soul, is genuine and saving, according to the possibility of mutual sympathy, and neither pity nor compassion nor the utmost good-will can supply this lack.

"Lead us not into temptation," is the best of all prayers; but they who choose friend or consort at the bidding of gold or social position, are tampering with powers of evil from which it may be in vain to ask deliverance. Alas! we are slow to see who come nearest to our souls, or having seen, are smitten with a sudden blindness of worldly wisdom, and grope on alone, and wearily. It is fitting that fineness should ally itself to fineness, and coarseness to coarseness—*similia similibus curantur*. However great the wish to give, or the need to receive love, any intimate association of coarse and fine natures is likely to result in mutual misapprehension and injury. In the vital interchange of thought and converse, the flash of soul is more or less destructive to the finer being, and seldom, if ever, of benefit to the coarser. Unfortunately, there is often between such the attraction of strength and weakness, but for proof of the disastrous results, we have only to note how

"Quick friendships have a sudden end,"

and how young hearts crumble slowly into ruins.

The essential equality is that of fineness, the harmonious difference; the natural attraction is that of strength and weakness, of positive and negative, the *modes of manifestation* being determined by the *dominant faculties*. It has been hastily said that the strong are coarse and the fine are weak; but Nature, in her generous moods, does now and then give to this poor world one who is strong, fine, pure; and if such a one should take unto himself, for life-companionship, another, less in power and will, but equally fine and pure, could any words reveal the blessedness? It happens mostly otherwise; but the union that is not based on likeness in organic quality, and difference in power, is not fully sanctioned by God or Nature.

If we would search out, and obey in all simplicity, the laws of our being, we should carry with us the powers of Nature; but, alas! we waste life in ignorance and resistance.

HUMAN DEVELOPMENT.—To how great a perfection the intellectual and moral nature of man is capable of being raised by cultivation it is difficult to conceive; the effects of early, continued, and systematic education of those children who are trained, for the sake of *gain*, to feats of strength and agility, justify, perhaps, the most sanguine views which it is possible for a philosopher, a parent, or a guardian to form with respect to the improvement of the species.—*Stewart's Elements*.

THE PARIS EXPOSITION FROM A PHRENOLOGICAL POINT OF VIEW.

BY JAMES BURNS.

No matter where I came from, here I am, in the midst of the excitement and bustle of the world's great show of 1867 aggregated in Paris. I am aware that many of the readers of the JOURNAL have found their way to this great fashionable center of attraction; but for the benefit of those who may not have had the opportunity, I shall submit a few remarks upon the subject which may be thought worthy of interest to those who make the mental constitution of mankind their special study. But in view of such a large subject, and the thousands of specimens that present themselves to the beholder, one is at a loss where to begin and where to end. Every country is so fruitful in those varied manifestations of the "mind immortal," that it might be an interesting theme to commence and discourse on the peculiarities of race and nationality from the first point of view that presents itself. This is, however, a matter which might be accomplished in New York itself, as individuals of all nationalities may be every day seen traversing your streets and mingling their peculiar dress and physiognomy with the more familiar visages and costumes of the natives. Of phrenological practitioners, Paris and the "*Exposition Universelle*" are singularly void and barren. I have hunted for days endeavoring to discover a French phrenologist, but hitherto entirely without success. French Phrenology seems to be entombed in the scarce and untrimmed volumes of Gall, Vimont, Broussais, and other celebrities of the last generation. A recent volume, by Dr. Castle (said to be an Englishman), entitled "*Phrenologie Spiritualiste*," is the latest work I have met on the subject. I have had the pleasure of coming in contact with several practitioners of the science from England.

ELECTRICITY—GYMNASTICS.

It would be rather beside our purpose if I furnished you with an account either of Paris or the Exhibition. The works of numerous travelers inform us on everything we want to know respecting the civilization of this age, and the newspapers have certainly been fruitful in their reports of the world's fair of 1867. After diligent scrutiny in those departments where I expected to meet with objects of special interest to phrenologists, I have not been successful in discovering anything that is particularly worthy of record. Collateral objects of interest will be found in the class devoted to medical and surgical apparatus. In this department of artistic manufacture France stands unrivaled, Paris taking the lead in the manufacture. The instruments for the application of electricity are not, perhaps, superior to those so extensively used with you in America, of which, I am sorry to say, I notice none on exhibition. The gymnastic apparatus is, however, very extensive and well assorted. I have visited several gymnasiums in Paris; they are

large, well ventilated, clean establishments, fitted up with the usual appliances of ladders, horizontal bars, vaulting horses, rope and horizontal ladders, immensely heavy clubs, iron dumb-bells, scepters, and a combined gymnastic machine, of French invention, by the aid of which a weight may be pulled up by a series of ropes so as to exercise the muscles in a great number of ways. We saw no indications of Dr. Lewis' musical gymnastics being in use in the establishments, and the proprietors of such institutions had never heard of them when I mentioned the matter.

MODES OF BATHING.

In Paris, gymnasiums have baths in connection, which are mostly in the form of a douche, shower, ascending douche, and spray bath; sometimes a steam-engine is used to pump the water so as to cause it to strike the bather with great force. This causes a genial glow in the skin. I had one the other morning; and though the water was as cold as water well can be during the hot summer weather, yet the drops came in contact with my body so minutely subdivided and with such force that the friction put me in a positive glow. Don't laugh, facetious reader, and by stretching the matter suppose that the continuation of this cold shower bath would have brought me into a state of perspiration so as to require a cold plunge to cool me down. Yet I have to attest that this means of applying water is a sovereign remedy for that tendency to congestion which follows cold bathing in many cases. The bather has a gutta percha cap put on his head. He is then subjected to a forcible shower bath where there is not a great volume of water, but it is projected against the surface of the body with great force. While this shower is acting upon the shoulders and back, the attendant with a flexible tube projects a forcible stream against the lower limbs. The next item of treatment is the ascending douche, then a shower bath from perforated pipes which go round in circles, extending from the bather's ankles up to his neck, and in the center of which he stands while the water rushes on him from all sides. This last is the most powerful and chilling of the series, and those who have light muscles and poor circulation had better dispense with it. The bather is then covered with a clean sheet, the outside of which is vigorously rubbed by an attendant. The effect of the whole process is of the most exhilarating and invigorating nature, enabling the bather to stand one of these broiling hot days with ease and convenience. In the exhibition is shown a variety of these hydropathic bathing apparatus, which indicate the great popularity which hydro-therapy has assumed in Paris and other French cities. In fact, Paris abounds with baths. They are in almost every street in some parts of the city; and sometimes there are several in one street. On the Seine there are quite a number of bathing establishments, affording swimming baths for men and for women, connected with which are schools of natation. They are built on the river, so that the bathers literally bathe in the river, but are pro-

tected by the bath, which allows the water ingress and egress, but prevents the natator from being carried away by the tide. One object connected with bathing is worthy of special notice. A series of bath belts for invalids and children enable the sick to receive the benefits of a bath by being supported in a recumbent position by these belts. An apparatus is also adapted for children in the form of a chair, by which they may be suspended in the bath and amuse themselves with little buckets which hang from a pulley above them.

MANIKINS—DISSECTIONS.

In the American department, hospital apparatus for the army is exhibited. Near by is Dr. Auzoux's collection of anatomical models, exciting great interest. A demonstrator is in attendance, who, with his assistants, dissects the figures and lectures upon them to the spectators. His highest-priced figure of the human body costs 8,000 francs. By it the human organism may be most minutely dissected. He has also an elaborate preparation exhibiting the structure and physiology of the brain. The sensory track is seen to pass through the medulla oblongata and spread itself throughout the surface of the brain, from which emerges the motor fibers conveying the behests of the mind to the various parts of the nervous system. When the model is complete, it exhibits the appearance of the brain and its appendages in their normal condition on a large scale. The dissection, as it goes on, exhibits the appearance of the brain in a great variety of aspects. By taking off one piece, a particular section may be observed, as if a slice were taken off at random, in the manner pursued by the old anatomists, before Gall and Spurzheim pointed out the true mode of dissecting the brain. Other portions may be removed so as to give the observer a general section of the interior—showing the position and relations of the corpus callosum, commissures, ventricles, shalami, quadrigeminal bodies and other parts, that can only be indefinitely represented in an engraving or diagram. It is very remarkable to observe with what delicacy and perfection the bundles of nerve fibers can be stimulated, and what a vivid idea is impressed upon the mind of the natural appearance and functions of those most recondite portions of the human anatomy! This collection contains a great variety of models of men, eggs, eyes, ears, the gorilla, the horse, botanical specimens, and, in fact, all branches of natural history. We notice some finely prepared skulls; but nothing particularly illustrative of phrenological science with the exception of this dissecting model of the brain, which is, certainly, a most interesting object. Prince Oscar, of Sweden, exhibits gymnastic apparatus on Ling's system. Spain produces electro-therapeutic apparatus, artificial limbs, gymnastic apparatus, and a curious lay figure, life size, with all the articulations and capable of all attitudes and movements which the living subject is endowed with. It is one of the greatest curiosities of the exhibition. In a continental department a great

curiosity is presented by specimens of embalmed bodies, and parts of bodies, in a glass case. The trunk of a female is shown, the tone of the skin being nearly as natural in appearance as in life. There are also dissections of the fossæ of the face, with parts of the brain and nerves issuing therefrom. There are, also, preparations of the stomach, duodenum, intestines, and various other portions of the viscera; they present the natural outlines as in life; but the color is changed by the process of preservation.

ETHNOLOGY—THE RACES.

In an adjoining department are a series of heads representing ethnological divisions of the human race. One side of the model is scalped, showing the thickness of the integuments, while the other side of the head is in its natural shape. The models are well executed, and strikingly illustrate the peculiarities of the groups of the human family which they are intended to portray. The Ethnographical Society of France occupies a small cottage in the gardens, almost entirely with ethnographical collections of types of the various tribes of humanity. This is supplemented by other collections, and by sculpturing and modelings, so as to make it a very interesting, instructive, and complete exhibition. Such illustrations, being photographed from nature, are, of course, remarkably authentic; and it would be a boon to all students of anthropology to have such a series of photographs engraved and published with descriptive letter press. I may add that such a work is, at present, in course of issue, in monthly parts, by the eminent publishing house of Routledge & Co., of London and New York, entitled the *Natural History of Man*; the first five numbers are issued, and devoted almost exclusively to the description of the native tribes of South Africa. It is profusely illustrated. The plates do not only figure the individual appearance of the natives, but illustrative engravings are given to exhibit their agricultural, manufacturing, social, and national characteristics.

THE PICTURE GALLERIES.

One feature of great interest which the exhibition presents to the phrenological student is the picture galleries, which are replete with the best productions of all countries where art has been cultivated in any high degree. France supplies an immense extent of painted canvas. Britain has also contributed her share. America is in an adjoining department, and the works on exhibition, though not numerous, are exceedingly choice—both as regards the high class tone of the subjects and manner of execution. Many of the old-world people are astonished to think that such a young country as America should figure so highly in art alongside of old nationalities who have had schools of painting in existence during the last three or four centuries. It is quite curious to remark the moral tone of the paintings furnished by the above countries. England presents in her art, as they are exhibited, a preponderance of specimens illustrative of moral and domestic scenes—having a quiet,

homelike, subduing influence upon the mind. Scotch artists appear more advantageous in bold specimens of natural scenery, broad humor and studies illustrative of historical scenes, all mingled with illustrations of the sentiment which we have noticed as being characteristic of the English artists. The American section contains some grand pieces of natural scenery; for where is to be found more gigantic specimens of nature's wonderful productions than in the great continent of the West? There is also a high idealistic tone noticeable in many of the American works which it is difficult to describe—an approach to spiritual symbolism, which seems to carry the mind of the spectator away from the scenes around up into a sphere of consciousness far in advance of every-day experience. Other nations follow their peculiar circumstances. Italy is rich in religious and Scriptural scenes; Austria in battle and historical subjects, some of them of immense size and wonderful execution—dark shades of color being most prominent. Prussia and Russia speak the language of their geographical situation and moral and literary characteristics. They are particularly rich in portraits and scenes descriptive of great historical incidents. Here we witness the struggles and triumph of the Reformation depicted on immense tableaux that speak the language of the times in words of immortal merit.

Passing on to France, the lighter colors are more in use. Nude figures and beautiful outlines of the human form are here introduced. The esthetic part of human nature is liberally portrayed; while glory and national achievements, both military and diplomatic, are largely represented. Spain is not behind-hand in this group, and is particularly characteristic. Belgium and the Low Countries bring forward their peculiar style of art, often illustrative of deep meaning and power of conception. In fact, a few pictures in this department convey to the mind an immense area of European history. But as art is the reflex of nature, we find glorious glimpses of the human peeping out most refreshingly in every section of this elaborate collection. All forms and combinations of the primitive powers of the mind—all temperaments and natural dispositions—all educational biases, national, individual, or circumstantial, are limned with a piquancy that is highly gratifying and never to be forgotten. How faithfully are the great artists of mankind led to a correct appreciation of the great truths of phrenological and collateral sciences in depicting the passions, predilections, and other phenomena of human existence! How carefully they describe the contour of the skull, the form of the face, the expression of the countenance, the quality, color, and deposition of the hair, the perfection and details of the limbs, the proportions of temperaments, all in harmony with the natural attitude and habit, including dress and ornaments. Truly art is in harmony with science, or she belies her sacred mission. All efforts of the human mind seem to point in one determi-

nate direction, and by harmonizing these sectional forms of mental action, known by the names of science or morals, etc., we arrive at a glorious unity worthy of the Almighty Mind who willed it into existence. But we must not forget the portraits which this unrivaled display of paintings contains.

PORTRAITS—CHARACTERS.

The student of history, who, by the aid of Phrenology, more correctly understands what he reads, has a glorious banquet presented to him in the number of portraits of historical personages of all countries that are here gathered together. How interesting it is, for example, to behold under a variety of aspects the portrait of that martyr of freedom and duty, Abraham Lincoln! a little crowd is constantly in contemplation of these specimens of art which represent his person. And so of the famed of all countries, whether their renown has originated in worthy or unworthy acts. The sculpture is also worthy of notice; many specimens of humanity are here faithfully rendered by the hand of the sculptor. Writers, patriots, warriors, despots, etc., mingle their various forms together, in which their characters and habits of thought and action are unmistakably outlined. Compare Frederick Bremer with Auguste Comte, and the contrast in organization is as great as the contrast between their mental productions. Again, compare the organization of Garibaldi with some other modern warriors who shed the blood of thousands for material aggrandizement and the absorption of nationalities. The ideal subjects also exhibit the same class of truths. The gladiator, the shepherd, the musician, the dancing boy, the sage, the prophet, the warrior, all have chiseled in their forms the organic peculiarities required by the characters they are made to assume. I have taken notes of the developments of several busts of noted personages which I have met with, and at some future time, if your space will permit, I shall be glad to furnish you with the details of them. There are six busts of Napoleon the First, extending over the greater part of his life. Near these are several correct busts of Napoleon the Third.

It is an interesting study to notice the peculiar progress which thought and action make in transforming the material organism in the course of a series of years, and these are strikingly evidenced in the busts of the first Napoleon. The difference between him and that of his imperial nephew is curiously suggestive of the widely different policy which the two emperors have assumed.

CONCLUSION.

This subject is a large one, and adapted to a separate communication. Having had such a lengthy gossip, your readers will perhaps excuse me if I take a walk around the outer circle and notice the peculiarities of national organization and costume, as observed in the waiters who dispense the various kinds of comestibles supplied at the cafes and restaurants belonging to the different countries represented at the exhibition. During this hot weather one may almost be excused if they stop at the American soda water fountain and regale themselves by sucking a glass of iced lemonade through two straws which the negro boy, who serves it, assures us are not used a second time. This peculiar mode of imbibition is a subject of much amusement to our British cousins, who, in swallowing fluids, usually apply the glass direct to the labial fissure.

Our Social Relations.

Domestic happiness, thou only bliss
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appealing as in truth she is,
Heav'n-born, and destined to the skies again.—*Cooper.*

UNMARRIED WOMEN. THEIR PLACE IN SOCIETY.

BY MRS. GEORGE WASHINGTON WYLLIS.

THERE are too many old maids by half in the world!

Not, perhaps, for the comfort of those individuals (and their name is legion) who like some meek and ever-ready pair of shoulders upon which to lay the burden of "do this" and "do that" and "don't forget the other thing." Makewrights and scape-goats have their uses. Society composed merely of men and their wives without these "ancients" would be not unlike an ill-packed trunk; there would be rattling and shaking and breakages innumerable. Old maids are needed to "pack in;" to fill up the interstices, and steady the uncertain, and support the weak! But there is no kind of danger of the race of old maids becoming extinct, as long as the world wags on in its usual style, and the sun rises and sets after its accustomed routine!

How is it with the old bachelors? Well, they are somehow regarded with gloomy respect, outre and semi-barbarous though they may have become. *They* are not the victims of neglect! *They* might have been married had they chosen to say the word to some expectant young lady! But an old maid—that's quite another matter. She can't help herself—she is the victim of untoward circumstances. People look at her as they might regard a piece of unsalable calico left over the season on the merchant's back shelves, or a picture that hangs unsolicited on the artist's hands. It is the general impression that she is very much to be pitied—that she has tried her best, angling in the brook of life for the shy fish called "husband," but without success.

Now, what is she to do? Womanly delicacy forbids her to snap her finger in the face of this obtrusively pitying world and silence its whispers by the bold assertion: "It's no such thing. I have had opportunities to be married, and I am an old maid by my own choice and election!" And if she did face up the world in this sort of manner, the world wouldn't believe her.

It is very hard to be misjudged, and the old maid has more generally to drink this bitter cup to the dregs!

"It is such a pity Mary Such-a-one has never married—she would have made such a nice wife!" How often we hear that expression, and how it must aggravate the single sisterhood! "Such a nice wife for somebody—such a useful household machine; such a willing drudge!" And what does the old maid herself think about it? Does she regret that she hasn't been led, an orange-blossom decked lamb, to the sacrificial altar of matrimony?

Or does she fall back contentedly upon her *corps de reserve* of green tea, worsted work, and mint drops, thanking her benign stars that she has never been inveigled into that bondage wherefrom there is no escape save by death or divorce?

After all, there is a good deal to be said in favor of the life of an old maid.

She is independent, firstly, to begin with. No number of Fourths of July could convey the full adequate idea of her entire liberty of speech, motion, and thought. If she wants to go anywhere, to the North Pole for instance, or Van Diemen's Land, she has nothing to do but to pack up and go. Nobody's permission is to be meekly asked, nobody's countenance to be furtively studied. If she likes her breakfast at four o'clock in the afternoon, she orders it at four o'clock in the afternoon, and eats it like one of the Signers of the Declaration! If by any chance she gets out of temper, there are no sharp angles of any one else's temper to strike wordy fire! She is self-reliant, self-sufficient, self-contained.

She is held responsible for nobody else's backslidings. If some poor, over-burdened wretch blows out his brains, or still worse, runs off to Australia with his debts unpaid, and his character riddled through and through like a sieve, there is nobody to roll their eyes at her and murmur reproachfully, "Ah, if his wife had been a different woman, that never would have happened!" If Jones fails, she is not Mrs. Jones to be overwhelmed with the torrent of blame that should rightfully be adjudged to Jones' unlucky fondness for faro and champagne!

She may be like a solitary oyster in its shell; but has not the life of an oyster some advantages? Oysters are placid, calm, unruffled by the high and low tides of life! Who would not rather be an oyster than a sensitive plant?

But we are speaking now of the old maid who is an old maid simply through her own choice and preference—the comfortable, cosy old maid with money enough to live on, common sense enough to enjoy her freedom, and ingenuity enough to amuse herself without the aid of masculine society! How is it about other old maids?

"There never yet was a woman so ugly or unattractive but that some time in the course of her life she received at least *one* offer."

This is a statement frequently and confidently made, but nevertheless quite untrue. There are women in the world who pass through existence unsought and unwooed. There are women, and more than a few, too, who are made to feel most bitterly and uncompromisingly that they are superfluities in the world!

They are educated "to be mammas;" they dress, dance, and attend fancy fairs "to be married;" they smile and play croquet, and sit up late at nights "to be married;" and, finally, the autumnal shadows of the "thirties" steal athwart their lives, and they are *not* married after all. Nobody denies that they are "nice girls;" they are neither humpbacked, pock-marked, nor outwardly deformed, and yet somehow the commodity does not seem to be marketable. They cling to the outskirts of that debatable land which is neither girlhood

nor ancientry, as long as possible; they treasure the fading trophies of their youth, and finally, when the line is irrevocably drawn, and the little girls of their day, succeeding to the throne of bellehood, look at them askance, and speak of them in audible whispers as "old maids," they still hope and trust on, believing in the truth of Milton's line—

"They also serve, who only stand and wait!"

Would it were so for the sake of the old maids.

And then, what a second-rate place they are compelled to occupy in existence. For most of them—say seven eighths on an average—having no settled homes nor incomes of their own, are obliged, perforce, to become the tolerated appendages of other families. Alas! how much less are the legitimate and authorized paupers of a charitable institution to be pitied than these pallid, delicately nurtured paupers of polite society, who eat the bitter bread of dependence, and try to persuade themselves that it is cake!

How is it done? Perhaps a married brother offers them a home in a grudging sort of way, as if he were throwing a bone to a dog; perhaps a sister, who finds the cares of her family too burdensome for her unassisted shoulders, takes her in lieu of upper nurse or superior servant, "to make herself generally useful!"

If we wanted to enter an insane asylum within the year, we should take a situation somewhere "to make ourselves generally useful." Wash, scrub, go out to house-cleaning by the day, white-wash, do anything in the world rather than try to "make yourself generally useful." The sphere is altogether too general. Never, until you have been hunted into your grave, will people be satisfied that you have made yourself "useful" enough.

And so ends all spice and sparkle of individuality in life, as far as the old maid is concerned. Thenceforward she is only a convenience to others—a faint reflection of stronger, happier presences. She sews on buttons; she mends zig-zag rents; she sits up with sick children; she scolds servants, per special instruction; she checks off washing bills; she runs after people, picking up things, shutting doors, dusting tables, and setting cushions straight; she is here, there, and everywhere in one and the same moment.

And when, at night, stealing away from the social circle in which she feels too acutely that her presence is scarcely missed, she creeps, tired and heartsick, to her rest, she has the satisfaction of knowing that everybody thinks "she might have done a little more!"

Is this what the heavenly Arbitrator intended a woman's life should be, when he filled her nature with loving instincts and aspirations, which a solitary life can never fulfill?

When a bone gets out of place, there are surgeons to set it, and cunningly devised instruments to coax it back where it should be; but when human creatures get so woefully and piteously out of place, where is the surgeon that can contrive to re-set them? Even the Good Physician who watches over us all, extends no perceptibly aiding hand in this extremity. It is his will that we should all work out our own salvation, and even so must it be.

But we come back to the original text of our brief discourse. Why do we have old maids at all? That is the question. Not all the leap years in the nineteenth century—no, nor the ninety-ninth either—will do the matter any good, while deep on the very substratum lie social misapprehensions and mistakes that must be uprooted and reformed.

Queen Elizabeth was an old maid; but why, nobody on earth knows. What an interesting book somebody might make about the Old Maid's history, if he could only tell us circumstantially and accurately "how it all happened."

SOCIAL RELATIONS.

BY JOHN NEAL.

ARE not most of us greatly mistaking our way through this world, whether preparing for the next, or not? We are adventurous, it may be; hopeful, industrious, ambitious, and oftentimes self-denying and self-sacrificing, to such a degree as to astonish our neighbors. And so are they. If we look about, we find the great majority of mankind busy with a like purpose, though in a different way, while here and there one may be met with who looks upon life with other eyes, and instead of "presuming to be ambitious," to govern others, or to be talked about in the newspapers, or to be known for great wealth, or astonishing enterprise, or extravagant living, holds on his way with a calm, hopeful, trusting, untroubled spirit; satisfied that he will be taken care of, if he will only try to take care of himself, and provide for those who are dependent upon him, in a reasonable way.

How many there are about us who are interested only in what concerns themselves—in their own business—their own families—their own health—and their own purposes! And how many who boast of this! claiming to be neither busy-bodies, nor eavesdroppers, nor intermeddlers, and minding their own business so effectually, that war, pestilence, and famine, earthquake and revolution, are all unheeded, with every form of trial or calamity, so long as they and theirs are comfortable.

Can this be what we were made for? Are we not, by the very constitution of our nature, by the very laws of our being, forbidden to segregate ourselves from our fellow-men? Are we not intended to share in the sorrows and joys of others; and of others, too, beyond the walls of our own habitation, or neighborhood, or country? In other words, instead of minding our own business altogether, are we not impelled, nay, commanded, to intermeddle with the business of others, if thereby we can promote their welfare?—to "look upon the things of others," as well as upon our own things? Else, why are we endowed with so many and such ever-active social faculties? Why, with such unappeasable desires toward companionship? and why, when our sympathies begin to cool off, and the frost of age to gather along the avenues of sensation, and we go less and less into the world, and cast off, or neglect, or forget one after another of the companions and associates of our earlier time, why do we withdraw from the sunshine and bustle of life into the loneliness and shadow of old age with such unwillingness? why are we so often troubled with misgiving and self-reproach?

The fact is, that although we are endowed—all of us—with a certain number of capabilities and faculties, *all of which are essentially social*, making us mutually dependent, while no one of the whole is of itself *unsocial* or *unsympathetic*, though it may be selfish—we are ignorant of their functions, and unless we take

up Phrenology as a new manifestation of the religious element, and try not only to understand, but to obey, the laws of our heavenly Father, as they are there revealed to us, we shall die in our ignorance; nay, more—we shall die in our sins; being unacquainted with ourselves, and liable to go astray continually in the pursuit of happiness, both here and hereafter.

The moment a man is ready to acknowledge, even to himself, that he takes no interest in others, he may be sure that he is going to his own funeral, whatever may be his age. He can not hope to live out half his remaining days; for sympathy is the wine of life—nay, life itself; and he who wearies of companionship, and withdraws into himself, and refuses to go into company, or to visit his neighbors in a sociable way, and sees the shadow of an old friend vanish from his path forever, without any dampening of the lashes or a word of prayer, is already dying by inches. The blue mold is gathering on his heart, though he may be sitting in the high places of power; and the world may be busy with his name, as a philanthropist, or statesman, or soldier, as a millionaire, an orator, a man of science, a poet or an author.

What shall such a man do, being unacquainted with Phrenology? Let him bestir himself—let him begin to busy himself with other men's affairs. Let him not only "visit the fatherless and the widow," and "keep himself unspotted from the world," but let him try to get acquainted with himself and with his next-door neighbors, to become interested in whatever concerns them and theirs, to watch children at play, and the sunshine itself, when it shimmers along the turbid waters of life.

What! shall a man be satisfied with making money in this world—or even reputation—and neglect the sensibilities, the godlike sensibilities and capabilities of his nature, and hope to be forgiven? Shall he grow old in his darkened office, like an overgrown bloated spider in the midst of a web that overspreads the whole community, and hope to persuade himself, when he comes to die, that he has lived to any good purpose? How can he? What has he been doing for others?—nay, for himself, while burying most of his talents in a napkin, and employing only the few? How shall he answer for the abuse of so high a trust when called to his reckoning?

Hath God given him a heart—a conscience—understanding, and the gift of speech, only to be employed upon himself? All the social propensities are strengthening and cheerful in their operation. They who are pleasantly employed outlast their companions, who are always at work in a dreary way, or always idle. Just like all the painters and poets who, in laboring for others, as well as for themselves, have buried whole generations of pretenders. Titian and Dante are but archetypes of what devoted men should be, in their self-seeking.

There are those who think it undignified to trifle in this world, as if we should be capable of trifling, were not trifling sometimes to be

encouraged. No greater mistake, so far as our social relations are concerned—and they make up, after all, the substance of life—can there be than that of supposing it unworthy of a great mind, or of a serious mind, to make itself agreeable, even by trifling or pleasantry. Sour-tempered men feed on themselves; and they who can not laugh, and laugh heartily, too, at downright nonsense on a proper occasion, have no business here.

When the great Sully came upon his royal master by surprise, and found him down on all-fours, galloping round the chamber with the little Dauphin on his back, and was told to wait until he was himself a father, before he made up his mind upon that subject, while his Majesty gave the boy another turn round the room, he was learning a lesson for life, worth more to him perhaps, and to others also, than many a negotiation which had set all Europe in a blaze.

The French understand these things better than we do. They are not afraid to be happy. The profoundest mathematicians—the great surgeons, chemists, naturalists, anatomists, and draughtsmen—and they are among the greatest the world has ever produced—are never out of place in fashionable society, and Cuvier and Laplace and Legendre, and other Academicians, the leading minds of their day and authorities with all the world from their day to ours, were never ashamed to appear in purps and tights, with a *chapeau bras* under the arm, in the crowded assemblies of highest fashion; sharing in the prattle, and as ready with their agreeable nonsense, or *persiflage*, there, as with their demonstrations in the lecture-room or the Academy, or the Forum. And this it is to live. These men understood what their faculties were given to them for; and each was constantly encouraged to seek its appropriate nutriment. Hence were these men not only philosophers, but men of the world—welcome everywhere, and everywhere at home. Yet the French are frivolous, we are told—given to gossip and tittle-tattle. *Frisolous!*—men of the largest erudition—of the most astonishing patience—and among the most laborious inquirers after truth, and at the very head of the profoundest thinkers—*frivolous*, forsooth, because they enjoy a little nonsense now and then, or a whirl in the dance, after their heads have whitened. No! not frivolous are such men—but philosophers and sages, who know how to enjoy life—in other words, who understand what is meant by social relationship.

Such things never happen with us, nor with our breed. We are too dignified by half. The only man I ever knew, in England, who was at the same time a man of science, and a man of the world, was Sir Humphrey Davy, and he passed for a coxcomb in the drawing-room, because, being altogether alone, and with nobody to keep him in countenance, when he felt inclined to play the fine gentleman, and sink the shop, but Sir Thomas Lawrence, he never seemed to be altogether at ease. And we Americans are constantly transgressing in the same way.

That we are by nature social beings, may be seen by the habits of children. A healthy child can not bear to be left alone; and the voices of other children outside, or the glimmering phantasmagoria of the street reflected on the wall, or in a mirror, will drive him half crazy. And why? Because the social instincts are beginning to flower. And even the most selfish child becomes unselfish, in his anxiety for a companion. How few among men are capable of going apart from their fellows to gloat over a picture, or to enjoy a glass of wine, or a canvas-back, by themselves! They need companionship, and it requires the hardships of a long service to the world—of a long disheartening apprenticeship, indeed, to overcome the instincts of youth, and make us uncompanionable, and selfish and short-sighted.

We encourage self-respect. We discourage self-esteem. And why? Because we do not understand, I will not say Phrenology—but because we do not understand ourselves. And so with most of the social affections—the sweeteners of life, our comforters and our hope under all the trials and sorrows of life—what know we of them as a people? as a money-making, thrifty, ambitious people, who go through life, determined to be talked about, and remembered after death for something, it matters little what—fast horses or a full treasury—for having made a noise in the newspapers, or on 'change, or for "cutting up fat."

Why do we not ask ourselves what these many faculties are given us for, if they are never to be exercised, cultivated, and strengthened? Are they not always, if rightly employed, avenues of pleasure, as much as our bodily senses? and are we not abusing a high and holy trust, if we fail to exercise them? But even with our bodily senses, it is pretty much the same.

We have eyes, but we see not. God's wonders are all about us, but we neither look up to the great and glorious heavens, and watch the changes there, nor heed the silent and awful presence of great mountains, nor look abroad over the sea, unless we have something at stake. We have ears, but we hear not. The harmonies of the universe are within us and about us forever, but we hear only the dinner-bell, or the chink of gold, or the rustling of 7.30's. "The heart is like the sky," says Byron.

"The heart is like the sky—a part of Heaven!
And changes night and day too, like the sky.
Now o'er it clouds and thunder *must be driven*,
And darkness and destruction, as on high."

And he found it so, poor fellow! But Byron was but one of millions who have gone through the world, and out of the world, without knowing what the heart was made for—as a home for the social affections, for household joys, and everlasting companionship. Rightly understood, the changes he would complain of are but the signs of vitality; and the very "clouds and thunder" but purifiers of the upper atmosphere, and the "darkness and destruction," just what we must go through with, before we understand ourselves.

Here is a young man at my elbow full of en-

thusiasm and vague hope, who affects to despise public opinion—to have no need of sympathy—to take no interest in the welfare of others out of his own family, and to be what he calls thoroughly independent, and above desiring the help of others. The simpleton!—if he knew how dependent we all are upon others, even the strongest upon the feeblest, and the wisest upon the simple, he would soon feel the necessity of making friends, instead of enemies, at every step in life, and before long set a just value upon the opinion of others. But just now, having a large share of self-esteem, with little caution, and just enough love of approbation to make him feel uneasy when he is overlooked or misunderstood, though he will do nothing to conciliate or soothe, and if appearances are against him, will not condescend to explain himself to his best friend, upon the ground that friends would not require explanation, for what are friends good for if they must be satisfied, as others are, upon every questionable point that arises?—he will probably go on belying himself and his own nature, and passing for a self-sufficient, heartless coxcomb, when, if the truth were known, and he would but cultivate the social relations, and learn to care for others without neglecting himself, he would be one of the most popular, and in time one of the most prosperous young men I know of. But will he? God only knows. There are so many about us, who go on through life with their senses sealed, having their eyes fastened upon one object only, and their ears open to but one song—that of the siren they are following headlong into the deep sea, that I am almost frightened when I think of what may happen even to him, with his fine talents, and generous temper, and large heartedness, if he do not wake up and bestir himself, before it is forever too late.

And there—just over the way—is another sad example of what may follow a long neglect of our social duties, growing out of our social relations—a man who has not yet passed the meridian of a well-appointed active life, and who might be comparatively a young man, if he would but keep his heart young—for it is our own fault if we grow old without sickness—begins to feel no interest in anything here but money, whist, and the chances, however remote or contingent, of his occupying a post he is never likely to reach. He has long eschewed most of the duties and all the forms of social relationship, and is therefore—it can not be otherwise, though he may not be willing to acknowledge it even to himself—a most unhappy man. Linked to others by the delicate bonds of human sympathy—sorrowing unaffectedly with others, and the more the better, as others have sorrowed with him in his trials and afflictions—he might be at this hour one of the happiest men living, a comfort and a blessing to thousands, exceedingly popular, with a reasonable prospect of a long life before him, and a life, too, of great usefulness. But no; feeling so little interest in others, whom he has known all his life, and to whom he is largely indebted for the encouragement and help which

have made him what he is, that if he were questioned to-day, he could hardly tell you whether they were alive or dead, he will go down to the grave with the reputation of having no more heart than a grindstone.

And why? Because the man has always been sufficient for himself. Not having understood the sanctities of our social relations, he has gone along, with his whist-playing, and political manœuvres, till his heart is ossified, and the currents of natural affection for man in the aggregate have been turned back and chilled at the source.

Now, he can not afford this; nor can any other man, or woman, that lives. We are put here, not only to be happy ourselves, but to make others happy. To this end we are made, not independent, but inter-dependent, and are endowed with appetites and inclinations to bring us together, and to keep us together, and God has provided the proper aliment and the proper stimulus for such appetites and inclinations; and we might as well stop our ears and employ only our eyes—or shut our eyes and trust only to the sense of touch—and seal up our other senses, under pretense of pursuing the single object of our life with more steadfastness, as to grow old in our offices, or laboratories, or counting-rooms, without ever looking up at the blue sky, or stopping in our hurry to hear the twittering of birds.

And the birds and blue skies, what are they, after all, but the types and shadows of other attractions about us, which we fail to profit by, or even to recognize, while we are tolling for the bread that perishes, and laying up riches for them who are already beginning to wonder why we, with our feeble step and trembling hands and pale dim eyes, are not weary enough of the world to leave it? They see us sitting apart from our own families, perhaps, not joining in the conversation of our children and grandchildren, however sprightly and agreeable, tired to death of newspapers and gossip, unable to read, and yet more unwilling to be read to; and they take it for granted that such must be the natural condition of old age.

Preposterous! If the social affections were cultivated as business relations are; if the interest we once felt in the affairs of others, of comparative strangers, perhaps, had not been: nothered or paralyzed, men would never grow old, nor women neither. They would die, of course—might die of age, so called, but it would be of the old age that endears and attracts—not that which repels; and we should part with them, as with old friends going home to meet their families, full of cheerfulness and hope, though full of years.

Let our young men watch themselves narrowly, and when they find springing up in their hearts a desire to withdraw from social enjoyments, and to be by themselves—to give up their acquaintances, and to have done with nonsense and trifling—let them wake up and bestir themselves and walk out into the open air, and take to sea-bathing, and rare beef, or they will find, after a time, that these morbid

symptoms have determined their fate for life, if not forever; so that if they escape being men of business, and nothing more—money-getters and politicians, or something worse—with no interest in mankind, no concern for the great human family outside of their counting-rooms and offices—they will find their better instincts deadened, their social inclinations utterly paralyzed or smothered, and all that makes life worth having, a disappointment and a weariness.

To escape this dread issue, what shall be done? First satisfy yourself as to the causes. If you know anything of Phrenology, or can obtain a chart of your head from a truly scientific man, these questions will be answered at once, and conclusively. But if you are ignorant of that beautiful science, try to ascertain whether your unsocial habits are growing upon you, and whether they proceed from your dislike of others, or from your over-estimate of yourself; from your indifference to the opinion of others, or from shyness or bashfulness. And then, after having satisfied yourself upon these points, go to work. Employ all your faculties—all—giving the preference to those for

which you are mainly distinguished, and by which you are to get your bread, but neglecting none—not even the smallest; for even the smallest are needed, or they would not be there. Make friends of all you meet, so far as you may without a sacrifice of manhood or principle; be "all things to all men," as St. Paul was—and in the same sense—not by pretending or counterfeiting or concealing—but by manliness and truthfulness, and you will most assuredly have your reward, and establish the best of *social relations* for life.

And now, let me ask you, young man, if this be not worth striving for? Would you like to grow old, like that good-for-nothing old man you have so often met with, who began by withdrawing from the world, then from the neighborhood, then perhaps from his own household—first hugging his money-bags, and then, after awhile, himself, and then his old shriveled hands, and weak, trembling knees, as if he were caressing the babies he once loved, till they had outgrown themselves, and he had gone off to a dark, dusty corner of his old warehouse or family mansion, there to gloat over the record of his possessions, and forget even the wife of his youth, and the burial-place of her children? If not, be up and doing! You have no time to lose. Up! I say; and

PORTRAIT OF ELIAS HOWE, JR.

God helping you, you will be ashamed of yourself before the sun goes down, and to-morrow be ready to throw yourself upon your face in thanksgiving for the escape you have had, and for the comforts assured you by a right understanding of your social duties.

ELIAS HOWE, JR.

THE head of an active, restless, persevering, inventive, ambitious man! The brain was large—somewhat above the average size—but not disproportioned to the body. Originally the vital temperament was ample, but the mental and motive predominated. The health quality of the whole was good; if not exquisitely fine, he was neither coarse nor gross.

His perceptive faculties were large, constituting him an observer. The reflective powers were sufficient to enable him to understand principles and to ap-

ply them, while Imitation and Constructiveness were large; not more so, however, than may be found in the ordinary New England head, of which he may be said to have been a fair type.

His Love of Approval was large, as exhibited in the mode of his dress and the style of wearing his hair. This may be considered a sort of vanity which often exhibits itself in persons not highly cultivated. That he had large Firmness, there can be no doubt; this may be seen in that long, full upper lip. He also had Hope and Combativeness large, and the social affections were not wanting.

His sympathy, kindness, and generosity are well indicated; but he was that kind of man that requires occasions for liberal action to be offered, rather than that kind which makes them for one's self. There is nothing of the

prodigal revealed in this organization. The feeling of "mine" would be strong at all times; and he would also be unyielding in his sense of right, holding all men to a rigid accountability.

There was a good degree of refinement and love for Art as well as for mechanism. Aside from his vanity and love for ostentatious display, he would be accounted an industrious, persevering, self-relying, and self-helpful citizen.

The following is a brief history of the man and of his works.

This gentleman, whose name is illustrious in connection with sewing-machines, died on the 3d of October last. Although comparatively a young man, he had achieved a reputation for inventive talent and benevolent zeal scarcely surpassed by any in these days of American liberality. His achievements with the sewing-machine not only conferred a last-

ing boon on mankind in the way of simplifying and rendering easy a severe employment, but affords a striking example of success attained under painful trials and disappointments.

The history of the sewing-machine is too well known in this country to need a specific reviewal at our hands. The picture of Mr. Howe persistently working upon the model of a little instrument, in a lonely garret, pinched by hunger, destitute, suffering, is vividly reproduced on the mention of his name. He was born in 1819, at Spencer, Mass. His father was both a farmer and a miller, and young Elias assisted in this double capacity. Having acquired some knowledge of mechanism, he subsequently became engaged in a machine-shop in Boston. There the idea of inventing a sewing-machine was suggested to him.

In 1845 he succeeded in producing a machine which would sew, but its cost was too great to render its manufacture in large numbers practicable. However, the result was attained, and subsequent improvements simplified the mechanism and reduced the cost of manufacture. Much opposition was offered to the introduction of the machine into general use by manufacturers who imagined that it would injure their interests; and several persons competed with him for the patent rights, so that it was not until 1854 before his claims were acknowledged. After that time, the revenue derived from his patents began to increase, and made him in a few years very wealthy.

During the war he made good use of his means, contributing largely toward enlisting volunteers in the service of the Government. At a public meeting in Bridgeport, Conn., early in the war, he enlisted as a common soldier in the 17th Regiment Connecticut Volunteers, and went to the field. He afterward established a depot in New York city as a stopping place for disabled and returning New England soldiers, where thousands were nursed and cared for until able to continue on their journey homeward.

An internal disease affecting the kidneys, from which he had suffered for some years, terminated his life while he was stopping at the residence of his son-in-law in Brooklyn.

We are indebted to the editors of the *Scientific American* for the excellent portrait of Mr. Howe.

LITTLE THINGS AND LITTLE PEOPLE.—Little things and little people have often brought great things to pass. The large world in which we exist is made up of little particles as small as the sands on the sea-shore. The vast sea is composed of small drops of water. The little busy bees, how much honey they gather! Do not be discouraged because you are little. A little star shines brightly in the sky on a dark night, and may be the means of saving many a poor sailor from shipwreck; and a little Christian may do a great deal of good if he or she will try. There is nothing like trying.—*Dr. Chalmers.*

SUNSHINE OF THE HEART.

[THE following lines are sweet, breathing a true poetic spirit. They are from a youthful writer quite unknown to print.]

The glorious sun tolled up the sky, and gently sank to rest,
And tinged with its soft mellow light the shadows of the west;
Its dying rays reflected bright, o'er hill and dale and stream,
Shed forth a radiance beautiful e'en in their last faint gleam.

The gathering twilight softly fell, and kissed with breath of dew
The tender shrubs and sleeping flowers, of many a changing hue;
And lovingly its mantle flung o'er earth so bright and fair,
Protecting 'neath its sheltering folds the "habitants of air."

More heavily the shadows drooped, more dense the darkness fell,
Till roving fancy stayed its flight, bound by the dreary spell.
With eager eyes I tried to trace some bright spot viewed before,
But only darkness met my sight, the sweet light fell no more.

How bright would be this world of ours, if we could always trace

The sunshine of a loving heart reflected in each face!
If darkness never came to cast its gloomy shades around,
Or cause sharp pangs of grief to mar the happiness profound!

Oh, let us prize each sunny spot whereon our footsteps roam,
And let its cheerful radiance cast a halo round our home;
And bind with ties that never can be rudely rent in twain,
The hearts of loved and cherished ones, till no dark clouds remain.

Bright angels with their loving eyes shall watch time move away,
And guard from every coming cloud the sunlight of to-day;
Trusting the future in His hands, who doeth all things well,
Let us walk forward in the way of happiness to dwell.

VICTORINE A. COLWELL.

SAINTS AND SINNERS.

WHERE ARE THEY?—No. II.

WE stated in No. 1 that we did not use the terms saints and sinners merely or principally to distinguish the *perfectly* good from the *perfectly* bad, for we believe that no man on earth is *perfectly* good or *perfectly* bad. Saints and sinners is an expression we use for convenience, to mark the good, however great their faults and sins may be, from the bad, or rather, to express the real and great difference between people.

We think we have shown most clearly that Phrenology shines with a full and bright light upon men and women, revealing their character *just as it is*, and not as it *appears* to a superficial observer to be. We have spoken boldly of inherited sin—in other words, of inheritance of diseased bodies and diseased minds—of the great disadvantages of bad parentage and bad ancestors, and shown that the men and women who struggle bravely with all these disadvant-

ages, and fight a *good* fight, are good and much more worthy to be called saints than many others who pass for such.

And now another question seems to arise, which we will try to answer before we leave the subject of saints and sinners, and that is, *where* are they?

In the first place, we might say that neither saints nor sinners "travel in battalions." Perhaps no fact with regard to the race of man needs more notice than this. The good and the bad do not exist in separate distinct bodies. Good organizations are not composed entirely of good men, and bad organizations of bad men. Bad men are not confined to the lower strata of society, and good men to the higher. There is no organization so good that bad men can not be found in it; no pinnacle so high that bad men can not be found on it. Neither are there any organizations so bad, nor any places on earth so low, that good men can not be found there.

We are not among those who chastise that great organization, the church, with scorpions. We believe that the world is much better with it than it would be without it. He must be a superficial man indeed who affirms that the church does more harm than good, and that there is much more evil than good in it. And yet it can not be denied that hundreds and thousands of bad men are hidden and sheltered in it—men whose intellects and moral sentiments are ruled by their propensities—men who fold the drapery of the church around them, and are glad that it becomes them so well, and that their outward appearance is so fair.

Then there are others in the church who are doubtless, in a measure at least, ignorant of themselves. They have been long, perhaps, under restraining, pleasant influences. They have, perchance, had place, or power, or prominence in the church. They have been admired and praised for well-doing, and their Love of Approbation and their Self-Esteem—two prominent organs of the brain—have received great gratification, and thus well-doing has become a great delight to them. They do not do good for the love of doing what is good and right, but that they "may have praise of men." Their motives of action are no higher, no better than the motives of those whom they style bad men, and who commit evil deeds. And their pride in all that they think themselves to be, and in all that they do, is monstrous. They daily "thank God that they are not as other men are."

There is still another class in the church who think themselves much better than those in the world who bear the stamp of bad men. They practice many virtues because they were trained from their earliest childhood to practice them. Thoughtful, watchful parents kept them out of the way of harm, out of the way of sin. A good physical and mental training, as well as a desirable inheritance from their parents, made it easy to avoid the wrong and choose the right, and they early learned to look, with

a kind of horror, upon those who are called bad men, and without the least appreciation of their struggles.

We have no thought of beginning a tirade against the Church. It is a sacred, blessed inclosure, but within it are men as bad as many who are regarded unfit society for the good. We ask again the question—where are the good and the bad? Where are saints and sinners? And we answer, *everywhere*. No large body of men was ever so pure that sinners did not exist there; and no stratum of society so high that only the saints of the earth formed it. Everywhere, too, are men who, made in God's image, are struggling to have that image, long lost though it be, restored in themselves. The places where these men abide may be low places indeed, and the atmosphere they breathe may be most foul and oppressive. Phrenologists have found good heads in bad places. They have seen pure tears start from the eyes of those who were called bad men, and by using their philanthropy as well as their phrenology, and inquiring into the daily lives of these men, they have learned that they were, with almost everything against them, struggling to resist all evil, and come off conquerors.

Oh, men and women in high places, who close your eyes and turn away your heads, and draw back your garments when men in low places pass by, be careful how you call them low, for many of them will come up at last, in the resurrection morning, with robes made white in the blood of the Lamb. And it shall appear that many of them had bad physical and mental constitutions, and yet laid hold on the Infinite One and worked with him in the restoration of their physical and mental health.

One of the hardest tasks in life, because men bring unwilling minds to it, is to find out the truly good. It is admitted that men of a certain stamp or character are good, but they are too often looked for in certain organizations, or certain high places of the earth, and not everywhere. We call too many "common and unclean" because they abide in "common and unclean places."

It would be well if every philanthropist were a phrenologist, for then it would be discovered that many among the so-called "lost and wretched" need only a few favoring circumstances to make them better than the men and women who labor for their good.

We may reasonably suppose that there will be a great sifting time at last, and that we shall look on, with astonished eyes, when those whom we once thought great sinners shall "shine forth" as saints.

Let us learn then now that saints, as well as sinners, are everywhere, in high places of power and temptation and corruption, and also in low places, where, it is supposed, none but evil men live and work. Let us learn, too, that Phrenology, however much derided by the ignorant, does true and noble service for the race by dealing fairly with all men, taking off the masks from those who wear them, undeceiving the deceived, and aiming and trying

to make them better, taking the defamed and those of no reputation by the hand and showing the world their true character and worth; and also offering help and healing to men with bad heads and bad lives, and discouragement to none.

Phrenology has never yet taught any man that he is such a sinner he can never become a saint; that he is so bad he can never become good; but it helps all men upward and onward, and longs to bring the day when saints shall be found everywhere and sinners nowhere.

A THOUGHT.

BY FRANCES L. KESLER.

In a thousand tender actions,
When we let the truth decide,
There's a holy, soothing power,
Free from passion's fiery tide.

In the haunts of sin and sorrow,
All along Time's wreck-strewn strand,
Should we let our fellows perish,
With no kindly-offered hand?

With no eye all moist with pity,
With no sweet and gentle word
Whispered to the doubting spirit,
By all other ears unheard?

Must a kiss on cheek or forehead
Of a brother in distress,
Have a tendency to baseness,
Rather than to cheer and bless?

Ye that say so from conviction,
Yours the hearts that hold the sin,
And at last your lips must answer
For the guiltiness within.

OVERCOMING.

THE human soul grows toward perfection in no other way than by rising above, or overcoming, all obstacles that lie in the path between it and its ideal. This is the exercise that God requires of it. And as a proper exercise of the body gives to it greater strength and symmetry, so greater strength and symmetry of soul is the result of its proper exercise.

The little child that walks across the floor for the first time, to take from its mother's hands a glittering toy, gains something more than this, for it learns to walk. The heads and hands that toil for daily bread, earn with it a mental and physical development, as well as a satisfaction and an independence of soul, worth far more than the bread, and which that alone without the toil could never give.

The student who, after long searching, discovers some hidden truth, receives with it a keener mental sight to detect a more darkly hidden one. So, every evil temptation resisted; every burden borne with Christian fortitude, will bring to the soul strength to resist a greater temptation, or bear a heavier burden.

As, by use, the physical eye learns to see new wonders in the material world, and the mental eye at every trial explores farther in the realms of science, so the spiritual eye, by every exercise, reads some new revelation of God.

The soul that drifts through its existence

here in a kind of passive state, being acted upon, instead of acting, is of as little use in the moral world as a paralyzed body is in the physical. The great problems of life that set so many souls quivering and throbbing in the struggle for solution, are as nothing to such a one. It wonders why people are so disturbed. All talk about right and duty is as unintelligible to it as Greek is to a child. It has become paralyzed through lack of exercise.

The soul that stands highest in the scale of virtue is the one whose life has been the greatest struggle, the one in whose experience inclination and duty have been oftenest at variance, the one to whom every question involving a principle has come directly, allowing no evasion, but demanding an immediate choice between the right and the wrong. It is the one that, obeying the voice of God within it, "has done the right, as though it walked the earth alone, and all the gods were dead," expecting no praise and seeking no reward. Right-doing for the sake of right is the only true exercise of the soul, and every inclination to allow any other motive to control one's actions is a temptation to do wrong.

In the desire or inclination to do that which conflicts with one's highest convictions of right lies temptation. The desire for an object makes that object a temptation. The degree of the desire makes the degree of the temptation. The strength of *will* one possesses, will measure the ease or difficulty with which the desire may be controlled, and the temptation thus resisted.

As each person is differently constituted from every other person, that which is a strong temptation to one may be none at all to another. The man who does not drink whisky, simply because he has no taste for it, must not think himself better than he, who, yielding to a powerful appetite, is intoxicated every day; nor must he think himself equally strong with him, who, crushing a craving desire, walks the earth a conqueror.

He who does not lie or steal or get drunk, because he is not tempted to do these things, must not fancy that it is because he is strong. Temptation is the only test of strength. There is no virtue without it. From the Gethsemane of a vanquished temptation the soul comes strengthened and glorified. And the darker and more fearful the struggle, the more divine will be the victory. HOPE ARLINGTON.

A LITTLE PHILOSOPHER.—"Papa," said the son of Bishop Berkely, "what is the meaning of the words *cherubim* and *seraphim*, which we meet in the Holy Scriptures?" "Cherubim," replied his father, "is a Hebrew word, signifying knowledge; *seraphim* is another word of the same language, and signifies flame. Whence it is supposed that the cherubim are angels who excel in knowledge, and that the *seraphim* are angels likewise, who excel in loving God." "I hope, then," said the little boy, "when I die I shall be a *seraph*; for I would rather love God than know all things."

EMINENT AMERICAN CLERGYMEN. BIOGRAPHICAL SKETCHES, WITH PORTRAITS.

THE Church of Swedenborg is of comparatively recent growth, but bids fair to become a strong society in this country. The spiritual element is very conspicuous in its religious doctrines, and the organ in the human brain which subserves spiritual susceptibilities is generally large in the heads of its prominent advocates. In their interpretation of Scripture, the followers of the Swedish seer claim to discern the spiritual essence of its declarations in a deeper and more satisfactory sense than other religious investigators, and have thus come to be regarded by many as given to vague and mystical utterances of faith. An examination of their doctrines and practices shows them to be liberal and tolerant—in fact, promoters of the utmost religious liberty, under a Christian polity. Following the sketches of biography and character the reader will find a concise view of the principles and practices of the Church of the New Jerusalem.

THOMAS WORCESTER, D.D.—Dr. Thomas Worcester was born in Thornton, N. H., April 15, 1795. He entered Harvard College, Cambridge, Mass., in 1814. During his collegiate course he read with much interest the works of Swedenborg, which he found in the College library. In 1818, he began to lead in public worship in Boston, and was licensed to preach in 1819. He was ordained, and introduced into the office of an ordaining minister at the same time, by the Rev. John Hargrove, of Baltimore—the first American New Church minister—August 17, 1823. He has been elected President of the General Convention of the New Jerusalem in the United States of America at every annual session of that body since 1838. He has also been President of the Massachusetts Association of the New Church almost from its commencement, in 1833. Ever since his ordination, Dr. Worcester has been the pastor of the Boston Society of the New Church. He was for many years an editor of the *New Jerusalem Magazine*, and has contributed largely to the standard literature of the Church. He is an earnest, thorough-going, and highly esteemed leader in the denomination.

Here we have a strong yet fine face; every feature is well set and finely chiseled. His head appears to be rather large, at least it is well proportioned to the body, and there is every indication of a sound mind in a sound body. The temperament is at once fine and strong, elastic and enduring. Such an organization feels quickly, and all the functions respond promptly. There are no signs of excess, of overdoing, of losing balance and being swept away from proper moorings by impulse, passion, or prejudice. His is a judicial intellect; he would have made an excellent magistrate, to investigate the higher class of causes in civil and criminal jurisprudence; is endowed with practical talent sufficient to gather knowledge, and the organs of memory to hold it, with a talent for classification and synthesis, as well as analysis, that makes him a clear, sharp, and consecutive thinker. He reads human character like a printed book; men standing before him for the first time are revealed to him with a clearness which, to his judgment, amounts to certainty. His benevolence and veneration are the pre-eminent elements of his religious life. He has faith and spirituality, but he accepts very little without a show of reason, without facts or analogies to sustain them. The doctrine of correspondences would be to him an open book, while to many it is a sealed one. He should be known for integrity, dignity, perseverance; for great sincerity; for plainness of speech, and dignity of manner.

Rev. CHAUNCEY GILES. Chauncey Giles, well known in New York religious circles as a bold and spirited advocate of the New Church tenets, was born at Conway, Mass. While a young man, being possessed of a good education, he went to Ohio, and there took charge of a school. It was not until nearly middle life that he entered upon the preparatory course which made him a religious teacher. In May, 1863, he was ordained a minister of the Church of the New Jerusalem, and in June, 1863, he was consecrated to the grade of an ordinary minister. He has been for some years

the pastor of the Society in New York city, and is the President of the New York Association of the New Church.

The well-known Swedenborgian preacher of New York has a strongly practical brain. There is no imitation, no tendency to follow, here. He is staunch, methodical, energetic, and progressive. He differs widely in mental organization from most ministers of his sect in possessing so much practicality and so little dependence on the intangible evidences of emotion or feeling. He should be keen-sighted, quick in drawing conclusions, and active in the prosecution of his chosen calling. Benevolence, Veneration, and Firmness are large, and constitute the principal ingredients of his religious life. In fact, the chief stimulus of his moral life is benevolence, and this gives tone and direction to his practical intellect.

Rev. ABIEL SILVER was born in Hopkinton, N. H., April 8d, 1797. His early educational training was limited to the common school and academy. Soon after he was twenty-one he became seriously religious, and joined the Episcopal Church.

In 1818 he engaged in teaching school, of which he was fond. In 1820 he left New Hampshire to seek better opportunities in the State of New York, taking a letter of introduction from John Harris, Judge of the Court, to Nathaniel H. Carter, of Albany, then editor of the *Statesman*, who became his friend, and opened the way for a favorable acquaintance with men of influence. From this time Mr. Silver soon opened a prosperous school in Ogdensburg, N. Y., and pursued teaching and his studies regularly from 1820 to 1825, with a view of entering the Episcopal ministry. But he finally felt compelled to give it up, because he could not altogether understand the doctrines of the Church, though he still continued an active member.

This changed his plans of life, and he went into business as a country merchant in Waddington, N. Y. In 1830 he took goods into Michigan, where he dealt also in lands. There he found it was necessary, in order to be successful in business, that he should understand law; and he read law for that purpose. He was then appointed one of the Associate Judges of the Circuit Court; and, still later, Commissioner of the State Land Office; always holding some responsible office of trust until 1849. Then he gave up all other business for that of the ministry, and was ordained a minister of the New Jerusalem Church. In 1855 he was consecrated an ordaining minister.

Mr. Silver was led to the writings of Swedenborg in 1838 through the loss of an arm; the sensations of the hand which remained, convincing him that he had an organized spiritual body within the natural body; and being advised to read Swedenborg for explanation. And here, to his great joy, he says, he found what his soul so much wanted—a rational understanding of the doctrines of the Holy Word.

Thus, when he was ordained, in 1849, he had been reading the philosophical and theological works of Swedenborg with intense interest for eleven years. He was ordained as a missionary at large, and has declined being settled over any Society as a permanent pastor, choosing rather to labor where it might seem to him he could be most useful. He has preached four years in Michigan, four in New Hampshire, four in Wilmington, Del., four in the city of New York, and one in Salem, Mass. In the mean time he has made missionary visits to many places, and preached in most of the cities and populous towns north of Virginia and east of Galena.

Besides various sermons and articles for the papers, Mr. Silver has published two books, entitled "Lectures on the Symbolic Character of the Sacred Scriptures," and "The Holy Word in its Own Defense."

Mr. Silver has an organization which, at this advanced period of his life, indicates a well-sustained tone of quality and vigor. His intellect is of that finely poised character which adapts a man to the successful prosecution of scholastic employments. As a teacher, as a writer, or as a lecturer, he would meet with success. He is eminently a thinker; inclined to investigate theories, to lay plans, and originate measures. Those subjects which do not present a clear and coherent outline, which may not be scrutinized beneath the surface, do not receive much favor from him. He would know for him-

self and not depend on others for the bases of his beliefs. Yet he is kind, forbearing, and tender, not inclined to treat harshly or contemptuously that which his judgment rejects. He has much social affection, a strong sympathy for his fellows, and marked earnestness of purpose in the calling to which his spiritual longings are so well adapted.

Rev. J. R. HIBBARD. John Randolph Hibbard is the pastor of the Chicago Society of the New Jerusalem, and Superintendent of the Illinois Association of the New Church. He is the most prominent and efficient Swedenborgian minister in the West. Born and educated in the Presbyterian Church, while yet a minor he became a minister of the United Brethren Church. In 1839, at the age of twenty-four years, he became a member of the New Church, and was ordained a minister therein the same year. After preaching some time in Ohio he removed to Illinois in 1844, where he has been employed ever since. In 1847 he was consecrated, at New York, to the grade of an ordaining minister. He has black hair and eyes, is of medium size, and of active mental habits. He enters with all his heart into the performance of his duties, is faithful and painstaking as a pastor, and as a missionary he seems to continually bear the command, "Go ye into all the world and preach the Gospel."

Here we have the indications of strength, resolution, positiveness, self-reliance, willingness to meet opposition, and a conscious power to grapple with difficulty and to overcome it. He has many of the elements which indicate sternness and hardihood, the power to bear burdens and suffer privations. He is more like the oak than like the willow. He strives with the storm more like the oak than bends to it like the willow. He is much more like a steamer than like a sailing vessel; he does not consult the winds nor the tides as to his course; he never consulted ease and convenience in respect to his duty. For his steadfastness and self-reliance he resembles John Knox. He has not so much combativeness and destructiveness as belonged to Martin Luther, hence he is not inclined to wield carnal weapons; he aims more to persuade and convince than to vanquish a foe. He is frank almost to a fault. There is a lack of acrimony in his reproof, in his blunt, argumentative efforts, which make acceptable from him that which with most men would seem dogmatical and overbearing.

His perceptive intellect is amply developed, indicating the power to understand the signs of the times, the ways of men, of business, and to meet the exigencies of life in the proper spirit.

He has a retentive memory, great analytical power, excellent reasoning ability, a full share of mirthfulness, a relish for the beautiful, and comparatively little regard for property; he would be willing that Agar's prayers would be answered in respect to him—"Give me neither poverty nor riches."

He has an extraordinary development of Benevolence, rendering his mind expansive and liberal in sympathies, and deep as to the needs of man. It is seldom we find so much gentleness and pathos combined with so much stateliness of thought and such direct earnestness of will and purpose as in this organization.

Rev. JAMES P. STUART. James Park Stuart, Missionary Bishop in the New Church, was born near Ripley, Ohio, January 29, 1810. His parents were Scotch, and were of the Presbyterian Church. In this church he received his early education, and was admitted to its communion in the eighteenth year of his age. The same year he commenced his preparation for college. In 1836 he graduated at Illinois College; and the same year commenced his theological studies preparatory to entering the ministry. In furtherance of these studies he became a resident graduate in Yale College in 1837-8, where he attended the Theological Lectures of Dr. Taylor, Dr. Fitch, and others of the Divinity School, as well as the Scientific Lectures of Prof. Silliman, Prof. Olmstead, and others.

Returning to the West, Mr. Stuart was introduced in the Presbyterian ministry in 1839, and commenced his labors in this profession in Rock Island, Ill. But in the pursuit of his theological studies, he began soon seriously to doubt the truthfulness of the Presbyterian doctrines; and at the close of the second year of his ministry he re-

signed his charge at Rock Island and returned to Ohio, his native place, for the purpose of making a full examination of the doctrines to which he had committed himself as a public teacher. This investigation was continued through a period of about three years, and led him finally to the full rejection of the whole system of Calvinism, new and old school, and at the same time the correlated system of Arminianism, as well also as the systems of Arius and Pelagius.

While thus in the general disbelief of the prevailing dogmas of the old church, Mr. Stuart was led to examine the works of Swedenborg and the doctrines of the New Church, and the examination resulted in his full and hearty acceptance of the New Doctrines.

After a preliminary study of more than a year, Mr. Stuart entered the ministry of the New Church, into which he was ordained in 1847. He at once entered the missionary field in Ohio, in which work he continued until 1850, when he was called to the pastorate of the church in Cincinnati. After three years he resigned this charge, and again entered the field as a missionary, and as a laborer with others in the work of establishing a school of the Church in Urbana, Ohio. For a time Mr. Stuart was general agent of this young University, and then for several years held the chair of Professor of Moral and Intellectual Philosophy. But funds not being available for the endowment of the institution, Mr. S. resigned his chair, and returned more directly into the work of the ministry.

About this time a parish of the New Church was formed at Glendale, Ohio, and Mr. Stuart took the pastoral charge of it. During his pastorate, a very handsome Temple was built by the parish, and dedicated—one that is regarded a model in the perfection of its form and structure.

In 1861 Mr. Stuart was called to New York to take charge of the Book Concern of the New Church and to edit the *New Jerusalem Messenger*. This office he continued to discharge until 1865, when he resigned it to enter once more upon his favorite work of propagandism by popular lectures and sermons.

In the organization of Mr. Stuart we perceive fineness of quality and an elevated and refined nature. It will be observed that the head increases in magnitude as it rises from the eyes and ears upward; across the brow there is not a great development. He gathers knowledge more through meditation than through observation and experience. He has a theoretical intellect, and is obliged to devote himself to the subject-matter in hand in such a way that he can reason it all out.

He has large Causality, which demands and gives a reason. He has the higher order of Constructiveness, which harmonizes with imagination rather than with perceptive and tangible things, hence his inventions will be in the direction of ideas more than in the direction of things. He is endowed with a sense of the ludicrous, and whenever he can prove a thing absurd, he feels satisfied that he has overthrown it. His sense of the perfect and beautiful, his appreciation of the grand and sublime, appear to be strong.

He is a man of caution, and he seldom adopts a new course or a new class of thought without careful investigation and prolonged meditation.

He is a man of integrity; he loves truth for its own sake, and inclined to stand upon it with a strength and firmness which is not easily set aside.

He has Hope, Veneration, and Spirituality large enough to make him a leader of other people's feelings and thoughts. He sympathizes with the realm of the social, but is not an ardent, impassioned man; he prizes a well-tried friend; but does not quickly warm up to strangers, however attractive.

He is not a man of severe feelings, but has considerable combativeness; is rather inclined to assail that which he regards as faulty, and aims to argue down opposition and argue up his views. He has rather a polemical spirit, and in his line will be likely to become a leader in thought, a man to be quoted for the soundness of his views, and the clearness and strength of his positions.

Rev. J. C. AGER. John Curtis Ager was born in Warner, N. H., March 22d, 1835. At the age of thirteen he left home and found employment in Fisherville, N. H., in a cotton mill. From this time, depend-

ing solely upon his own resources, he managed, by hard work and close economy, to secure about eleven weeks' schooling each year. His chief employments, until he reached the age of twenty-one, were working in cotton mills, shoemaking, and farming, and, during the latter part of the time, teaching country schools.

From his early childhood Mr. Ager had felt a strong desire to become a minister. In the spring of 1855 a course of lectures on the doctrines of the New Church was delivered in Warner, by the Rev. Abiel Silver, which resolved him at once to devote himself to the New Church ministry. In the spring of 1856, after six months' preparation in the New London (N. H.) Academy, he entered an advanced class in the New Church College at Urbana, Ohio. During the year, as his means were limited, he was permitted to undertake the studies of two classes. This proved too much for his health, and he was obliged to leave Urbana in the spring of 1857, after a college residence of little more than a year. Recruiting his health during the summer, he took charge, in the autumn, of the New Church Academy at Contoocook, N. H., which he taught for nine months—carrying on at the same time his college studies, so that he was enabled to graduate with his class in June, 1858.

After holding a position of tutor in his alma mater for two years, he was appointed Professor of Philosophy and English Literature. In 1861, on account of the war and the consequent financial prostration, the College was compelled to suspend its sessions, and Mr. Ager, receiving an invitation from the New Church Society in Brookline, Mass., to become its pastor, accepted it.

In January, 1865, he removed to Brooklyn, N. Y., and took charge of the New Church Society in that city—a position which he still holds.

In person Mr. Ager is rather above the medium height, but carries his head a little forward, and his shoulders slightly bent. His face is strikingly handsome, lit up by large, dark eyes of singular depth and sweetness of expression. His head is compact, well formed, and of medium size; he has a clear olive complexion; hair dark brown, almost black. In manner, he is quiet, gentle, self-contained, and reassuring to the diffident and awkward. He satisfies with a sympathy rather implied than expressed, and is quite reticent with regard to himself and his opinions.

Mr. Ager combines rare tact with talent; can make the most of the resources at his command; would be likely to avoid all needless combat and friction, and would not thrust himself against sharp corners for the sake of winning a cheap martyrdom, of no practical account when won; in short, a well-balanced mind, enlarged and disciplined by culture; thorough good temper improved by religious training, and a ready tact that avoids all unnecessary antagonisms, combined with an attractive person and courteous manners, insures Mr. Ager a hearty recognition in the circles of the intelligent and refined in every religious denomination.

As a reformer, he would follow rather than lead; would give no hasty indorsement of novel opinions, nor rashly commit himself to any untried plan of world betterment however plausible it might seem. In other words, he is, in the structure of his mind, naturally cautious and conservative.

WILLIAM B. HAYDEN. William B. Hayden was born at Schodock, N. Y., Christmas day, 1816. An early ancestor on his father's side came over in one of the ships of the Massachusetts Bay Company, in 1633, and the family for seven or eight generations, or nearly 300 years, remained in Braintree and Quincy, Mass. The subject of this notice studied at the academy in Albany, and at about the age of seventeen went to Boston, where he remained a few years in the bookselling business. Afterward, for nearly twelve years, he was engaged in the same business in New York. About the year 1846, through his friend, the late Prof. George Bush, he had his attention called to the doctrines of the New Jerusalem Church, of which he became a professed receiver. In 1848 he published a small work "On the Character and Work of Christ," being a review and examination of Rev. Dr. Bushnell's "God in Christ," which had just then appeared. In 1849 he commenced lecturing on the doctrines of the New Church in the city of New York, and soon afterward in Portland, Me., and Providence, R. I. In 1850 he was licensed to preach by the

Maine Association of the New Church, and was called to fill the pulpit of the New Jerusalem Society in Portland the same year. The following year he was ordained, and became the pastor of the Portland Society, where he is still located. He is the author of the following works: a treatise on Genesis and Geology, entitled "Science and Revelation;" "On the Phenomena of Spiritualism;" "Ten Chapters on Marriage," and "Ten Lectures on the Book of Revelation."

This face and head indicate health, constitutional vigor and soundness, and the conditions of long life. We judge that he resembles his mother from just below the eyes upward. His forehead indicates a quick, sharp, practical judgment, and the ability to gather from all quarters all the facts, practical and historical, that belong to a subject. He has a historical mind, and lets no fact of importance escape his attention or be left out of his argument. He would make a very fine teacher; he is adapted to communicate that which he knows to others, and he can do it in a style that seems at once graceful and simple.

He has great directness of intellect, and his language is sufficient to give voice to his thoughts. He would excel as an extemporaneous speaker, for he coins his subject in his head, not necessarily in his manuscript. His knowledge becomes a part of himself. Some men have power without the edge; he is known for a keen edge; is sharply discriminative; has the power to concentrate all he knows upon a subject to a single point, and to bring strength to bear in a given place.

He has a great deal of system. Method characterizes all his performances. He is no imitator; he copies others but little, either in manner or style of thought. Truthfulness seems impressed upon his whole nature, and he has enough of energy to make himself felt; he drives all that he attempts.

He is a very social man, warm in his affections; the little ones love him, women confide in him, and men respect him.

Rev. T. B. HAYWARD. Tilly Brown Hayward was born April 2, 1797, in Plainfield, Mass. In 1816 he entered Harvard College, Cambridge, Mass. At the end of his first collegiate year, the doctrines of the New Church were introduced to his notice by Rev. Thomas Worcester. He examined them, and cordially embraced them. In August, 1818, he with twelve others united in being instituted as the Boston Society of the New Jerusalem Church. Mr. Hayward graduated in 1820, and shortly afterward commenced teaching school, which he continued for twenty-six years, when he was licensed to preach the doctrines of the New Church, and in 1850 was ordained. He is now the minister of the Bridgewater Society, in Massachusetts. Mr. Hayward has been the Secretary of the "General Convention of the New Jerusalem in the United States of America" from 1826 to the present time. He has also been the Secretary of the Massachusetts Association of the New Church ever since its commencement in 1835. He has devoted much time and labor to the study of the doctrines of the New Church in Swedenborg's original Latin, and has written out manuscript translations of several volumes.

In this organization we have apparently excellent health, and a calm, sedate, well-poised nature. In disposition, he is gentle and affectionate; in intellect, scholarly and practical rather than logical or original; he acquires knowledge easily, and teaches it with clearness and plainness, if not with force. Men feel that he is their brother rather than their master, for he has a quiet dignity of his own. He assumes but little; aims to persuade rather than to command; to lead, rather than to coerce; to enlighten, not to dogmatize. He is hopeful; his spirituality gives him a love of feeling and sentiment that enables him to anticipate, in some sense, the life to come. He feels that there is something in the universe that is real besides oak and iron, besides matter and earth.

His benevolence renders him sympathetic and generous, and tends to give a kindness and urbanity to his manners which render them particularly acceptable to persons of gentle, confiding, yet diffident, natures.

His affections are strong, but they are generally exercised through the medium of spirituality and benevo-

lence. He inclines to look upon men in the light of that which they are to be, not merely as they are; he pities their ignorance, is sorry for their misfortunes, and prays for their redemption and glorification.

Rev. T. O. PAINE. Timothy Otis Paine, pastor of the East Bridgewater Society, Mass., was born at Winslow, Maine, October 13th, 1824. His education was thorough, graduating from Colby College, Waterville, Me., in 1847. From that date until 1853 he was employed in artistic pursuits, such as drawing, crayon portraiture, sculpture, and practicing on the restoration of lost forms from descriptions and explorations. During this time, however, his attention was drawn seriously to the consideration of religious subjects. In 1853 he began his work, well known in the New Jerusalem Church, "Of Restoring the Tabernacle, Temple, House of the King, Oblation of the Holy Portion, etc.," a second edition of which is now in course of preparation. In 1856 he was called to minister in the pulpit of the East Bridgewater Society, and became its pastor August 14th, 1864.

This gentleman evidently possesses much refinement and intensity. The brain is long and high; from the ear forward there is great length, indicating not only breadth of thought, but practical talent and intensity. His Comparison is immensely developed, showing great discrimination and power of illustration. He has a quick and clear appreciation of the character of other people, and a natural tact of comprehending strangers, and approaching them in such a manner as to gain a favorable influence over them.

His language is peculiar; it is not copious, but it is exact and searching; it touches the point, it convinces the understanding, it impresses deeply the hearer. He has a temperament and an organization favorable to esthetic taste; he has also a natural talent for mechanism and art. If he had devoted himself to poetry and polite literature he would have made his mark. His natural friendship qualifies him to be a good friend, a loving father, and an affectionate husband. If he does not work too hard and prematurely break himself down, we predict that the world will hear much more from him than he has yet said or done.

Rev. WILLARD G. DAY. Willard Gibson Day was born at Circleville, Ohio, January 25th, 1834. From the age of thirteen to that of eighteen he was employed in a printing-office at Chillicothe, where he doubtless made good use of opportunities for mental improvement. Leaving the *case* in 1852, he commenced a course of study in Urbana University, on the completion of which he was appointed a tutor. In 1856 he was licensed to preach at Urbana, and in the subsequent year he was regularly ordained a minister of the New Jerusalem Church. He became pastor of the Church in Northern Ohio, and he remained several years at East Rockport, near Cleveland. Mr. Day has been for two years past President of the Ohio Association of the New Church.

A large brain and an active temperament are prominent characteristics in this organization. Thoughtful yet scrutinizing, clear and solid as a reasoner, and compact as a speaker, Mr. Day appears to possess most of the elements of intellectual success. He has a strong sense of the spiritual—is able to look away from the merely material into the unseen and find a sufficient rest for the mind, a firm basis for his inner thoughts. He has much ability as a critical theorist, but is not over-confident in his personal capacity. He would be well considered by others, yet carefully avoids ostentation, and, as far as possible, anything that would render him especially conspicuous.

Rev. JOHN GODDARD. John Goddard was born in North Bridgewater, Mass., October 9th, 1830. He received as good an education as the common schools and academy of his native town afforded. When he was about fifteen years old, becoming tired of school, he entered a printing-office in his native place. One day, while engaged in "rolling" at a hand-press, the pressman, himself a New Churchman, happened to state to him the substance of the doctrine of the New Church respecting the Lord. Although he had attended church all his life, and had had the advantage of his father's teachings, this doctrine, only till then realized,

seemed to change the current of his thoughts and feelings, and from that moment he determined to enter the ministry.

He entered Amherst College in the autumn of 1858, but was soon obliged to leave on account of his health giving way. He at once commenced fitting for the ministry with his father, devoting himself principally to the study of the theological works of Swedenborg. After four years devoted to teaching and studying, he was licensed to preach in July, 1862. After officiating a few months in the towns of Yarmouth and Bridgewater, Mass., his health again gave way, and he felt that it would be useful to spend a year in the equable climate of Minnesota. Having through this means partially recovered his health, he resolved to abandon the clerical profession and learn some secular business. Accordingly, he entered the counting-room of Messrs. Wm. Carter & Brother, in Boston; but after remaining with them about a year, he was applied to by the Cincinnati Society of the New Jerusalem to fill their pulpit for a month. The call was accepted, with the expectation of leaving at the end of that time; but he was induced to remain a few months longer, when he was chosen pastor, in May, 1866.

This gentleman is active, sprightly, and energetic. Sensitive and susceptible, everything of an inciting nature, especially if it be allied to his profession, serves to keep him in motion, if not on the strain. He needs composure—rest, and must live less nervously than he is inclined to if he would improve in health, and so render himself better able to discharge the duties of his pastorate.

He has a keen sense of the mirthful, and a sharply observant intellect. As a speaker he should be clear and direct, yet sprightly and somewhat ornamental.

Rev. JABEZ FOX. Jabez Fox, pastor of the Washington Society of the N. J. Church, and Presiding Minister of the Maryland Association, was born October 7, 1817, at Berkeley, Mass. He is a descendant in the sixth generation from that Jabez Fox who was settled in Woburn, Mass., in 1679; and the ninth generation from John Fox, author of the Book of Martyrs. His parents designed him for the ministry of the Congregational Orthodox Church from his birth, and his early education had reference to this purpose. But he early began to entertain doubts in regard to the doctrines of that church, which gradually grew into entire disbelief of the whole system. He was but seven years old when an effort of his father to explain what was meant in the Westminster Catechism by "hell," led him to think his father knew very little of what followed death, and was the first step toward unbelief. At eleven years of age he went to his father with a picture drawn by Dr. Watts of the Second Person in the Divine Trinity "sprinkling the Father's flowing throne with his redeeming blood," asking how the two persons could be so dissimilar and yet be one Being. All efforts at explanation but increased the difficulty; and the growing skepticism of the boy defeated the intention of the father to educate him for the ministry. He learned the printer's trade, and at twenty-one went to the city of Washington to find employment. He soon became foreman of the compositors in the *Democratic Review* office. But he had resolved on getting more schooling, and the following spring he went to Whitesboro', N. Y., and entered as a sophomore in the Oneida Institute. It was from some lectures of that robust and manly Christian scholar, President Beriah Green, on the character of St. Paul, at the close of which the immeasurable superiority of Jesus to Paul or any other mere man, was very successfully presented, that a resolution was formed in the young man to re-examine the grounds of his religious belief, or disbelief; for at this time he was not a believer in a revealed religion, and yet he was in the habit morning and evening of offering up prayer to the unknown and unrevealed Creator. Circumstances, and not any purpose of his own, carried him soon after this to Detroit, where the doctrines of the New Jerusalem were brought to his notice, and a copy of the "Four Leading Doctrines" was placed in his hands. He read with eagerness, and his skepticism at once gave way to earnest belief. He took an active part in the formation of a New Church Association, of which he became an influential member and officer, and so continued while he remained in Michigan. The urgent request of personal friends led him (in company with Hon. A. Silver,

then Commissioner of Michigan State Land Office, and Mr. Henry Weller) to enter upon a course of Sunday Lectures on the Doctrines of the New Church, at public halls and in school-houses, at and in the vicinity of Marshall, Mich. A Society grew up at Marshall and another at Edwardsburg (the residence of Mr. Silver), and in June, 1849, in Philadelphia, Mr. Silver and Mr. Fox were ordained, and Mr. Fox became the minister of the Marshall Society soon afterward. In January, 1850, he accepted an invitation to become the pastor of the New Church Society at Detroit; and laid aside altogether his secular calling to devote himself to the ministry. In 1857 he became the pastor of the Washington Society of the New Jerusalem; but in July, 1859 (the Society finding itself unable to support him), he returned to Michigan, and became the chaplain of the State Prison, preaching in the city of Jackson to a New Church congregation. In 1861 he accepted a call from the Society at Peoria, Ill.; but in 1863, the Society at Washington, D. C., insisted on his return; and he complied.

This gentleman possesses the equanimity and directness of character which the contour and general expression of the face so strikingly indicate. He is a direct and positive man; yet forbearing and sympathetic. There is a softness about the features which evinces delicacy of feeling and sympathy, while the massive character of the head laterally, shows force and vigor. He is a keen-eyed observer, and draws his notions and theories mainly from external life. Hence he is practical and matter-of-fact. He is firm, yet cautious in taking a definite position. He does not assert that which he has not fully determined, but when satisfied with the truth or falsity of a subject, he is spirited and inflexible in the maintenance of his opinion. His first impressions are influential in forming his judgment, and his manner is frank and candid, in fact, attractive and encouraging.

THE NEW JERUSALEM CHURCH.

I. ORIGIN OF THE NEW CHURCH.

THE Sacred Scriptures announce the second coming of the Lord, to execute the Last Judgment, and to institute a New Church, signified by the New Jerusalem in the Apocalypse. The Lord himself predicted, when he was in the world, that the Christian Church would come to its end, through evils of life and errors of doctrine. This prediction is particularly set forth in the twenty-fourth chapter of Matthew, in these words: "And as he sat upon the Mount of Olives, the disciples came unto him privately, saying, Tell us, when shall these things be? and what shall be the sign of thy coming, and of the end of the age?" And Jesus answered and said unto them, Take heed that ye be not troubled; for all these things must come to pass; but the end is not yet. For nation shall rise against nation, and kingdom against kingdom: and there shall be famines, and pestilences, and earthquakes in divers places. All these are the beginning of sorrows. Then shall they deliver you up to be afflicted, and shall kill you; and ye shall be hated of all nations for my name's sake. And then shall many be offended, and shall betray one another, and shall hate one another. And many false prophets shall rise, and shall deceive many. And because iniquity shall abound, the love of many shall grow cold. But he that shall endure unto the end, the same shall be saved. And this gospel of the kingdom shall be preached in all the world, for a testimony unto all nations; and then shall the end come. . . . For then shall be great tribulation, such as was not from the beginning of the world to this time, no, nor ever shall be. . . . Immediately after the tribulation of those days, shall the sun be darkened, and the moon shall not give her light, and the stars shall fall from heaven, and the powers of the heavens shall be shaken. And then shall appear the sign of the Son of man in heaven: and then shall all the tribes of the earth mourn; and they

* In the Greek this expression is *Τῆς συντελείας τοῦ αἰῶνος*. In the Latin New Testaments it is *Consummationis seculi*. It properly means the consummation or winding up of the age or dispensation.

shall see the Son of man coming in the clouds of heaven, with great power and glory."

The New Church doctrine teaches that this prophecy refers to states through which the Church was to pass: thus, to various conflicts between good and evil principles. By the sun being darkened is represented the absence of the Lord's love and charity. The moon signifies faith; and faith is said to give no light when the Church is overrun with evils and errors. The stars denote knowledges and truths concerning the Lord and the Church; and these are said to fall from heaven, or from the interior of the mind, when the Church comes to its end. The end of the age, or, as it is commonly rendered, the end of the world, signifies the last time of the Church; when all good has been perverted and turned into evil, and all truth falsified, and made of none effect by the traditions of men.* The coming of the Lord in the clouds of heaven, represents his second coming, to execute the Last Judgment and to establish the New Church. This New Church is described by the New Jerusalem and its magnificent things. "When the New Jerusalem was seen to descend out of heaven, it is said, 'Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and he will be with them, their God: and the nations that are saved shall walk in the light of it; and night shall not be there. I, Jesus, have sent my angel to testify to you these things in the churches. I am the root and offspring of David, the bright and morning star. And the Spirit and the Bride say, Come; and let him that heareth say, Come; and let him that thirsteth come; and he that will, let him take of the water of life freely. Yea, come, Lord Jesus: Amen.'—(Rev. xxi. 3, 24, 25; xxii. 16, 17, 20.)"†

In the theological writings of Emanuel Swedenborg it is taught that the Last Judgment took place in the spiritual world in the year 1757, and that the Lord sent his twelve disciples, who had followed Him in the world, out into the whole spiritual world to preach the gospel anew in the year 1770.‡

II. THE FAITH OF THE NEW CHURCH.

The Faith of the New Church in the universal form is this: That the Lord from eternity, who is Jehovah, came into the world, that he might subjugate the hells, and glorify his Humanity; and without this no mortal could be saved; and they are saved who believe in him.

The particulars of faith on man's part are, 1. That God is one, in whom is a Divine Trinity; and that he is the Lord God the Saviour Jesus Christ: 2. Saving faith is to believe in him: 3. Evils are not to be done, because they are of the devil and from the devil: 4. Good things are to be done, because they are of God and from God: 5. And these are to be done by man as of himself; but it is to be believed that they are with him and through him from the Lord.

III. THE DOCTRINES OF THE NEW CHURCH.

1. The Doctrines of the New Church are new. They are not simply a combination of truths collected from the religious systems of the past. While they are in harmony with all the truths of science, philosophy, and religion that have hitherto been known, they also claim to embrace fuller and more enlarged views concerning those subjects that most concern our eternal welfare.

2. The New Church teaches that there is but one God in essence and in person, and that he is the Lord and Saviour Jesus Christ, who is Jehovah in human form. In him dwelleth all the fullness of the Godhead bodily. The relation between the Father and the Son is like that existing between a man's soul and his body; but with this difference, that the Lord glorified and made divine the humanity he assumed from Mary, while a man, on his departure from this world, leaves behind him his natural body. The human nature which the Lord assumed when in the world partook of the weakness and frailty of men, and had like tendencies to evil, yet without sin. During the whole period of his abode in the world, the humanity of the Lord was being glorified, or made one with the Father or indwelling divinity. In order to accomplish this, all the evil tendencies and infirmities derived from Mary had to be put away; and in

proportion as this was done, the divinity from the Father flowed down and supplied their place. This work of resisting temptation and putting off human frailties caused the indescribable sufferings which the Lord underwent. But it was only the human nature of the Lord that suffered, and not his divine nature. The passion on the cross was the last temptation the Lord experienced; and when he rose again, he ascended into the spiritual world, and became invisible in this world. After his resurrection he manifested himself to the spiritual sight of his disciples; and then ascended up through the heavens into the Divine—to that glory which he had with the Father before the world was. Thus, when the New Churchman speaks of the Father, Son, and Holy Spirit, he means the Essential Divinity, the Divine Humanity, and the Proceeding Influence of the Lord; consequently, not three persons are understood, but three essential principles, constituting together the one person of the Lord Jesus Christ.

3. The New Church teaches that the Sacred Scriptures are the Word of God, or the Divine Truth itself, which is the source of wisdom to angels and to men. The books of the Bible which constitute the Word of God have an internal or spiritual sense, distinct from the literal sense, as the soul is distinct from the body; that is, the internal sense of the Word is the soul of the literal sense. It was this internal sense the Lord had reference to when he said, *The words that I speak unto you are spirit and are life*—John vi. 63. The arcana of wisdom contained in the Word are seen, in the light of true doctrine, to be more and more wonderful as they become unfolded and are understood. The angels understand the Word in its spiritual sense; and inasmuch as it contains truths continuous from the Lord, in its inmost sense, it is inexpressibly divine and holy. The nature of the internal sense, and the correspondence of the literal sense with it, are fully unfolded in the theological writings of Emanuel Swedenborg, who declares that the spiritual sense of the Sacred Scriptures was revealed to him while he read the Word. The theological writings of Swedenborg, although claiming to be a revelation from the Lord, do not, like the Old and New Testaments, contain an internal sense. And while they add nothing to the Word of God, they explain it in a most wonderful way, and in a manner entirely new and startling.

4. Swedenborg taught that *all religion has relation to life, and that the life of religion is to do good*. According to his view, merely going to church on Sundays and attending prayer meetings and other religious gatherings, do not, of themselves, make a person religious. They are the external signs of religion. Nor does faith, alone, save. A belief in some particular creed or system of doctrines, without a life according to them, is of no more avail to save than it would be to expect a house to come into existence simply by the architect's drawing a plan of it. Two things are necessary in order to live a Christian life. One is to believe in the Lord Jesus Christ as the only God of heaven and earth; the other is to obey the Ten Commandments. We must have faith, which shows us our duty, and we must have charity, which consists in faithfully performing the duties of our employment. Simply giving to the poor, endowing hospitals, and performing other similar acts called charitable, are of less importance than doing well our every-day work, and fulfilling justly all our relations in life; for the former kind of charity can only be exercised by a few, while the latter is within the reach of all. He is most charitable who performs the greatest use in his particular calling.

5. In order to clearly understand the difference between the teachings of the New Church and the Old, we must base our comparisons, not only on the creeds and doctrines that now prevail, but we must also consider the doctrines that were generally taught as orthodox a century ago; for while the New Church doctrine remains the same now that it was then, the doctrines and teachings of the Christian Church have been much modified and improved. Thus, when Swedenborg announced that man was in freedom in spiritual, as well as in natural, things, his teaching was universally regarded as heretical, and was rejected accordingly. But men now see that they are free to live good lives, if they will. They now know that it is possible to obey the Commandments, and that their destiny is not a pre-ordained

thing, but depends upon how they use the freedom and rationality God gives them. Every one is accountable for his conduct in the circumstances in which he is placed. There are always two courses open to us, so long as we are in this world—the good and the evil.

6. Death and the Resurrection, in the light of the New Church, are regarded as one event: death is the natural side, of which resurrection is the spiritual side. Death is an orderly step in life. We begin existence on earth. At death we rise into the spiritual world, where we are to live eternally—in heaven if we are good; in hell if we are evil. The nature of the change called death may be compared to the transformation of the worm into the butterfly. It is the transfer of the scene of our life from the earth to the spiritual world—from time to eternity. And when the dark river of death has been crossed, we bid farewell to earth for ever; for as the butterfly *does not* resume the low forms of its former existence, and the bird *does not* return to inhabit the shell from which it was hatched, so man *can not* come back to this world after he has been raised up into the spiritual world.

7. The Spiritual World, into which man comes after death, is not any place in space. It is not here or there; but it is a world within the material universe; not within as to space, but within as to state, as the soul is within the body. It is everywhere contiguous to the natural world, but is not continued into it. This relation may be illustrated in a slight degree by water in a sponge. The water is in every part, yet is separate from it. It is also like the relation between the soul and the body; for as the soul acts upon and pervades every part of the body, so the spiritual world acts upon and pervades every atom of the material universe. Spirit is to matter what the cause is to its effect. The spiritual world consists of heaven and hell, and the intermediate state called the world of spirits. Every one, immediately after death, first comes into the world of spirits. While there, he undergoes the judgment, which, with the good, consists in the separation of his evil qualities from him, and their rejection to hell; and in proportion as this is done, he is led by the Lord toward heaven, and becomes associated with some society in heaven which is in a similar state of good with himself. There he continues to live to eternity, in a state of constantly increasing blessedness. The judgment which the evil man undergoes consists in the separation from him of his good qualities, as the Scripture says, *From him that hath not, shall be taken even that which he seemeth to have*—Luke viii. 18. When this process of separating the good from the evil is fully accomplished, the wicked man chooses to go to hell.

8. By the Church, in its widest sense, Swedenborgians mean all who acknowledge and worship a supreme Being, and who live as good a life as they know how. In a less general sense they understand the Church to include all who believe in the Lord Jesus Christ as the only God, and live a life according to the Ten Commandments, and who acknowledge the Sacred Scriptures to be the Word of God, or the Divine Truth itself.

9. In regard to Baptism and the Holy Supper, it is believed that they were instituted by the Lord in lieu of the various ceremonial rites of the Israelitish dispensation, and that they are significative of spiritual and divine things, by which man has conjunction with the Lord and with heaven. Baptism is a sign, which is perceived in heaven, that the person baptized belongs to the Lord's Church, and it is a memorial that he is to be regenerated. By the water used in baptism is signified truth; by its application is meant the purifying influence of truth. This ordinance was instituted in place of circumcision and the various washings and purifying processes of the Jews. Hence it signifies the cleansing of the soul from evil, and at the same time introduction into the Church. The Holy Supper was instituted in place of the burnt offerings and sacrifices of the Jewish Church; and it represents the appropriation of good and truth from the Lord. By the Lord's flesh and the bread are signified the divine good; by the blood and the wine are signified the divine truth; and by eating the bread and drinking the wine are meant their appropriation.

10. It is according to divine order that there should be both civil and ecclesiastical governments. And these are related to each other as the internal and the external, or as the soul and the body. These two kinds of government must act in harmony; if otherwise, strife and dis-

* Matthew xv. 6; Mark vii. 13.

† Principles of the New Church, pp. 38, 39.

‡ Last Judgment, number 45; True Christian Religion, n. 791.

cord are engendered. The Church can not exist where civil government is not respected, nor can any civil government prosper unless there be also ecclesiastical government.

IV. HISTORY OF THE NEW CHURCH.

Swedenborg had not been dead many years before his writings began to be read by a few Englishmen, Frenchmen, Germans, and Scandinavians, who were sufficiently learned to read Latin, in which language the writings of the New Church were left by their author. In the year 1788, Robert Hindmarsh, the first New Church minister, was ordained. And in 1789 the first session of the General Conference of the New Church in Great Britain was held in London. The organization of the Church in America began later—the first American minister having been ordained in 1798, and the first session of the General Convention of the New Jerusalem was held at Philadelphia in 1817. The growth of the New Church in Great Britain has been small as regards numbers, there being less than a hundred churches in that kingdom; but though its growth has been slow, it is increasing in strength and influence. The General Convention of the New Jerusalem in the United States has grown more rapidly. Its organization is very complete, extending to every State of the Union. It is made up of four classes of members, namely, individuals, societies, associations, and ministers. The principal associations are those of Massachusetts, Ohio, and New York. The largest societies are those of Boston, New York, Cincinnati, and Chicago. The organization of the General Convention is so comprehensive that all New Churchmen residing within its limits may be represented in it. There is an orderly progression from the individual member up to the general church. The membership of the New Church in the United States has increased tenfold since the first General Convention was held half a century ago.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cassini*.

My people are destroyed for lack of knowledge.—*Shem iv. 6.*

THE STUDY OF PHYSIOLOGY.

BY JOHN STUART MILL.

THE importance of understanding the true conditions of health and disease, of knowing how to acquire and preserve that healthy habit of body which the most tedious and costly medical treatment so often fails to restore when once lost, should secure a place in general education for the principal maxims of hygiene, and some of those even of practical medicine. For those who aim at high intellectual cultivation, the study of physiology has still greater recommendations, and is, in the present state of advancement of the higher studies, a real necessity. The practice which it gives in the study of nature is such as no other physical science affords in the same kind, and is the best introduction to the difficult questions of politics and social life. Scientific education, apart from professional object, is but a preparation for judging rightly of man, and of his requirements and interests. But to this final pursuit, which has been called, *par excellence*, the proper study of mankind, physiology is the most serviceable of the sciences, because it is the nearest. Its subject is already Man; the same complex and manifold being whose properties are not independent of circumstance and immovable from

age to age, like those of the ellipse and hyperbola, or of sulphur and phosphorus; but are infinitely various, indefinitely modifiable by art or accident, graduating by the nicest shades into one another, and reacting upon one another in a thousand ways, so that they are seldom capable of being isolated and observed separately. With the difficulties of the study of a being so constituted, the physiologist, and he alone among scientific inquirers, is already familiar. Take what view we will of man as a spiritual being, one part of his nature is far more like another than either of them is like anything else. In the organic world we study nature under disadvantages very similar to those which affect the study of moral and political phenomena. Our means of making experiments are almost as limited, while the extreme complexity of the facts makes the conclusions of general reasoning unusually precarious, on account of the vast number of circumstances that conspire to determine every result. Yet, in spite of these obstacles, it is found possible in physiology to arrive at a considerable number of well-ascertained and important truths. This, therefore, is an excellent school in which to study the means of overcoming similar difficulties elsewhere. It is in physiology, too, that we are first introduced to some of the conceptions which play the greatest part in the moral and social science, but which do not occur at all in those of inorganic nature. As, for instance, the idea of predisposition and of predisposing causes, as distinguished from exciting causes. The operation of all moral forces is immensely influenced by predisposition. Without that element, it is impossible to explain the commonest facts of history and social life. Physiology is, also, the first science in which we recognize the influence of habit; the tendency of something to happen again merely because it has happened before. From physiology, too, we get our clearest notion of what is meant by development or evolution. The growth of a plant, or animal, from the first germ, is the typical specimen of a phenomenon which rules through the whole course of man and society; increase of function, through expansion and differentiation of structure by internal forces. I can not enter into the subject at greater length; it is enough if I throw out hints which may be germs of further thought in yourselves. Those who aim at high intellectual achievements may be assured that no part of their time will be less wasted than that which they employ in becoming familiar with the methods and with the main conceptions of the science of organization and life.

[Mr. Mill uses the term Physiology synonymously with, or instead of, Phrenology. When read with this fact in view, the general statement is correct. One familiar with the whole subject might infer that the British statesman had studiously avoided the term Phrenology, which evidently would have been more appropriate. We should, however, remember that

Mr. Mill's positive philosophy inclines him to consider mental phenomena more from the side of Physiology than from the less material side of Phrenology or Psychology.]

PARASITES.—It is said that all living things have their parasites—man, animals, birds, and plants are afflicted. But here is something about *oyster eating extraordinary* in British waters. One dreadful gourmand has been specially stigmatized. The cruel dog-whelk, or "piercer," is branded as the greatest destroyer of myriads. He ought to be good eating himself, he is so tasty in his own food. The piercers swarm up like locusts in the spring, and are wondrously prolific. They are regularly hatched from nests; each nest contains about 800 eggs, and every egg has forty infant demons softly nestled in tiny cysts. These spring quickly to maturity, and set to work at boring. With an organ wonderfully adapted for the purpose, they drill a hole in the shell of the young oysters and suck out their luscious lives. A legion of crabs follows in the wake of the whelk, and these prick out and clear away the remnants of the murdered bivalves. At Lohillon, near the Ile des Oiseaux, there are four men who live in a boat which floats over the famous breeding beds below. The duty of these four men is to watch the line of march taken by the army of piercers. As the boat sleeps in its own shadow on the unruffled surface, they see the young spat floating above the sea-weed like white spangles, and then descending to its resting-place. Next, a thin white line of whelks advances, and the young oyster is slain. They gather these whelks at low tides, and M. Coste, chief of the ostreacultural department, records that one man has been known to gather fourteen thousand whelks in two hours.

The curculio stings and spoils our plums. The worm spoils our apples; the flies spoil our cheese; and, we suppose, these spoilers are all spoiled in their turns.

PALSY CURED.—Mr. Jefferson Jackson, about fifty years of age, now living near Ashland, Tenn., was badly afflicted with palsy from his youth up, shaking and trembling constantly. He entered the Southern army, and was in the battle of Fort Donelson, and for some time exposed to a heavy fire from the Federal artillery. From that time he has been clear of palsy. Question—What cured him?

Response. This is surely a singular and interesting case. Such exposures quite frequently make sound men shake, and it is wonderful that a life-long palsy should be cured by such necessarily great nervous excitement. A fright cures hiccoughs, and fear or anger often suspends pain; and here is a case of chronic palsy cured by acute nervous excitement under conditions which often paralyze the vigor of the nervous forces. A satisfactory and scientific solution to this strange phenomenon is needed. Who can give it?

NEW YORK,

DECEMBER, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous premises of telling unbiassed truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Puc.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

VALEDICTORY.

TO-DAY the Forty-sixth Volume of the PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is completed. During the year we have given the reader between two and three hundred engraved portraits and other illustrations and sketches of prominent characters, with interesting biographies. We have given the whole of Pope's inimitable "Essay on Man," with original illustrations; Rev. Dr. Osgood's discourse on the "The Gospel among Animals;" Hon. Schuyler Colfax's "Education of the Heart;" a capital treatise on "The Phrenological Theory of Man's Organization;" with orations, sermons, and addresses on various topics, including a full measure of matter in all the departments of Ethnology, Phrenology, Physiology, Physiognomy, Psychology, and something of Natural History.

In the always racy department of "Our Social Relations" much interest has been manifested, and we trust some solid instruction has been given. The Religious and Psychological portions, we are assured, are read with avidity and gratitude.

The poets have enlivened our pages with the most beautiful versified sentiments. A full account of our Army and Navy has been given, and our new Territory described; New Books noticed or reviewed, and all subjects coming within the range of our observation and studies have received attention.

Instead of thirty-six pages each month—which were promised—we have given since last June FORTY PAGES in every number. This is at the rate of 960 octavo pages a year. Has the reader had his money's worth? Is he the better for having read the PHRENOLOGICAL JOURNAL?

Has it awakened or renewed in him the spirit of enterprise or a desire for personal and public improvement? Have its teachings been in accordance with his highest good? Is he more tolerant, more liberal, more generous, and at the same time more just, more merciful, more devotional, more trusting, and more hopeful? Has he found words of cheer and encouragement in these pages? Has he been warned against the formation of bad habits, and against the schemes of wicked men? In short, has he received an equivalent for the time and money thus expended? If yes, then our promise and our contract are fulfilled, and we are even. So ends our engagement, and the subscription-books for 1867 are forever closed.

Must we now part to meet no more? Are our mutual friendships to be severed? Can we be of no further use or interest to each other? Must we give the parting hand to those whose familiar names have cheered and strengthened us? Spare, O spare us this pain from which our heart recoils; we would live always in the esteem and affections of our friends. Nor are we selfish in this. If we ask attention to our science, or a hearing, it is with the hope of doing good. We would cry out from the house-tops, and warn the unwary against the dangers that beset them. We would instruct the young and uninformed on important subjects not generally taught by others. We would encourage self-denial, personal discipline, and the subordination of the propensities to the intellect and moral sentiments. We would point out the way in which each should go—the paths of temperance, industry, enterprise, education, religion; paths of prosperity, peace, and happiness. We feel that our life's work is but just begun; and if health and strength be spared us, we promise, by the Divine assistance, to re-consecrate our entire services to God and humanity.

In conclusion: To those who elect to part company with us here, we bid them a heartfelt good-bye. We pray that our past intercourse may be blessed to our mutual good.

But you, dear reader, are to go on with us, are you not? All right. We enter your name in our new book for 1868, and doubt not we shall have a "good

time" on our next year's voyage. Judging by the present prompt renewals, we shall have as large and as happy a company as ever before. "The more the merrier." Bring on your friends!

CHRISTMAS—ITS HISTORY.

CHRISTMAS DAY is regarded throughout the Christian world as the important day of the year, and whether the birth of Christ occurred on the twenty-fifth day of December, or a few days earlier or later, is a matter of no great moment. The significance of setting apart a day consists in the fact that all Christians, by general consent, accept a specified time for the celebration of this event.

In pagan Rome there was a yearly celebration called the Saturnalia, or Festival of Saturn, which was marked by the prevalence of a universal license and merry-making. The slaves were then permitted to enjoy a period of freedom in speech and behavior; every one feasted and rejoiced; work and business were entirely suspended; houses were decorated with laurels and evergreens; presents were made by parents and friends, and all sorts of games and amusements were indulged in by the citizens. In the early ages of Christianity, its ministers frequently experienced difficulty in inducing the converts to refrain from indulging in the popular amusements which were so largely participated in by their pagan neighbors. At last convinced, partly by the inefficacy of denunciations, and partly influenced by the idea that the spirit of Christianity might thereby be advanced, the Church endeavored to amalgamate, as it were, the old and new religions, and sought, by transferring the heathen ceremonies to the solemnities of the Christian festivals, to make them subservient to the cause of religious piety. Engrafted thus on the Roman Saturnalia, Christmas festivities received in England further changes and modifications by having superadded to them, first, the Druidical rites and superstitions, and then, after the arrival of the Saxons, the various ceremonies practiced by the ancient Germans. The result has been the strange medley of Christian and pagan rites which contribute to make up the festivities of the modern Christmas. Thus ceremonies, rites, and symbols, once full of meaning to pagans, have been transferred without their meaning to Christians, and have come to have an entirely new and different signification. This, at least, is true: they have come to mean joy at the birth of the Saviour, joy in view of his love for mankind, joy in burying animosities and reviving friendship among men, and last, but not least, in opening peculiar joy to millions of little folks who are not old enough to understand the mysteries of mythology or the intricacies of theology.

On the evening of the twenty-fourth of December, or Christmas Eve, the Christmas holiday may be said to commence. Sir Walter

Scott gives a picture of Christmas Eve in the olden time in verse, as follows:

On Christmas Eve the bells were rung;
On Christmas Eve the mass was sung;
That only night in all the year
Saw the stoled priest the chalice rear.
The damsel donned her kirtle sheen;
The hall was dressed with holly green;
Forth to the wood did merry men go,
To gather in the mistletoe.
Then opened wide the baron's hall
To vassal, tenant, serf, and all;
Power laid his rod of rule aside,
And Ceremony doffed his pride.
The heir, with roses in his shoes,
That night might village partner choose.
The lord, underogating, share
The vulgar game of 'post and pair.'
All balled, with uncontrolled delight,
And general voice, the happy night,
That to the cottage, as the crown,
Brought tidings of salvation down."

The Christmas tree is supposed to have originated in Germany, but it is incorporated with the celebration of Christmas in England and the United States. In England, it naturally comes from German stock, for its princes are imported—why not some of their customs? In America, especially in New York and Pennsylvania, the Germans have dotted the land with their happy homes, and have brought their Santa Claus, their *Krischinkle*—a corruption of *Christ kindlein*, or the Infant Christ—their Christmas-tree; and with the German and English and the Roman ceremonies, customs, and ideas, the result is a day of days with a central idea, but with many converging associations widespread, rendering the day rich in composite symbols centralized upon the one great thought, Messiah—God with us!

Hanging up the stocking, for Santa Claus to fill with good things for the good, and rods for the bad, is of German origin; and when the doors of the parlor are opened, and the bright eyes and palpitating hearts of the little ones come in to see what the Christmas-tree bears for them, who can estimate the joy that belts the Christian world on this great anniversary of the year?

Many of the grotesque ceremonies of ancient time have been laid aside, but all that was sweet and rich has been cherished and ripened, bringing light to the dark corners of the world, and awaking joy in thousands of hearts whose sorrows had else made them feel estranged from men and forgotten of God. As in old pagan times, when Christianity was in its infancy, Christmas had its abuses, so at present it is, with many, the occasion of dissipation and evil. We have sometimes been amazed that men who are celebrating Christmas with such hilarity and zeal, should so far forget the commands of the Saviour whose birth they celebrate, as to violate all the precepts of the religion he came to establish, by drunkenness, wrangling, and other excesses. Let us hope that all our readers will remember that Christmas means forgiveness of enemies; the lifting up and encouragement of those who are bowed down; the ministrations of mercy to those who are in need; the deepening and re-establishment of friendships and affections, and the

remembrance that He whose birth is celebrated requires pureness of life and correctness of conduct, as well as faith in his mission, and an adherence to religious services. Let this be a day when bad habits shall be abandoned, and good habits entered upon, that the Christ may be to us salvation indeed, as well as in name. Let each of us contribute, by word and by deed, *something*, be it little or much, toward bettering the condition of those around and among us; and it will be to all, what we wish it may be, dear reader, to *you* and *yours*, A HAPPY CHRISTMAS.

SEPARATING FAMILIES.

We are not, dear reader, about to discuss this painful subject from a European point of view, though hundreds of families in the old country are daily separated—of course, with them, it is voluntary—from loving friends and dear old homes; nor are we to argue the question from a Southern point of view, in which masters and servants, husbands and wives, parents and children, were sometimes forcibly separated; we purpose a few remarks on the desirableness, nay, the *necessity*, of separating families here in the United States of America.

We often hear it said by affectionate mothers, that they would work until their fingers bled, their bodies were unclothed, and their stomachs empty, before they would be separated from their children; as though it were a blessing to the little ones to be kept in such poverty rather than to be placed in some charitable institution, or in a childless family, where they would be well fed, clothed, and educated. And with all deference to this natural instinct on the part of the mother for the personal protection and care of her child, and not only conceding, but claiming this to be the duty of every one whose circumstances will permit it, we must frankly state that, in *many cases*, the condition of the child would be vastly improved by being taken away from its parents and placed in other hands.

For example: here is a dissipated, poverty-stricken father, who not only makes no provision for his family, but leaves the care of several children to his wife, whose hard earnings, perhaps, are scarcely sufficient to keep body and soul together. In such a case, the children should be taken away and placed in a better home. It is for the interest of a community to see that all its members are put in the way of improvement and beneficial development, that each be fed, clothed, educated, and cared for; and there are hundreds, nay, thousands of cases, where this will not be done if left with these almost, if not quite, pauper parents. If kept together in such families, the children grow up dirty, ignorant, little savages, without intellectual, moral, and social culture, and they become thieves, libertines, prostitutes, or something worse; whereas if they had been placed under proper influences, they would have become useful members of society.

In this view of the case, we are convinced that every good citizen should have a voice in this matter; and that while we should consider the feelings of the parents, we should also consider the interests of the children; and when they can not be properly provided for at home, it is clearly the duty of society to put them in the way of being properly cared for. There are to-day large numbers in our country, who occupy leading positions in society, who were forcibly separated from their parents in early youth and placed in the kind keeping of guardians; or who were apprenticed to thrifty farmers, mechanics, manufacturers, and merchants. Nor are there few who played the Ben Franklin act, and left home in boyhood without the consent of parents, and, escaping dissipation and the other vicious temptations of life, and having correct habits, right motives, and perseverance, came up and made themselves men of mark.

It is the affections which often blind the eyes of parents to the best interests of their children; but we would not do aught to produce alienation, or unsettle the minds of youth when they are in the way of improvement at home. We believe in every mother's nursing and caring for her child, and in every father's putting his son in the way of the best development of body and mind. This is simply his duty. But where the conditions are such that this can not be done at home, then we propose separation and adoption.

Reader, are you a middle-aged man, or are you advanced into ripe old age? look back to your youth, even to your childhood, and consider whether it would not have been better for you had you been transplanted from your half-starved home to a more thrifty family, whether it would not have been better for you, and whether you would not have made life a still greater success by having had a better start? and you, who were nursed in the lap of luxury, cradled on a bed of roses, petted, pampered, and indulged, whether, even in this case, you would not have become more of a man had you, early in life, been thrown on your own resources?

There are extremes both ways, and it is the happy medium that should be sought by one and all. Let not your affections stand in the way of the interests of your children; remember that your own poor home—calling it sweet don't make it so—may in reality be only a barren pasture, in which yourself can not obtain the means wherewith to grow into the full stature of a man. Be not afraid of transplanting into broader fields and deeper soil, where, taking root, instead of becoming a shrunken shrub, you may become a magnificent human tree, whose branches shall spread in all directions, and whose spirit—the better part—shall always incline "onward and upward." Then, in realizing your own limited sphere—your own lost opportunity of the past—set aside all selfish considerations, and let your first duty be, to provide *good and comfortable homes for your children*.

READING FOR YOUTH.

In a government like ours, where its stability and prosperity depend upon the intelligence of the citizens, it is important in the highest degree that the youth of both sexes receive that course of education and training that will best fit them for the discharge of their duties, both as citizens and as Christians. While free schools are scattered all over the northern section of our country, dispensing their blessings to all classes in such a manner as no other country in the world is blessed, we can not ignore the fact, that the parental and social training of our youth, according to our advantages and opportunities, is neglected perhaps to a greater extent than any other Christian nation in the world.

The Icelanders are socially and parentally better trained than any people we know of in history, and the results are apparent in their intercourse and dealing with one another socially, religiously, and politically.

To select a proper course of reading for youth after they are able to comprehend written language sufficiently, is an important but often a sadly neglected duty. The cheapness and abundance of *literature* at the present day has placed within the reach of youth an amount of literature the adaptation of which to their needs is very questionable. The taste for works of fiction, for *trash* and light reading, amounts almost to a mania among us. Our boys and girls seize upon and devour with avidity most of the light reading they get into their hands, to their permanent injury.

Many religious parents wisely forbid the reading of one kind; but often, unwittingly, allow it to run to an extreme in another. The great majority of the books in our Sunday-school libraries are light fiction; and their excessive reading, like the other class, is positively injurious.

We know boys and girls—more of the latter than of the former, however—who devour all such books that come in their way. Such reading acts upon the mind as stimulants do upon the body; they excite the mind to an improper and undue activity, fill it with pictures and phantasies, not of the real, but wholly of the ideal and the untrue; they keep it stretched to its utmost tension in an improper direction, till it is worn and sinks as if from a slow poison. We have seen it manifest itself in the eye, and in the features, and in the actions of the body, until the whole physical being was in perfect sympathy with the mental system.

We do not decry or oppose works of fiction, but they should be left to a mature age, and then be judiciously selected.

Perhaps the best course of reading, in conjunction with the Bible and religious instructions, from the ages of twelve and fourteen, are standard historical writings of our own and of other countries—Parley's, Irving's, Bancroft's, Prescott's, and others of the same kind. The popular writings of Irving, Ma-

caulay, etc., can properly be left to a maturer age. The papers and news of the day should not be neglected. The best thoughts of our popular writers are given to the public in our magazines, and should not be overlooked. One of the best magazines of the day is the *AMERICAN PHRENOLOGICAL JOURNAL*, and should be found on the table of every family in the land. We know of no journal, in all our acquaintance with literature, that we can more safely commend. We know of none where will be found a happier and better combination of the True, the Beautiful, and the Good. Rich in thought and replete with instruction, it elevates and ennobles, and leaves all who seek improvement better and happier for its monthly visits.—*Greenock (Pa.) Pilot*.

[We are certainly very much obliged for this high compliment, as well as for the very excellent advice, so concisely given, in the article quoted, and which we thought well worthy re-publication. For the *AMERICAN PHRENOLOGICAL JOURNAL* we can only claim an honest *endeavor* to make its pages *useful* to its readers. We regard our premises correctly based on the constitution of man, and we reason and teach from this basis. Our views, so far as we can learn, are in accordance with science and revelation. We *think* them right.]

A LASTING PRESENT.

DURING the holidays—Christmas and New Year's—good, generous-hearted people will puzzle their minds over the thousands of objects offered as presents, seeking the most suitable, each for his or her lover, friend, or companion. One will exhibit his taste by sending something good to eat—it may be a chicken, a turkey, a pig, or a box or basket of fruit. Another will send his friend wine, another cigars, according to the supposed preference of the recipient. But these are not "lasting presents." One will buy jewelry or fancy clothing; another a writing-desk, with pens, ink, paper, wax, mucilage, etc. These things are useful, and tend to call out the faculties of the one who uses them. Another will select a choice book, or a library, in which all the family may participate, not only now, but for years and years to come. *This* is what may be called a *lasting present*. Another very appropriate and welcome present is a useful magazine. Having perused a useful journal for a time, one comes to wish all his friends to have the benefit of its teachings, and accordingly forms a club on his own account, and orders copies for the year to five, ten, or more, including himself, at wholesale rates. The recipient on receiving a receipt for a year's subscription from the publisher often wonders who ordered it sent, his or her heart throbbing with gratitude to the unknown giver. Last year we had many such orders for the *PHRENOLOGICAL JOURNAL*, and we now look for their renewal. The charitably disposed may do good service by placing a copy in the reading-room of every Young Men's Christian Association, and medical, mercantile, hospital, and other public libraries.

Reader, if you have not yet bestowed all your New Year's charities; if you think well of it, suppose you head a list, and either pass it around for signers, or hand it to an energetic, enterprising person who will order ten or twenty copies sent to so many worthy persons who can not *afford* to subscribe on their own account! This would be a service of love and usefulness, which in its effects on the readers would be *LASTING*. Try it.

THE TO-BE PRESIDENT.

THE political quack doctors all over the land are busy feeling the public pulse, trying to determine whom the people will or will not have to serve or rule them. One party names McClellan and Lee as likely to unite the politically disaffected sections. Grant and Lee are also spoken of. So are Johnson and Fessenden; while a comic counselor names Greeley and Davis as combining all the elements of radicalism and conservatism, including every complexion, white, black, yellow, and red. Another names Mr. Bennett, Sr., of the *N. Y. Herald*, from Aberdeen, and Mr. Douglass, orator, from Rochester. It is stated that Mr. Douglass declines. Seriously, why not have a regard for the dignity of the nation, and place in the Presidential chair a man of education and character? We want a *STATESMAN*—not a tailor or a tinker. We are not political partisans. Voters are now *AMERICANS*. With such well-trying men as Messrs. Chase, Stanton, Colfax, Wilson, Harland, and the like, we shall not put up with those of less culture ability, dignity, and power. Let the tobacco-smokers, whisky-drinkers, the boxers and the gamblers, have places adapted to their qualifications. When we can, let us have the "RIGHT MAN IN THE RIGHT PLACE."

A WICKED JOKE.—An Alliance correspondent of the Canton (O.) *Repository* relates the following: Some weeks ago there was a dancing party given for the benefit of the Fenians, on the outskirts of the town, and several of the ladies had little babies, whose noisy perversity required too much attention to allow their mas to enjoy the "hop." A number of gallant young men volunteered to guard the infantry while the ladies engaged in the "break-down." No sooner had the mothers left their cherubs in the hands of the mischievous wretches, than they stripped the darlings and changed their clothes, giving the apparel of one to another. The dance over, the mothers each took, as they thought, her own baby, and hurriedly left the scene of gayeties, and started to their homes, several miles apart, being far on the way before the "peep-o'-day." On the following day there was a tremendous row in the settlement. Mothers discovered that a single night had changed the sex of their babies, and then commenced some of the tallest female pedestrianism. Living miles apart, it required two days to unmix the little cherubs, and required as many weeks to restore the mothers to their naturally sweet dispositions.

A CHAPTER OF CRIME.

BRIDGET DURGAN.

The following phrenological statement is from a description of this unfortunate woman, which was furnished us by Mrs. E. Oakes Smith, a lady well known for her interest in Phrenology and reformatory measures generally.

"A visit to New Brunswick, N. J., afforded me an opportunity to see Bridget Durgan, the murderess of Mrs. Correll, whose case has

BRIDGET DURGAN.

excited a great deal of interest, and even malevolence, in the public mind. A brief account of the miserable girl may not be without interest to your readers.

It has been my practice for many years to visit the prisons in various parts of the country, not from a morbid and idle curiosity, but that I may the better understand my own sex in every aspect in which they may be placed. Those who form their opinion of women from

CRIPINO CADENZA.

what they may see of them in the domestic or social relation, or in fashionable life, base their judgment of them upon very meager and inadequate grounds. I have sometimes discerned a true, noble womanhood amid poverty, misery, and even in prison cells.

In the scale of human intelligence Bridget Durgan was on the very lowest level. She had cunning and ability to conceal her real actions; and so have the fox, the panther, and many inferior animals, whose instincts are not more

clearly defined than were those of Bridget Durgan.

I found the girl seated close to the door of her cell, where I am told she invariably sat; and by her manner and looks I think she did this from a secret, indefinable dread—it may be of herself. She was neat in person, her hair combed close to her head, which gave the observer an opportunity to notice her strong animal organization. She was large in the base of the brain, where Destructiveness and Secretiveness are located by phrenologists, while the whole region of intellect, ideality, and moral sentiment was small. Her texture, temperament, all were coarse; hair coarse and scanty, forehead naturally corrugated and low, nose concave and square at the nostrils, leaving a very long upper lip.

The jaws were large and heavy, but the mouth small. I think another such a mouth would not be found in ten thousand—narrow gums, cat-like in shape, with pointed teeth. The whole person was heavy, inclined to fullness, and the hands large, coarse, and somehow had a dangerous look, for hands, as well as faces, have expression.

I looked upon Bridget Durgan without prejudice, and I describe her without exaggeration. She was born without moral responsibility, just as much as the tiger or the wolf is so born; and the question naturally arises, what was the duty of a wise, humane, and just legislator in her case? That she was dangerous to a community might have been easily seen before she steeped her hands in blood. That she ought never to be permitted to prey upon it again is no less evident. But whether it were right to take such an irresponsible, morally idiotic creature, and she a woman, whose sex had no voice in making the laws under which she suffered, and hang her by the neck, is a question for our advanced civilization to consider.

It is most probable that when Bridget and her accomplice first made their attempt at the house of Dr. Correll, their object was to rob; but, having been detected, and perhaps resisted, by the unfortunate deceased, Bridget's ferocious instincts at once took fire, and she then had no more power to resist them than a tiger rolling itself in the blood of its prey.

I consider her case one of deep and painful interest, and hope that one so well defined may lead the public mind to a consideration of the question of capital punishment. To me it is a cruel relic of a barbarism which ought to be expunged from our legal code; but there are many points besides this upon which our people need great and thorough investigation."

Bridget was born in Sligo Co., Ireland, and ran away from her parents after stealing money to pay her passage to America. In this country she was employed as a domestic in several families successively until her engagement by Dr. Correll, the fiendish murder of whose wife brought her so quickly, while but a young woman, to the gallows.

Mary Gilroy, whose portrait we present with

Durgan's, is the servant who was arrested at the instance of Bridget Durgan as being in her confidence with reference to the murder of Mrs. Correll. Her organization is evidently a coarse and deficient one, but it was not shown on the trial that she was actually cognizant of Durgan's intentions.

MARY GILROY.

THE CADENZA TRAGEDY.

It is no willing task on our part to record deeds of atrocious criminality. In fact, we avoid them; but of late so many murders have clustered together, and cast their fell shadow on the soil of so many different States, that we feel constrained to notice them.

In connection with Durgan we print the portraits of Cripino and Matilda Cadenza, negroes, the former of whom, while in a fit of jealous rage, murdered the latter, his wife.

MATILDA CADENZA.

Cripino is but nineteen years of age, and has the reputation of being an excitable and passionate person. His portrait is not attractive, but his low-toned morality is due to lack of proper culture and guidance, rather than to special organic irregularity. The woman has a rather pleasant expression and a better head. She is said to have been of quiet habits, peaceful and industrious; and contributed chiefly to the support of the household by "taking in washing" for gentlemen and families. For the portraits we are indebted to the courtesy of the proprietors of the New York *Dispatch*.

PORTRAIT OF ABDUL AZIZ KHAN, SULTAN OF TURKEY.

TURKEY AND ITS SULTAN.

OF all the royal personages who honored the Paris Exposition with their presence, none commanded more attention than the Sultan of Turkey. Napoleon and his wife Eugenie strove to do him special honor; and if the accounts given by journalists of the incidents which occurred during the Oriental visit in Paris be worthy of credit, Abdul Aziz Khan, Commander of the Faithful and Chief of all the Mohammedans, was fêted, caressed, and lionized in a style well calculated to impress his Grand Seigniorship with the notion that he was the most important character of the age. Whether the wily Emperor of the French had in view some grand political or diplomatic scheme, or whether the Eastern question assumed colossal proportions with the advent of the Turk, we are not sufficiently skilled in the under currents of European diplomacy to say. At any rate the Sultan's visit to Paris and Lon-

don brought so prominently before the public the subject of Turkey and its relations, that we have been induced to give a little space in our JOURNAL to their consideration. The visit of the sovereign of Turkey is remarkable for having no historical precedent. It is the first time that the supreme head of the followers of Mohammed left his seat of government for a friendly visit to his Christian neighbors. As it is not many years since the Sultan was admitted into the brotherhood of European monarchs, and his cis-Hellespontine subjects into the comity of European nations, this visit may be regarded as an act in confirmation of his cordial appreciation of the dignity allotted to him. His religious belief offered barriers and restrictions which had to be broken through or removed before the brother of Mohammed could practically entertain the design of treading on Christian soil. It is said that before he could set out on his journey, he was obliged to obtain a special dispensation from the chief

Mohammedan authorities, which would render his undertaking legitimate according to the precepts of the Koran. A brief glance at the history of the Sultan of Turkey will be interesting.

Abdul Aziz Khan, styled in the language of the Orient, Commander of the Faithful and Sultan of the Ottoman Turks, is the thirty-second sovereign of the line of Othman, Chief of the Oguzian Tartars and founder of the Turkish Empire, and he is the twenty-sixth since Mohammed II. took Constantinople and made it his capital. He is the second son of Sultan Mahmoud, historically famous for exterminating the Janizaries, and brother of the last Sultan, Abdul Medjid, whom he succeeded in June, 1861, pursuant to a Turkish law which provides that a brother of a Sultan shall succeed him in the occupancy of the throne before his own children.

Abdul Aziz was born in February, 1830, the 1245th year of the Hegira, or Mohammed's flight from Mecca. Previous to his assumption of the dignity of royalty he was but little known, having been obliged to live in retirement. He was then occupied in agricultural pursuits, directing the details of a farm on the banks of the Bosphorus. His reign thus far has been characterized by measures tending to improve vastly the financial condition of his empire and the social relations of his subjects. Among these measures stand prominently the introduction of a metallic currency, the breaking up of the seraglio, the promotion of equality among all his subjects, whether Musulmen or not, and permitting foreigners to acquire land and hold it in his dominions. The policy exhibited by the present Sultan toward Christians is very liberal when compared with the harsh treatment they have generally received from his predecessors. In character, Abdul Aziz is said to be mild and courteous. He is of medium stature, but stout and heavily built. From the features we gather the impression that for energy and activity he is not remarkable. The perceptive about the median line are well developed, and the eyes indicate a fullness of the organ of Language; but there is a heaviness, a lack of nervous vigor in the face, the result, perhaps, of the life of indolent ease so long associated with Oriental rule and despotic privilege. He doubtless loves his ease and good cheer, but possesses sufficient benevolence and reason to appreciate the good results of an act of clemency and liberality. The fez cap covers so effectually the major portion of the head, that we are unable to predicate aught of his moral, religious, and semi-intellectual faculties. We must leave it to be inferred from his administration of the government of what nature and development they are.

The Ottoman Empire, called by the Turks Osmanli Vilayeti, includes large portions of the continents of Europe, Asia, and Africa. Turkey Proper is partly in Europe and partly in Asia, and is under the direct rule of the Sultan, while there are numerous dependent and

tributary states, governed either by their own princes or by appointees of the Sultan. The most important of these dependencies is Egypt, the viceroy of which, Ismail Pacha, who has become distinguished for the facilities afforded in promoting commercial relations in and through his territory. That portion of Turkey Proper with which the civilized world is most familiar, is situated on the continent of Europe, and comprises an area of 203,484 square miles, and is the smaller of the two sections. Its principal city, and, indeed, the principal city of the Turkish Empire, is Constantinople, which is celebrated for its commerce and mixed population. It is the center of trade between the Orient and Europe, and there can be seen in strange association the yellow Chinaman, the swarthy Arab, the tall Armenian, the cunning Hindoo, the majestic Greek, the keen-eyed Jew, the

martial Albanian, the dusky Congo, and, in fine, a sprinkling of nearly every nation on the earth's surface, with all their variety of costume and peculiarity. The grand feature of interest to the stranger in Constantinople is the bazaars, a city of covered shops; street after street continuing to open before him, where the richest fabrics of the world are exposed for sale, each species in its own bazaar—Kashmir shawls and Chinese and India silks, brilliant jewelry, glittering arms, embroidered robes, slippers, fezes, etc.

The commerce of Turkey is extensive, and under the influence of judicial regulations, introduced in great part by the present sovereign, is rapidly increasing. The exports and imports collectively during the past year exceed \$600,000,000. Among the most prominent of the productions, manufactured and otherwise, of the country are wax, figs, olive oil, morocco, carpets, dyes, wool, meerschaum clay, tobacco, sponges, glass, cutlery, and gums.

The trading interests of Turkey are much retarded for the want of facilities of internal transportation. The Government, recognizing this lack, is pushing forward the formation of new roads and the laying down of railways.

The population of European Turkey is estimated at about 16,000,000, while the entire population of the Ottoman Empire is nearly 40,000,000. It would be difficult to conceive a more mixed and heterogeneous aggregation of races than that comprised under the rule of the Sultan. There are the Osmanlis, the ruling race, the Turkomans, the Greeks, the Armenians, the various Slavic races, the Wallachs, the Albanians, the Arabs, the Jews, the Franks, the Koords, the Gipsies, besides Tartars, Circassians, Copts, Nubians, Berbers, etc. The

STREET SCENE IN CONSTANTINOPLE.

Osmanlis are generally well formed, robust, and intelligent. They are courteous and generous in disposition, but inclined to indolence and luxury. In the prosecution of business enterprises they are surpassed by the Armenians, Greeks, and Jews.

The soil of Turkey in Europe is for the most part exceedingly rich and prolific, but agriculture is in a depressed state, owing to the little attention, comparatively, which it commands from the people. The implements of husbandry now in use are primitive and rude, very little improvement having been made in their manufacture during the past 3,000 years. Notwithstanding the imperfect cultivation, the crops of grain, cotton, and tobacco are large, such is the fertility of the soil.

The nature of the government is a pure despotism; the Sultan, though possessing nominally absolute power, is really less the ruler than the Sheikh-ul-Islam, the Chief of the Ulemas, who is at the head of the judicial and religious systems of the country, and has the right to object to any of the Sultan's decrees. The established religion is Mohammedanism, but all sects are now tolerated. Besides, a Mussulman can now change his religion, whereas before 1856 such change was made a capital offense, and followed by a summary death.

No special measures were taken for the intellectual improvement of the nation until 1847, when a definite system of education was inaugurated. There are now schools and colleges adapted for the different departments of scholastic training, and all are established on a free basis. Parents are required to send their children to school on attaining the age of six years.

The Turkish, or properly the Osmanli, litera-

ture is so composite, or rather Persian, in its nature, like the language, that it can not be said to possess a distinctive character; yet it is rich in history, poetry, and medieval philosophy. Its golden age was that period which comprised the reigns of Solyman the Magnificent and his son Selim. Then the most distinguished of Turkish historians and poets flourished, and their peculiarities of composition and style are considered models of excellence by the Turkish literati of the present day. The Turks have striven, as it were, to render their language an echo of the Persian in its different literary aspects. They have done little toward the grammatical construction and systematic arrangement of the Osmanli tongue proper, but have accomplished much in these respects for the Arabic and Persian. The printing press was introduced early in the 18th century, and since that time the work of publishing foreign and native books has been actively carried on.

The recent history of the Ottoman Empire has been much marred by the rigorous and cruel measures directed against the Greeks, a people possessing still, in a great measure, the heroic and indomitable spirit of their illustrious ancestors, and whom Turkish oppression has incited again and again to open revolt. The Cretan insurrection now in progress is maintained chiefly by Greeks anxious for independence and separate civil and religious nationality.

The Crimean war, in which France and England united with Turkey against Russian aggression on the latter, served to break through the barriers of prejudice and to overcome the antagonism which had been previously entertained by the civil and religious policy of Turkey toward the Christian nations of Europe.

From that time there has been a continued improvement in the social and civil interests of the Turks.

The civilizing influences of improved commercial relations with the great European powers has produced, and will continue to produce, changes for the better in that semi-exclusive country. The trade in female slaves has been in a great measure discontinued, and the institution of the harem is almost a thing of the past. Laws of a mild character are taking the places of old and oppressive regulations, and the arts, sciences, and manufactures are developing rapidly under a more and more liberal patronage. The Osmanlis have a country rich in resources, and favorably located in the very track of Asiatic-European trade; and they have but to rise to a full appreciation of their native advantages to take, ere long, a national position which shall command the respect of the world.

"MY PROFESSION."

FOR OUR YOUTHFUL READERS.

"WELL, Master Theodore, I'm glad to see you so bright and early this morning."

"Halloo, Farmer Jay," was the not altogether respectful answer. "I've come after some eggs. How many hundred dozen can you spare?" The city boy and the country man—the former in his buggy, and the latter standing in his garden and leaning on his hoe—eyed each other for a moment. At last the farmer replied:

"How many do you want?"

"Oh, any quantity—all you want to sell," replied young Theodore Wright.

"But eggs are *high* now," said the farmer, quizzically.

"I know it—but we put *down* a great many—not the *price*, but the *eggs*. The price is nothing to us, for my father has the rocks."

"And he's harder than rocks," said the farmer to himself, "whenever money is wanted for the poor, but no man could be more generous to his own body than he is. Well, generosity, even when it leans the wrong way, is better than no generosity at all." Then rousing from his reverie, he asked, with a roguish smile on his face, "About how many dozen can you *afford* to buy?"

"All you can spare, I said," replied young Wright, with a great show of importance, and money too, for he opened his purse and began to unroll some bank bills.

"I can let you have twelve dozen. It's a big pile—but then I see you have a big pile of bills there."

"Yes, and as soon as it's gone, another will take its place."

"And did you *earn* all that?"

"*Earn*!" replied the boy, much astonished at the question; and he added, boastingly, "I never earned a dollar in my life. My father is a rich man, and I thought every one knew it"

It was evident from the humorous twinkle

of Farmer Jay's eye that he knew all about the young man's father, and quite as much about the son, but he continued to draw out the boy.

"How was it with your ancestors, Mr. Theodore?" he asked.

"My grandfather was rich. He drove splendid horses, and lived in elegant style. My great-grandfather, too, was just as well off. I don't know of a relative, on my father's side, who wasn't rich."

"Then money runs in your family, don't it?"

"So it seems," replied Theodore, supposing the farmer to be filled with admiration of him and all his moneyed relations.

"How far back can you remember, young man?"

"Oh, not very far, of course, for I'm only sixteen years old—but I remember my grandfather, and I know he had more money than he knew what to do with. And I've often heard my father say, that as far back as he could remember, there was no poverty in the family."

"And did any of them *earn* their riches?" blandly, but pointedly, asked the farmer.

"They never worked much," was the answer. "A great deal of their money was left to them by rich relatives, father says, and the rest came easy enough, for everything they touched turned to gold."

"Is that so?" exclaimed the farmer, with an air of great surprise. "Well, now, with all your money, it will be difficult for you to decide upon a profession."

"No, sir, it won't. I calculate to be a gentleman, and live on my father's money. I might as well do that as to make myself old with work. My father is worth five hundred thousand dollars, and I think he can afford to let his son choose the profession of a gentleman. No man is fool enough to work when he needn't, and I'm sure there won't be the slightest need of my working."

"Five hundred thousand dollars!" Is that so?" once more exclaimed the farmer. "Well, you have a remarkable pedigree, and your ancestors have been high up in the world. As to my relations, I can't say much. One of them was very high in position, but he was disgraced at last, and in consequence of it I've had to work hard all my days."

"What was his name?" asked Theodore, looking pitifully at the farmer.

Just then the basket of eggs was brought out, and as Farmer Jay put it in the buggy, he leaned forward, and in an under-tone, said: "I'll tell you his name. It was—Adam."

Theodore looked rather confused, as Mr. Jay continued, without changing his tone or the expression of his face, "He was doing most splendidly in the world. His *garden* was more magnificent than any garden I've ever heard of, but he misbehaved sadly, and had to take his wife and leave. As the result of it all, I've had to work; but I've tilled my farm until I'm pretty well rid of the 'thorns and thistles,' and, besides this, the work has done me good—so I

don't lay up anything against my unworthy progenitor."

Theodore Wright tried to laugh, but he was so mortified to think that he didn't "smell the rat" sooner, his laugh was forced. The story had been told at his expense, and it only made matters worse to hear the farmer say:

"Why, my boy, it's a true story, and the only way I recovered from my great ancestor's disgrace was by working as hard as I could, and not trying to dodge the curse. If there is any man within five thousand miles of here who can eat heartier, or sleep sounder, or boasts of better health, I'd like to have him call on me and show himself."

Theodore had grown restless, and wouldn't have stayed five minutes after the conclusion of the story of Adam, but Mr. Jay had treated him to plums, and while he was eating he was obliged to listen.

"Now, young man," began the farmer again, "I've heard all you've said, and you must hear all I have to say. If you don't expect to have any other profession than that of fishing money out of your father's pockets and spending it, you are making your arrangements to be just nobody; and when you come crawling out of the little end of the horn at last, you'll be so small you can't be seen with the naked eye. This is plain talk, my boy, but I owe it to you, just as I owe everybody a kindness when I have a chance to show one. I'm very sorry for boys who have rich fathers, for rich men are not always wise, and their sons too often talk as you have talked to me to-day. You have boasted that you never earned a dollar in your life, and it is evident that you are laying your plans never to earn one, for you 'calculate,' you say, 'to live on your father's money, and not make yourself old with work.' You think that money is the making of a man. Well, so it is. It too often makes a fool of him, and it always does when it stands between him and some useful employment. Now, my advice to you is to change your calculations and make different arrangements. Don't look to your father's money for respectability or for support when you get to be a man, and look out sharp that it don't lead you to choose the profession of a *gentleman*."

Theodore was suddenly "in a hurry to get home with the eggs," and he drove off, not only with the eggs, but with several new ideas—ideas that ere this, it is to be hoped, have led him to decide upon some other profession than that of "an *unoccupied gentleman*."

MORAL GROWTH.—Why should the student be taught that, in dynamics, the power must be greater than the inertia, and in statics, that the resistance must be equal to the pressure; and yet not be taught, so as to feel a far livelier consciousness of its truth, that the quantum of energy must exceed the maximum of obstacle, or no heroic enterprise will ever be achieved; and that moral principle must grow as temptation grows, or we are swept to ruin?—*Horace Mann.*

OLIVER CROMWELL—HIS LIFE AND CHARACTER.

BY EDWARD W. TULLIDGE.

"Put your trust in God, and keep your powder dry."

ELIZABETH and CROMWELL! How well their names class together! How well the missions they represent! Their fame and their infamy, according to the point of view taken, have both come from the same forceful, heroic character, the same belief in their missions, and their strikingly comparable acts. How much like two halves of one whole are they? They are as two great instruments of destiny raised up to complete one great work, to let the world go on, and bring forth those mighty changes out of which not only has the religious face of Europe been changed, but republican empire grown up (almost as in a day in six thousand years) to its present gigantic proportions.

Where would have stood the old world today?—where would have been republican America, had not Providence given us an Elizabeth and a Cromwell? Moreover, those instruments must have been of a corresponding type in their missions and characters, for in striking down the massive consolidations of ages, destiny must raise up individuals as mighty battering-rams; and they must believe in their own missions and force the issue of the times. Elizabeth defied Popes, battled against their right divine, overthrew the Catholic Church in her realm, almost in a day; established the supremacy of the throne, and carried empire onward upon her imperial shoulders. She further fortified the struggling Protestants in Germany, Sweden, Denmark, the Netherlands, and Scotland. Her countenance and alliance encouraged the revolution of the age everywhere; and even to those whom she aided indirectly, Elizabeth, among sovereigns the representative of the era, became as a tower of strength.

Cromwell, in his turn, completes the other half of the age; and now the work is both in antagonism and concord with the first half which Elizabeth typed. Here again we see that religious revolutions produce their exact counterpart, in social and political changes; and in the case of these remarkable characters and their surroundings, one seems like the other repeated in a new but closely relative phase. How much Elizabeth and Shakspeare type their age! How much Cromwell and Milton theirs! How marked their relation and comparison! Elizabeth made Cromwell a necessity. So sure as that she had come, so must he follow, and their correspondents of mission and character were certain to be remarkable. She knew not that in beating down the past, which Popes represented, she was calling up a character like herself, but leading another mission in the world's destiny, to pull down the other half of the past, which monarchs held by assumed right divine. Cromwell in reality was her heir, and not James of Scotland—the heir of her mission, the heir of her imperial sway, and the repeater of the acts that have

OLIVER CROMWELL.

blackened their names to this day in the people's minds. She sent the unfortunate Mary Stuart to the headsman in 1586, under the infatuation that her rival cousin, being the heiress and claimant of her throne, and a Catholic princess, must be sacrificed as a dire necessity; and Cromwell, under a similar infatuation, sent her grandson, Charles the First, to the ax Jan. 30, 1649. If we carry the suggestive train of relations further, William of Orange (William the Third of England) comes the next, as the heir to the leadership of the age, and James the Second loses his throne, by the revolution of 1688, but not his head like his father Charles and great-grandmother Mary. What evil fate was there with the Stuarts? This one, and no other: they were ever with the past, and not with the future; they were ever standing in the way of the onward-rolling world, and not leading it; and they fell upon times when the ponderous wheels were rolling. They were, the whole race of them, crushed beneath those wheels. Shall we hold William of Orange, or Cromwell, or Elizabeth, or the revolutions of the people, in too strict account because the times were onward and the Stuarts would stand in the way, or disgrace an earnest age by profligacy? Who are they that a world should wait for them, or be hindered by them? The only good they ever did to the world was that, in a time big with empire and revolutions, which have not yet found all their final issues, their evil genius threw the greatest of those issues upon this continent. We may weep for their unfortunate lives and cruel fates, but shall we more than for George the Third, who lost more than a head and a throne when he stood in the way and lost America? George Washington and his compeers held the world's destiny that had passed farther on the western course of empire, and George the Third's head would have been cut off too, had it been under the wheels; but the world, with its van, had passed England, and America held the leadership now. Perchance that saved George the Third from the fate of the Stuarts.

To fully comprehend an era we must have its links in the great chain; nor must we think that Elizabeth and Cromwell are far removed from us because a couple of centuries stand

between us and them. They, in the aggregate periods of empires, are but as years in man's three-score-and-ten.

The temporal supremacy of the Church, since Elizabeth fully exploded it in England, has become exploded for all time. In hurling Popes, as her father had done, from temporal dominion in her realm, she hurled them from final *temporal* supremacy everywhere. One was but the beginning, the other the great consummation. And there is the relative of this in what Oliver Cromwell represented. It was the supremacy of the people, and the Church spiritual, above monarchy and popedom of every name. It is not the Roman Catholic religion that is exploded, or the Protestant religion. They may advance to higher forms of civilization and Christianity, still continue to divide the world, till in a circle they meet in Christian brotherhood of two faiths, vying together in liberality of spirit and progressive institutions of church and state. But Elizabeth cast out the supremacy of popedom, and Cromwell cast out the supremacy of kings above peoples. The problem solved in them and their era, for it was two halves and not two wholes, was that the *finale* is the Church and the people, with king-craft and priest-craft demolished.

Oliver Cromwell was forty years of age before he began to make his great mark in the world. He was born at Huntingdon, April 25th, 1599, and hence was living in the time of Elizabeth, who died in 1603. There were in the world together, the one going off, the other coming on, the stage of life, two of the mightiest personages of English history—a male and female—both of whom so well represented England in their own great characters, and under whose potent rule England gained a prestige of empire in Europe, such as she held not before nor since has held, nor ever will again, unless such personages rise once more to fill an old nation with the might of manhood and the grand earnestness of a mission.

Cromwell was of Welsh extraction; but his ancestor, whose name was Williams, married a sister of Thomas Lord Cromwell, Earl of Essex, and *assumed* the name of Cromwell; and, by marriage, his family was connected with some of the best names of England. He is also said to be related to the Stuarts, by his mother's side; and if his family pedigree be correct in this, Charles II. was a distant cousin of Oliver's.

When boys of about the same age, so runs the traditions of Huntingdon, Charles and Oliver met at Hinchinbrook House, the seat of his uncle, Sir Oliver Cromwell. The youths had not long been together before they disagreed, and Oliver, who regarded his princely sanctity as little then as thereafter, thrashed the then future "Lord's Anointed," in king-craft parlance, and made the blood flow copiously from the prince's nose. "This was looked upon as a bad presage for the king when the civil war commenced."

It is said that, when a boy, Oliver had a re-

markable vision. Noble, an eminent authority, tells us that Cromwell himself "often averred, when he was at the height of his glory, that on a certain night in childhood he saw a gigantic figure, which came and opened the curtains of his bed and told him that he should be the greatest person in the kingdom, but did not mention the word king;" and, continues Noble, "though he was told of the folly, as well as wickedness of such assertion, he persisted in it, for which he was flogged by Dr. Beard at the particular desire of his father; notwithstanding which, he would sometimes repeat it to his uncle Stewart, who told him it was traitorous to relate it." Those who have aimed to blacken the name of Oliver, such as Lord Clarendon, also refer to this vision as a proof of Cromwell's visionary and fanatical tendency of mind, and his ambitious dreams from childhood of the crown. On the other hand, such as his relative, Oliver Cromwell, Esq., would have us believe that his great kinsman ought not to have anything so disreputable as a vision pinned on to his memory. But wherefore should he not see a vision, or have a dream of empire to come in his life? Such men as Cromwell and Napoleon do thus dream and see visions in their boyhood, of armies at their command and scepters in their grasp, and we need no higher psychological explanation than the great conceptive instincts of their imperial minds, that paints, in fancy's forums, the kingdoms in themselves.

While under Dr. Beard, our hero is said to have been aspiring, stubborn, and obstinate; at Cambridge to have figured most in wrestling, cricketing, and such like exploits; and, as a young man, to have been turbulent and "fond of the juice of the grape and the charms of the fair." His kinsman, in his memoirs of his illustrious namesake, essays to soften down these features of his youthful character, and to wipe out such flaws from the life of the greatest man that Europe has produced. But better that we know him as he was; for he illustrates himself in a stronger light, and makes himself a harmony more sonorous by his very discords. That impetuous energy and potent *quality of action* in the man, which when a boy was turbulence, is eminently in harmony with that power of character which won the revolution for the Parliament, struck off the head of the king, mastered Parliament in turn, and made all Europe tremble at the might of the man, and to humble itself in the very dust to England. As for the sins of his youth, which he confesses to, they but intensified the fervor of his puritanic spirit; and when, afterward, was superadded to it the great ambition which took possession of his soul, it made him a grand enthusiast over his mission, as a mighty instrument for the "work of the Lord."

Oliver married a young lady of piety and excellence of mind, and this, doubtless, had a chastening, religious influence over his future life. He was returned twice as a member of Parliament for Huntingdon; but, until the

great revolution of his country called him out as the man of the times, he sustained a no more prominent part than that of a sober gentleman farmer, of an earnest puritanic prestige—a champion of the rights of the middle classes, and an antagonist to the exactions of the crown in his local province. His great local mark, and that which doubtless paved his way to a membership in the "Long Parliament" as representative for Cambridge, was made in his vigorous support of the popular Earl of Bedford against the king, in the notorious circumstance of the drainage of the Fens, when Oliver put to the worst the king's Commissioner, and aroused the universal spirit of the country. From that day his cousin, the famous patriot Hampden, pronounced him a man that would "sit well at the mark." Previous to this, disgusted with the king's tyranny and the ecclesiastical outrages instigated by Archbishop Laud, eight ship-loads of the Puritans were about to set sail for America. A proclamation of the king authorized the "Lord Treasurer to take speedy and effectual course for the stay of the eight ships now in the Thames preparing to go to New England," etc. In one of those ships were Cromwell and his illustrious cousin and compatriot Hampden. How blind and foolish are tyrants! Charles had stopped the emigration of the man destined to hurl him from his throne and take his head off!

In 1633, Oliver and his cousin Hampden were hindered from sailing to America. In 1639 came his famous resistance of the king's Commissioners in support of the Earl of Bedford; and now the lion was fairly aroused for the great struggle between the king and the nation. Eleven years had elapsed since a Parliament of England had been assembled; but the king now deemed it necessary to call one to aid him to expel the Scotch army which had marched into England, in revolt against Charles, for meddling with the religion of Scotland. Cromwell was elected from Cambridge. Finding Parliament not on his side, the king dismissed it after a sitting of only twenty-three days, but assembled it again in the following November. Lord Digby, one day going down the stairs of Parliament House, inquired of Hampden "who that sloven was." It was Cromwell! "That sloven whom you see before you hath no ornament in his speech; that sloven, I say, if we should ever come to a breach with the king (which God forbid), in such a case, I say, that sloven will be the greatest man in England." The sequel, which was rapidly coming along, wonderfully verified Hampden's prediction concerning his great cousin, "the sloven."

The famous attempt of the king to seize the five members of the House of Commons, among whom were Hampden and Pym, brought Parliament to the issue, and the popular cry arose, "To your tents, O Israel;" and the Parliamentary army was organized under the command of the Earl of Essex. But, previous to actual hostilities, Cromwell exhibited his energy and character. He distributed arms in the town of Cambridge,

raised a troop of horse, seized a magazine in Cambridge Castle for the use of Parliament, and stopped a quantity of plate which was on its way from that University to the king at York, crushed the efforts of the king's party in several counties to raise forces, and arrested the sheriff of Hertfordshire when about to publish the king's proclamation declaring the Parliament commanders all traitors.

At first, the Parliamentary forces were beaten everywhere. Nothing but the genius of Cromwell saved the glorious cause from utter defeat. Here let the man himself reveal his genius and matchless policy. At the famous conference between Oliver and the Committee when he refused the crown, he related a conversation between himself and his cousin Hampden, in which, after noticing that the Parliamentary troops at his "first going into that engagement were beaten on every hand," he suggested a remedy. "Your troops," said I, "are most of them old, decayed serving men and tapsters, and such kind of fellows; and," said I, "their troops are gentlemen's sons, younger sons, and persons of quality. Do you think the spirits of such base and mean fellows will be ever able to encounter gentlemen that have honor and courage and resolution in them? Truly, I did tell him, you must get men of spirit—of a spirit that will go as far as gentlemen will go, or else I am sure you will be beaten still." Hampden, he said, thought he "talked a good notion, but an impracticable one; but," Oliver continued, "I raised such men as had the fear of God before them and made some conscience of what they did; and from that day forward I must say to you, they never were beaten, but whenever they engaged the enemy they beat continually." How strongly does this tell us that the whole issue of the times was in the man himself! His genius solved the problem, and his impetuous, lion-like character was equal to the task of carrying out his great programme, big with human philosophy. Against the chivalry of English knights and gentlemen, pit the grand fanaticism of a grand and iron age! It was the only solution of success. But, then, where was the man in the world but Cromwell capable of organizing such troops, and inspiring them with his own grand, forceful soul? As it was, the Parliamentary generals were overmatched by the gallant Cavaliers; but Cromwell and his redoubtable Ironsides were ever invincible. He was the host that won the republican cause by his genius and forceful character. Tell us not that he was a hypocrite; it is but the fool's explanation. Rather tell us that he was the inspired "Captain of the Lord's host," even if moved by no higher inspiration than that of his own mighty soul.

Whitelock, Cromwell's ambassador to the queen of Sweden, in his Memoirs, says: "He had a brave troop of horse of his countrymen, most of them freeholders and freeholders' sons, who upon matter of conscience engaged in the quarrel with Cromwell! And thus being well armed within by the satisfaction of their own

consciences, and without in good iron armor, they would as one man stand firmly and charge desperately."

Marchmont Needham, whose potent pen the Parliament engaged, wrote with a graphic humor—"As for Noll Cromwell, he is gone forth in the might of his spirit, with all the train of his disciples, every one of whom is a David, a man of war, and a prophet, gifted men all, that resolve to do their work better than any of the sons of Levi."

Cromwell trusted not alone to the stern religious character of his troop from the middle classes, to pit against the gallant Cavaliers, but he put them through the best of discipline and inured them for active service. To test their courage, he once led them into a pretended ambushade and caused much alarm to be made, whereupon twenty of his troops turned and fled. These he directly dismissed, desiring them, however, to leave their horses for such as would fight the Lord's battles. The moral status of his soldiers is thus described: "No man swears but he pays his twelvepence; if he be drunk, he is set in the stocks, or worse; if one calls the other Roundhead, he is cashiered; inasmuch that the counties where they come, leap for joy and come in and join them." What could resist such troops?

In a fight near Ludlow, Cromwell "defeated twenty-four troops of the enemy's horse and dragoons, with seven troops only which he had with him." But the king was still victorious; and in the fight of Chalgrave Field, Bucks, June 18, 1643, the glorious patriot, his cousin Hampden, was slain; but toward the close of the same month came Cromwell's famous relief of Gainsborough, which Whitelock says was "the beginning of his great fortunes, and now he began to appear in the world." He made an up-hill charge upon the rear of the enemy, who outnumbered him three to one after the king's troops under the command of Lieut-General Cavendish had completely routed the Lincolnshire men, who fought for Parliament. From this commenced the "inseparable" league between Cromwell and Ireton, who was so charmed with our hero, who subsequently became his father-in-law, that Ireton left his own regiment and joined the Ironsides. In Oct., 1643, Cromwell led the van of the forces commanded by the Earl of Manchester in the attack of the royalists at Windsley Field, in which the Parliamentary army was victorious. "At the words Truth and Peace," Cromwell's "thirty-seven troops of horse and dragoons, himself at their head, advanced singing psalms; reserving their charge until Sir John Henderson's eighty-seven, who were coming down the hill upon them, had fired." Cromwell's horse at the onset was killed under him, and he mixed *pêle mêle* in the fight. Again he was down under the hand of a royalist, supposed to be Sir Ingram Hopton; but rising, he seized a poor horse from one of his troopers and contributed in person to the great victory. The nation now looked upon him as a match for Prince Rupert, and the king himself exclaimed, "I would that some one would do me the good

RISTORI AS MARIE ANTOINETTE.

fortune to bring Cromwell to me alive or dead!"

At the crowning battle of Marston Moor the Parliamentary forces were put to the rout, and three of the commanding generals had actually retired from the field giving up all as lost; but "Cromwell, with the brave regiment of his countrymen (300 strong), they only unappalled, were even yet observed persisting in desperate conflict with Prince Rupert's right." Sir Thomas Fairfax, son of Lord Fairfax, who had commanded the right wing, observing this, rallied some horse while Cromwell, though Newcastle's troops of foot up to this moment had "stood like a wall, now began to mow them down like a meadow." Reanimated by the sight, his whole brigade returned to the fight. Major-General Leslie, commanding the Scots, attacked Newcastle in the flank, all the Parliamentary troops rallied, and Cromwell fell like a thunderbolt upon the detached bodies that had been broken in their late pursuit, and Prince Rupert's army was driven to the very gates of York and scarcely allowed breathing time to enter; and the surrender of York quickly followed. Thus had the extraordinary conduct of one man again saved the Parliament cause.

[TO BE CONTINUED.]

MARIE ANTOINETTE.

ABOVE we give a view of Ristori, the actress, as she appears when dressed—should we not say loaded?—for the stage, in the character of the ill-fated French queen. Of course it is intended to represent French fashion near the close of the eighteenth century. This is the nonsense which grows out of a vain, foolish, pompous, wicked monarchy. Such a state of things would be impossible in a republic. Our women are fond of dress—as all women are—but they do not "pile on the agony" after this sort. Look at Powers' statue of the Greek slave—an almost faultless figure of the human form—and then at the fixed-up creature loaded down with superfluous dry goods, and say what you think.

Referring to the stage and its influences, *Watson's Art Journal* remarks:

"The production of 'Marie Antoinette,' with all its perfectness of scenery, like that of 'Richelieu,' 'Hamlet,' and the 'Merchant of Venice,' some time since, suggests the question whether the art education of the people would not be greatly advanced through the medium of scenic art.

"People go to the theater to be amused—a

few, perhaps, to be instructed. Striking a balance, we will find the amusement-seekers to be in a majority of about ninety per cent. Now, can not this ninety per cent. be taught something? Setting aside the mere question of acting, can not they be taught something about art—its aims, objects, and interests?

"The stage possesses a superior advantage to the studio or picture-gallery in that it has the advantage of histrionic as well as pictorial art. The passions of man, his loves and weaknesses, are brought before us in horrible colors, with vivid reality; and we are made more thoroughly to appreciate the innermost workings of his mind, than we possibly could be by the limner's art, through the medium of the canvas. Can not, then, the scene-painter's art be raised to an equality with that of the actor? Can not the public be taught that without it acting is, comparatively, nothing? Can not we, in short, wheedle, if you choose, the people into a love of art, by displaying to them how valuable an auxiliary art must always be to everything connected with mental culture and refinement? Assuredly, yes. Take, for instance, this very matter of scene painting; what immense strides we have made even within the last five years! We see nowadays but few scenic incongruities. A play, to be successful, must be perfect in its scenery. Garrick played 'Hamlet' in a powdered wig and knee-breeches. The 'Hamlet' of the present day must give us, at least, some idea of Danish costume. The same way with scenery. The theater-going public of to-day expect in it artistic skill and artistic unity. All this demonstrates one fact—day by day we are getting to more thoroughly understand and appreciate art.

"Should not, then, this understanding and appreciation be encouraged? If the stage is the medium through which it can be accomplished, why, then, let it be so. But, above all, let us leave no stone unturned to bring about the desirable end of making ourselves an art-loving, art-admiring, art-appreciating community."

[But we trust these things we see on the stage, these extravagant exaggerations, are not for us Americans to imitate. We admire fine painting, sculpture, and all that, but don't like to see the human form so distorted as to make it look hideous. Simple nature unadorned with such trappings would be better.]

TO MY "SOMEBODY."

"I'll not forget you very soon."

THE words were whispered soft and low
By stranger lips, and yet I know,
In the dim and shadowy long ago,

The same kind words to me were spoken.

The same kind hand my head caressed,
The same pure lips to mine were pressed;
Be still, my soul, 'tis for the best,

For friendship's ties so soon are broken.

My yearning soul goes out for thee,
Like a beacon o'er the stormy sea;
My "kindred spirit," come to me;

Has thy lone heart no answering token?

CAMBRIDGE, O.

EMMA.

PREMIUMS FOR THE PEOPLE.

We offer the following to all who may feel an interest in the PHRENOLOGICAL JOURNAL:

For 350 new subscribers, at \$3 each, we will give a Steinway Rosewood Piano, worth \$650.

For 100 subscribers, at \$3 each, we will give a Horace Waters five Octave Parlor Organ, worth \$170.

For 60 subscribers, at \$3 each, a Horace Waters five Octave Melodeon, worth \$100.

For 30 subscribers, at \$3 each, a Weed Sewing Machine, new style, worth \$60.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

For 15 subscribers, at \$3 each, the Riverside Edition of Irving's "Belles Lettres Works," comprising "Knickerbocker," "Tales of a Traveler," "Wolfert's Roost," "Crayon Miscellany," "Bracebridge Hall," "Alhambra," "Oliver Goldsmith," "Sketch Book," elegantly bound, worth \$16.

For 12 subscribers, at \$3 each, a handsome Rosewood Writing Case furnished with materials, complete, worth \$12.

For 10 subscribers, at \$3 each, the Sunnyside Edition of "Irving's Life of George Washington," in five volumes, appropriately illustrated, worth \$12 50.

Those persons desiring our own publications instead of the book premiums offered, can select from our own catalogue books amounting to the value of the premium for which they would have such books substituted.

The premiums offered are all serviceable in any household, and each is well worth the moderate effort required to secure it. Every family, large or small, should have a sewing machine and some instructive books. There are very few well-ordered families, no matter how poor, in this country, that have no good books on their narrow shelf, but there are many that do not possess a sewing machine. How many poor widows there are with two, three, four or more young children, who are obliged to toil early and late for a bare subsistence! If such had sewing machines to expedite and yet lighten their labor, how much more comfortably they could get along in the world! Reader, do you know a poor widow who is trying her best to earn an honest living, to clothe and educate her children? Think how much easier she could do it with one of these excellent machines! Then why not start a subscription paper and induce a few "well-to-do" neighbors to put down their names, each for the trifling sum of \$3, and thus get the JOURNAL a year, and in a few hours put the "Family Treasure" in the poor woman's house?

We will guarantee the quality and genuineness of each article in our premium list. In fact, we will invite the premium creditor to select for himself or herself.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

MANUAL OF PHYSICAL EXERCISES, comprising Gymnastics, Rowing, Skating, Fencing, Cricket, Calisthenics, Sealing, Swimming, Sparring, Baseball, together with Rules for Training and Sanitary Suggestions. By Wm. Wood, Instructor in Physical Education. With one hundred and twenty-five illustrations. One vol., 12mo, pp. 315. Price \$1 50. New York: Harper Brothers, publishers.

Another useful manual of instruction for those who need it. Before the war, Americans, both men and women, were becoming, in a measure, effeminate; our young ladies were thin and fragile, and our young men delicately constructed, thin in muscle, and narrow in the chest, and gotten up on a sharp and active principle rather than on a broad and vital. The war tended to call out and develop the men, and to put them on a new footing. The work before us seems well adapted to the purpose of physical development, and will inevitably find many readers and willing followers. We may not endorse all the author's suggestions, nor will we stop to criticize, inasmuch as the general tendency of the whole is in the right direction, and for the most part in keeping with our own teachings. The publishers have brought out the "Manual" in their usual good taste and style.

FAMILIAR LECTURES ON THE PENTATEUCH, delivered before the Class of Bethany College, by Alexander Campbell; also, Extracts from his Sermons, a Portrait, and Brief Sketch of President Campbell's Life. Edited by Rev. W. T. Moore. 12mo, pp. 380. Price \$2. Cincinnati: H. S. Bosworth.

The "Disciples" may well congratulate themselves on this admirable production. The Rev. Dr. Moore, at present residing and preaching in Cincinnati, a graduate from Bethany College, was most intimate with Dr. Campbell, its founder, and is, perhaps, the most competent to produce such a work as this. The sketch of Dr. Campbell's life is by Charles V. Segar, a photographic reporter many years in our employ, who reported Dr. Campbell's discourses with a view to publication, and although Mr. Segar, as well as Dr. Campbell, have departed this life, their works remain a monument to their memory.

KATHRINA. Her Life and Mine, in a Poem, by J. G. Holland, author of "Bitter-Sweet." One vol., 12mo, pp. 287. Price \$1 50. New York: published by Charles Scribner & Co.

Beautiful! beautiful! beautiful! It is charming to read such descriptions and heartfelt confessions. Though popular before, through his numerous publications, Dr. Holland's last production has written his name indelibly on the hearts of humanity. His Kathrina will be translated into other languages, and will become classical when he shall have gone to the spirit-land. We shall attempt no description of the book, but simply ask all to read it, to remember its lessons, and be improved by them.

LE PETIT MESSENGER for November furnishes the latest Parisian fashions in the various departments of ladies' toilets. It contains several beautifully colored plates, besides two paper patterns. S. T. Taylor, publisher, 349 Canal Street, New York. \$5 per year. Single copies, 50 cts.

THE EARLY YEARS OF HIS ROYAL HIGHNESS THE PRINCE CONSORT, compiled under the direction of Her Majesty the Queen, by Lieut.-General the Hon. C. Grey. One vol., 8vo, pp. 371. Price \$3 00. New York: Harper & Brothers, publishers.

A charming book, by a faithful wife and loving mother. Victoria has endeared herself to humanity by her modest, mindful, and circumspect life, and she has given, in the delightful volume before us, an insight into the royal domestic circle. The book will be widely read, and exert a healthy influence on all. Young lovers may read and profit by a perusal of the account of the early life of the "Prince Consort."

QUEER LITTLE PEOPLE. By Harriet Beecher Stowe. With Illustrations. Quarto, pp. 185. Price \$1 50. Boston: Ticknor & Fields.

A delightful book for children. It is not an exaggeration to say that it is one of the best of its kind, and will afford the richest entertainment with instruction for children and youth. It is beautifully illustrated with birds, squirrels, dogs, cats, crickets, frogs and the like, and it is every way suitable as a holiday-book for the young.

MODERN PALMISTRY; or, The Book of the Hand, chiefly according to the Systems of D'Arpentigny and Desbarrolles, with some Account of the Gipsies. By A. R. Craig, M.A. With Illustrations. One vol., 8vo, pp. 330. Price \$1 50. New York: American News Company.

An interesting piece of bookmaking, with handsome type, handsome paper, and handsome binding, but only curious as a matter of speculation. We would quote from the work were it worth while. We have given in "New Phyllognomy" all that is scientific, and something that is only speculative in regard to reading character by the hand.

ECHO-BANK. A Temperance Tale. By Evrie. 18mo, 269 pp. Price 85 cts. New York: National Temperance Society and Publication House.

A capital book for the family fireside, especially for youths who are forming character. It is in the interest of virtue, temperance, education, and religion. The author, in speaking of the blighting influence of the distillery and its products, says: "It is all-powerful to make misery ten thousand times more miserable; to turn man's heart into a hell; to ruin his soul through all time and all eternity; to deaden and destroy the energies, and to turn the blood of one's veins into fire to consume them." The spirit of the book may thence be inferred.

HAREM LIFE IN EGYPT AND CONSTANTINOPLE. By Emmeline Lott, late Governess to His Highness the Grand Pacha Ibrahim, son of His Highness Ismael Pacha, Viceroy of Egypt, and authoress of "The Nights in the Harem." 12mo, pp. 357. Price \$1 50. Philadelphia: Peterson & Brothers.

Americans, and the Western World generally, read with interest anything about the Orientals. The work before us seems to be a reprint from an English book. The author adopts from Alger the following lines:

"What precious things I find in Oriental lands,
Returning home I brought them in my votive hands;"

and gives an account of her experiences in the land of the dervish and the fez. Those who anticipate anything gratifying to their sensual natures will be disappointed.

Harem life in reality is very different from the voluptuous and lustful which many imagine. But it is an old institution, has had its day, and will ere long be a mere subject of Eastern history. It can not long resist European civilization and enlightenment. The book before us furnishes an interesting inside view of life in Turkey.

A TALE OF TWO CITIES. By Charles Dickens. With Illustrations by John McLennan. People's Edition. 415 pp. Price \$1 50. Philadelphia: Peterson & Brothers.

These enterprising Philadelphia publishers do not intend to be surpassed by Messrs. Ticknor & Fields, of Boston, and they bring out their monthly volumes in good type, and on good paper, very promptly. The form in which the volume under consideration is presented, is styled "The People's Edition," and the "Tale" is the third of the series. The same publishers have printed Col. Forney's letters from Europe, in a handsome volume. Price \$2 00. Those who read these letters in the Philadelphia Press will be glad to have the same collected in a convenient form for perusal and preservation.

GOOD STORIES. PART 2. 18mo, pp. 223. Price 50 cents. Boston: Ticknor & Fields.

Contents: The Metempsychosis; Uninvited; Bellowmender of Lyons; Small Change Family; Scoteman's Tale; Blacksmiths of Holsby; A Penitent Confession; with four appropriate illustrations.

RAINBOWS FOR CHILDREN. Edited by L. Maria Child. With twenty-eight illustrations. One vol., 12mo, pp. 169. Price \$1 50. Boston: Ticknor & Fields.

Twenty years ago these delightful stories were first published. They had the benefit of a somewhat extended circulation through the press of Messrs. C. S. Francis & Co., and are now transferred to the enterprising house of Messrs. Ticknor & Fields, who give them a new lease on public attention. The more they may be circulated the better will it be for the rising generation.

LEYTON HALL. By Mark Lemon, Editor of London Punch and Author of "Loved at Last," "Wait for the End," etc., etc. 176 pp. Price 75 cts.

This is a large octavo in the usual style of popular novels. That Mr. Lemon of the London Punch would make an interesting story, no one would doubt; but the question would arise, What is the use of it all? If one has ample leisure, and a love for mental dissipation, the reading of such a production is one of the ways to do it. We regard Mr. Lemon as being quite capable of both "Love and Jealousy" in its most intense form, and presume he has spoken to the point. Those likewise afflicted might get consolation by reading his book, on the principle that "misery loves company."

CONFUCIUS AND THE CHINESE CLASSICS; or, Readings in Chinese Literature. Edited and compiled by Rev. A. W. Loomis. San Francisco and New York: A. Roman & Company. 12mo, cloth, pp. xiii., 482. \$2.

This book contains information which has been long desired by the literary public with reference to Chinese literature. The political, domestic, and social habits of the Chinese, their religious beliefs, and moral philosophy are clearly described, and the ancient sources of each mentioned. What China was in the days of Confucius, China is, in a great measure, to-day, so that the reader of this compilation is introduced to customs, ceremonies, and political and religious creeds two thousand or more years old. The book abounds in quotations from the writings of Chinese philosophers, poets, moralists, etc., which contain a large amount of sound instruction even for the Christian reader.

SNOW-BERRIES. A Book for Young Folks. By Alice Cary. With Illustrations. One vol., 12mo, pp. 206. Price \$1 50. Boston: Ticknor & Fields.

A charming medley of prose and poetry, and illustrations to match, by this always delightful writer. The Spotted Deer; Counting the Chickens; Talk with a Tree; The Burning Prairie; Gipsy Fortune-Teller; The Brickmaker's Boy; The Weaver's Daughter; The Fisherman; The Street Beggar; Jennie and I; The Man with a Stone in his Heart, etc., make up the contents of a rather pretty book.

THE HARD MASTER. A Temperance Story. By Mrs. J. E. McConaughy, author of "One Hundred Gold Dollars," "Hawthorn Blossoms," etc., etc. One vol., 18mo, pp. 278. Price 85 cts. New York: National Temperance Society and Publication House.

A companion to "Echo-Bank," with chapters, entitled: The New Master; The Serpent in the Garden; Starting the Ball; Little Nell; Blinding the Chains; Light and Darkness; Making Money Easy; The End Thereof; Temptation; The Blessing of the Lord.

It is pre-eminently adapted to Sunday-school libraries of all denominations.

GRIMM'S GOBLINS, selected from the Household Stories of the Brothers Grimm. With Illustrations in Colors from Cruikshanks' Designs. One vol., 12mo, pp. 111. Price \$1 50. Boston: Ticknor & Fields.

Another holiday book by these popular publishers. The present is illustrated by colored plates. It comes in handsome large letters, printed on tinted paper, making altogether a handsome presentation book.

DOMBEY & SON. By Charles Dickens. With Eight Illustrations. Charles Dickens' Edition. pp. 543. Price \$1 50. Boston: Ticknor & Fields.

One of the most quoted and played of all this author's works. It is printed, in this new edition, on fair-sized type, rather close, but very compact, and suitably illustrated. Mr. Dickens is a close observer of human actions, and his fertility of imagination enables him to create originals for his stories whenever there may be occasion. If we must be occupied in reading comic scenes and comic stories, we think Dickens is the very man to supply the material; but earnest men, who have a purpose in life, will aim at something higher than mere amusement or entertainment.

THE BOYS IN BLUE; or, Heroes of the "Rank and File," comprising Incidents and Reminiscences from Camp, Battle-Field, and Hospital, with Narratives of the Sacrifice, Suffering, and Triumphs of the Soldiers of the Republic. By Mrs. A. Hoge, Assistant Manager of the Northwestern Branch of the U. S. Sanitary Commission, Chicago. With an Introduction by Thomas M. Eddy, D.D. With Illustrations from Original Drawings of the most striking Scenes of the War of the Rebellion. One vol., 8vo, pp. 477. New York: E. B. Treat & Co. Price, in cloth, \$3 50. In cloth, beveled boards, gilt, \$4 00.

We may cry out against multiplying war-books as much as we will, but there is a history connected with every man who participated in the late great contest which will possess some fascination for all the others. In this volume is recorded the observations and experiences of one who took a large part in the war, and it is meet that such observations and experiences be placed on record. The publishers have done their part pretty well. We have already given an account of the lady authoress in this JOURNAL. The book will be sold only by subscription. Those disposed to engage in its sale should correspond with the publishers, who will make the terms known. It is a handsome work, profusely illustrated, and is every way worthy a place in the family library.

A CHURCH DIRECTORY for New York City; City Mission Document No. 9; New York City Mission, 30, Bible House. 50 cents.

This neat compilation subserves a want long felt in the religious circles of our great city. Besides the names and addresses of the ministers, the locations, and numbers in the congregations of the different churches and societies, there is much statistical information given relating to Sunday-schools, mission stations, and charitable organizations. A neat colored map of New York accompanies the book.

IN BONDS. A Novel. By Laura Preston. New York: A. Roman & Co., publishers. 12mo, fancy cloth. \$1 75.

If Mrs. Child's "Romance of the Republic" is the first volume issued from the American press which weaves together in an agreeable style fact and fiction relating to the past condition of Southern society, Miss Preston's is certainly the second. "In Bonds," from a cursory glance, gives us a comparatively faithful account of Southern slave life in some of its many striking and interesting phases. The ornate, and, to some extent, sensational setting of the plain narrative will render the book acceptable to the romance reader.

BARNABY RUDGE, and HARD TIMES. By Charles Dickens. With Original Illustrations by S. Eytinge, Jr. Diamond Edition; pp. 523. Price \$1 50. Boston: Ticknor & Fields.

As a delineator of low life in England, Mr. Dickens is incomparable. This his severest critics confess, and the above-entitled book is a good example of his ability in that department of book-writing.

THE NEW AMERICAN CYCLOPEDIA: A Popular Dictionary of General Knowledge. Edited by George Ripley and Charles A. Dana. Sixteen volumes. Price \$80. New York: D. Appleton & Co.

In our October number a statement was made which would appear to be discreditable to the above well-known American production. It is remote from our purposes, it would be thwarting our opinions, to depreciate a work so well established in public favor as the "New American Cyclopaedia." Its completeness of design and elaborateness of detail must commend it to all who lay claim to culture and literary taste. The articles generally evince scholarship in their preparation and tasteful discrimination in their arrangement. No American library would be complete without a copy of the "New American Cyclopaedia."

THE LIFE AND ADVENTURES OF MARTIN CHuzzleWIT. By Charles Dickens. With eight illustrations. 1 vol., 12mo, pp. 522. Price, \$1 50. Boston: Ticknor & Fields.

Regularly, promptly, and cheaply the enterprising publishers give the stories of Mr. Dickens to the public. The present is, all things considered, the most desirable for the library. Having these works at hand, one will have a stock of constant entertainment within easy reach, not unlike such as may be found in the theater.

THE STUDENT AND SCHOOLMATE. A capital magazine for children and youth, now in its twentieth volume, is published monthly, at \$1 50 a year by Mr. J. H. Allen, 203 Washington Street, Boston.

SMITHSONIAN INSTITUTION.—We are indebted to the courtesy of Mr. John T. Hoover, in the office of the U. S. Coast Survey, for a copy of the Annual Report of the Board of Regents of the Smithsonian Institution. The volume exhibits the operations, expenditures, and condition of the Institution for the year 1866. A handsome octavo of 469 pages, in the usual style of our public documents.

PREMIUM ESSAYS ON BANKING.—The publisher of the N. Y. BANKERS' MAGAZINE offers a premium of \$300 for the best Essay on Banking and Finance, and \$200 for the second best article on the same subject.

THE RIVERSIDE MAGAZINE FOR YOUNG PEOPLE is really a very beautiful monthly periodical, well worthy a place in every family where good taste, good morals, and high culture are to be encouraged. It is published at \$2 50 a year, by Messrs. Hurd & Houghton, of New York. The *Riverside Magazine* will be clubbed with the PHRENOLOGICAL JOURNAL for \$5 a year. Order from this office.

A PORTRAIT OF HORACE GREELEY.—The publishers of the *Tribune* propose to send a copy of Ritchie's superb engraving to each subscriber to the *Tribune*, as per advertisement, to which we refer. This is much the best likeness of Mr. Greeley that has been engraved.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

SPECIAL NOTICE.—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, and ANTHROPOLOGY, or the general SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

CAN WE LOVE OUR FRIENDS TOO MUCH?—Do you think it wrong for one to love his friends all he can? Does great human affection necessitate less love for God? Is not idolatry loving too little, or too selfishly, which is the same, rather than too much? I can not understand how loving our friends much can make us love God less.

If we love them truly, we are ready to labor and suffer and make sacrifices for them; to deny ourselves their presence for their good; to forswear our love, even, for their honor; and doing this can never make us forget God, for it is only through his strength that we can do it.

I believe that the more tenderly, devotedly, and unselfishly I love my friends on earth, the better fitted I shall be to love my friends and Father in heaven. My heart echoes the beautiful words of Mrs. Ames, when she addresses her friends:

"* * * I hold you most religiously; I count your names a rosary in my prayers. Nor separation with its saddest change Can change for me the faces that I love.

Not mine to have, to bless, to lean on long;
Yet through the everlasting years my own
To love, to pray for, and to live for still!
I lift each name into the oriflamme
Of God's own love, and say, "Lord, love my friends!
And let me love them in Thy purer world!"

[This is right. And we doubt if there can be love to God till after there has been love to man. We agree with our correspondent that it is selfish love which idolizes, and that it is the pure and sanctified kind which she so beautifully describes. Husbands sometimes idolize their wives, wives idolize their husbands, and parents their children. If parted from them by death, instead of accepting the infliction with proper Christian resignation, they agonize and go mad. So it is with foolish young lovers when disappointed, and they grieve and moan their lives away. This is foolish, if not wicked.]

"**SUBSCRIBER.**"—We will supply back numbers of the PHRENOLOGICAL JOURNAL at regular price, 30 cents, as long as they last.

TEMPERAMENT.—"Does the blood in one's veins have any effect on his mental qualities?"

Ans. It is claimed by some that the venous blood, when existing in extra amount in a person, is the basis of what is called the bilious temperament, while the arterial blood in predominance gives rise to the sanguine temperament. Those in whom the venous system exists in great abundance, generally have the hardest

muscles and bones—the greatest amount of strength and hardihood and endurance. They are inflexible, resolute, stern, and sometimes hard in disposition. Some claim that the predominance of the venous blood was the result, not the cause, of the bilious or motive temperament. One thing is certain: those in whom this temperament prevails are more liable to rheumatism, bilious fevers, and the like, and they should eat tart fruit freely, and avoid oily articles of food and any excess of saccharine matter.

"**FASCINATION,**" or the "Art of 'charming,'" is out of print, and we will not in future publish it as a separate work. It now comprises part of a large work—the "New Library of Mesmerism," two handsomely illustrated volumes. Price \$4.

EYES AND BEARD.—Does the shaving of the upper lip cause weakness of the eyes? If so, what is the remedy?

Ans. A dull razor often causes the tears to start when the upper lip is undergoing the savage process of being shaved with such an instrument, and the idea has obtained general belief that there is some intimate nervous relation between the upper lip and the eyes, because a dull razor does not produce the same effect when applied to any other part of the face. The remedy for such evils is not to shave at all. The Chinese shave the head, which all civilized nations consider to be wrong. The hair and beard for convenience may properly be clipped, but not shaven. Why not shave the eyebrows? They were placed there by the Creator, and, like the beard, should not be removed.

HEALTHFUL HEAT.—Which produces the most healthful heat for an ordinary room—an air-tight wood stove or a coal stove?

Ans. A wood fire in an open fire-place would be preferable if it could be had. We would rather be warmed by an air-tight wood stove than by an air-tight coal stove. But we like the artificial warmth best which comes from hot-water pipes. The heater may be a stove or a furnace in the basement of a building with a boiler, having pipes throughout the house. The water may be kept at an even temperature day and night if desired, and thus a healthful heat obtained. But the best of all warmth is that which comes from bodily exercise. Most people in cold climates sit too much in over-heated rooms, depending on artificial rather than on the more natural and consequently healthful heat which comes from a vigorous circulation of the blood. Cold hands and cold feet indicate imperfect circulation, the remedy for which is exercise, exercise, exercise.

IMMORTALITY.—"Do you believe in the doctrine of Zoroaster, that there is an immortal soul within man, independent of his body? or with Job, that there must be a resurrection of the body to give tangibility to man's immortality?"

Ans. We believe that there is an immortal soul within man which will live, and know, and enjoy when his earthly body is dead. As to what the body shall be in the resurrection, how different it shall be from the one he now wears, it is not necessary to know. If God desires man to have a body as "a clothing for the soul," he will make such a one as will best serve it. See 1 Corinthians xv. 37-45. The essence of the subject is contained in the forty-second and forty-fourth verses: "So also is the resurrection of the dead: It is sown in corruption; it is raised in incorruption. It is sown a natural body; it is raised a

spiritual body." It is doubtful whether the worthies of the Old Testament generally had a clear idea of the future, and immortality is not very clearly taught in it. It is said that Christ "came to bring life and immortality to light," not to create it.

"**CONSTANT READER.**"—Yes, we can supply you with the "Life and Writings of Oliver Goldsmith." Price by mail, postpaid, \$4; and "Animated Nature," by Goldsmith, in 2 vols., \$5.

HYDROPATHY—HOMEOPATHY.—1. Which is the best *Hydropathic* pocket manual with which to treat one's self in common diseases without a physician? 2. Which is the best *Homeopathic* manual of the same kind?

Ans. Dr. Trall's Hand-Book of Hydropathy, \$2. And Dr. Ellis's Family Homeopathy, \$2. See also The Illustrated Hydropathic Encyclopedia, \$4 50, the most elaborate work on the subject.

C. O. D.—What is the meaning of the letters C. O. D., marked on goods?

Ans. An Irishman, once upon a time, ordered a fish dealer to send to him by express a box of mackerel. In good time an express wagon drove up to his door with the expected box of fish, but his dismay was great on seeing the letters C. O. D. marked on the box. "C. O. D.—I never ordered any codfish, ye spalpeen; I ordered mackerell." Of course the expressman did not know the contents of the box, except that it was fish; but finally he managed to pacify the excited Irishman by telling him that C. O. D. did not necessarily mean codfish, but, in mercantile usage, Collect on Delivery. "Collect on Delivery," replied the Irishman in scorn; "and why didn't they make it D. W. C., Deliver when Collected, so that everybody could understand it?"

SMOKING ON THE CARS.—It is against the rules of all well-regulated street cars, omnibuses, and public carriages to permit gentlemen (?) to pollute the air with the fumes of burnt tobacco. We consider it the duty of conductors to prevent the nuisance, and thus spare passengers who are liable to be made sick by this vulgar practice.

ARSENIC AND THE SKIN.—A lady writes, "Can you tell me the quantity to take to whiten the skin; also the effect of arsenic on the system, when taken in small quantities? If you know of any work treating of these facts, please inform me of the price, and where procured."

Ans. The best work on the skin is that of Erasmus Wilson—two volumes, with plates, \$8 50. See our "Special List." We can not advise the use of arsenic to whiten the skin—nor is it suitable to be taken into the human stomach.

TWINS.—If two persons have the same temperament, and their heads are alike phrenologically, would they be exactly alike in form and action?

Ans. This question, to our mind, answers itself. We have seen several pairs of twins who were in complexion, build, weight, size of body and form of head, so nearly alike that they could not be distinguished by their own mothers; and their dispositions, characters, and actions were as nearly alike as their looks and organization. We have examined the heads of such twins, and finding some slight characteristic differences which would not be noticed by the general observer, we have pointed them out, and found them to be precisely such as were indicated by the slight differences in the forms of their heads. Consequently, if in organization and mental development two persons are exactly alike, they will act and feel exactly alike, as nearly as two peas are alike.

Publisher's Department.

SWEDENBORGIAN.—In continuation of our plan to give an account of all the great religious bodies, we present in the present number a group of representative men of this church, together with the distinct doctrinal tenets of their faith.

THE JEWS.—We have nearly ready a group of distinguished Jewish rabbis, whose portraits will soon be given in this JOURNAL.

YOUR CHARACTER FROM YOUR PORTRAIT.—Those who desire to obtain a careful phrenological description of themselves, with advice as to the best pursuits, etc., and who can not conveniently visit our office in person, may send us a three-cent stamp, asking for "The Mirror of the Mind," which will give information how to have likenesses taken for this purpose, the measurements required, terms, etc.

BOWLBY'S MUSICAL DEMONSTRATING BOARD.—This is an ingenious arrangement for facilitating a student in music in comprehending the changes and transpositions of the scales. It is made of card-board with two movable slides. In the center of the card is printed the Scale of Absolute Pitch with its appropriate letters A, B, C, etc., and with the intermediate sharps and flats. The slides represent the diatonic scale with its regular intervals, which are designated by numerals. The learner has only to arrange these slides to correspond with any letter in the fixed scale, and he at once sees what sharps or flats are necessary in any given key. It is a very convenient and useful assistant to the teacher, and has received the approval of some of our best musicians. Price, plain \$1 50; in neat walnut frames \$3. Supplied from this office.

THE NEW WORK ON THE PREVENTION AND CURE OF CONSUMPTION by the Swedish Movement Cure, is now ready. Price, 30 c.

ORATORY—SACRED AND SECULAR; or, Extempore Speaking, by Rev. William Pittenger; and **LIFE IN THE WEST;** or, Stories of the Mississippi Valley, by N. C. Meeker, will appear shortly. The work on Oratory will be one of the best of American productions on the subject.

General Items.

OUR EXCHANGES.—We have altogether something more than a thousand newspapers and magazines on book, to whom we send the PHRENOLOGICAL JOURNAL regularly. Considering the cost for paper and printing, this is no small draft on our exchequer. But the generous notices so kindly bestowed on the JOURNAL by the press we deem an ample equivalent. Subscribers, not willing to enjoy the JOURNAL alone, often request us to send copies to editors for examination, which we are always happy to do.

POSTING UP THE COVER.—In a large factory near New York one of the men took the liberty of posting in a conspicuous place one of the cover pages of the JOURNAL, and writing under it, "SUBSCRIPTIONS RECEIVED HERE." A good idea. After reading, the covers may be removed and used for posters to advantage.

ADVERTISEMENTS.—Merchants throughout the world have for many years availed themselves of the Press to make known the fact that they have goods for sale. Lawyers use the same means to inform the public that their services are available. So do physicians. And say what we may of a "hiring priest," it is a fact that many churches, in our large cities, are announced by advertisement to be open for service at certain times and places. Some announce both names of preachers and of subjects. A full column of such announcements in a Saturday's daily may be found. We regard it a great convenience: 1st, it serves as a directory to strangers, of whom, it is said, there are from forty to fifty thousand in New York every day; many of these wish to hear a certain preacher, and the advertisement informs them where to find him. The custom promises to become general. Manufacturers, dentists, fruit-growers, publishers, shippers, railways, express companies, etc., all advertise—and readers are often interested in and instructed by these pithy announcements. Of course publishers should discriminate and admit nothing calculated to mislead or deceive. We go further than this, and exclude not only lotteries, gambling schemes, etc., but quack medicines, liquors, tobacco, and the like. We can not be a party to that which must inevitably be injurious to our fellow-men. This fact makes our JOURNAL all the more desirable as an advertising medium. Moreover, the space allotted to business is not great, and it is believed those who use it get more than an equivalent for the expenditure. It would be gratifying to advertisers to know that their announcements in the PHRENOLOGICAL JOURNAL met with responses. Purchasers will therefore oblige by stating *where* they saw the advertisement. To secure insertion "in the next number," advertisements must reach us the first of the month preceding its date—i. e., a month in advance. We are obliged to commence printing thus early to be out in time. We once promised that when our subscription list reached 50,000, that we would either exclude all advertisements, or print them on a separate sheet. We need not far from 20,000 more to attain that figure. Shall we have them? It rests with our readers.

A MEDICAL COLLEGE IN OREGON.—In the Willamette University, at Salem, there is now in successful operation a regular medical college, of which J. H. Wythe, A.M., M.D., is president. The faculty is composed of Messrs. H. Carpenter, M.D., Professor of Civil and Military Surgery; E. R. Fiske, A.M., M.D., Professor of Pathology and Practice of Medicine; J. Boswell, M.D., Professor of Obstetrics and Diseases of Women and Children; J. H. Wythe, A.M., M.D., Professor of Physiology, Hygiene, and Microscopy; D. Peyton, M.D., Professor of Materia Medica and Therapeutics; J. W. McAfee, M.D., Professor of Chemistry and Toxicology; A. Sharples, A.M., M.D., Professor of Descriptive and Surgical Anatomy; M. B. Lingo, M.D., Demonstrator of Anatomy; Hon. J. H. Mitchell, Professor of Medical Jurisprudence. The means of illustrations in each department are ample, and the course of instructions thorough and complete. Material for practical anatomy will be supplied in abundance. Clinical advantages of this College are good for a new country. The county hospital and State penitentiary, with out-patients, afford to the class a large amount of material for clinical study. The second course of lectures commenced on the 4th of November, and continues four months. Success to the first medical college in Oregon.

THE FARMERS' ROCKING-HORSE is a new agricultural implement, manufactured by Messrs. Abbott, Downing & Co., San Francisco, California. It appears—judging from the illustrations—to be a most useful piece of machinery. It is a marker, a planter, a cultivator, etc., all in one. Those interested should inclose ten cents to Mr. A. W. Putnam, Pleasant Valley, Salano Co., Cal., and ask for a catalogue describing the Farmers' Rocking-Horse.

A MISTAKE.—To make a joke, somebody makes a mistake. Here it is: What style of hat is easiest to wear? That which is not felt. [Now we maintain that the easiest of all hats—the most comfortable and healthful—is the soft felt hat. The hard, air-tight, stove-pipe hats are painful to wear, and tend to make men bald-headed.]

TEN-MINUTE SPEECHES.—The best collection of brief, practical, pointed, pathetic speeches, by several of the best orators in America, may be found in that handsome document entitled *TEMPERANCE IN THE AMERICAN CONGRESS*. Young speakers can not find better models than here—to say nothing of the subject of these ten-minute speeches. The book is sent by return post for 25 cents, by S. R. Wells, New York.

A GOOD MOVE.—At a meeting of the Medical Society of the State of New York, held not long since, a committee was appointed to investigate and report upon the result of consanguineous marriages. We suppose that the object of this measure is the procurement of such evidence as will warrant the Society in applying to our legislative authorities for some special enactment regulating marriages among relatives. So much disease, infirmity, and we might add crime, is entailed on succeeding generations by the marriage of near relations, that it is high time our law makers made them the subject of serious consideration.

The Society call on all those who have the welfare of society at heart, and who are in possession of any facts relating to the subject in charge of its special committee, to aid them in this worthy endeavor to promote the health and happiness of humanity.

In our Annual for 1868 we publish a lengthy article on the subject above mentioned, furnishing abundant authority for our long-known opposition to conjugal association by near relations.

BACK VOLUMES for 1864, 1865, and 1866, bound in cloth, may be had at \$3 each. Earlier volumes are scarce, and command from \$10 to \$15 per copy. A complete set of the JOURNAL is worth \$200. Judging by present indications, the older the JOURNAL grows the more valuable it becomes.

CLUBBING WITH THE MAGAZINES.—The price of the *Atlantic* is \$1 a year. The PHRENOLOGICAL \$3. We will send the two for \$6. Or we will send the PHRENOLOGICAL and *Harper's Monthly, Weekly, or Bazar* at \$6. The PHRENOLOGICAL and any other \$3 magazine for \$5. We will also club with any New York newspaper at proportional rates. When desired, we will subscribe for and forward any periodical published in America. Address this office.

THE PILGRIM, IN BUNYAN HALL.—Citizens and strangers who visit the metropolis should pay an early visit to Bunyan Hall, and be agreeably entertained and profoundly impressed. There are

most instructive pictures, short and pleasant addresses, and plain though excellent music there. Parents should take their children—including the servants—to the place. It is a capital entertainment for a class of Sunday-school children. It would be a rich treat, and gratefully remembered by all. Go to the catch-penny museums if you will, go to the play-houses if you must, but wherever you go, do not fail to go to see the PILGRIM, in Bunyan Hall, on Union Square, New York.

THE POSTAGE RATES on newspapers, circulars, books (including printed matter of all kinds) addressed to Great Britain and Ireland, is as follows:

Newspapers and circulars 2c. each (1d). The postage on the PHRENOLOGICAL JOURNAL to Great Britain and Ireland is 6 cts. or 3d per number. Books, 6 cents (3d) for four ounces or fraction of four ounces.

This is a new arrangement of international law, and will give general satisfaction, as the rates heretofore were quite exorbitant.

MR. ROCKWOOD, the photographer, 839 Broadway, has invented a number of mechanical appliances to his art which, combined with artistic knowledge, good taste, and judgment, give him many advantages in the practice of his business. One of his inventions, specimens of which were recently on exhibition at the Fair of the American Institute, is the process for making photographic images of a sitter is transferred to a block of clay; the lines being so firmly fixed that the sculptor to whose hands the work is afterward confided is enabled to produce a perfect likeness of the original. An intaglio is then sunk, from which plaster casts are taken and all the varieties of bronze, Parian marble, etc., are produced.

Mr. Rockwood has also much improved the process for making life-sized photographs, and has so perfected them that he is about the first to make plain life-sized photographs that are satisfactory without the expense of retouching by an artist. Another adaptation of the camera enables him to enlarge an ordinary carte de visite or daguerreotype to a life-sized portrait. Among other novelties that he announces are portraits on porcelain lamp shades and miniatures on watch crystals. Our friends living at a distance, and wishing to have old pictures copied and enlarged, can send their orders directly to us, and we will personally see that they are placed in the hands of Mr. Rockwood, and that his personal attention is called to them.

POOR PAPER AND PALE INK make a sorry-looking letter, and one very difficult to read. But worse than this is a long letter written with a poor lead pencil. There may be circumstances where it is necessary to tear out the blank fly-leaf of a book and use it instead of a neat letter sheet. But good stationery is now too plentiful for any one to insult a correspondent by writing him on a dirty, crumpled bit of waste paper. Use clean white paper, bright black or dark brown ink—be brief when writing on business—dwell as long as you like when writing love letters—and rather than leave your correspondent to "guess" what you mean, read over your letter and carefully revise as if for publication. Then add your address in full, giving post-office, county, and State. If to be answered, inclose stamp with which to pay return postage—otherways it may fail to get attention. Then write the address of him you would reach, plainly, fully, and it will—accidents accepted—go straight to the person addressed.

UTILITY OF PHRENOLOGY.

EVERY young man—and woman too—wishes to know with certainty in what calling or pursuit in life he can accomplish most, do the most good, serve his friends the best, obtain a competency, provide liberally for the wants of himself, family, and others who may be dependent on him. He desires to place himself in that position for which he is by nature and acquirement best fitted, and in which he may, without doubt or experiment,

SECURE SUCCESS IN LIFE.

Few men in the ordinary pursuits come up FULLY to their REAL CAPABILITIES. It is true that some, by mere accident or good fortune, without any definite knowledge of their own powers, stumble upon a situation to which they happen to be well adapted, and in which, without a struggle, they

RISE TO EMINENCE.

They are said to be "lucky;" while thousands of others, more highly educated or endowed, and with force and energy of character, pursue a respectable though tiresome and "up-hill" employment, chosen without regard to their adaptation to it, which brings them "neither honor nor profit." These get a living, while many more drag out an unhappy existence, complaining of their hard lot, and end their days in sore disappointment, pronouncing

"LIFE A FAILURE."

We have a remedy for this. It is SCIENTIFIC, and therefore RELIABLE. By the aid of PHRENOLOGY, PHYSIOLOGY, and PSYCHOLOGY, the true character, with all its capabilities, may be clearly indicated; the most suitable calling, profession, or occupation, to which each person is adapted, and in which he may best succeed, can be clearly pointed out, and you, reader, may thus learn

HOW TO RISE IN THE WORLD,

and make the most of all your talents.

Parents wish to insure for their children all the blessings which judicious training and right direction can secure, and there is no other means whereby these ends may be so surely attained as by the aid of science. By having their characters fully described, and carefully written out in full, you will have a Chart which will serve to keep them in the right direction—to avoid the quicksands and the rocks on which too many unfortunate human barks founder and are lost.

WHAT CAN I DO BEST?

Can I succeed as an Attorney, Artist, or Author? As a Banker, Bookseller, or Broker? A Carpenter, Clerk, or Chemist? A Dentist or Designer? An Editor or Engineer? A Farmer or a Grocer? Can I Invent, Lecture, or Legislate? Can I succeed as a Manufacturer, Merchant, or Machinist? In Music, Navigation, Oratory, Painting, or Sculpture? As a Preacher or Physician? A Poet or a Policeman? A Sailor or a Soldier? A Teacher, Tragedian, or Writer? Can it be foretold, with scientific certainty, WHAT I CAN DO BEST?

WE ANSWER:

By the light of the science we teach, you may know for a certainty what you are, as compared with others—what you can do best, and how you may turn all your talents to the best possible use. The cost for this service will be comparatively small, while the benefits derived may be of great value to every individual.

PRIVATE EXAMINATIONS.

With Charts, and full written Descriptions of Character, and Advice in regard to the most appropriate occupations and pursuits, in which you can best succeed; Faults, how to correct them; Health, how to secure and retain it; the Management of Children; Self-Improvement, etc., given daily at our private Rooms, 839 Broadway, New York. Those residing at a distance, who can not visit us in person, may send a stamp, and ask for THE MIRROR OF THE MIND, which explains how character may be delineated from a likeness.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wornersville, Berks County, Pa.

THE MOVEMENT-CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 87 West 38th Street, N. Y. city. Aug., 'tf.

MRS. E. DE LA VERGNE, M.D.,
325 ADDELPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y. tf

NEW NATIONAL RELIGIOUS PAPER.—A national religious newspaper, to be called "THE ADVANCE," will be published weekly, from the first of September onward, in the city of Chicago. It will represent Congregational principles and polity, but will be conducted in a spirit of courtesy and fraternity toward all Christians. The form will be what is popularly termed a double sheet of eight pages, of the size and style of the New York Evangelist. The pecuniary basis is an ample capital furnished by leading business men and others, to be expended in the establishment and improvement of the paper, which is intended to be second to none in the country, in its literary and religious character. The purpose of its projectors is indicated in the name: their aim being to ADVANCE the cause of evangelical religion, in its relations not only to doctrine, worship, and ecclesiastical polity, but also to philosophy, science, literature, politics, business, amusements, art, morals, philanthropy, and whatever else conduces to the glory of God and the good of man by its bearing upon Christian civilization. No expense has been spared in providing for its editorial management in all departments, while arrangements are in progress to secure the ablest contributors and correspondents at home and abroad. The city of Chicago has been selected as the place of publication, because of its metropolitan position in the section of the country especially demanding such a paper, and the fact that it is nearly the center of national population, and in a very few years will be the ecclesiastical center of the Congregational Churches. Issued at the interior commercial metropolis, "THE ADVANCE" will contain the latest market reports, and able discussions of financial subjects, such as will make it a necessity to business men in all parts of the country. The editor-in-chief will be Rev. Wm. W. Patton, D.D., who resigns the pastorate of the leading church of the denomination at the West for this purpose, and who has had many years' experience in editorial labor. The subscription price will be \$2 50 in advance. Advertising rates made known on application. Address THE ADVANCE COMPANY, P. O. Drawer 6,374, Chicago, Ill. S.6c.

THE CHURCH UNION.—The largest and best Religious Family Newspaper in the world.

Owing to the unprecedented reception of this paper, it is now enlarged to twice its original size.

It is devoted to Liberty and Union in the whole Church of Christ, opposes Ritualism and Rationalism, and advocates Radical Doctrines in both Church and State.

It favors universal suffrage, and equal rights for every man and woman of every nationality.

It is the organ of no sect, but will endeavor to represent every branch of the Church, and every society organized for the purpose of converting the world to Christ.

It is Trinitarian in creed, but favors free discussion by all Religionists of every faith.

It will advocate a free communion table for all the Lord's people, and a free pulpit for all his ministers.

It will print a sermon from Rev. Henry Ward Beecher in every issue. This sermon, published at twelve o'clock every Monday, will be selected from one of the two sermons preached by Mr. Beecher the day before publication. It is not copyrighted, nor is it prepared for the press by Mr. Beecher.

Terms—\$2 50 yearly. \$1 to agents for every subscriber. Sold by American News Company at 5 cents, and by Publishers.

Address, CHARLES ALBERTSON, Supt. Church Union, 103 Fulton Street, New York. Sept., 'tf.

AMERICAN EQUAL RIGHTS ASSOCIATION.—HENRY WARD BEECHER, GEORGE WILLIAM CURTIS, JOHN STUART MILL, and others, on SUFFRAGE FOR MEN AND WOMEN.

Tracts of the American Equal Rights Association:

WOMAN'S DUTY TO VOTE. By H. W. Beecher.

EQUAL RIGHTS FOR WOMEN. By Geo. Wm. Curtis.

SUFFRAGE FOR WOMEN. By John Stuart Mill.

PUBLIC FUNCTION OF WOMAN. By Theodore Parker.

FREEDOM FOR WOMEN. By Wendell Phillips.

ENFRANCHISEMENT OF WOMAN. By Mrs. John Stuart Mill.

UNIVERSAL SUFFRAGE. By Elizabeth Cady Stanton.

WOMAN AND HER WISHES. By Thomas Wentworth Higginson.

THE MORTALITY OF NATIONS—THOUGHTS ON UNIVERSAL SUFFRAGE. By Parker Pillsbury.

Price per single copy, 10 cents; per hundred copies, \$5; per thousand copies, \$30.

Every one should send stamp for "Should Women Vote?" answered by many eminent authorities.

All orders should be addressed to SUSAN B. ANTHONY, Secretary American E. R. Association, 37 Park Row, (Room 17, 3d floor), New York.

TO ADVERTISERS.

Our Tracts furnish one of the very best mediums for advertisements. A limited number will be received. Address as above. 1t

GOOD BOOKS BY MAIL.—Any book, magazine, or newspaper, no matter where or by whom published, may be ordered at publisher's prices, from S. R. WELLS, 389 Broadway, New York.

Spurzheim's Phrenology, with Plates. \$3 50.

Vol. 2. Phrenology, or the Doctrine of the Mental Phenomena. By Dr. Spurzheim. Very scarce. \$2 50.

Moral and Intellectual Science, applied to the Elevation of Society. By George Combe, and others. Scarce. \$4.

Importance of Practical Education and Useful Knowledge. By Edward Everett. \$2. We can not duplicate this at any price.

Address this office.

WORKS ON MAN.—For New Illustrated Catalogue of best Books on Physiology, Anatomy, Gymnastics, Dietetics, Physiognomy, Shorthand Writing, Memory, Self-Improvement, Phrenology, and Ethnology, send two stamps to S. R. WELLS, Publisher, No. 389 Broadway, New York. Agents wanted.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 35 cents a line, or \$35 a column.]

AMERICAN ARTISAN AND PATENT RECORD.—New Series.

The American Artisan, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the American Artisan contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the American Artisan are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the American Artisan are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COOMBS & CO.,
Proprietors of the American Artisan,
tf. No. 189 Broadway, New York.

JENKINS' VEST-POCKET LEXICON.—An English Dictionary of all except Familiar Words; including the Principal Scientific and Technical Terms, and Foreign Moneys, Weights, and Measures. Price, in Gilt Morocco, Tuck, \$1; in Leather Gilt, 75 cents. Sent post-paid by S. R. WELLS, New York. tf.

AGENTS WANTED.—\$10 to \$20 a day, to introduce our new patent STAR SHUTTLE SEWING MACHINE. Price \$20. It uses two threads, and makes the genuine LOCK STITCH. All other low-priced machines make the CHAIN STITCH. Exclusive territory given. Send for circular. W. G. WILSON & CO., Manufacturers, Cleveland, Ohio. Oct. 31.

THE PLATFORM: A Weekly Newspaper for the People. Devoted to the Discussion of Living Questions, and the Dissemination of General Intelligence.

This Temperance Journal is now in its third year of publication. It has been indorsed by Temperance men and organizations in all parts of the country.

Heretofore, The Platform has been published every other week; but on the first of January, 1868, it will be made

A WEEKLY PAPER, containing eight six-column pages, about the same size and form as the Springfield Republican, the Methodist Christian Advocate, and other large quarto journals. The Platform will not only be, as heretofore, the leading Temperance paper of the West, but the

LARGEST AND BEST TEMPERANCE NEWS-PAPER IN THE WORLD.

On the Temperance Question the following is our platform:

1. Total Abstinence from all that will Intoxicate.
2. The Dissemination of such Literature in Families and Sunday-Schools as will Educate the Young in the Principles of Temperance, and help to guard them against Temptation and Ruin.
3. The Efficient Organization and Co-operation of all friends of Total Abstinence.
4. Active and Unflinching Efforts to Prevent the Increase of Intemperance and to Reform the Inebriate.
5. The Enactment and Enforcement of Wise and Practicable Laws for the Suppression of Intemperance.
6. The Election of Sound Temperance Men to all Offices of Trust and Profit.

PROHIBITION A NATIONAL QUESTION!
We advocate the Absolute Prohibition of the Liquor Traffic, not as a "side issue," or "minor question," but as a measure of the first importance, demanding the immediate attention of the State and National Governments!

We believe the great Temperance Reform should have a newspaper organ which will not suffer in comparison with the great political and religious periodicals of the day.

Among our contributors will be numbered the

LEADING TEMPERANCE MEN in this and other States.

Besides its Temperance matter, The Platform will give a

Weekly Summary of all Important News!
The Crown of Current Literature!
Discussions of Living Questions!

And, in short, will be a first-class

NEWSPAPER FOR THE PEOPLE.

TERMS:
Single Copy, one year, \$ 3
Ten Copies, one year, \$2 50 each, 25
Twenty Copies, one year, \$2 each, 40

AGENTS WANTED.—To whom CASH PREMIUMS will be paid. For terms, address the Publisher.

Subscribers who pay for 1868 before the close of this year, shall receive the paper for the balance of 1867 FREE. Thus, those who send subscriptions the first of November will receive The Platform fourteen months for one year's subscription!

Address all letters to the Publisher,
W. S. PETERSON,
1t. Des Moines, Iowa.

THE MASONIC HARMONIA ;

ORIGINAL AND SELECTED,
For the use of the
MASONIC FRATERNITY.
BY HENRY STEPHEN CUTLER,
Doctor in Music, Director of the Ceciliaan Choir, etc.

Being the most complete and best adapted for use in Lodges.

Published under the auspices of St. Cecilia Lodge, No. 568, city of New York.

Price, \$1. Sent free of postage on receipt of price. Descriptive Catalogues of Masonic Books, Regalia, etc., sent free on application.

MASONIC PUBLISHING AND MANUFACTURING CO.,
433 Broome Street, New York.

IMPORTANT TO OWNERS OF STOCK.—THE AMERICAN STOCK JOURNAL AND FARMERS' AND STOCK BREEDERS' ADVERTISER

A first-class Monthly Journal devoted to Farming and Stock Breeding. Each number contains thirty-six large double-column pages, illustrated with numerous engravings. Only one dollar a year. Specimen copies free, for stamp.

HORSE AND CATTLE DOCTOR FREE.

The publishers of the AMERICAN STOCK JOURNAL have established a Veterinary Department in the columns of the Journal, which is placed under the charge of a distinguished Veterinary Professor, whose duty it is to receive questions as to the ailments or injuries of all kinds of stock, and to answer in print in connection with the question, how they should be treated for a cure. These prescriptions are given gratis, and thus every subscriber to the Journal has always at his command a Veterinary Surgeon free of charge. Every Farmer and Stock Breeder should subscribe for it. We will send from June until the 1st of January for 50 cents.

Address N. P. BOYER & CO
S. Tex. Gum Tree, Chester Co., Pa.

ELECTRO VITAL.—DR. JEROME KIDDER'S Highest Premium Electro-Medical Apparatus, warranted greater magnetic power of any called magnetic.

The patent labels of the United States, England, and France are on the machine itself, as the law requires for all genuine patentee districts.

"The best yet devised in any country for the treatment of disease."—Dr. Hammond, late Surgeon-General U. S. A.

Caution.—The latest improved bears the patent labels of 1860 and 1866.

Address DR. J. KIDDER,
478 Broadway, New York.

DEMOREST'S MONTHLY MAGAZINE. PROSPECTUS FOR 1888.

As we are now closing the present year, we consider it a proper time to say a few words to our readers concerning what we have done, and more of what we propose to do in the future.

We think all will agree that whatever promises we made at the commencement of the present volume have been abundantly kept. Letters from all parts of the country have constantly assured us of the high satisfaction experienced by our subscribers; and the regular and rapid increase of our already large subscription list—this in the face of a somewhat depressed financial condition of the country at large—affords flattering and undeniable evidence of the firm hold which the Magazine has obtained in the good graces of the public and the affections of families.

During the coming year, we purpose to make our great specialty of FASHIONS more full and complete than ever. In addition to our original Colored Steel Plate, we shall add large plates every month, of Cloaks, Walking-Costumes, Bonnets, or whatever may be the most interesting fashionable features for the month.

The smaller illustrations of dress, head-dresses, trimmings, needle-work, jewelry, fancy articles, and the like, will be continued with greater profusion than ever; and the descriptions, instructions, explanations, etc., always made full, complete, and practical.

The Fashion Department of this Magazine has always been unrivaled, its information not being confined to mere descriptions of dress, but embracing constant and valuable hints to mothers, to dressmakers, and to ladies who take charge of their own wardrobes, and to persons generally who wish to keep *au courant* of the changes which constantly occur in the world of fashion, society, and intelligence.

In the Literary, Musical, Household, and other Departments of the Magazine, we challenge comparison with any other periodical, while there are many features which are exclusive with us; and are made highly interesting by being liberally illustrated and intelligently and exhaustively treated.

To our Fashion and other illustrations, illustrated poems, and the like, we have lately added Illustrated Sketches of Fashionable Life, in which the faults and follies of the day have been excellently hit off by a graphic pen and pencil. These will be continued at intervals, alternating with poetic sketches of the same character, and with the lively and sparkling efforts of well-known writers, whose most brilliant fancies will find their appropriate medium through our columns.

The "Work-Basket," an Illustrated Art column, and "American Etiquette," have been among the new features of the past year. These will be continued, with other attractions, some completed, and others in preparation, for the New Year, 1888.

Try, ladies, just once. You can do anything, and we know perfectly well that you will accomplish our wishes in time; but why not make the effort at once?

Yearly, \$3, with a premium to each subscriber. Do not fail to consult our extensive list of valuable premiums, remembering that we are offering a new Wheeler and Wilson Sewing Machine for only twenty subscribers, besides the very desirable premiums to each.

Persons desiring to form clubs will be furnished with a specimen copy of DEMOREST'S MONTHLY, and a number of prospectuses for distribution, for 15 cents.

For Book Premiums, see page 379.

NEW AND SPECIAL PREMIUMS.

TWO SUBSCRIBERS AT \$3 EACH.—One pair of Silver Plated Butter Knives, the newest patterns, and the best article of plated ware manufactured, value \$2; a Lady's Memorandum Book and Card Case, combined, in Turkey morocco; package of French Imperial Note Paper, 100 sheets, and envelopes to match.

THREE SUBSCRIBERS AT \$3 EACH.—Portrait, in oil, of Abraham Lincoln, 15½ inches, by 12½ inches. This is a faithful likeness of our late President, and but a few hundred copies were printed.

FIVE SUBSCRIBERS AT \$3 EACH.—Carving Knife and Fork, ivory handle, the best article of Rogers' celebrated Cutlery, value \$4.

SEVEN SUBSCRIBERS AT \$3 EACH.—Twelve Silver Plated Tea Spoons, the newest pattern, and the best article of plated ware manufactured, value \$7.

TEN SUBSCRIBERS AT \$3 EACH.—Twelve Dessert or Tea Knives, ivory handles, the best article of Rogers' celebrated Cutlery, value \$9.

THIRTEEN SUBSCRIBERS AT \$3 EACH.—Twelve Silver Plated Dessert Forks, the newest pattern, and the best article manufactured, value \$11.

FOURTEEN SUBSCRIBERS AT \$3 EACH.—Twelve Dinner Knives, ivory handles, the best article of Rogers' celebrated cutlery, value \$13; or twelve Silver Plated Dining Forks, or twelve Silver Plated Table Spoons, the newest pattern, and the best articles manufactured, valued at \$13 each set.

THIRTY-FIVE SUBSCRIBERS AT \$3 EACH.—Twelve Sterling Silver Tea Spoons, extra heavy, Grecian or Ionic pattern, value \$33.

FIELD CROQUET.—We will send, as a premium, a complete set of Field Croquet for any number of subscribers, from ten up to forty, at \$3 each, the sets range in value from \$7 to \$29.

SPLENDID INDUCEMENTS FOR CLUBBING.

LOW RATES TO CLUB SUBSCRIBERS.

Club of 2 for one year.....	\$ 5 50
Club of 3 "	7 50
Club of 5 "	12 00
Club of 10 (and one to the getter-up)	24 00

No premiums can be given to subscribers at these rates, but an extra copy will be sent, without charge, to the getter-up of a club of ten subscribers for \$24.

OUR PREMIUM LIST FOR 1887-8.

One of the following valuable Premiums is sent to each and every

YEARLY SUBSCRIBER.

whether single or in clubs, who pays three dollars for the Magazine:

First.—A package of fine stationery, including two sizes of note paper, and envelopes to correspond, both stamped in color, with the initial letters from A to Z, so that subscribers can select what letter they require. All ladies require stationery, and this being of the best quality and fashionably initialed, can not fail to prove welcome and attractive.

Second.—Any four pieces of music selected from our published list in the November Magazine.

Third.—A large and fine photographic portrait of Mr. or Mme. Demorest, on an eight-by-ten card-board, ready for framing.

Fourth.—A package of Mme. Demorest's celebrated "diamond" needles.

Fifth.—A package of Mme. Demorest's Lily Bloom or Roseate Bloom for the complexion, or an everlasting perfume packet.

Sixth.—The Children's Dress Chart.

Seventh.—One dozen of Stimpson's very superior pens.

Eighth.—The Family Letter Scale.

Ninth.—A package of fine Visiting Cards, with your name, in a case.

Tenth.—A Pocket Diary for 1888.

Either of these premiums will be sent promptly on receipt of subscribers' names, with three dollars for one year, commencing with any number.

To any person sending two subscriptions for one year, at \$3 each, will be sent either of the following premiums (besides either of the first premiums to each subscriber), a morocco and gilt edge Photographic Album, for holding twenty-four pictures; or Jenny June's valuable Cook Book, or the First Volume of "Demorest's Young America," elegantly bound.

Or, to two subscribers clubbing together, and each paying \$3 for one year, to both will be sent either Mme. Demorest's Lady's Dress Chart, or a set of Dress-Loopers, in addition to either of the first premiums to both.

For a club of three subscribers to the Monthly, at \$3 each, besides the first premium to each subscriber, to the getter-up of the club either of the following premiums: a superb Photographic Album; or *Peterson's Lady's Friend*, for one year; or a Lady's Companion, in morocco case, containing numerous work-basket utensils, etc.; or a Morocco Reticule; or our Self-Tucking Attachment for Sewing Machines.

For four subscribers, at \$3 each, *Harper's Magazine*, or *Godey's Lady's Book*, or *Atlantic Monthly*, for one year; or a Mahogany Writing Desk; or a \$5 Photographic Album; or a Lady's Companion, ornamented, Turkey morocco, with drawers, and beautiful furnishings, etc.; or an elegant Reticule.

For five subscribers, a \$6 oblong Photographic Album; or a \$6 Music-Box; or one of Ives' Patent Kerosene Lamps for the hall or table, with either globe or shade.

For six subscribers, a large Photograph Album, for holding one hundred pictures; or a Lady's Companion and Dressing Case combined, in Turkey morocco, with elegant furnishings, worth \$10; or a large Mahogany Writing Desk.

For eight subscribers, a Universal Clothes Wringer, price, \$8 50.

For ten subscribers, at \$3 each, Webster's large Unabridged Dictionary, pictorial edition, with fifteen hundred engravings. Every family should possess this most indispensable work—price, \$12. Or a beautiful \$12 Music Box; or a Photographic Album, as large as a family Bible, for holding two hundred pictures, elegantly bound; or a magnificent Family Bible.

A large number of these Premiums are sent by mail, postage-paid; those not admitted into the mails are sent by express.

OUR GREAT PREMIUMS.

For Twenty Subscribers to DEMOREST'S MONTHLY, at \$3 each, requiring only \$60, will be sent a new WHEELER & WILSON SEWING MACHINE, Price, \$55.

Any of the higher priced Machines may be had by sending the difference in money.

For Thirty Subscribers, one of Carhart & Needham's beautiful Melodeons, rose-wood case, scroll legs, price \$70.

For Sixty Subscribers, a beautiful Parlor Melodeon, piano style, five octaves; or in walnut case, Parlor Organ, double set of reeds, price of each, \$150.

For One Hundred Subscribers, a splendid Parlor Organ, rosewood, paneled and carved case, double reeds, and two stops, price \$200.

For Two Hundred Subscribers, a new Piano, worth \$400.

All the above Subscribers will be entitled to either of the first premiums.

Subscriptions to either *Arthur's Magazine*, *Peterson's Ladies' Friend*, *Our Young Folks*, or the *Phrenological Journal*, will be received as equivalent to subscriptions for the MONTHLY for any of the premiums, provided the amount of \$3 is sent for each; or the *Atlantic Monthly* at \$4.

Two subscriptions to DEMOREST'S YOUNG AMERICA, at \$1 50, will count as one for the MONTHLY.

Subscriptions may be sent as fast as procured, and they will be credited as if sent altogether, to commence with any number and to any address. Persons failing to get the requisite number of subscribers, may select any of the lesser premiums.

By a special arrangement with the publishers, we are enabled to furnish DEMOREST'S MONTHLY and *Godey's Lady's Book*, one year, for \$5 50, with one of our first premiums.

DEMOREST'S MONTHLY and *Peterson's Ladies' Friend*, or *Arthur's Magazine*, for one year, \$4 50, with one of our first premiums.

DEMOREST'S MONTHLY, and *Merry's Museum*, or *Working Farmer*, one year, \$3 75, with one of our first premiums.

DEMOREST'S MONTHLY, and DEMOREST'S YOUNG AMERICA, one year, \$4.

The postage on this Magazine to yearly subscribers is only one cent each number, to be paid quarterly, in advance. In addition to the yearly subscription, *Canada subscribers must inclose twelve cents* for United States postage to the lines. Subscribers always secure it by mail several days in advance of transient purchasers. Those whose subscriptions expire, should renew them at once, as the Magazine is never sent beyond the time paid for.

FORM OF AN ORDER.

You will please send me your Monthly for one Year, commencing with the . . . Number; for which I inclose three dollars. And oblige yours,

Do not fail to give your full address.

Inclose the amount in United States, or National Bank Bills, a bank draft, or U. S. Postal Order.

Be particular in giving full address of each subscriber.

Address,

W. JENNINGS DEMOREST,
473 Broadway, New York.

Send a stamp for our Annual Circular with full details, for which we have not space here.

CHOICE NEW CROP TEAS.

THE SHIP "GOLDEN STATE" has arrived from Japan with 22,000 half chests of the finest Japan Teas to the GREAT AMERICAN TEA COMPANY, Nos. 31 and 33 Vesey Street, New York.

These Teas by the ship "Golden State" were purchased direct from the Japanese factor, and in consequence of the magnitude of the transaction, were transferred at about half the usual commissions. This is the largest cargo ever imported from Japan by about seven thousand packages. By this operation the GREAT AMERICAN TEA COMPANY put these Teas into the hands of the consumers with but one very small profit—an achievement in commercial enterprise seldom if ever before attained. These Teas are acknowledged, both here and in Japan, as being the finest full cargo ever exported from that country.

Also the ship "George Shotton" has arrived from Foochow with 12,000 half chests of the finest Foochow Oolong Teas.

The cargo of the ship "George Shotton" is the second in size that has ever come to this port from Foochow (which is the finest Black Tea district in China). These are the *finest first-picking contract Teas*—rich, fresh, and full-flavored. This will enable us to supply our trade with uniform fine-flavored Teas for a long time to come. These Teas were contracted for before the picking. Contract Teas are always far superior to any others. A large proportion of contract Teas of first pickings go to the European markets. That is one of the principal reasons why the English people consume three pounds of Tea, on an average, to one in an equal number of population in the United States. Heretofore, the United States have been compelled, to a considerable extent, to put up with lower grades of Teas and later pickings. This unfortunate result for the consumers of this country has been brought about heretofore in consequence of the many and great profits of the "middlemen" in the Tea trade. But this has been in a great measure remedied by the establishment of the GREAT AMERICAN TEA COMPANY, and their system of furnishing Teas to the consumer direct from the Chinese and Japanese factors, thus saving them many intermediate profits.

The receiving of these two large cargoes by the GREAT AMERICAN TEA COMPANY for their own trade is acknowledged by the mercantile community as the largest transactions ever made in this country. They were deemed of so much importance, that the fact was telegraphed to all the principal commercial papers in the country by their correspondents here, and thus appeared as an important news item throughout the United States at the same time.

The importance of these transactions in this market is thus noticed by the oldest and most respectable commercial paper in this city—the *New York Shipping and Commercial List*—which says: "The trade have again been startled by the arrival of two large cargoes of Teas to the GREAT AMERICAN TEA COMPANY; the ship 'Golden State,' from Japan, with 22,000 half chests; and the ship 'George Shotton,' from Foochow, with 12,000 packages." And in another place it says: "The recent large operations of the GREAT AMERICAN TEA COMPANY have taken the Trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 12,331 packages Black, and 23,849 packages Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands."

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivaled for fineness and delicacy of flavor.

This is the season of the year when we receive new Teas, and, consequently, our customers will not fail to notice a marked improvement in freshness from this time forward.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small

additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well), can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey Street.

Parties sending Club or other orders for less than thirty dollars had better send post-office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the custom-house stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory, they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the List of Prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70 c., 80 c., 90 c., best \$1 per pound.
MIXED (Green and Black), 70 c., 80 c., 90 c., best \$1 per pound.

ENGLISH BREAKFAST (Black), 80 c., 90 c., \$1, \$1 10, best \$1 20 per pound.

IMPERIAL (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.

YOUNG HYSON (Green), 80 c., 90 c., \$1, \$1 10, best \$1 25 per pound.

UNCOLORED JAPAN, 90 c., \$1, \$1 10, best \$1 25 per pound.

GUNPOWDER (Green), \$1 25, best \$1 50 per pound.

COFFEES ROASTED AND GROUND DAILY.

Ground Coffee, 20 c., 25 c., 30 c., 35 c., best 40 c. per pound. Hotels, Saloons, Boarding-House Keepers, and Families who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30 c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50 c. to \$1 per pound by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,

Nos. 31 and 33 Vesey Street,

Post-Office Box, No. 5,643, New York City.

The GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, New York City, Orange Judd, Editor.

Christian Advocate, New York City, Daniel Curry, D.D., Editor.

Christian Advocate, Cincinnati, Ohio, J. M. Reid, D.D., Editor.

Christian Advocate, Chicago, Ill., Thomas M. Eddy, D.D., Editor.

Evangelist, New York City, Dr. H. M. Field and J. G. Craighead, Editors.

Examiner and Chronicle, New York City, Edward Bright, Editor.

Christian Intelligencer, E. S. Porter, D.D., Editor.

Independent, New York City, William C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., D. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

CLUB ORDERS.

Edwards, St. Lawrence Co, N. Y.,
June 8, 1867.

To the Great American Tea Company,
31 and 33 Vesey Street, New York.

Dear Sirs: I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were nearly out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other and oblige

Your ob't servant,

DAVID C. McKEE.

Post-Office Box, 5,643.

COSTUME OF MODERN EGYPTIANS.

THE MODERN EGYPTIANS.

THE people now inhabiting the banks of the Nile are a race much inferior to that which erected the Pyramids and the great temples and cities whose amazing ruins now dot the land. The wonderful change from a high state of refinement and scientific cultivation, such as doubtless existed in the time of the Pharaohs, about 1500 B.C., to that of abject ignorance and prostration, as observable now, was probably brought about gradually, and extended through a long period. Between 600 B.C. and 500 A.D. there was a series of devastating wars, which hastened the complete disintegration of the Egyptian empire and nation. The Assyrians, the Greeks, the Romans, the Arabs overran the country repeatedly and successively, until nearly every trace of its once proud civilization, except that chiseled in enduring rock, had disappeared. Attempts have been made by the Turkish Government, under the control of which Egypt has substantially remained since 1517, to improve the condition of the natives, socially and politically, but without much success. The present Viceroy, a man of education and advanced views, is doing much in improving the trading relations of his province; but as the commerce of the country is chiefly in the hands of resident Europeans, the natives do not receive much benefit. That their customs, dress, etc., are rather primitive, is evidenced by the illustration. The women carry their young

children astride of their shoulders; and in this position they rest most securely. Sometimes these children are clothed in a single garment, but most of them are permitted to run naked until ten years old—wearing only a cap of white cloth upon their little shaven heads. These poor people live in huts made of mud; the huts being usually situated some distance from the bank of the Nile, and upon a slight eminence, to avoid, if possible, the inundations consequent upon the annual rising of the river. The principal occupation of the women seems to be that of carrying water from the river to their huts.

DECAY IN THE OIL REGIONS.—A recent visitor to the oil regions of Pennsylvania describes the desolation which reigns in a once famous locality. Between Oil City and Meadville not one well is in operation. It is only a long line of rotting derricks and rusted boilers and engines. At Franklin, where the French Creek empties into the Alleghany, they show with pride the great court-house that they are building, the tall marble monument to the martyrs of the war, and the tumbling down farm-house of the Evans family. Three years ago, \$100,000 were offered to this family for their house and ground. The offer was refused as too moderate; and the daughter of the house, in the flush of sudden wealth, scorned her rustic lover and canceled her engagement. Now, the estate, house, farm, and all will not bring \$1,000, the daughter pines in single blessedness, and the family can only remember, in their present misery, their former hope.

SLEEP.

THOUGH we are well acquainted with the phenomenon of sleep, it is a singularly strange one. Suppose we had never seen a sleeping creature, we should scarcely have believed that such a thing as sleep was possible. We should have deemed it absurd to think of life being reduced to a condition of apparent lifelessness; of consciousness itself being rendered unconscious, and yet have the power to return to perception after the short space of six or seven hours, not knowing, except by the clock, that it had actually been both unperceiving and unconscious for such a length of time. That man, full as he is of spirit, life, and energy, should lie down motionless like a stone, and become for a time blind, deaf, and dumb—that he should be shut out wholly from the impressions of the outer world for half a dozen hours, as if away on an errand to some other quarter of the universe, and yet be capable of being called back in a second of time by a touch of the arm or a shout into the ear, is a mystery, yet it is none the less a fact. It has perplexed the minds of the greatest thinkers; and Pyrrho, the ancient skeptic, after having exhausted his brain in trying to understand it, at length declared he did not know which was the real human life—the sleeping or the waking. "Do we," he asked, "dream during the night about what we have experienced during the day? Or do we during the day dream about what we have experienced during the night?"

To this last question we reply: A little of both. The *mind* may be active though the *body* is in repose. The spirit-principle can not be said to sleep as the body does.

THEY WILL BLACKEN IF THEY DO NOT BURN.—A wise father gave this lesson to his daughter. He had refused to let her visit a young lady who was neither good nor amiable.

"Dear father," said the gentle girl, "you must think me weak and childish if you imagine I should be exposed to danger."

The father took, in silence, a dead coal from the hearth, and reached it to his daughter.

"It will not burn you, my child; take it."

She did so, and behold! her delicate white hand was soiled and blackened, and, as it chanced, her white dress also.

"We can not be too careful in handling coals," she said, in vexation.

"Yes, truly," answered the father; "and you see, my child, that coals, even if they do not burn, blacken. So it is with vicious company."

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED.

Is devoted to *The Science of Man*, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, &c. It furnishes a guide in choosing a Pursuit, and in judging of the dispositions of those around us, by all the known external Signs of Character.

Published monthly. \$3 a year in advance. Sample numbers, 30 cents. Clubs of ten or more, \$2 each. Supplied by Booksellers and Newsmen everywhere.

RECENT OPINIONS OF THE PRESS.

The PHRENOLOGICAL JOURNAL abounds in useful information. It is steadily and deservedly gaining general favor.—*New York Evening Post.*

No one of the many journals that come to us by way of exchange, exhibits in every feature its flourishing condition and brilliant prospects in a more marked manner than the PHRENOLOGICAL JOURNAL, published and edited by Mr. S. R. Wells. It overflows with entertaining and instructive articles in every branch of natural and physiological science. Editorially and otherwise, it talks common sense to that large class of readers who are too apt to give themselves wholly up to the dominion of hide-bound medical practitioners or empirics. There is matter in it for every class of the community; matter of interest, instruction, and judiciously included amusements. The illustrations of the journal are specially attractive. Each month portraits of distinguished men and women are given, accompanied by analyses of their character, based on their known phrenological and physiological characteristics. It is a main point in the policy by which the JOURNAL is conducted to allow no topic of passing interest, be it ever so trifling, to pass unnoticed.—*New York World.*

The PHRENOLOGICAL JOURNAL is the best monthly of its kind in the country. It is edited carefully and with ability.—*Philadelphia City Item.*

There is no periodical that comes to our office which displays more ability in its "make up" than this.—*Methodist Recorder, Ohio.*

We esteem the PHRENOLOGICAL JOURNAL as among the richest and most valuable of our exchanges. As a definer of man—the physical, mental, and moral man—we are acquainted with none better.—*Intelligencer, Louisville, Kentucky.*

This most admirable journal is conducted in a thorough Christian spirit, and is replete with articles bearing on the intellectual, moral, social, and religious interests of mankind. It has only to be known in this country to have a large English circulation. It is well edited and printed, and illustrated with numerous engravings. *London Baptist Messenger.*

It is an unusually valuable publication for all classes. Its teachings, and the drift of all its articles, tend to the right side. * * * Young or old can always find instruction and enlightenment in its columns.—*Troy (N. Y.) Daily Whig.*

The PHRENOLOGICAL JOURNAL is the most useful and valuable publication in the country. It is devoted to Science, Literature and General Intelligence, with a view to elevate and improve mankind, intellectually and spiritually. A single number is worth a year's subscription.—*Lehigh Register, Allentown, Pa.*

The PHRENOLOGICAL JOURNAL is one of the finest specimens of magazine literature and art that we have seen.—*Catholic Telegraph.*

This most utilitarian monthly deals only with the practical concerns of life, and events, facts, theories and topics of practical current interest. It is a very useful work.—*The Citizen, Beaver Dam, Wisconsin.*

The PHRENOLOGICAL JOURNAL continues to give portraits and biographical sketches of eminent men, thus doing much to educate the public in a pleasing kind of knowledge. It is human nature to want to know what we can about each other, even if we don't know ourselves. This journal fills a place in the monthly literature that no journal does.—*Concord (N. H.) Daily Monitor.*

We have received the PHRENOLOGICAL JOURNAL for October, and it is as welcome as ever. We cannot imagine how people manage to get along without this valuable publication. We are sure they would not if they knew its real value.—*Recorder, Houston, Mo.*

It is known all over the land as an able and earnest advocate of Phrenology and Reform. And besides these topics, its other subject-matter must make it interesting and valuable to every reader. We have read and liked it for years, and would commend it to others.—*Iowa Voter, Knoxville.*

The Journal.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

PATRICK HENRY AND EDWARD EVERETT.

THE ORATOR OF NATURE AND THE ORATOR OF THE ACADEMY.

AMONG the readers of this JOURNAL there are no doubt many young men who look upon the glittering spoils of oratory as the brightest badges of success, and the richest rewards that can be won in the arena of public life. These ingenuous youths are constantly drawn toward illustrious examples, and feel an absorbing interest in everything that relates to the oratorical career or the private history of those who, in their day, with master-fingers swept the chords of human auditoria.

In presenting models to the young, the biographical writer should wisely discriminate between those whose performances it is possible for most persons to emulate, and those who, by the largeness and the splendor of their natural endowments, have their place fixed in that selected number whom mankind must consent to admire without hoping to rival.

It is from phrenological science alone that the biographical writer can derive that knowledge which enables him thus to discriminate. And we know of no instance in our American history which illustrates this contrast more forcibly than the one which may be drawn between the renowned men whose faces are at the head of this article.

There is not one man in ten thousand, nay, not one in a million, who has been gifted by nature with such a magnificent equipment for

the arena of public debate as the great orator of the Revolution.

On the other hand, the student of rhetoric, the scholar, the elocutionist, can hardly find a more shining instance of the happy effects of assiduous culture, than in that most accomplished speaker whose silvery tones, whose rounded sentences, whose polished phrases, whose happy metaphors, and whose perfect action were, for so many years, the highest delight of American audiences. Whatever can be achieved by the training of the faculties, by the storing of the memory, by a chastened activity of the imagination, by the mastery of foreign tongues, by enlarged and liberal courses of historical study, by long intercourse with the most refined and cultivated people at home and abroad, that was done by Edward Everett.

But it was endowment, and endowment only, that made Patrick Henry what he was. He was gifted by his Maker with that supreme and royal grandeur of manner, that irresistible and unquenchable flame, that unrivaled force of will, that almost superhuman power, by which he sprang at one heroic bound from the obscurity of his native woods to the forefront of human orators.

It must, by no means, be understood that such a man as Edward Everett was a person of common mental gifts. That smooth, full, arching forehead was, by nature, bountifully supplied with the power of acquiring knowledge, and of using it to the best advantage. There was no break or jar in the intellectual make-up of Mr. Everett between those faculties which enable us to acquire knowledge, and those which fit us to use it. But there *was* a break, so to speak, or a missing link in the connection between his knowledge and his action. In order to see this in his face, observe the lines which pass down from the forehead to the nose, and then look at the same lines in the face of Patrick Henry. In the latter, the brow sweeps down into the nose in broad, well-defined lines, so that it is hard to tell where the nose begins and the brow ends. With such a man conviction and action must be immediately and inseparably blended. His whole career will be described by Shakspeare:

"From this time forth the firstlings of my heart
Shall be the firstlings of my hand."

He was by constitution a leader; for no sooner did he see the course to be pursued (and in the knowing faculty he has no superior), than his feet were already in the path, and his voice sounding like a trumpet call in the vanguard of the advance. The same peculiarity may be observed in the faces of a great number of prominent men, especially men remarkable for the promptness with which their ideas were carried into action, and their quickness in seeing not only what is true, but what is to be done.

Take, for instance, the face of Washington, those noble lineaments familiar to us all. How broad and massive is the interval that unites the forehead with the nose! In what

other life was there ever a blending of conviction and action more perfect and absolute?

In this respect the face of Edward Everett was imperfect, and there was a corresponding defect in his character.

When Patrick Henry uttered that sentence which rang through all the colonies, beginning, "Three millions of people armed in the holy cause of liberty," he was declaring in advance the determination of the American mind.

Mr. Everett was in the meridian of his great fame and his unrivaled power as a speaker when our civil war burst upon the land. His course throughout that conflict was patriotic and thoroughly loyal; but intense as was the public excitement, and momentous as was the crisis, he said nothing that materially added to his fame as a speaker or his rank as a statesman. There has never been in this country so eminent a man who was so exclusively the orator of the Academy. His life passed beneath the loaded shelves and in the still air of well-appointed libraries, where it was his delight to linger among the shades of the illustrious dead and quaff deep draughts from the inexhaustible wells of knowledge. From these pure and elevated studies he stepped forth, from time to time, with one and another of those admirable, polished orations, better fitted than anything ever spoken in this country to delight the ears, to gratify the taste, and to feed the mind, but deficient in the power of molding opinion, affecting the judgment, or moving the will.

His face, studied by the lights of modern science, indicates the same cast of character which we have described as belonging to his oratory. That broad and polished expanse of brow could belong to no other than one of the finest scholars of his age. The prominent, sparkling eye was made to rest with peculiar delight upon the crowded audience room and the sea of upturned faces. But when we pass downward to those parts of the physiognomy where we look for indications of will, purpose, tenacity—in a word, whatever makes the powerful character—we find no such record, but in place of it we read physical refinement, purity of taste, an amiable disposition, and great suavity and courtliness of manner. Taking the upper and lower parts of the face together, we see the traits of elegant and polished oratory, beautiful morality, a blameless and brilliant life; but after saying this much, we must, at the last, pronounce Mr. Everett as lacking in commanding greatness; and this resulted, not from mental deficiencies, nor from physical frailty, but from the lack of will-power.

Compare the lower face of the Academician with that of the Revolutionary orator. There is in the physiognomy of Henry a remarkable length from the eyebrows to the tip of the chin. This indicates those qualities in a public man which in a horse we call "bottom," the power of endurance and of coming out fresh and elastic at the end of the race. It also indicates want of poetic or nervous susceptibility, indifference to the cuts of an adversary, the criticisms of a newspaper, and cotemporaneous opinion. This

cast of countenance is found associated with carelessness as to personal comfort and convenience, and lack of appreciation of all those nameless refinements which go to make up what we call the gentleman.

Of Patrick Henry we might say that he was every inch a man; of Edward Everett that he was, *par excellence*, a gentleman.

On the other hand, comparing the upper part of the two heads, the front of Mr. Everett is far more beautifully and symmetrically developed. The great Virginian may be described, not as a man of ample knowledge, but of strong convictions. We do not find in such a shaped head as his the marks of wide learning, but we do see indications of that rugged, vigorous sense, the piercing insight, the mother wit, which sometimes makes the man superior to all the books.

In order to illustrate the contrast of character in these men, to show the superiority of Mr. Everett in volume and culture of intellect, a study of their faces should be arranged by combining the upper part of Mr. Everett with the nose, mouth, and chin of Patrick Henry.

What a striking and powerful physiognomy is thus produced! Suppose the fine symmetrical development, the ample stores, the world-wide culture of an Everett were yoked to as much earnestness, force, decision, sweep of character as is indicated in the face of Henry. Such a man as that, living in the time of Patrick Henry, would have left, instead of the colossal traditional fame of the Virginian, a body of discourses on the natural rights of nations, and especially the fundamental principles of American Law and Government, such as the world has never yet seen. He would have been the consummate orator of his age, and equaled the renown of Demosthenes himself. There has never been such a man as this in our country, and very few such in any age. The face of Julius Cæsar is the only one that we are reminded of by this imaginary face, and this man would have been the superior of Cæsar in the controlling strength of his moral nature, and no way inferior in the force, splendor, and universality of his public talents.

If he had lived in Mr. Everett's day, the issues of these stormy times would have been discussed, and our history molded by orations in which all the wealth of learning and all the weight of precedent would have been inflamed by an unquenchable love of country, and sent home to the hearts of ten thousand of hearers by his own profound convictions. With such a man as this on our soil in 1861, the Old Dominion would never have burst away from her allegiance; nay, the entire drift of our history for the past twelve years would have been different could we have had in our national councils a judgment so infallible and a power of persuasion so resistless.

This imaginary face has a lesson. It shows us what might have been done if Patrick Henry had united with the royal endowments which nature gave him, the assiduous culture, the deep learning, the incessant industry, and

the faultless taste of an Everett. It is a proof that inborn faculty, however magnificent, will not give a permanent, recorded fame. Patrick Henry left no orations which give the student anything like a just and adequate idea of his great abilities. It is true that nothing printed can reproduce the silvery tones or the inimitable graceful action which gave Mr. Everett's delivery such a charm; but a great part of him lives and will live in those volumes of his, abounding, as they do, in passages which for brilliant and finished rhetoric, faultless diction, and exquisite balance of period have rarely been equaled by any speaker or writer of the English tongue.

On the whole, there is not on the bright roll of American oratory a name more worthy of honor or a career more fit to be emulated than that of the silver-tongued orator of Massachusetts. He was like the steward in the New Testament to whom five talents had been given. By unremitting and systematic study, by a painstaking in which he never relaxed and of which he was never weary, he added to those natural gifts five other talents. If he failed of scaling the heights of state renown, it was not for lack of any diligence on his part, but because nature had made him more delicate, more sensitive and elegant than is consistent with the temper of her masterpieces of power. Yet young men can with more safety be pointed to his example than to the more stormy career of those who have cut their names deeper in the annals of their country. He never spoke a word that needed to be taken back or apologized for; he never inflicted a wound; all his orations tended to illustrate the dignity of human nature, the wealth of learning, the value of education, and to beget a beautiful and fitting reverence for the great names of our history.

Everett stands before us like some *chef-d'œuvre* of sculpture, polished in every limb, beautiful in feature, graceful in composition, faultless in execution. The other name seems, amid the smoke and roar of the Revolution, like some gigantic bas-relief, a partly-finished sketch of Michael Angelo, with lines of inimitable strength, but the conception half developed and the glorious whole dimmed by the mists of tradition looming before us a Titanic figure moving in the shadows of the past.

L.

GIVING THANKS.—"Let us be thankful for life, and work, and enjoyment; that we live now and here; that our eyes see what ancient prophets foretold, and ancient saints longed to witness; that duty and opportunity alone are ours, and the results God's; that we can calmly behold all changes, knowing that "the removing of those things that are shaken" is only "that those things which can not be shaken may remain." Let us be thankful for God, our Father, for Jesus, our Saviour, for the Holy Ghost, our Comforter, for the communion of saints, and for the hope of life eternal!"—*The Advance*.

Religious Department.

Know,
Without star, or angel, for their guide,
Who worship God shall find him. Humble love,
And not proud reason, keeps the door of heaven;
Love finds admission where proud science fails.

—Young's Night Thoughts.

THE USES OF CULTURE IN THE MINISTRY.

BY A. A. G.

THE discipline and knowledge gained in that process called culture, may be used for the highest and noblest purpose, the good of man and the glory of the great Creator. And when it becomes the all-inspiring motive of a man's life to do good to his fellows, and swell the song of praise that is at last to thrill through the universe, he often feels born within him hungerings and thirstings after knowledge, and an intense desire to know all things, and bring up his mental faculties to the highest possible point of culture. He learns, as if by a sudden revelation, that knowledge is power, that culture is influence, and at once lays upon his body and mind all that self-denial imposes upon those who, by extensive and varied knowledge, would gain access to all men.

That ignorance is no helpmeet in the great life-work of doing good is very plain, and it certainly has been felt by many, especially by those called to that sacred ministry which has been most beautifully named, "the ministry of reconciliation." They, more than others, have regarded ignorance as a fetter, as something that sets limits to their power for good, and erects barriers between them and a useful life. And they have realized that high culture introduces men of their profession to a large and blessed life of successful toil.

Now, how is it that culture has this advantage over ignorance? Wherein does the power of culture lie? The superficial thinker will answer that the man of culture, if he possesses tact and shrewdness and knows how to *display* his learning, will be able to compel all men to look up to him with admiring reverence as they do at the stars that glow and burn in the sky above them, and will thus make himself a man of *power*. But *this* power is not the power of true culture.

It might be said with truth, that one of the great elements of the power of culture is *simplicity*—simplicity that is without affectation or display; simplicity that makes no effort to show its treasures of knowledge; simplicity that is never disturbed by the fear that rare acquirements will not be recognized and admired; simplicity that can be a child with children as well as a man with men.

A certain church in a certain town was once left without a minister, and the question that soon swallowed up all other questions within the spiritual inclosure was: "Whom shall we get?" And there were not only "many men," but many *women* of "many minds" in that congregation. One, however, more than all the

rest, attracted attention, and contributed not a little to the general amusement. She was an old-fashioned woman, had seen nearly sixty years, and was a person of sound sense, in the main, but she had for years declared war against culture in the ministry. And when it came to her ears that the church thought of calling Mr. G., a man eminent for learning, she went at once to see one of the principal deacons, and, without any preliminaries, said to him: "Now, brother, we musn't call Mr. G., for he's a *learned man*. If we do, the church will soon be like a withered, dried-up branch. I've seen enough of learning among ministers, and I know it's the death of all grace, not only of their own grace, but of the grace that is in the church. I know I'm a little singular in my notions, but I do honestly think that tobacco and learning are the two worst things a minister can have about him. I've never heard that Mr. G. chews or smokes, but I know he's a *learned man*, so he's not the one for us."

In spite of the good sister's labors with the deacon, Mr. G. received a call, accepted it, and soon came and took possession of the vacant pulpit.

Not long afterward, as he was going the rounds of his church, calling on his new flock, he came to the house of the great opposer of learning. Grandmother Baxter, as she was called in the church, was not at home, but a little blue-eyed, flaxen-haired grandchild was, and she bounded into the room, exclaiming: "I know you, for I saw you up in the pulpit last Sunday."

As soon as her grandmother came home, she told her that the minister had been there. "Has he?" replied grandmother Baxter. "Well, my child, I hope you acted like a little woman, and sat still, and tried to talk with the minister."

"Why, no, grandma! I couldn't! He wanted to go out and see my flower-bed, and after I'd shown it to him, I took him down to see the chickens, and he helped me feed 'em, and then he put me on his shoulder and ran up to the house with me, and when he went away he said he'd 'had a good time.'"

Grandmother Baxter was astonished; but she was more astonished still when "the new minister" came into Sabbath-school, Sabbath after Sabbath, and talked to the children without using—one *big word*! Indeed, she couldn't see that he used any *big words*, even in the pulpit, and she came to the conclusion that he was "just as simple as her little grandchild." The simplicity of true culture was at last made manifest to the old lady, and the minister became her special favorite.

True culture has still other elements of power that show its noble uses. It has a something to which we know not how to give a name, that impresses and influences the uncultivated, and when joined to goodness of heart, it is irresistible in its effects.

There was once a backwoods place, where the people were as rough as the uncleared ground, and the shepherd that led the flock

was a backwoods shepherd. All religious bodies sometimes make mistakes, and the Conference of the Methodist Church made a great mistake when it sent such a minister to such a people. Before his first year was up, it was discovered that he had no power over the people. No good seemed to be accomplished in that field where, alas, so much good needed to be done, and the Conference concluded to send there what they called "a high-toned man." He was a man of true culture as well as of singleness and earnestness of purpose, and an influence at once went out from him that was most wonderful in its effect. The people had not really known their own wants. They had not understood that the undeveloped and uncultivated crave development and cultivation, and, consequently, the ministrations of a minister whose preaching has a cultivating power in it. But they had understood that they "needed a different kind of man," and when he came to them, he came in that fullness of power that true culture, united to holy zeal, always possesses, and they were blessed. Scores of rough men were won to the love of all the glorious truths of the Christian religion.

It has too often escaped the observation even of deep thinkers and shrewd observers that the most uncultivated frequently have a quick perception and high appreciation of culture, as well as a craving for it. When the new minister settled in the backwoods town, every Monday found the people wherever they met, in their places of business, talking about the sermons they had heard the day before, and it was soon seen that the culture of the man was an educating power, and not only piety, but an intelligent piety, began to flourish in what had before appeared to be barren soil. Now, if there had been in the people no perception of culture, or no appreciation of it, the new ministry would have been as powerless as the old. We know of no higher or better uses of culture than this one. We have not forgotten, however, the power of a man of true culture over a cultivated audience, or the ability that culture gives him to meet the foes of Christianity and errorists of every description. The use of culture in winning polished and powerful foes to the love of the truth should not be passed over lightly as of small importance. But the refining, educating, uplifting, forming power of true culture, united with religious zeal, gives it, we think, its noblest and best use. The King of kings, when he came down to earth, did not spend his time in seeking out the prominent and noted foes to his divine mission. He went among the people—the *common* people; the *multitude* followed him. The coarse, the uneducated, the uncultivated felt his power, and he rejoiced in his work among them. And while he lived on earth, he used the riches of his divine and perfect nature among the plainest and commonest men. Therefore let none say that *high culture* should not be put to *common uses*, and let not the man of high culture be afraid that he shall waste what is precious if he pours out the riches of his cultivated mind and heart upon *common* people.

We might add our fervent wish that every eye might be opened to see, and every heart be prepared to feel, all of the great and blessed uses of culture in the *ministry*.

[Our next article will relate to the "Abuses of Culture in the Ministry."]

HEADS AND HEARTS.

THE *Cosmopolitan*, a weekly London journal, treats its English readers to a chapter, from a secular point of view, under the above title. It says: "According to the orthodox creed, it is better to have a good heart than a good head. With a good heart—a 'regenerated heart'—our friends assure us that we shall go to heaven when we die, and there live and love forever, thrilled with inconceivable raptures of eternal joy. All the most ecstatic pleasures of this transitory life are but hints, foretastes, and intimations of the happiness to be enjoyed in the Land of the Hereafter. * * * Far be it from us to disturb the blissful illusion of the saints, or even to shake their 'well-founded hope of a happy immortality.' But what are these 'good hearts'—these 'renewed hearts'—'hearts of flesh,' that have taken the place of 'hearts of stone,' and make their possessors not only 'members of the Church,' but so much better than those wicked, unelected, unredeemed outsiders, who are doomed to eternal anguish and unquenchable fire in the world to come? We do not speak of the physical organ called heart, the blood-pump for ever at work in every living breast, which keeps the machinery in motion, and which, ceasing to contract and expand, with metronomic regularity, we instantly die; but of that other something called heart—the moral heart—which is called in one man good, and in another bad. Where does it exist? In the breast, or in the brain? Is it thought or feeling—or both?"

"We suppose a 'good heart' is simply a good inspiration, or, intellectually considered, a good *intention*. The man who means well is a 'good-hearted man.' He who means ill is bad-hearted or wicked. We do not believe in the old Spanish fallacy, that 'hell is paved with good intentions.' On the contrary, they rather tessellate the pearly paths of heaven. What men most want are good heads to guide them—well-organized brains. If emotion comes from the heart, intelligence has its seat in the head. Feeling is down below, like steam in the boiler; while thought is the pilot at the helm. The brain is the flower of the animal organism. Deep-rooted in the spine, like pith in the stalk of the cane, it blossoms in the cranium, and secretes, like an aroma, the subtle essence of thought. It is boxed up in a skull, and protected with the utmost care, and placed upon the top of the human edifice like a crown, nearest to the stars. What we should call a 'good man,' a well-cultivated man (men can be cultivated as well as roses), is one who is blest with a strong heart and a healthy brain. The moral character is dependent on the physical. It takes a fine tree to produce fine fruit; and men do not gather grapes from thorns, nor figs from thistles. The conclusion of all this is simply an argument in favor of physical education. In nine cases out of ten the child comes into the world impregnated with ancestral diseases. The sins

of the fathers are visited upon the children to the third and fourth generation [by inheritance]. To eradicate these seeds of iniquity and death is the work of medical education; and where the child is so fortunate as to be born with pure healthy blood, it is the first duty of his nurse, his protector, and his teacher to give nature fair play, by keeping the young human bud free from being tainted by poison in the atmosphere or poison in the food.

"A pebble in the streamlet scant
May turn aside the mighty river;
A dewdrop on the baby plant
May dwarf the giant oak for ever."

"Few things one has to encounter in the world are more offensively impertinent than the criticisms pronounced by small-brained and, consequently, 'small-minded men,' whose heads are not larger than a Newtown pippin—but who take a pharisaical pride in their 'good hearts'—upon those strong-hearted, large-minded men whom God, Nature, and education have made their superiors. All the little bigots, small fanatics who will never die of a rush of brains to the head, are perpetually hooting at men of mental magnitude beyond their little comprehension. But then these small potatoes are so 'good-hearted,' such nice fellows for the petty scandal-mongering of tea-parties!"

[Our cotemporary is severe on the small heads. "How can *they* help it?" Does not a bantam feel his importance quite as much as a shanghai? a poodle, as the St. Bernard! the Shetland pony, as the Arab steed? Are not little men and little women just as important—in their own estimation—as "big folks?" True, a pocket-pistol is not a columbiad, nor is a spy-glass a telescope, any more than a dwarf is a full-grown man. But it is not unusual to meet a large-bodied man with a child's mind. It was dwarfed when maturing, and, like thousands of undeveloped negroes, he is a man in stature, but a child in intellect. It is thorough culture and development of body and brain that is needed to make man what his Creator intended he should become.]

THE OLD YEAR.

We have closed the book and laid it by,
And ever thus must its pages lie;
We can not unclasp the lids again,
Nor write its record with brighter pen.

Ah! many the lines we would retrace—
And many the strains we would erase—
But the time has fled from us away,
We can not recall a single day.

Our lives have no backward paths to tread;
The words we utter are ne'er unsaid;
We never can dream the self-same dream,
Nor reverse the onward flowing stream.

Oh! then let us each in meekness now
Before our Maker in heaven bow,
And pardon ask for every sin,
Which the closed book doth hold within.

And when another again we ope,
With its pure white pages full of hope,
May we look to Him and humbly pray
For strength to keep it as pure each day.

ALBION AINLEY.

FREDERICK W. ROBERTSON, M.A.*

THIS justly esteemed minister had a large brain, with a very active mental temperament. There was great susceptibility, owing to the exquisite quality and high culture of the whole organization. Besides an intellect of most comprehensive power, he was blessed with a far-reaching imagination, intense sympathies, and remarkable capability to receive and impart impressions. He was evidently ambitious to excel, anxious about consequences, true to his perceptions of duty, and strong in faith. He was deeply devotional, but broad and liberal, simply conforming to what he deemed right and proper.

There was no bigotry, no superstition, no idolatry in him. If less sectarian than his brother clergymen, it was because of his broader views and sympathies, his meekness and his simplicity. His intuitions and thorough naturalness were no less remarkable than his rare conceptions and grand mental and spiritual gifts. What an artist he could have made! We can almost see even the cold marble breathe under his touch, while in painting and poetry he would repeat and echo nature and the highest human sentiment. In literature, he would describe in vivid light the past, the present, and the future. His was a mind akin to the prophetic—it was illuminated; and if he were not what is popularly termed a clairvoyant, he was certainly most impressible by psychological influences.

His faults grew out of a preponderance of the brain over the body. There was too much mentality, too much nervous intensity for the vitality. He was precocious, and his calling tended to develop his brain at the expense of the body. He was also extremely sensitive and diffident, distrusting his own abilities, which but increased the intensity of his feeling, and served still further to exhaust him. He was not adapted to pioneer life; his right place would have been in a position of tolerable quietness, where he could teach the teachers, evolving thought, inspiring the dormant natures of men, and

PORTRAIT OF F. W. ROBERTSON, M.A.

lifting them up spiritually to a higher plane by his own precept and example. Such a nature could never descend to counting coppers or driving sharp bargains, but conceded an ample income to supply its wants, and the wants of those dependent upon it. Like many other shining lights in theology and literature, he drooped and died from over-mental exertion.

BIOGRAPHY.

REV. FREDERICK WILLIAM ROBERTSON WAS born in London, February 3d, 1816, his father being a captain in the English army. Of his early life little is known, except that he displayed an intense passion for study. When only four years of age he is said to have derived his chief pleasure from books, and to have perused volume after volume with insatiable avidity. He received the rudiments of his education in a grammar-school at Beverley, Yorkshire, and when little more than nine years of age his parents removed to France, where he took advantage of the opportunity afforded him of acquiring a perfect knowledge of the French language and of devoting himself to the classics. On the return of his father to England in 1831, he entered the New Academy in Edinburgh, where he distinguished himself in Greek and Latin verse. After spending one year only at the New Academy, he attended the philosophical classes of that city, and prepared himself for the study of the law. The profession was uncongenial, however, and in a few months it was abandoned.

Being of an ardent and enthusiastic disposition, the army next suggested itself; but owing to delay in receiving a commission, and the deep conviction of those who were fondly attached to him that for one of his extreme intellectual refinement, moral purity, and re-

ligious convictions, the army would not prove the most congenial sphere of action, and that there was a higher and nobler cause to which his rare talents might be dedicated with better promise of promoting his own happiness and the welfare of his fellow-men, the young man left it entirely to his father to decide what course he should pursue, and the result was that he was sent to Brazenose College, Oxford. Only four days after, the long-looked-for commission arrived, but he had resolved to become a minister of the Church of England. He was at this time in the twenty-first year of his age. In college he acquired the reputation of possessing abilities which would enable him to excel in any department of learning, art, or science to which he might devote himself, and his subsequent life fully corroborated this opinion.

Immediately after leaving college he was ordained, and accepted a curacy at Manchester for twelve months, at the expiration of which period his health began to decline, and he went on the Continent to recruit it. There he took out-of-door exercises, and traveled much on foot. He made a pedestrian tour to the Tyrol, the wild, magnificent scenery of which made a vivid impression upon his sensitive mind at the time, and was the source from which he drew many of those beautiful images and apposite illustrations which abound in his sermons and letters. His letters written from that place are magnificent specimens of descriptive writing, not only for their poetry of expression, but for their fidelity of description.

While at Geneva, where he paused in the course of his travels, he was married to Helen, third daughter of Sir George Denys, an English baronet, and shortly afterward returned with his young bride to England, when he became curate of Christ Church, Cheltenham. Here he remained four years, during which period he succeeded by his eloquence and originality of thought, as well as by the amiable qualities of his heart, in gaining a large and increasing circle of friends and admirers, among whom was the Bishop of Calcutta. The latter happening to hear Mr. Robertson preach, sent to him, offering him a canonship in the cathedral of Calcutta, but he declined, as it would have involved separation from his children. In 1847 he returned to St. Ebbs, Oxfordshire, where he officiated for two months during the indisposition of the rector of that place, on a miserably inadequate allowance. At this time the incumbency of Trinity Chapel, Brighton, became vacant. The income attached to it was comparatively a good one; yet when it was mentioned to him, he expressed a willingness to sacrifice his own personal convenience and emolument for the cause in which he labored, and desired the Bishop of Oxford to send him wherever his lordship thought he would be

Life and Letters of Rev. F. W. Robertson, M.A., Incumbent of Trinity Chapel, Brighton, 1847-'53. Edited by Stopford A. Brooke, M.A., Late Chaplain to the Embassy at Berlin. 2 vols. 12mo. \$3 50. Rev. F. W. Robertson's Sermons. Five series. 5 vols. 12mo. Each \$1 25. Rev. F. W. Robertson's Lectures and Addresses on Social and Literary Topics. 1 vol. 12mo. \$1 50.

most useful. The bishop advised his going to Brighton, and he prepared to do so. Thus between the army and the church he left the choice with his father; between St. Ebbs and Brighton he left the choice with his bishop, showing a noble spirit of unselfishness and humility. He entered on his work at Brighton, August 15, 1847.

Trinity Chapel, Brighton, was attended by one of the most intellectual congregations in England. Mr. Robertson was pre-eminently intellectual. He was earnest, too; and in his earnestness he grew eloquent. The chapel was crowded every Sabbath, and his success was established. But "What is ministerial success?" he asks; "Crowded churches—full aisles—attentive congregations—the approval of the religious world—much impression produced? Elijah thought so; and when he found out his mistake, and discovered that the applause on Carmel subsided into hideous stillness, his heart well-nigh broke with disappointment. Ministerial success lies in altered lives and obedient, humble hearts; unseen work recognized in the judgment day." That success was abundantly vouchsafed to him. While he charmed his hearers by the intellectual brilliancy of his sermons, he also sympathized with his fellow-men. He sought the wicked in their dens of vice; he strove to elevate them intellectually and morally; he looked with pity and compassion upon their errors, their weaknesses, and upon the spiritual degradation into which they had sunk; he taught them truths, read to them; he reassured them in their doubts and misgivings; sympathized with their sufferings and strivings; and by a profound intuitive knowledge of the human mind, conquered the hearts and consciences of thousands of stubborn men and women, and made them devoted followers of Christ.

Thus did he work for his Master, ever widening his sphere of influence, until the close of the year 1852, when ill health came upon him. As time passed on, increasing debility and a lack of physical energy became painfully apparent. During the early months of 1853 he delivered a lecture before the Brighton Athenæum, on the "Poetry of Wordsworth." But it was the last of his public lectures. The temporary flush which it produced as he dilated upon his favorite theme, lulled into an alarming pallor. Spring came, and he was obliged to relinquish his pastoral duties. Cheltenham was selected for a change of air and a temporary cessation from mental exertion. Two weeks of rest made a manifest improvement in his health, and on the following week he returned to Brighton and resumed the duties of his office. A fatal act of self-devotion. From this period he sank rapidly, and on Sunday the 15th of August—the anniversary of the day upon which, six years before, the minister had entered upon his duties in Brighton—the painful tragedy drew to its close. His agony was great, and his last words were, "I can not bear it. Let me rest. I must die. Let God do his work."

One of Mr. Robertson's favorite axioms was, "Uselessness is crime;" and it was his constant endeavor, not only in the pulpit, but in the relations of private life, to devote his energies to the welfare of those around him. He labored constantly for the improvement, both morally and intellectually, of the working classes of England. He sympathized with them, and as a consequence won them to him. When a monument was being erected to the memory of the reverend gentleman in Brighton Cemetery, they sought to have a share in it, and begged permission to keep his grave free from weeds and supply it with fresh flowers.

Gifted with reasoning powers of the highest order, his discourses were pregnant with thought. His intense love of truth, however, did not lead him into the chaos of rationalism or infidelity, but direct to the fountain of Divine Truth. He had no narrow or sectarian opinions. He was broad, liberal, and intelligent; ever enunciating the great truths of Christianity in their fullest and noblest acceptation. Though a minister of the Church of England, and attached to her institutions, he was not bigoted in that attachment. It was his aim to convert the mere nominal Christianity of the age into a vital principle of action. Christianity, as he understood and expounded it, was a great agent of man's earthly regeneration and eternal happiness. His inmost feelings are fully expressed in the following words, uttered on the first Sunday in the year 1852: "The motto on every Christian banner is, Forward!—there is no resting-place in the present, no satisfaction in the past." The thorough earnestness for which Mr. Robertson was so remarkable is strikingly shown in that sentence. "Forward!" His sermons in the following year seem to be pervaded with a foreboding of the end. Perhaps this may be attributable to a "deficiency of Hope," which as he himself said "is the great fault of my character." How sad yet sympathetic is the following:

"Not one of us but has felt his heart aching for want of sympathy. We have had our lonely hours, our days of disappointment, and our moments of hopelessness; times when our highest feelings have been misunderstood, and our purest met with ridicule; days when our heavy secret was lying unshared, like ice upon the heart. And then the spirit gives way; we have wished that all were over, that we could lie down tired, and rest, like the children, from life."

We shall close our sketch of this admirable man and Christian by an extract from one of his beautiful sermons—

THE IRREPARABLE PAST.

It is true, first of all, with respect to *time*, that it is gone by. Time is the solemn inheritance to which every man is born heir, who has a life-rent of this world; a little section cut out of eternity and given us to do our work in; an eternity before, an eternity behind; and the small stream between floating swiftly from the one into the vast bosom of the other. The man who has felt with all his soul the signif-

cance of time, will not be long in learning any lesson that this world has to teach him. Have you ever felt it? Have you ever realized how your own little streamlet is gliding away, and bearing you along with it toward that other awful world, of which all things here are but the thin shadows, down into that eternity toward which the confused wreck of all earthly things is bound? Let us realize that, until that sensation of time, and the infinite meaning which is wrapped up in it, has taken possession of our souls, there is no chance of our ever feeling strongly that it is worse than madness to sleep that time away. Every day in this world has its work; and every day, as it rises out of eternity, keeps putting to each of us the question afresh, What will you do before to-day has sunk into eternity and nothingness again? Men seem to do with it through life, just what the Apostles did for one precious and irreparable hour of it in the garden of Gethsemane—they go to sleep.

Have you ever seen those marble statues in some public square or garden, which art has so fashioned into a perennial fountain, that through the lips, or through the hands, the clear water flows in a perpetual stream, on and on forever, and the marble stands there—passive, cold—making no effort to arrest the gliding water? It is so that time flows through the hands of men—swift, never pausing, till it has run itself out—and there is the man petrified into a marble sleep, not feeling what it is which is passing away forever.

It is so, just so, that the destiny of nine men out of ten accomplishes itself; slipping away from them aimless, useless, till it is too late. And this passage asks us, with all the solemn thoughts which crowd around an approaching eternity, what has been our life, and what do we intend it shall be? Yesterday, last week, last year—they are gone. Yesterday, for example, was such a day as never was before, and never can be again. Out of darkness and eternity it was born, a new, fresh day; into darkness and eternity it sank again forever. It had a voice calling to us of its own—its own work, its own duties. What were we doing yesterday? Idling? whiling away the time in light and luxurious literature? contriving how to spend the day most pleasantly? Was that your day? And now let us remember this: there is a day coming when sleep will be rudely broken with a shock; there is a day in our future lives when our time will be counted, not by years, nor by months, nor yet by hours, but by minutes—the day when unmistakable symptoms shall announce that the messengers of death have come to take us.

The startling moment will come which it is vain to attempt to realize now, when it will be felt that it is all over at last—that our chance and our trial are past. The moment that we have tried to think of, shrunk from, put away from us, here it is—going, too, like all other moments that have gone before it; and then, with eyes unsealed at last, you look back on the life which is gone by. And now, from the

undone eternity, the boom of whose waves is distinctly audible upon your soul—a solemn, sad voice—"You may go to sleep." It is too late to wake; there is no science in earth or heaven to recall time that once has fled.

Again, this principle applies to a misspent youth. Youth is one of the precious opportunities of life, rich in blessing if you choose to make it so, but having in it the materials of undying remorse if you suffer it to pass unimproved. You can suffer your young days to pass idly and uselessly away; you can live as if you had nothing to do but to enjoy yourselves; you can let others think for you, and not try to become thoughtful yourselves, till the business and the difficulties of life come upon you unprepared, and you find yourselves, like men waking from sleep, hurried, confused, scarcely able to stand, with all the faculties bewildered, not knowing right from wrong, led headlong to evil, just because you have not given yourselves time to learn what is good. All that is sleep. And now, let us mark it. You can not repair it in after-life. Oh! remember, every period of human life has its own lesson, and you can not learn that lesson in the next period. The boy has one set of lessons to learn, and the young man another, and the grown-up man another. Let us consider one single instance. The boy has to learn docility, gentleness of temper, reverence, submission. All those feelings which are to be transferred afterward in full cultivation to God, like plants nursed in a hot-bed and then planted out, are to be cultivated first in youth. Afterward, those habits which have been merely habits of obedience to an earthly parent are to become religious submission to a heavenly Parent. Our parents stand to us in the place of God. Veneration for our parents is intended to become afterward adoration for something higher. Take that single instance; and now suppose that *that* is not learned in boyhood. Suppose that the boy sleeps to the duty of veneration, and learns only flippancy, insubordination, and the habit of deceiving his father—can that be repaired afterward? Humanly speaking, no. Life is like the transition from class to class in a school. The school-boy who has not learned arithmetic in the earlier classes can not secure it when he comes to mechanics in the higher; each section has its own sufficient work. He may be a good philosopher or a good historian, but a bad arithmetician he remains for life; for he can not lay the foundation at the moment when he must be building the superstructure. The regiment which has not perfected itself in its maneuvers on the parade-ground can not learn them before the guns of the enemy. And, just in the same way, the young person who has slept his youth away, and become idle and selfish and hard, can not make up for that afterward. He may do something; he may be religious. Yes, but he can not be what he might have been. There is a part of his heart which will remain uncultivated to the end. Youth has its irreparable past.

And therefore, my young friends, let it be impressed upon you; now is a time, infinite in its value for eternity, which will never return again; learn that there is a very solemn work of heart which must be done while the stillness of the garden of your Gethsemane gives you time. Now, or never. The treasures at your command are infinite—treasures of time—treasures of youth, treasures of opportunity that grown-up men would sacrifice everything they have to possess. Oh, for ten years of youth back again, with the added experience of age! But it can not be; they must be content to sleep on now, and take their rest.

There is a Past which is gone forever. But there is a Future which is still our own.

On Psychology.

The soul, the mother of deep fears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless fancy's flight;
Lovely, but solemn it arises,
Unfolding what no more might close.—*Mrs. Hemans.*

NAPOLEON ON SUICIDE.

[The paragraphs below are translations of a fragment dictated by Napoleon at St. Helena, in 1820, to his faithful follower General Marchand, and of two passages from his "Outline of the Wars of Caesar," in the same line of thought. They are interesting in themselves, as being the opinions of one of the two or three greatest men who ever lived—many believe him unconditionally the greatest—on a subject which has been often debated, and which admits of much subtle and strong reasoning. They are also interesting as throwing a reflex light upon the mental character of the Great Emperor.

Napoleon's reasoning, it will be observed, is exclusively Pagan, or such as might be Pagan. It contains no reference to the Christian religion, and, in fact, no argument which implies any religion at all. It appeals simply to the sentiments of Adhesiveness, Self-Esteem, and Conscientiousness, and to that general balance and conclusion of the practical judgment which we call common sense. This is in exact accordance with the indications of the Emperor's head, which was rather flat than high in the region of Veneration, and not remarkably full at Conscientiousness. It may be added that many other occurrences in his life show the same trait, which might be called non-religiousness. He did not feel, for instance, any great difference between the intrinsic excellence and the binding force of Christianity and Mohammedanism, as he showed by his compliments to the Egyptian imams about their religion.

This omission does not, however, weaken those which the Emperor uses, and which are remarkably clear, direct, and strong. They amount to this: that suicide makes sure of whatever bad fortune there is, and effectually destroys all the chances of future good fortune, which chances always exist.

His discussion of the subject—which to be

sure was only the merest beginning—only applies to suicide resulting from disappointments in life. He does not include the case of suicide to escape infamy otherwise unavoidable, or intense physical suffering, which must (humanly speaking) persist until death, and perhaps cause it. His inquiries partake of this nature—Might not a victim of the Inquisition kill himself to avoid the nameless horrors of its torturers? Might not an Englishman kill his wife or his daughter and himself, in the Sepoy rebellion, to avoid enduring the lust and cruelty of the maddened heathen soldiery? Might not a victim helplessly jammed under some beam, pinned down in the middle of a burning house, and about to be roasted alive, shoot himself, to avoid the more inevitable and more agonizing death? And if such suicides—which are a hastening of the coming end by a few moments—are wrong, what shall we say of the excellent men, and especially the delicate women, who go away year after year into jungles and swamps as missionaries, with a moral certainty that they are shortening their lives, not by minutes, but by years? Was Arnold Winkelried wicked in gathering the sheaf of Austrian spears into his bosom to let in the fatal Swiss swordsmen to hew liberty from among the otherwise impregnable host of Leopold? But that was suicide, as much as Judas' hanging himself. So was the action of the steamboat pilot who broiled to death at his post in order to lay the boat ashore and enable all the rest of the ship's company to escape. Or, if such suicides are right, will it be found that the motive with which we kill ourselves gives the death its moral character, and that suicide in itself is neither right nor wrong? If Christianity does not forbid taking the lives of others if the cause be sufficient, why should it restrict our control of ourselves, more than our control of others?

It will not do to make a distinction between suicide by actually laying violent hands on one's self, or flinging one's self into fatal places on the one hand, and merely doing things that will necessarily cause our death on the other hand. It is *purposely causing our own death* which constitutes suicide, whether directly or indirectly. Does Christianity or the Bible prohibit all purposeful causation of one's own death? The saying of Christ, in the fifteenth chapter of John, "Greater love hath no man than this, that a man lay down his life for his friends," seems to imply that a person in spirit of self-devotion or sacrifice might properly put himself in a fatal position.]

THE EMPEROR ON SUICIDE.

Has a man the right to kill himself? Yes: provided that his doing so will not wrong any other person, and provided life is an evil to him.

But when is a man's life an evil to him?

When it offers him only suffering and pain. But, since suffering and pain are changing every instant, there is no moment of life when one has the right of killing himself. That mo-

ment only comes at the hour of his death; for it is only then that it becomes proved that his life is only a tissue of evils and sufferings.

There is no one who has not more than once yielded to mental distress and wished to kill himself; and who has not within a few days been diverted from that wish by changes within his own mind, or in the circumstances around him. He who killed himself Monday would the next Saturday have desired to live; but a man can kill himself only once.

Life consists of the past, the present, and the future; it must therefore have become an evil, if not for all the three, at least for the present and the future. If it is an evil only for the present, suicide throws away the future. The evils of one day do not justify the sacrifice of all the rest of life. It is only he whose life is an evil now, and who is certain (which is impossible) that it will always continue so—that there will be no change in his position or in his own will, resulting from modified circumstances and situation, or from habit and the lapse of time—an impossibility again—only such a man would be justified in killing himself.

One who sinks under the weight of present evils and commits suicide is guilty of an injustice to himself; he obeys, out of despair and weakness, a momentary fantasy, and sacrifices to it the whole of his future.

The comparison of a gangrened arm amputated in order to save the whole body, is not a valid one; for when the surgeon cuts off the arm, it is a certainty that it would occasion death. This consequence is not a sentiment, it is a reality; whereas, when a man's sufferings drive him to suicide, he not only puts an end to the sufferings, but destroys his future life too. One would never repent, in the case supposed, of having had an arm amputated, but he might repent, and almost always would, of having killed himself.

CATO.

The conduct of Cato has been approved by his cotemporaries and admired by history; but who gained by his death? Cæsar. Who was pleased at it? Cæsar. And who lost by it? Cato's own party at Rome. But, it may be argued, he died rather than bow before Cæsar. But who would have made him bow? Why could he not have gone with the cavalry, or with those of his party who fled by sea from the port of Utica? They rallied the party in Spain. What would not have been the influence of his name, his counsels, and his presence with those ten legions which in the following year held the balance of destiny on the field of Munda! And even after that defeat, what would have prevented him from following over sea the younger Pompey, who survived Cæsar, and long sustained with glory the eagles of the republic?

Cassius and Brutus, the nephew and the pupil of Cato, killed themselves on the field of battle at Philippi, Cassius when Brutus was victorious. Under a misunderstanding, these desperate actions, inspired by a false courage

and false ideas of greatness, gave the victory to the triumvirate. Marius, abandoned by fortune, showed himself superior to her. When cut off from the sea, he hid himself in the marshes of Minturnæ, and his constancy was rewarded by re-entering Rome and becoming a seventh time consul. When old, broken in strength, and at the highest point of prosperity, he killed himself, in order to escape from the vicissitudes of human fortune; but at a time when his party was triumphant.

If Cato could have read in the book of destiny that in four years Cæsar was to fall in the senate-chamber at the foot of Pompey's statue, pierced with twenty-three dagger wounds, while Cicero would still occupy the tribune and make the air re-echo with the philippics against Antony, then would Cato have stabbed himself? No. He killed himself from mortification—from despair. His suicide was the weakness of a great soul, the error of a stole, but a blot upon his life.

CÆSAR.

It is said that during the battle of Munda, Cæsar was on the point of killing himself. This would have been destructive to his party; he would have been vanquished as Brutus and Cassius were. May a magistrate, the leader of a party, voluntarily desert his friends? Is such a resolution virtue, courage, strength of mind? Is not death the end of all evils, of all disappointments, of all sufferings, of all toils? Does not the neglect of life constitute the habitual virtue of every soldier? Is it right to desire suicide, to commit it? Yes, say some, when one is without hope. But when or how can any human being be without hope, in this shifting scene of life, where the natural or violent death of one single man may instantaneously change the whole condition and appearance of affairs?

THE IDIOTIC TRAINED.

CHARLOTTE ELIZABETH'S PROTÉGÉ JACK.

THE story of Kaspar Hauser, the unfortunate being who for some reason was doomed to unmerited confinement from infancy, has always excited great interest on account of the physiological questions that came up when, just bordering on manhood, he was released from the dungeon he had so long inhabited. In the character of John T—, the subject of the present sketch, there are questions quite as curious and much more difficult to solve. Kaspar Hauser's was a confined body and an undeveloped mind; John T— seemed to have a mind as acute and strong in many respects as the average, but its expression was almost entirely prevented—he was deaf and dumb. He was considered an idiot, and probably that impression would never have been removed had he not come under the care of a woman who made it one of the objects of her life to disentangle from its uncouth wrappings the clear intelligence which she discerned in him. That woman was Charlotte Elizabeth, a

writer who thirty or forty years ago was well known and widely read. John T— was about eight years of age when she first knew him, and after living in her house for eleven years he died of consumption.

The boy was deaf and dumb, and of so contracted intellect that his parents, who were Irish peasants, could find no way either to remove or to mitigate his ignorance. His mother had undertaken dreadful penances for his sake: walking on her bare knees over a road strewn with pebbles, broken glass, and quicklime, to make her own sufferings sufficiently great to overtop the Divine wrath which she supposed was the cause of her son's affliction, and thus to obtain the bestowal of speech and hearing upon her boy. But her efforts had so little success, that when a stranger and a Protestant offered to take him away she gladly consented.

Jack, as the boy was called, was a pigmy in stature, and his features and aspect corresponded with the dullness of his mind. His bristly hair hung in an uncouth mass over his eyes, and it was not until his teacher one day lifted it away from his forehead that she began to have any hope of teaching him. But his brow once disclosed, proved to be high and expansive, and the thought at once struck her, that under such a forehead must lie an intelligence that could be awakened if she would only have patience. That idea and a little subsequent progress, sure, if small, gave her courage to persevere for seven years in the effort to give life to the dead intellect. When the first attempts were made to teach him the alphabet, he thought it great fun, but the unmeaning grin which spread over his face showed that he received no higher notion of the lesson.

The first intelligence that he manifested came so suddenly, that though long watched for, it was a real surprise. Standing before the house-dog, he pointed first to the animal, then to himself, and with his hand alphabet asked "What." He had to repeat the action many times before his teacher understood that he was asking what the difference was between himself and the dog. From that time he began to show an inordinate curiosity which nothing could satisfy. Nor was he contented with asking the names of furniture, dogs, and the like, and examining their nature. He entered the field of speculative philosophy at once. Pointing to the sun, he asked if the teacher made it. No. Then he asked the same question about each one of the four or five persons for whom he had a sign. When he found that none of these had made it, he made his "what—what" with fretful impatience and a stamp of the foot. The answer was a gesture upward and the word *God*. He then explained a system of astronomy he had formed.
